Preface

This volume follows the trail blazed so well by four outstanding dictionary volumes on the New Testament. We appreciate the high standards set by our predecessors, and we are honored to be able to present this volume on the Pentateuch. We pray that this volume, though a reverse of the canonical ordering, might fill as fruitful a niche as has the New Testament series.

Our generation has seen a revolution in many aspects of pentateuchal study, and the dust has not yet settled, if it ever will. Many see this revolution as long overdue. Among them is W. McKane, formerly of St Andrews University, who in 1978 wrote: “Old Testament scholarship suffers from the burden of too many received critical assumptions hung about the neck of its practitioners like Coleridge’s albatross. It needs the transfusion of a kind of scholarship which is not a further development of critical positions accepted as premises but is rather an *ab initio* investigation, unburdened by too many bibliographical cases, and concentrating a fresh eye on the Hebrew Bible” (VT 28 [1978] 381). The same needs to be said for traditional assumptions, those views passed down from generation to generation that often go unexamined and become hallmarks of orthodoxy. While not intrinsically wrong, unexamined views cannot be clearly called our own; they must first be examined.

New eyes are especially needed in looking at this portion of Scripture. Here the story is started: foundations are laid and trajectories initiated which will move through the rest of Scripture and beyond. Here important theological presuppositions are laid out which developed and matured into those of three major world religions. Here fundamentals of life in relationship with God and one’s fellow people are established in a manner especially needful in societies currently questioning absolutes and concrete underpinnings for behavior.

While not every topic can be examined in equal detail in the genre of a dictionary, the format followed here allows greater luxury than most. With no article less than a thousand words, and some articles exceeding ten thousand words, this volume explores a wide range of subjects all relevant to understanding the Pentateuch better. The variety of themes examined provides a richness of content usually not found in monographs or periodicals. Some articles touch on areas rarely examined. Other articles provide helpful surveys, leading one into an understanding of the current state of discussion. Others take critical assumptions to task, seeking at least to identify the albatross if not to remove it. All seek to provide a better understanding and appreciation of an important area of biblical knowledge.

The combination of introductory and innovative articles should serve well a number of audiences. Students just entering the field will find it useful to see where things have been and where they are now. Church educators in the pulpit and the classroom will be able to see what has happened since they were themselves in front of the lectern, and scholars currently engaging in research may be challenged to examine old areas anew and to explore new areas afresh.

Our thanks go out to many for assistance in bringing this project to a conclusion. First to Dan Reid, who envisioned the entire dictionary project, commissioned us to undertake this part of it, and spurred us on with encouragement, suggestions and, most of all, friendship. To those who undertook to write these articles, we thank you, especially some who did several, and at least one to whom we came several times at short notice. You were willing not only to help but also to excel in your contributions. Special thanks also to Bob Buller, whose considerable expertise as copyeditor greatly improved this project and led to his being an article contributor.

We hope that this volume will instruct, encourage and challenge many. Most of all we desire that it will not be just an academic tool but will help readers to experience the wishes of Deuteronomy 30:20: “that you may love the LORD your God, listen to his voice and hold fast to him.”

T. Desmond Alexander

David W. Baker

How to Use This Dictionary

Abbreviations

Comprehensive tables of abbreviations for general matters as well as for scholarly, biblical and ancient literature may be found on pages xiii-xviii.

Authorship of Articles

The authors of articles are indicated by their first initials and last name at the end of each article. A full list of contributors may be found on pages xx-xxii, in alphabetical order by their last name. The contribution of each author is listed following their identification.

Bibliographies

A bibliography will be found at the end of each article. The bibliographies include works cited in the articles and other significant related works. Bibliographical entries are listed in alphabetical order by the author's last name, and multiple works by an author are listed alphabetically by title. In articles focused on the books of the Pentateuch, the bibliographies are divided into the categories "Commentaries" and "Studies."

Cross-References

This dictionary has been extensively cross-referenced in order to aid readers in making the most of material appearing throughout the volume. Five types of cross-referencing will be found:

1. One-line entries appearing in alphabetical order throughout the dictionary direct readers to articles where a topic is discussed:

ALPHABET. *See* WRITING.

2. An asterisk in the body of an article precedes a word that relates directly to another article by that title (or closely worded title) in the dictionary. For example, "*tabernacle" directs the reader to an article titled "Tabernacle." Asterisks typically are found only at the first occurrence of a word in an article.

3. A cross-reference appearing within parentheses in the body of an article directs the reader to an article by that title. For example, (*see* Pentateuchal Criticism, History of) directs the reader to an article by that title.

4. Cross-references have been appended to the end of articles, immediately preceding the bibliography, to direct readers to articles significantly related to the subject:

See also COVENANT; DECALOGUE; LAW.

5. Occasionally references are made to articles in the companion volumes, the *Dictionary of Jesus and the Gospels* (DJG), the *Dictionary of Paul and His Letters* (DPL), the *Dictionary of the Later New Testament and Its Developments* (DLNTD) and the *Dictionary of New Testament Background* (DNTB). These references are found within the body of the text of articles. For example, a reference such as (*see* DJG, Gentiles) refers to the article "Gentiles" in the *Dictionary of Jesus and the Gospels*, and a reference such as (*see* DLNTD, Apocalyptic, Apocalypticism §1) refers to a specific section within the article "Apocalyptic, Apocalypticism" in the *Dictionary of the Later New Testament and Its Developments*.

Indexes

Since most of the dictionary articles cover broad topics in some depth, the *subject index* is intended to assist readers in finding relevant information on narrower topics that might, for instance, appear in a standard Bible dictionary. For example, while there is no article titled "Calendar," the subject index might direct the

reader to pages where calendrical issues are discussed in the articles on “Agriculture,” “Festivals and Feasts” or elsewhere.

A *Scripture index* is provided to assist readers in gaining quick access to the numerous Scripture texts referred to throughout the dictionary.

An *articles index* found at the end of the dictionary allows readers to review quickly the breadth of topics covered and select the ones most apt to serve their interests or needs. For those who wish to identify the articles written by specific contributors, they are listed with the name of the contributors in the list of contributors.

Maps

A map of “Possible Routes of the Exodus” appears on page 278. Maps of “Palestine in the Patriarchal Period” and “The Ancient Near East in the Patriarchal Period” appear on pages 920-21.

Transliteration

Hebrew has been transliterated according to a system set out on page xix.

A

AARON

The only person by this name in the Hebrew Bible, Aaron's identity is unambiguous. He was the elder brother of *Moses and a descendant of *Levi (Ex 4:14). Aaron at first served as Moses' assistant, particularly as his spokesman (Ex 4:15-16; 7:1-2), and then became Israel's first chief *priest (Ex 28:1-5). From that time forward only descendants of Aaron could legitimately function in that role (Ex 29:9; 40:15; Num 3:10; 18:7). The narrative does not disclose the circumstances of Aaron's birth, but it is obvious that it took place before the proclamation of *Pharaoh's decree that every male child born to the Hebrews must die (Ex 1:22—2:3). There is likewise no etiological explanation of his name. Most likely, it, like the name of his grandson Phinehas, is of Egyptian origin, ^ʿ*rn* ("the name is great") or the like.

1. Aaron the Prophet
2. Aaron the Priest
3. Aaron and Historical Criticism

1. Aaron the Prophet.

1.1. *The Setting and Circumstances of His Birth.*

According to the *chronology of the Masoretic Text, the exodus of Israel from *Egypt took place in the middle of the fifteenth century B.C. (1 Kings 6:1; *see* Exodus, Date of). Moses was eighty years old at the time (Ex 7:7), his birth thus having occurred toward the end of the sixteenth century, about 1525 B.C. Aaron was three years older (Ex 7:7). In terms of Egyptian history this was the so-called New Kingdom era, specifically the Eighteenth Dynasty. The Hyksos, who had ruled Egypt for about 150 years (1730-1580 B.C.), had been expelled by Ahmose, founder of the Eighteenth Dynasty, and in the aftermath of that expulsion the Hebrews may have come under suspicion as possible collaborators with the

Hyksos (Ex 1:8-10). This set the stage for Egyptian repression of the Hebrews, a pogrom that eventually ended in infanticide (Ex 1:22).

Aaron's apparent exemption from the royal decree suggests that it became effective sometime between the time of his birth and that of Moses. In any event, he obviously was spared and lived to grow up in the household of his father Amram and mother Jochebed (Ex 6:20).

1.2. *His Ancestral Lineage.* Aaron's parents were "of the house of Levi" (*mibbêṭ lēwī*), that is, descendants of Jacob's son of that name (Ex 2:1). More specifically, they traced their lineage back to Levi through Kohath, a son of Levi (Ex 6:16-20; 1 Chron 6:1-3). The four generations (Levi and Aaron inclusive) involved comports well with the promise to *Abraham that his descendants would depart from Egypt in the fourth generation (Gen 15:16). However, the reference to the sojourn as four hundred years (Gen 15:13)—or precisely 430 in the exodus narrative itself (Ex 12:40)—suggests that the Aaronic *genealogy is not "closed," that is, without missing generations. He perhaps was of the tribe of Levi, clan of Kohath, and family (*bêṭ ʾāb*) of Amram (cf. Josh 7:16-18). The main point to the genealogies, however, is to link Aaron to the tribe that was eventually set apart by Yahweh to minister in the sacred office (cf. Num 3:5-10), thus establishing Aaron's levitical and priestly credentials (cf. Num 18:1-7).

1.3. *His Role as Prophet.* Aaron's first ministry was not as priest, however, but as *prophet. When it was safe for Moses to return to Egypt from Midianite exile (Ex 2:23; 4:19), Yahweh instructed him to do so and to take steps to lead God's people from there to the land God had promised to the patriarchs (Ex 3:7-10; 6:10-11). Moses demurred, arguing that he lacked the necessary oratorical skills and persuasive powers (cf. Ex 4:1-2, 10, 13; 6:30). To this Yahweh re-

plied that Moses would speak to the people and to Pharaoh through Aaron. Aaron, he said, was a forceful speaker (*dabbēr yēdabbēr*, Ex 4:14). He would become Moses' mouth, and Moses would be to him like God (Ex 4:16). That is, Aaron would be a prophet between Moses and the people, a spokesman on his behalf. To underscore this relationship and Aaron's proclamatory role, Yahweh went on to tell Moses that Moses would be like God to Pharaoh and that Aaron would be his prophet. This time the classic term for prophet (*nābi'*) occurs, solidifying the fact that Aaron was a prophet not only by gift but by office (Ex 7:1-2).

The gift and calling of Aaron are confirmed, albeit in a rather negative way, in his confrontation with Moses en route to Canaan (Num 12:1-15). Envious of his younger brother's leadership role, Aaron—together with his sister *Miriam—used the pretext of Moses' having married a Cushite woman to challenge Moses' uniqueness as a prophet. Aaron's premise seems to be that since Moses had violated some social or even religious norm, he had undermined his authority as a spokesman for Yahweh. "Is it indeed only by means of Moses that Yahweh has spoken?" he asks. "Has he not also spoken by us?"

The claims of Aaron and Miriam (cf. Ex 15:20-21) to prophetism were indeed legitimate, as Moses' forbearance (*'anāw*, "humility," Num 12:3) and Yahweh's acquiescence make clear. However, they, unlike Moses, were "ordinary" prophets who received revelation by visions and *dreams (Num 12:6). Moses received God's self-disclosures in a direct manner (*peh 'el peh*, "mouth unto mouth," Num 12:8; cf. Deut 34:10). When Aaron understood this difference, he confessed his hubris and begged Moses to intercede for his sister, who had been struck with a loathsome skin disease for her equally presumptuous insubordination (Num 12:11-12). The tradition is silent thereafter with regard to Aaron's prophetic activity.

2. Aaron the Priest.

2.1. Antecedents to the Aaronic Priesthood.

Though Aaron was founder of a new postexodus order of priests, Israel already had some kind of priestly cult in place while still in Egypt. This is presupposed by Moses' demand to Pharaoh to let Israel leave Egypt to worship Yahweh in the desert (Ex 3:18; cf. 5:1, 8; 7:16; 8:8, 25-28; 10:9, 25-26). It is explicit following the exodus when, at Sinai, Yahweh cautioned Moses to see

to it that the priests sanctified themselves in view of the impending epiphany on the mountain and that they should not attempt to penetrate the boundary lines surrounding Yahweh's glory (Ex 19:22, 24).

2.2. Intimations of the Aaronic Priesthood.

Aaron's official appointment to the priesthood was preceded by certain events and allusions that pointed in that direction. For example, Moses asked him to gather up some manna in a pot to "be laid up before Yahweh," that is, in the sanctuary before the ark of the covenant (Ex 16:33-34). Though proleptic, this hints at a future priestly role for Aaron. Likewise, his association with the pre-exodus priests at Sinai attests to his increasing priestly involvement (Ex 19:24). Most striking of all is Aaron's participation in the covenant ceremony attendant to the giving of the commandments (Ex 24). He with his sons and seventy elders were allowed to ascend Sinai part way (Ex 24:9). Such gradual nearness to the Holy One was preparatory to even greater intimacy.

2.3. Aaron's Call and Ordination to the Priesthood. The first clear statement of Aaron's priestly status comes in the midst of the instructions about the building and equipping of the *tabernacle (Ex 28—29). He and his four sons were to be brought near (*haqrēb*), that is, presented to Yahweh, in order to commence their ministry (Ex 28:1). They first put on sacred garments (*see* Priestly Clothing), drawing attention to two facets of the priestly ministry: glory (*kābôd*) and beauty (*tip'eret*). The worship of Yahweh thus had transcendent, even frightening, forms but it was also invested with aesthetic attraction. All of the items of apparel are rich in symbolism, suggesting that the priest in his very appearance was a metaphor of divine-human mediation.

Investiture to the office included being set apart (*lēqaddēs*) to it through proper *sacrifices and rituals (Ex 29:1-18) and being dedicated in it through further such ceremonies (Ex 29:19-34). Only through these procedures could they and their priestly descendants be qualified to serve (*lēkahēn*, lit., "to be or serve as priest," Ex 29:44).

2.4. Aaron as Chief Priest. In addition to brief narrative descriptions of Aaron fulfilling his regular priestly duties (cf., e.g., Lev 8:31-36; 9:8-24) are the accounts of his deeds with or under Moses in the course of the desert sojourn. The first of these records his leadership of Israel in the apostate act of casting a *golden idol in Moses' absence on the summit of Sinai (Ex 32:1-29). Though Aaron

construed the image to be a representation of Yahweh (Ex 32:4-5), this itself was a flagrant violation of the second commandment (Ex 20:4-6) even before the tablets of the *Decalogue had been brought down from the mountain. Only Moses' fervent intercession spared Aaron and his priesthood. Ironically, Aaron's own levitical kinsmen took sword in hand to slay the ringleaders of the idolatry (Ex 32:25-29) of which their priestly head had been an instigator. A subsequent challenge came to him from certain Reubenites and other Levites who resented his priestly leadership (Num 16:1-35). In a public showdown orchestrated by Moses, Aaron and the Aaronic priesthood were conclusively vindicated. Only Aaronides would ever be qualified to burn incense, that is, to minister before Yahweh as intercessors (Num 16:40, 47-48).

In a third episode Aaron, with Moses, angered Yahweh by striking the rock for water rather than merely commanding it to yield its life-giving streams (Num 20:2-13). The result was their disbarment from the Promised Land, a penalty that followed their failure to set Yahweh apart (*lêhaqdîsēni*) as the one who bestows the blessings of life (Num 20:12). To strike the rock was human effort, androcentric; merely to speak would have shown dependence on divine power and be theocentric.

The account of Aaron's death follows shortly. After arriving at Mount Hor in the Arabah, Moses, having been told that Aaron's demise was imminent, stripped his brother of his priestly apparel and put them on Aaron's son *Eleazar, his successor to the holy office (Num 20:22-29). After the customary thirty-day lament the community resumed its life of desert sojourn.

3. Aaron and Historical Criticism.

Post-Enlightenment criticism has painted quite a different picture of Israel's cultic history—including, of course, the priesthood—from that of ancient Jewish and Christian tradition. Beginning with de Wette's assertion that Deuteronomy (D) was of seventh-century provenience and subsequent arguments that the Priestly source (P) presupposes D, the consensus today in critical scholarship is that priesthood as described in such meticulous detail in the Pentateuch is by and large a postexilic phenomenon.

However, the extreme view of an earlier era that the whole apparatus of priestly religion was a late, antiprophetic and degenerative move-

ment no longer commands attention. The undeniable evidence of such systems from elsewhere in the ancient Near East and from a period earlier than even the traditional date for Moses has put to rest the theory that the priestly religion of the Old Testament was the product of a religious evolutionism that placed it necessarily at the end of the process because of its alleged tendency toward professionalism and institutionalism. Still, the idea persists that the P source as such is a late redaction of priestly traditions that in their final form are a far cry from the Bible's own witness to their origins and pristine shape.

A casualty of this way of assessing the biblical witness is any notion of the actual historical existence of Aaron, at least as the flesh-and-blood person of the texts. Later OT (Ezra 7:5; Ps 77:20; 99:6; 105:26; 115:10-12; Mic 6:4) as well as NT (Lk 1:5; Acts 7:40; Heb 5:4) testimony notwithstanding, Aaron is thought at best to be a shadowy figure to whom later tradition pointed as a sufficient explanation for the origin of the priestly office and order. Such an assessment plays down the authenticity of the canonical tradition and is inadequate to explain the persistence of Aaron and his descendants as integral to the entire scope of the biblical religious history.

AARON'S ROD. See ROD, STAFF.

ABEL

Abel, the second son of *Adam and *Eve, appears only briefly in the biblical record, yet that appearance is long enough to secure God's earliest approval for an offering and long enough to become a lightning rod to his dejected brother's wrath. In the process Abel becomes the first victim of murder.

3. Implications

1. Biblical Evidence.

Abel appears only briefly in the OT, where he attracts both the favor of God and the lethal envy of his brother *Cain (Gen 4). In the NT the story of Abel supplies illustrations of obtaining divine favor (Hebrews) and of guilt incurred by murdering the innocent (Gospels and 1 John).

1.1. Old Testament.

1.1.1. Abel Obtains God's Favor (Genesis 4:1-5).

Abel enters the biblical narrative with minimal introduction. Unlike Cain, even Abel's name surfaces without explanation. The reader is left to speculate that this character may turn out to be a fleeting figure (Abel, from *hebel*, "breath" or "futility"). Abel turns to animal husbandry, while his elder brother struggles to bring produce from the soil.

In time each presents the Lord an offering (*minhâ*) from his respective productivity: earth's fruit and the flock's firstborn. This constitutes the first presentation to God in the biblical record. Abel and his animals earn divine commendation, while Cain and his crops do not. Scripture refrains from explaining, leaving ample room for speculation. Several scholars advise caution at this point, arguing that acceptance of offering is an issue peripheral to the point of the text. We should focus instead on regard for one's brother (see the valuable narrative study in van Wolde, 33), response to correction and violent consequences of unbridled anger (Krasovec, 10; cf. Heck, 137 n. 26; and Radday, 75). Others maintain that we can discern the reason for divine favor, though explanations vary. These may be summarized in three primary opinions.

The first opinion infers that as God favored one offering over another his actions were simply *inscrutable*. Westermann surmises that he re-

sponded immutably (Westermann, 296) and Brueggemann that the divine preference is simply inexplicable (Brueggemann, 56).

The second focuses on *the genre or source of the offering*. Several explanations arise from this opinion. Perhaps both brothers knew that God preferred an animal offering, though not yet specified in the Torah (von Rad, 104). Two weaknesses undermine this explanation. First, if it could be shown that God had given instructions concerning gifts or sacrifices, this proposal would be greatly strengthened (as presumed by Calvin [Lewis, 493]). Sacrificial instruction later in the Torah will leave nothing to assumption (cf. Lev 1—7). Why a fact so salient here would be left unspecified is problematic if God expected an animal offering.

Second, consider the term for "offering" (see the excellent summary in Waltke, 366-68). The brothers each presented a *minhâ* ("offering"). In a noncultic setting *Jacob dispatched an advance *minhâ* as a gift to pacify vindictive *Esau prior to their face-to-face encounter (Gen 32:19). Nothing was slain. This usage recalls the underlying meaning of *minhâ*, deriving from *mnh*, "to give" (Anderson, 27-29).

If animal slaying were integral to this act of worship, the writer could have selected any of several other terms that often (or in some cases always) required slaying an animal. These include *'olâ* ("burnt offering"), *zebah sêlāmim* ("fellowship offering"), *hattâ't* ("sin offering") and *'āsām* ("guilt offering"), to list the primary sacrificial categories. In contrast, *minhâ* in Leviticus is restricted to grain offerings, absent of blood. Thus by its definition a *minhâ* was designed to obtain favor—not expiation—thus explaining why it need not include animal sacrifice. Is it possible that the Septuagint's translation *thysia* ("sacrifice") for Cain's *minhâ* ("offering," Gen 4:3) has misled interpreters to presume a divine requirement of blood in the elder brother's gift (Lewis, 496)?

Another explanation supporting the *genre or source offering* opinion recalls the curse upon soil uttered to Adam (Gen 3:17). Perhaps any subsequent offering from blighted fields was thereby rejected (see the sensitive reading in Spina, 319-32; cf. Herion, 53). If later rescission of this inferred prohibition were more explicit, it would ease concurrence. By the time we reach Leviticus a *minhâ* consisting of grain harvested from the ground is prescribed, not proscribed.

A third opinion recommends that *the character of the offerer* may best explain God's response. Early interpreters such as the writer of Hebrews, Josephus, Irenaeus and Augustine attributed Abel's initial success to his more noble character (Heb 11:4; Lewis, 484-89). Later writers agree, often observing that Abel brought gifts of higher quality (not superior genre), as conveyed by "first-born" and "fat portions" (Cassuto, 205; Speiser, 30; Heck, 134; Waltke, 368-69). Further, *hēleb* ("fat") may form a complementary assonantal link to Abel's name. After a thorough consideration of the evidence, W. Lane concludes: "The general tenor of Scripture indicates that the superior quality of Abel's offering derived from the integrity of his heart rather than from the nature of the offering itself" (Lane, 334).

The evaluation formula itself appears to focus principal attention on the offerer, since each brother is specified by name before mention of his offering: "*Abel* and his offering . . . *Cain* and his offering" (Gen 4:4-5, emphasis added; cf. Heck, 139). As the story unfolds in the ensuing verses, the flawed character of the elder brother will become glaringly evident.

1.1.2. *Abel Succumbs to Cain's Anger* (Genesis 4:6-16). As Cain capitulates to resentment and envy, Abel succumbs as the first fatal casualty of intrafamilial strife. Younger brother fades to a voiceless victim, with *blood-stained soil his only advocate. God, champion of the victimized, responds to fratricide, personally ensuring that injustice will not go unanswered (cf. Prov 22:22-23). The cry of blood is testimony sufficient to sway the divine court (Brueggemann [60] detects lawsuit language in questions posed to Cain).

1.2. *New Testament.*

1.2.1. *The Gospels.* Abel appears in the Gospels as Jesus warns religious leaders against callous opposition to his message (Mt 23:35 par. Lk 11:51). With hyperbole he lays against his contemporaries the blame for the murder of all from ages past who by conduct or communication confronted others with the need to repent. If by Zechariah the postexilic prophet is intended, then the expression "from Abel to Zechariah" forms a set of chronological bookends, an A-to-Z of martyred messengers. (This infers a martyrdom for postexilic Zechariah, which was not reported in the OT. Uriah in Jer 26:20-23 was the latest OT martyr recorded.) If instead Zechariah the martyr is intended (2 Chron 24:20) and if Chronicles is the last book of the OT, then "from Abel to Zech-

ariah" forms a canonical front-to-back statement of comprehensiveness.

1.2.2. *Hebrews 11:4; 12:24.* In Hebrews the writer makes a case for faith as an attribute attracting divine favor. He produces Abel as the earliest individual receiving such commendation (Heb 11:4). Later he recalls the personification of Abel's blood "speaking" from the earth (Heb 12:24; cf. Gen 4:10). Jesus' blood speaks as well, the writer observes—even "better than" Abel's. Instead of simply crying out for vindication, Jesus' blood announces the inauguration of an entire era of *grace and reconciliation.

1.2.3. *1 John 3:12.* It is an exhortation to love each other that brings Cain and his brother to 1 John 3:12. Cain supplies a counterillustration. There the writer traces murder to its source: prior wicked deeds on Cain's part confronted the righteous deeds of his brother, resulting in a deadly combustion. By pointing to prior deeds of each, John's interpretation sounds very much like the conversation between Abel and Cain supplied by *Targum Neofiti* (neatly filling the lacuna in MT at Gen 4:8a). According to this source, Abel explains: "It was because my deeds were better than yours that my sacrifice was accepted with favor and your sacrifice was not" (Kugel, 177, cf. 181).

2. Trends in Interpretation.

In addition to the interpretations noted above, several other approaches merit mention. (For a historical review of interpretations on Abel's offering from the Septuagint forward, see Lewis's useful survey.)

Liberation theology recognizes the Cain-Abel account as significant for the theme of victimization. Depending on the writer, liberation theology may focus on either Abel or Cain as victim. While Abel's suffering is transparent from the text, in a materialist reading Cain may be recognized as suffering as a peasant farmer dispossessed by the dominant society (McEntire, 25-26). M. McEntire seeks to characterize God not only by his involvement but also by divine absence at conspicuous points (McEntire, 28, 30). For example, why did God warn Cain of pending temptation but not Abel of pending murder?

H. Maccoby presumes that behind the biblical account is a myth akin to Romulus's killing of Remus. He infers this fratricide took place originally as a human sacrifice that obtained divine favor. In time biblical compilers altered the

account to disparage human sacrifice (Maccoby, 11, 32). If the textual evidence could match the creativity of this revisionist interpretation, it might prove more compelling.

3. Implications.

Two implications flow from the life of Abel (not to mention those stemming from Cain). The first concerns God's attitude toward acts of worship. If Abel's gift was preferred because of *the offerer's character*, we encounter here a truth that biblical writers will later reiterate: cultic observance has worth if it springs from inward integrity (cf. Amos 5:21). Only then will gifts (and givers) obtain divine favor (cf. Mt 5:23-24). Alternatively, if Abel was preferred because his *offering* complied with unrecorded stipulations, such obedience would likewise recommend reception.

Second, injustice by its nature summons divine retribution. Aggrieved minds of prophets and martyrs alike may find rest in the fact that at the proper time God will bring justice on behalf of those innocently victimized (cf. Hab 2:8; Rev 6:10).

ABIHU. See NADAB AND ABIHU.

ABIMELECH

Abimelech ("my father is king" or "father of a king") is the name (or cognomen, i.e., the title applied to Philistine rulers, as *Pharaoh* was applied by the Egyptians) of the king of Gerar (not to be confused with the Israelite judge named Abimelech in Judg 9). In Genesis 20; 21:22-34 and 26:1-33, this character (or pair of characters) plays a major role as the antagonist of the patriarchs *Abraham and *Isaac. Both patriarchs face Abimelech first in the setting of the wife-sister motif, then in a dispute over water rights that is resolved by a covenant ceremony.

1. Philistine Identity
2. Abimelech and the Ancestors

1. Philistine Identity.

Abimelech is identified as a Philistine in Genesis 26:1 (cf. Gen 21:32), an apparently anachronistic identification, since the Philistines did not arrive in Canaan until about 1200 B.C. It is possible to view this identification as proleptic in anticipation of the later arrival of the Philistines (Wenham, 94). K. A. Kitchen suggests that the Philistines of Genesis may have come from the Aegean area, noting that the description of the Philistines in Genesis is inconsistent with their descriptions in Judges and Samuel:

Those [Philistines] in Genesis live around Gerar, and under a king, not in the "pentapolis" (i.e., Gath, Gaza, Ashkelon, Ashdod, Ekron) under "lords." . . . [T]hey are rela-

tively peaceable, not forever waging wars, despite having an army commander. It is therefore, more prudent to compare the Philistines of Abraham and Isaac with such people as the Caphtorim of Deuteronomy 2:23, and to view the term itself as a thirteenth- to twelfth-century term used of an earlier Aegean group such as the Caphtorim by the narrator. (Kitchen, 56)

The suggestion's plausibility is supported by the ample archaeological evidence of Aegean contact with the Levant as early as the third millennium B.C. (Yamauchi, 26-32). J. Van Seters, however, takes the identification of Abimelech as Philistine as evidence of the narrative's lack of historicity (Van Seters, 52).

2. Abimelech and the Ancestors.

2.1. Characterization. In his dealings with the Hebrew ancestors, Abimelech is variously characterized as (1) a sincere, morally upright, just, God-fearing king who seeks to make amends when caught in a controversy (Gen 20:9, 14-16; 21:23; 26:11); (2) an obtuse if not incompetent ruler whose intelligence apparatus inevitably fails him, leaving him susceptible not only to being duped by the patriarchs (Gen 20:2; 26:7) but also ignorant of his own servants' actions (Gen 21:26; 26:29); (3) an individual of unfailing spiritual insight that enables him to converse with God through a *dream (Gen 20:3-7) and to recognize the presence and blessing of God with the patriarchs (Gen 21:22; 26:28-29); and (4) one who eagerly enters into covenant relationships with the patriarchs (Gen 21:23, 32; 26:28-29). While these apparently contradictory portrayals of the narratorial character serve the interest of the story, we will see below that the demands on the chieftain of the Philistine territory required a leader skilled in negotiating with such nomads as Abraham and Isaac and in maintaining the interests of the agriculturists he ruled. Although Abimelech does not hesitate to refer to God in negotiations with the patriarchs, there is insufficient evidence to indicate that Abimelech shared the faith of the ancestors.

2.2. Wife-Sister Motif. Abimelech encounters both Abraham and Isaac when these nomadic pastoralists enter Gerar, between Kadesh and Shur, in search of water and pasture. In their fear of the powerful ruler, both use the "wife-sister" deception to try to protect their own lives. Because of the obvious parallel with Genesis

12:10-20, scholars have puzzled over the original form of the story. The suggestion has also been made that the "wife-sister" deception is a literary doublet or triplet in which the ancestor is portrayed as one who used deception "as a measure of self-defense by an immigrant against a powerful, indigenous ruler" (Matthews, 21). It has also been suggested that the original story featured the lesser-known Isaac and Abimelech but grew through folkloric retelling to feature the greater Abram and *Pharaoh and the increased danger to the ancestress (von Rad, 271). J. Van Seters argues for the dependence of the later stories on the earlier ones in the sequence and regards the Genesis 12 account the oldest of the three, an oral folktale told with simplicity (Van Seters, 167-91). T. D. Alexander questions this approach, arguing that the episodes derive from a single author.

Scholars have found theological purposes for the use of the wife-sister motif (Clines, 45). In each case the ancestors have just received a divine promise of progeny (Abraham in Gen 18:10, 14; Isaac in Gen 26:4). Both patriarchs jeopardize the promise by reacting in fear to Abimelech's presence and failing to trust God's protection, while in both cases Abimelech, the Philistine king, acts with integrity to protect the matriarch from contact that would have undermined the promise. Thus God does not allow the divine promise to be thwarted (Martens, 32). S. McEvenue suggests a reading that concerns God's intervention in distinct realms of reality: international relations, relations with other racial groups and individual human feelings.

The wife-sister stories can be read as a test of the promise to Abram in Genesis 12:1-3 that the patriarch will be a source of *blessing (or even curse) to the nations. The stories describe a situation in which both Abimelech and the patriarchs "are depicted in terms of a relationship fraught with possibility, both for good and evil, wherein both parties are responsible for behaving properly toward one another" (Biddle, 611). G. C. Nicol offers a similar reading of the stories using the categories of "promise," "threat" and "resolution."

Several attempts have been made to understand the socioeconomic context of the wife-sister stories. J. K. Hoffmeier suggests that the patriarchs offered their wives to Abimelech in diplomatic marriages. G. M. Freeman contends that the stories indicate that both Abraham and

Isaac made personal treaties with the Philistines that were not binding on later generations. According to V. H. Matthews (118-26), the Abimelech account describes the constant interaction between the more settled agriculturalists (the Philistines) and the nomadic pastoralists (the ancestors). Abimelech, as chieftain of this territory, exercised the authority to regulate the social and economic conflicts in the region. The ebb and flow of the relative strength of the patriarchs and Abimelech can be charted through their negotiations for water rights. Using advantage gained through the "wife-sister" deception, the patriarchs were given greater freedom to expand their herds to the limit of available resources. Their growing prosperity and privileged status provoked hostility among the more sedentary Philistines. The provocation of bringing Phicol, the military commander, to the negotiations again shifted the balance of power. Eventually both patriarchs were able to negotiate a covenant of nonaggression with Abimelech. The narratives illustrate how crucial the maintenance of good relations with the indigenous peoples was to the later readers of these stories.

ABRAHAM

As progenitor of the Israelite nation, Abraham is clearly one of the most important figures portrayed in the Pentateuch. Not only is he Israel's biological ancestor, the father of the special line of seed through which *blessing would come to all nations, but he is also the role model for the *covenant community, both in the faith he exercises and the obedience he exhibits. Therefore, although the central focus in approximately twelve chapters of Genesis, Abraham's significance extends far beyond the amount of space allocated to him—both in the Pentateuch itself and in the OT as a whole.

1. Name(s)
2. Career
3. Character
4. Religion
5. Family and Relatives
6. Significance

1. Name(s).

Abraham is the first character in the Bible to have two names and the only one (with the possible exception of *Sarah) to have two that are so similar in sound and perhaps also in significance—although the latter conclusion, despite the general consensus, is still debatable. The initial form of the patriarch's name, *Abram*, combines the noun *'āb* ("father") with the verb *rwm* ("to be high, exalted") and can mean either "he is of exalted (i.e., good) ancestry" or, as is more likely, "exalted father"—a reference to the deity's status rather than that of Abraham's ancestors.

Most scholars interpret the patriarch's name change simply in terms of a dialectal variant, dismissing the explanation of the longer epithet given in the text (i.e., "father of multitudinous nations," Gen 17:5) as "popular etymology." However, while there is no attestation of a cognate root in biblical Hebrew, the existence of the Arabic root *rh*m ("multitude") provides some linguistic support for retaining the meaning of

“Abraham” suggested in the biblical text and detecting a switch in focus in the two names (i.e., between the fatherhood of God and the fatherhood of the patriarch). Thus understood, the etymology implied in Genesis 17 may reflect a subtle wordplay on two synonymous terms (*rāhām* and *hāmōn*) to reinforce the fundamental idea of multitudinous expansion. Alternatively, N. Sarna (124) adopts Ibn Ezra’s suggestion of reading the consonants as an acronym for *’ābir* (“mighty one”) plus *hāmōn* (“multitude”) plus *gōyim* (“nations”). This ingenious explanation, however, has not won widespread support.

Apart from the rationale offered in Genesis 17:5, no convincing explanation has been offered for the fact that Israel’s progenitor should have these two names. Significantly, each name is used in a way that is entirely consistent with the name change at this point in the Genesis narrative, *Abram* being used some sixty times in Genesis 11:26–17:5, and *Abraham* occurring almost 130 times from Genesis 17:5 to the end of the book. Therefore, even if the two names are understood simply as dialectal variants, an explanation in terms of the different literary sources or oral traditions that have allegedly been amalgamated in the process of compilation seems to be ruled out.

2. Career.

Abraham’s career is recorded in Genesis 11:27–25:11, the largest of the sections introduced by the “*tōlēdōt* formulas” that provide a literary framework in the book of Genesis (see Genesis, Book of §1.1). The cycle relates how Abraham’s clan migrates from *Ur (southern Babylonia), settles in *Haran (Upper Mesopotamia) en route to Canaan and how subsequently Abraham (seventy-five years old; Gen 12:4) and his family separate themselves from their clan to take up a seminomadic existence in and around the land of Canaan. This decision on Abraham’s part is explained as his obedient response to a divine directive, to which several *promises are attached (Gen 12:1-4a). The story that unfolds in the ensuing narrative highlights Abraham’s devotion to Yahweh and, despite some vacillation, his enduring confidence that the promises made by this deity will eventually be fulfilled.

Yahweh’s instruction and promises to Abraham are essentially twofold: (1) Yahweh com-

mands Abraham’s physical relocation, offering him the assurance of future nationhood (i.e., “descendants” and **land*”; Gen 12:1-2a); (2) Abraham is instructed to “be a blessing” (Gen 12:2b) and given the promise of international blessing (“all the families of the ground will experience blessing through you,” Gen 12:3b). While the meaning of the first part of Yahweh’s speech is fairly straightforward, the same cannot be said of the second (Gen 12:2b-3), which has unfortunately been taken by many translators and commentators as simply an extension of the blessings promised in Genesis 12:2. However, several recent studies have highlighted the linguistic and literary grounds for retaining the imperative sense of the Hebrew here, thus understanding the promise of international blessing as in some way consequent upon Abraham’s subsequent behavior.

Abraham, it must be said, appears to trip up at the first hurdle. Having symbolically mapped out his territory in Canaan (Gen 12:6-9) and despite further divine assurances (Gen 12:7), Abraham abandons the Promised Land in face of a severe famine and travels down to Egypt (Gen 12:10-20). This episode in the patriarch’s career is a rather unfortunate one: Abraham places both himself and his family in grave peril by the ruse of passing off Sarah as his sister (which, though technically correct, is nevertheless deliberately misleading; cf. Gen 20:12). Only divine intervention averts disaster and keeps the promise of descendants alive.

The nationhood dimension of the divine promise continues as the primary focus in the two chapters that follow (Gen 13–14), both of which involve Abraham’s nephew *Lot. Precisely why Lot had accompanied Abraham is never clearly explained, although there are some grounds for seeing this as the first of Abraham’s attempts to provide for himself a surrogate heir (cf. Gen 11:30; 15:2-3). This would certainly explain why Lot has such a prominent place in the Abraham narrative up until the birth of a physical son to Abraham (Gen 16) and, if L. A. Turner has correctly identified a reference to Lot in the enigmatic parts of Genesis 15:2-3 (see below), why the suggestion of a surrogate heir through *Hagar is made only after Yahweh’s promise of a biological son in Genesis 15.

Significantly, in both of the early incidents involving Lot (Gen 13–14), the issue primarily

at stake is the prospect of nationhood. The fracas between Abraham and Lot's herdsmen is over territorial rights and is resolved by Abraham's magnanimous decision to give Lot first choice of territory. Notably, Lot's departure from Abraham is followed with a reiteration of the nationhood aspect (land and seed) of Yahweh's promise (Gen 13:14-17) and Abraham's symbolic staking out of his territorial claim at Hebron (Gen 13:18). In the subsequent episode (Gen 14), the prospect of Abraham becoming a "great nation" and having a "great name" (Gen 12:2) is to some measure foreshadowed (see McConville). Moreover, Abraham's extraordinary identification with *Melchizedek, the priest-king of Salem (with whom Abraham's royal descendants would ultimately be linked; cf. Ps110:4) may allude to the special status and role of Abraham's seed and heirs (i.e., "a priestly kingdom and a holy nation"; cf. Ex 19:6).

Whatever hopes Abraham may have entertained for Lot, they are clearly dislodged by Yahweh in Genesis 15, the first place where the patriarch expresses any reservations about the fulfillment of the divine promises (cf. Gen 15:1-2, 7-8). Here Yahweh clarifies his promises, ruling out the notion of a nonbiological son and heir altogether (Gen 15:3-5) and guaranteeing both dimensions of the nationhood promise (seed and land) through the making of a *covenant (Gen 15:9-21). While the symbolic meaning of the strange ritual associated with the establishment of this particular covenant has not been determined to any degree of certainty (see Williamson 2000b, 103-4), the fact that Yahweh alone (as represented by the flaming torch and smoking furnace) passes between the dismembered animals seems to highlight its unilateral nature. Unlike the eternal covenant announced in Genesis 17, the fulfillment of the promise of nationhood is not conditioned by Abraham's subsequent ethical behavior (cf. Gen 17:1). Thus understood, the covenant of Genesis 15 guarantees the fulfillment of only the first dimension of the programmatic agenda of Genesis 12:1-3, that of nationhood.

However, while the territorial aspect of the promise has been firmly resolved in the mind of Abraham by the end of Genesis 15, the same cannot be said of the related dimension (i.e., seed). Although biological descendants have been divinely guaranteed, Yahweh has not expressly said whether or not these will come

through Sarah. Thus, beginning with Genesis 16, there is a shift in emphasis from the promissory focus of nationhood generally to the legitimate line of Abrahamic descent through which this nation, and ultimately the blessing of all nations, will come.

Genesis 16 relates how Abraham himself complicates matters when, at his wife's bidding, he obtains (at the age of eighty-six; Gen 16:16) a surrogate heir through Hagar, Sarah's Egyptian *slave-girl. Yahweh's preservation of Hagar and her unborn child, and in particular his promise of numerical expansion concerning *Ishmael (cf. Gen 16:10), leave open the possibility that the programmatic agenda of Genesis 12:1-3 will be realized through Abraham and Hagar's son. It is this prospect, apparently entertained by Abraham himself (cf. Gen 17:18), that makes necessary Yahweh's further revelation (when Abraham was ninety-nine; Gen 17:1) of a covenant to be perpetuated with the special line of Abrahamic descent through Sarah's son, *Isaac (Gen 17:19-21). This covenant guarantees not simply the blessing of a single nation descended from Abraham but the blessing of a multitude of nations—whose "father" (in the sense of spiritual benefactor) Abraham will be. How the latter will materialize is elucidated in Genesis 17:6-8. From Isaac's line of Abrahamic descent will come a royal line of "seed" (the "kings" of Gen 17:6, 16; cf. 35:11) who will reign over the "great nation" promised to Abraham (Gen 12:2) and who will culminate in an individual through whom all the nations of the earth will obtain blessing (cf. Gen 22:18).

This emphasis on the special line of Abrahamic descent through which the nations obtain blessing is maintained in subsequent chapters of the Abraham narrative. The unusual nature of Isaac's conception—and thus the miracle needed to establish this special line—is highlighted by the account of a further *theophany in Genesis 18:1-15. The following two incidents—Abraham's intercession for Sodom (Gen 18:16-33) and Lot's deliverance from its destruction (Gen 19:1-29)—seem to highlight not only that others may obtain blessing through Abraham (Gen 19:29) but also that to experience such blessings others must emulate Abraham's righteous behavior (Gen 18:17-19). Interpreted in this light, the disturbing incident with which the story of Lot concludes (Gen 19:30-38) highlights the stark difference between the behavior

of Lot's descendants and that which was expected of Abraham (cf. Gen 17:1) and all those incorporated within the covenant of *circumcision (Gen 18:19).

In the following chapters the special line of Abrahamic descent is brought into even sharper focus. The promise of a son and heir, along with all the other promises, is placed in jeopardy when Abraham again attempts to pass his wife off as his sister (Gen 20:1-18). Once more disaster is averted by divine intervention, and so the promised son is born (Abraham is now one hundred years old; Gen 21:5). The special line of Abrahamic descent, anticipated in Genesis 17, is at last established (Gen 21:1-7). Not surprisingly, the next issue to be resolved is the covenantal status of Ishmael vis-à-vis Isaac (Gen 21:8-21). Although Ishmael will enjoy some of the promised blessings (Gen 21:13; cf. 17:20), Isaac alone is to be the covenant heir (Gen 21:12; cf. 17:19, 21). Thus Hagar and Ishmael are banished from Abraham's household.

Given the nature of *Abimelech's concerns—not only for himself but for his descendants (Gen 21:23)—and the way Abraham's second encounter with him illustrates the patriarch's potential to mediate blessing to others (Gen 21:22-34), it seems unlikely that the primary focus of the narrative has shifted from Abraham's seed. Indeed, rather than being a literary intrusion, this pericope may also alert the astute reader to the covenantal significance of the following chapter, in which we read of God himself swearing an oath. Before Abraham can enter into such a covenant with God, however, his submission to the divine imperative of Genesis 17:1 must first be demonstrated, thus explaining the otherwise anomalous test narrated in Genesis 22. Once Abraham demonstrates the extent of his faith and obedience, God's choice of Abraham as the one through whom "all the families of the ground will experience blessing" is vindicated and the eternal covenant announced in Genesis 17 is established.

The rest of the Abraham narrative (Gen 22:20—25:11), essentially an appendix (see Alexander 1998, 202 n. 26), focuses chiefly on how the special line of Abrahamic descent is maintained. Rebekah, Isaac's bride-to-be, is introduced in the short *genealogy of Genesis 22:20-24. The following chapters mark the transfer of the divine promises from Abraham to Isaac, recording the death and burial of Sarah (Gen 23),

the obtaining of a wife for Isaac (Gen 24) and the means by which Abraham ensures and Yahweh confirms Isaac's status as Abraham's exclusive heir (Gen 25:1-11). The length at which Abraham's purchase of the cave at Machpelah is recorded highlights the importance of the Promised Land in the ensuing narrative. But as well as having literary significance, patriarchal *burial in the Promised Land is clearly an expression of confidence that God's promises will eventually be fulfilled (cf. Gen 49:29-32; 50:25). Thus even in death (at the age of 175; Gen 25:7), Abraham's confidence in God's promises is graphically portrayed.

3. Character.

As the above survey of Abraham's career graphically illustrates, Abraham's character can be summed up in one word: *faith. It was faith in God's promises that induced him to exchange an urban-based life in Ur (Gen 15:7; cf. Neh 9:7)—and subsequently (however the opening clause of Gen 12:1 is understood) Haran (cf. Acts 7:2-4)—for the seminomadic lifestyle he adopted in the land of Canaan. It was this same faith in God's promises that underpinned his unselfish offer to Lot (giving him first choice in the dispute that erupted over pasturage for their animals; Gen 13), prompted his tithe to Melchizedek (Gen 14:19-21) and persuaded him to refuse a share in the spoils of war (Gen 14:21-24). It is for his faith that Abraham is accredited with a righteous standing before God (Gen 15:6), and it is his faith that explains his unhesitating obedience to God's commands (e.g., to circumcise himself and his household [Gen 17:23-27]; to expel Hagar and Ishmael [Gen 21:8-14]; to sacrifice his beloved son and promised heir [Gen 22:1-18]). Ironically, it is the chapter in which Abraham's doubts are first articulated that expresses the significance of Abraham's faith—as the means of his righteous status before God (Gen 15:6). Thus throughout the Abraham narrative faith is the key aspect of the patriarch's character to which the writer repeatedly draws our attention.

Nevertheless, Abraham's was not an unquestioning faith or one that was immune to doubt. As already noted in the above panoramic sketch of his career, on more than one occasion Abraham felt it necessary to question the logic of God's plans, and he did so not only in relation to his personal circumstances (cf. Gen 15:2-3, 8;

17:17-18) but also in connection with God's dealings with others (Gen 18:23-32). Moreover, on several occasions Abraham betrays a distinct lack of faith: twice placing Sarah—and thus the promised seed—in jeopardy (Gen 12:10-20; 20:1-18), once laughing at the very idea of such an elderly couple producing a child (Gen 17:17).

However, these few occasions when Abraham failed to express absolute certainty in Yahweh's plans do not detract from Abraham's status as the exemplar par excellence of faith (Rom 4:11). Indeed, the climactic location of the supreme test of faith and Abraham's submissive response (Gen 22) highlights that, in the final analysis, faith triumphed over doubt—even to the extent of believing that, were it necessary, God would restore life to the dead (cf. Gen 22:5; Heb 11:19). Thus these two contrasting images of the patriarch's character (faith and doubt) should not be interpreted as being contradictory or mutually exclusive but rather as indicative of the genuine struggles between mental certainty and stark reality that even Abraham, "the father of those who believe," had to overcome.

4. Religion.

The nature of Abraham's *religion is inextricably bound up with the identity of the deity whom he worshiped. This issue is complicated by the fact that a number of different epithets are used of the patriarchal deity in the book of Genesis (e.g., El Elyon, El Shaddai, El Olam, El Bethel). The rich variety of divine appellations in Genesis was the basis for A. Alt's thesis (3-86) that Israel's ancestors originally worshiped several different gods and that these deities were only later identified with each other and subsequently assimilated into Yahwism (*see* God, Names of). Thus, according to Alt, patriarchal religion was essentially polytheistic, despite its monotheistic presentation in the final form of the book of Genesis. Alt's thesis has been criticized on several grounds: the remoteness of the material with which he compared the patriarchal texts (Nabatean and Palmyrene inscriptions dating from, or just prior to, the early Christian era); his contention that the patriarchal deities were originally anonymous (known only by the names of their devotees); and his assertion that the various El gods mentioned in Genesis were associated with specific localities.

A different understanding of patriarchal religion, propounded by F. M. Cross, employs com-

parative material (e.g., Ugaritic) that is much closer to the patriarchal era (i.e., Middle Bronze Age). Unlike Alt, Cross acknowledges a basic continuity between the deity of the patriarchs (who all worshiped the same cosmic Canaanite deity, El, despite the use of different epithets) and Yahweh (another epithet of El). Against this, however, one could contend with M. Haran that the patriarchs avoided worship at existing Canaanite shrines, preferring rather to erect independent altars, and that El Shaddai was primarily a Hebrew deity (cf. Gen 10:21). While G. J. Wenham (171) correctly notes the circularity of such observations (they depend on the antiquity and reliability of the Genesis traditions), it would be ironic indeed, given the antipathy to Canaanite religion in the biblical traditions (especially if the latter are thought to be later retrojections; *see* below), if Israel's ancestors were in fact simply devotees of the chief god in the Canaanite pantheon. Admittedly, a cursory reading of Abraham's encounter with Melchizedek (Gen 14) could reinforce such an interpretation. However, as J. G. McConville (94) points out, Abraham clearly identifies Melchizedek's "God Most High" as Yahweh (Gen 14:22). Consequently, to equate Abraham's and Melchizedek's concept of "God Most High" is strangely to miss the point.

The question of whether Abraham's concept of God was monotheistic (as opposed to being simply henotheistic) is more difficult. While Abraham's use of the plural verb form (although cf. the Samaritan Pentateuch) in association with *'ēlōhīm* in Genesis 20:13 could be interpreted as proof that he had not abandoned polytheism (cf. Josh 24:2), this may simply be an instance of Abraham accommodating his speech to the worldview of Abimelech. Moreover, while household gods feature in the patriarchal stories (Gen 31:19-35; 35:2, 4), it is surely misleading to suggest that these were "highly valued" (Wenham, 160); indeed, their use seems to have been restricted to *Jacob's family and appears more to have been tolerated by the patriarch than actively encouraged. Thus there is no incontestable evidence within the Genesis material that patriarchal religion was in any sense polytheistic. Indeed, as A. R. Millard boldly concludes from the example of Akhenaten in Egypt and the long antiquity of the Rudā cult in Assyria, "the possibility has to be allowed that in the 2nd millennium B.C. there was a fam-

ily, then a people worshipping one God alone . . . without leaving any trace apart from the traditions preserved in writings formed at a later date" (Millard 1994, 129).

The identity of Abraham's deity is further complicated by Exodus 6:2-3, a text that—read in association with Exodus 3:13-15—may be taken to suggest that Abraham and the other patriarchs were ignorant of the name *Yahweh*. Such an interpretation, however, does not sit easily with the frequent use of *Yahweh*—both in the narrative and (admittedly less frequently) in the dialogues of the Genesis material. Genesis portrays Abraham's deity, whatever other appellations he attracts, as *Yahweh*, the God who was worshiped subsequently by the Israelites. While some have argued that this is an editorial feature, reflecting the later theological understanding of the biblical compiler rather than genuine patriarchal knowledge of God (so Wenham; Moberly), the typical diachronic explanation is to ascribe the allegedly conflicting viewpoints (as to when God disclosed himself as *Yahweh*) to different underlying sources or traditions. Both these explanations, however, fail to account adequately for the rationale of the final editor(s), whose literary finesse is now widely acknowledged, and which may in fact be reflected in the actual distribution of the divine names in Genesis (see Alexander 1997, 96-101). A further drawback of these two explanations is their failure to allow for any differences in theological nuance between *Yahweh* and *Elohim* (see Alexander 1997, 99-100).

In view of the frequent deployment of the name *Yahweh* in Genesis, therefore, other scholars have challenged the above interpretation of Exodus 6:3. Drawing attention to the unusual syntax of Exodus 6:3 (and the enigmatic nature of Ex 3:13-15), such scholars have concluded that these texts do not necessarily claim that the patriarchs were ignorant of God's name as *Yahweh*. Some have suggested (most recently, Alexander 1997) that the key clause in Exodus 6:3 should be understood as a rhetorical question: "By my name, *Yahweh*, was I not known to Abraham?" Others have placed more emphasis on the actual significance of the divine name, claiming that patriarchal knowledge was deficient in respect to the actual meaning of *Yahweh*. In a recent variation on the latter explanation, C. R. Seitz plausibly interprets Exodus 6:3 in the light of God's enigmatic reply to

Moses in Exodus 3:13-15 (i.e., "I will be who I will be"), persuasively concluding that "God was not known in his name *YHWH* fully until the events at the sea" (Seitz, 247).

While debate on the precise significance of Exodus 6:3 will continue, there can be no question as to the identity of Abraham's God as far as the final editor of Genesis was concerned: Abraham was a follower of *Yahweh*, and thus his religion, however primitive, was a form of *Yahwism*. This is supported by the many points of commonality: *altars, *sacrifices, prayer, vows, circumcision, tithes. Granted, there are notable dissimilarities (e.g., patriarchal worship involved practices later deemed improper, apparently operated without the mediation of *priests and lacked key aspects of the later cult such as the *tabernacle and the celebration of the *exodus; patriarchal marriages took place within relations proscribed in the Mosaic law). Some of these, however, were innovations that occurred due to God's activity in the time of *Moses. Nevertheless, while the religious practices of the patriarchs differed significantly from normative Mosaic *Yahwism* (and comparative ancient Near Eastern religions; see Pagolu), it was the central tenet they shared—that *Yahweh* (Wenham; Moberly) had formed a unique relationship with Abraham and his descendants—that united patriarchal religion and Mosaic *Yahwism* and gave them their most distinctive religious trait.

5. Family and Relatives.

Abraham's father, *Terah, was a descendant of *Shem (Gen 11:10-26). Terah's motives in migrating from Ur to Canaan (Gen 11:31) are not recorded in Genesis, although, according to the NT, he was apparently influenced to some extent by Abraham's decision (cf. Acts 7:2-4). In any case, rather than making the final leg of the journey, Terah settled in Haran, where he subsequently died (at the age of 205, according to the MT, when Abraham was 135; cf. Gen 11:26, 32; the Samaritan Pentateuch, however, gives Terah's age in Gen 11:32 as 145).

Abraham's two brothers, *Nahor and *Haran, are of secondary significance in the Abraham narrative—indeed their significance relates not to themselves but rather to their offspring. For reasons nowhere explicitly stated, Haran's son Lot accompanied Abraham to Canaan. However, as suggested above, it seems likely that Abraham saw in him a potential sur-

rogate heir, thus explaining his attitude and actions toward him. Nahor's chief significance lies in the fact that his son, Bethuel, fathered Rebekah, the wife of Isaac (Gen 22:20-23).

Sarah, Abraham's wife, plays a crucial role in the Abraham narrative. Her barrenness, highlighted from the beginning (Gen 11:30), proves to be the recurring test of Abraham's faith in the promises of God. While the wife-sister incidents highlight how Abraham placed the promise in jeopardy, the Hagar episodes indicate that Sarah herself was not faultless.

The significance of Hagar, Sarah's maid and Abraham's concubine, lies not only in the fact that through her Abraham fathered Ishmael but perhaps also in her Egyptian nationality. As Zakovitch has recently suggested (516-19), Abraham's dealings with *Egypt, and Hagar in particular, may account to some extent for Egypt's later maltreatment of his descendants.

Ishmael and Isaac are undoubtedly the two most important characters in the Abraham narrative (except for Abraham and Sarah). Ishmael is something of an enigmatic character in the plot. Despite the circumstances of his conception, he is incorporated (to some extent, at least) in the promises of a "great nation" (cf. Gen 12:2; 17:20; 21:13, 18), innumerable descendants (cf. Gen 15:5; 16:10; 17:20), blessing (Gen 12:2; 17:20) and, arguably, a great name (cf. Gen 12:3; 17:20; 25:16). Nevertheless, a clear distinction is maintained between the covenantal status of Ishmael and that of Isaac (cf. Gen 17:18-21; 21:11-13). While Ishmael is undoubtedly a covenant beneficiary, Isaac is exclusively the covenant heir. The significance of the latter, it seems, was the perpetuation of a special line of Abrahamic descent from which would come a special nation, a line of kings and, ultimately, a royal individual through whom the promise of international blessing would be fulfilled (see Williamson 2000b, 151-74).

The significance of another wife, Keturah, after the death of Sarah (the most straightforward reading of the canonical arrangement of the narrative) and her children to Abraham seems to lie chiefly in the fact that the children Abraham fathered through her were, like Ishmael, not counted as his heirs (cf. Gen 25:5-6). Thus, while (like Ishmael's descendants) Keturah's children reflect a fulfillment of the divine promise to increase Abraham's descendants numerically, they play no part in the

fulfillment of the promise in Genesis 17:2-6 to make Abraham the "father of multitudinous nations"; this promissory aspect belongs exclusively to Isaac (Gen 17:15-16; 21:12).

As well as the members of his immediate family, Abraham's household included numerous servants (Gen 14:14; 17:23-27; 18:7; 22:3; 24:2, 35, 59), among whom belonged (probably) the herdsmen of Genesis 13:7-8. Some of these servants, presumably including Hagar, were acquired during Abraham's stay in Egypt (Gen 12:16), as were others after his tryst with Abimelech (Gen 20:14). While admitting that the picture of Abraham with his private army in Genesis 14 contrasts markedly with the general portrayal of the patriarch elsewhere in the narrative as a nomadic shepherd, F. I. Andersen draws attention to at least one other text that supports this more illustrious characterization (Gen 23:6). Wiseman's observation (145-46) is also pertinent: Abraham's rank and dignity were also acknowledged by the kings of Egypt (Gen 12:10-20) and Gerar (Gen 20), who, given the circumstances, would undoubtedly have dismissed an insignificant foreigner rather than lavish gifts upon him.

Eliezer, as observed above, is another problematic character in the story, due largely to the uncertain meaning of the Hebrew words in Genesis 15:2-3. The one of whom Abraham speaks in these verses has been generally identified as a surrogate heir, one "Eliezer of Damascus, Abraham's household slave." L. A. Turner, however, challenges the traditional interpretation on the grounds that the meaning of the *hapax legomenon* (word appearing only once in the Hebrew Bible) *mešeq* is assumed, as is the supposition that Abraham speaks of the same individual in both verses. Turner (73) maintains that while Genesis 15:2 may admittedly refer to one Eliezer, his precise identity and role is far from clear, as is his relationship to the person described as a *ben bēti* in the following verse. Turner suggests, rather, that whatever the identity and role of the former individual (Eliezer), the "son of my house" in view in Genesis 15:3b is none other than Lot, Abraham's nephew.

Nevertheless, however the *ben bēti* of Genesis 15 is interpreted, it is clear from Genesis 24:2 that some sort of hierarchical structure existed among Abraham's servants and that the one with overall responsibility was a male. Thus, while the connection is not made explicitly in

the text itself, the servant whom Abraham commissioned to find a wife for his son may have been the Eliezer of whom we read in Genesis 15.

6. Significance.

Abraham's significance is at least threefold, in that the Bible presents him as a national ancestor, a historical figure and a theological character of tremendous importance.

6.1. National. Abraham was of paramount importance in relation to the nation of Israel. Not only was he the nation's progenitor (Ex 2:24; 4:5; 32:13; cf. Mic 7:20), but also Israel's territorial claims and concept of God are traced back ultimately to him (Ex 3:6, 15; 4:5; cf. Ps 47:9).

This representation of Abraham in Genesis as the father of Isaac, the grandfather of Jacob and, consequently, the national ancestor of all Israel is viewed by many *traditio-historical critics, however, as quite artificial. While his connections with Hebron suggest to such scholars that Abraham was indeed an ancestor of the Judean tribes that settled in this vicinity, R. E. Clements (153-54) typically maintains that his elevation to ancestor of all Israel did not take place until the period of the united monarchy, when relations between Israel and Judah were conducive to such a claim. Such a reconstruction, however, is driven by scholarly presuppositions over the identification and dating of alleged sources/traditions, which increasingly have been challenged by recent scholarship, conservative and otherwise. It also raises serious questions over the historical value of the patriarchal traditions concerning Israel's ancestry, despite the fact that (1) Genesis clearly purports to be portraying real historical figures; (2) more complex oral folk histories have been accurately preserved by other tribal groups; and (3) such a tracing of national ancestry was by no means unique in the world of the first millennium. Admittedly, there is nothing among comparative material that is precisely like the biography of Abraham; nevertheless, there are ancestral traditions that are analogous to some extent.

6.2. Historical. Given the radical skepticism that has arisen in some circles with respect to later OT historiography (e.g., in the monarchy period), it is not surprising that for such scholars "the quest for the historical Abraham is a basically fruitless occupation" (Thompson, 315), echoing similar sentiments expressed over a century ago by J. Wellhausen. While the latter's

influence had been eroded by the biblical *archaeology movement's insistence on the historical plausibility of the patriarchal traditions, growing twentieth-century confidence in their authentic witness to the world of the second millennium B.C. was strongly challenged in the mid 1970s by T. L. Thompson and J. Van Seters. Like Wellhausen, they maintained that the patriarchal stories constitute an imaginative projection of Israel's later hopes into a created past that simply reflects the period in which it was written. Exposing some serious flaws in the methodology of W. F. Albright, C. H. Gordon and others, Van Seters maintained that comparative ancient Near Eastern evidence (e.g., the Nuzi archives) used to support a Middle Bronze Age setting for the patriarchal narratives was inconclusive, especially since equally good parallels could be drawn from the first millennium B.C. While such a depreciation of all the second-millennium comparative material—as well as Thompson's and Van Seters's own methodology—has not gone unchallenged (e.g., see Selman, 108-29), the very concept of a historical patriarchal age can no longer simply be assumed but must be defended rigorously. Nevertheless, the socioeconomic and religious distinctives portrayed in Genesis 12–50 sit most uncomfortably with the idea that it is a poorly disguised retrojection from a later age.

However, even when the antiquity of the patriarchal traditions is accepted, historical difficulties remain. Given the absence of absolute chronology in Genesis (e.g., exact synchronisms with extrabiblical events), it is impossible to date Abraham (or the other patriarchs) precisely. In fact proposed dates for the patriarchs range from a date in the Early Bronze Age (2800-2400 B.C.) to a date in the Late Bronze Age (1550-1200 B.C.), the most probable being somewhere in the early part of the second millennium. The biblical chronology, working back from 1 Kings 6:1, collates to a date of about 2092 B.C. for Abraham's arrival in Canaan. However, both 1 Kings 6:1 and the related chronological data are open to different interpretations (*see* Exodus, Date of; Chronology). Moreover, the LXX of Exodus 12:40 also includes the period in Canaan with Israel's 430 years in Egypt (suggesting a date of 1877 B.C. for Abraham's journey to Canaan), so dating Abraham's migration is clearly not as straightforward as may first appear.

Nevertheless, while fixing absolute dates for

Abraham is best avoided, the biblical portrayal of him certainly fits an early second-millennium setting: personal and place names associated with the patriarchs have appropriate attestation; the seminomadic lifestyle of the patriarchs, as well as key terms in the narratives, are exemplified in texts from Mari (located between Ur and Haran); some (although, by no means all; cf. Van Seters) of the customs attested to in the patriarchal texts find parallels only in second-millennium comparative material.

Moreover, alleged anachronisms in the Abraham narrative (e.g., the presence of Philistines [Gen 21:32, 34]; the domestic use of camels [Gen 12:16; 24:10]) do not necessarily undermine it as an authentic witness to the patriarchal age. As A. R. Millard contends (1992, 1.39), Philistines (or a group so called by a later writer) may have resided in Canaan long before their attestation in other written sources, and camels may have been domesticated centuries prior to their general use. Therefore, although ancient Near Eastern comparative material cannot be said to prove the historicity of the biblical Abraham, it does confirm that his portrayal in Genesis is entirely plausible and thus, from the historian's viewpoint, his actual existence more likely.

6.3. Theological. Prior to the Abraham narrative the book of Genesis presents two major phases in God's dealings with humanity and does so in terms of two individuals, *Adam and *Noah. The Abraham narrative, therefore, represents the third phase in salvation history, thus indicating the patriarch's theological significance.

The ancestry of Abraham's father, Terah, is traced back through Shem to Noah (Gen 10:1-32; 11:10-26), who is in turn traced back to Adam through *Seth (Gen 5:1-32). In this way a theological continuum is suggested between Abraham (and the promises God made to him) and the "protevangelium" of Genesis 3:15. Moreover, God's promise to make Abraham both fruitful and numerous (Gen 17:2, 6) seems to allude to the divine mandate given to Adam and subsequently to Noah (cf. Gen 1:28; 9:7), suggesting that this divine enabling of Abraham is but the next step in the outworking of God's original purposes. Furthermore, the juxtaposition of the call of Abraham with the tower of *Babel incident suggests that the promissory agenda of Genesis 12:1-3 comprises the element

of divine *grace that otherwise would, somewhat anomalously, be missing. Thus the phase of salvation history that begins with the call of Abraham carries forward the plan initially disclosed in the aftermath of Adam and Eve's rebellion in the garden of *Eden and subsequently maintained through the deliverance of Noah and his family from the *flood.

The promises of Genesis 12:1-3 set the agenda, not simply for the rest of the book of Genesis, but for all of the subsequent material in Genesis to Kings—indeed, arguably well beyond that to the NT fulfillment through Jesus Christ (see Williamson 2000a). Thus understood, while the primary fulfillment of these promises relates to the nation of Israel, their ultimate focus is on something far more extensive: the international community of faith.

Some aspects of the programmatic agenda are partially realized within Genesis—Kings. While none of the promises (other than the establishment of the special Abrahamic line of "seed") is fulfilled in Genesis, the book of Exodus emphasizes the phenomenal expansion of Abraham's descendants in Egypt (Ex 1:6-10; 12:37). It further illustrates that two key precursors to inheriting the Promised Land have been met: Abraham's descendants have become temporary residents in a different land, where they have been oppressed as slaves (Gen 15:13), thus setting the stage for the promised deliverance (Gen 15:14) that unfolds in the chapters that follow. Therefore, Exodus marks the initial stages in the fulfillment of the divine promise concerning nationhood, a prospect that is only finally realized after the conquest (under *Joshua) and total subjugation of Canaan (under David). However, this fulfillment of the posterity and territorial aspects of the patriarchal promise was merely a foreshadowing of an even greater fulfillment to come, a fulfillment anticipated especially in the OT's prophetic literature (e.g., Hos 1:10-11; Zech 10:6-10).

The other major aspect of the patriarchal promise (i.e., the blessing of the nations) remains an unfulfilled hope for the duration of the OT era. While there may be allusions to the promise in the activities of Joseph (Gen 41:57) and the reign of Solomon (cf. 1 Kings 4:34; 9:26—10:25), it is again clear from the prophetic literature that the consummation of this hope was still future (cf. Is 19:24-25; Jer 4:2;

Zech 8:13, 20-23). This same future orientation is reflected in Psalm 72:17, a psalm that, significantly, links the mediating role associated with Abraham and his seed to a future and ideal Davidic king.

In view of these OT expectations, therefore, it is not surprising that Jesus Christ is presented as a royal descendant of Abraham through David and that in him the patriarchal promises find their ultimate fulfillment: Abraham's innumerable descendants encompass a global community of faith, incorporating both biological and spiritual "seed"; the territory promised to Abraham encompasses not only the land of Israel but the whole earth (Rom 4:13); and through Jesus, Abraham's royal descendant, people from every tongue and tribe and nation obtain eternal blessing. Thus Abraham's theological significance extends far beyond the actual verses allocated to him; he is indubitably one of the most theologically significant characters in all of Scripture.

ADAM

The name *Adam* derives from the root 'dm . This root occurs some 605 times in the Hebrew Bible. It is also found in contemporary Hebrew epigraphic material and in later Hebrew, including the Dead Sea Scrolls. As a verb, the root 'dm means “to be red” (Is 1:18, etc.). It is associated with the color red or brown in words such as 'ādōm , “red, brown” (Zech 1:8, etc.); 'ōdem , “ruby” (Ezek 28:13, 17; 39:10); 'ēdōm , “Edom”; 'ādāmā , “reddish” (Lev 13:19, 24, 42-43, 49; 14:37); and the well-known word for “earth, ground,” 'ādāmā (Gen. 2:5, etc.).

'ādām is used with four senses in the Hebrew text: a generic term for humanity; a specific term for an individual male; a personal name; and a place name. Other usages have been suggested: “skin, hide, leather” (Hos 11:4); and “ground, earth, steppe” (Gen 16:12; Job 36:28; Jer 32:20; Zech 9:1). However, the four senses identified above suit all these occurrences as well. Therefore, there is no need for additional meanings that may be introduced from cognate forms in other Semitic languages or from other forms of the root in Hebrew (Hess 1988). The place name 'ādām occurs in Joshua 3:16, where it describes a location in the Jordan Valley usually identified with Tell ed-Dâmiyeh. The first three usages are found in the Pentateuch. In fact, they occur within the first four chapters of Genesis.

1. 'ādām in Genesis 1
2. 'ādām in Genesis 2—3
3. 'ādām in Genesis 4
4. The Name Adam Outside the Bible

1. 'ādām in Genesis 1.

The first appearance of 'ādām is found in Genesis 1:26-27. There it occurs twice, describing the divine *creation of humanity on the sixth day. It is clear that the 'ādām created is intended as a collective. In Genesis 1:27, 'ādām in the first half of the verse is set in parallel with “male and female” in the second half. The intent is to include all members of the human race in the 'ādām that God created.

God determines to make 'ādām in “our image” and “our likeness.” Suggestions about the

meaning of these terms have multiplied. Some think the one term was used in an earlier period and the second was added later as a gloss to explain the first. Others suggest that *image* and *likeness* reflect physical and spiritual dimensions of the 'ādām . However, none of these is conclusive. An Assyrian and Aramaic bilingual inscription dating to the ninth century B.C. and originating in northern Syria includes both these expressions, spelled the same in the Aramaic version as in Hebrew (Hess 1991). The Akkadian version translates both by the same word, “statue.” Therefore, it is reasonable to suppose that the Hebrew usage of these two terms was, as with Aramaic, stylistic variation used to describe the same thing. It reflects poetic repetition that emphasizes the idea.

However, 'ādām was not a statue. Instead, man and woman were commanded to be fruitful and to subdue the earth. The command or expectation to reproduce occurs with all the animals created in Genesis 1 and is best understood as part of the creation order rather than as distinctive to the *image of God (Bird). This image stresses the dominion or stewardship of the earth that 'ādām is commanded to complete. To be sure, fruitfulness is part of the fulfillment, because dominion is not possible without populating the earth. Yet the idea of dominion is a useful one with which to compare the statue mentioned above. A royal statue at a distant corner of the empire represented the king's authority when the ruler could not be physically present. So also, at the completion of God's creation, he left 'ādām as his image to represent his authority on earth. This suggests that the function of the image is to reflect the divine will on earth in such a way as to extend God's kingdom into every area of nature, society and culture. This is exactly what happens with the first man in Genesis 2.

2. 'ādām in Genesis 2—3.

The creation of 'ādām in Genesis 2:7 is described with a wordplay on 'ādāmā , the “ground” from which 'ādām was created. Thus 'ādām , having received the breath of life and in origin coming from the ground itself, is eminently suited to take care of the garden and all that God has placed in it.

In Genesis 2 'ādām occurs with reference to a single individual who is the focus of attention. Whenever 'ādām appears here it is always with

either the definite article or an inseparable preposition. Although the latter cases would not require *ʿādām* to be definite (and indeed the Masoretic Text does not vocalize it that way), the older consonantal text allows for the possibility of an original definite article before every *ʿādām* in the text.

If this is the case and *ʿādām* is definite, then “the man” may suggest a number of possible interpretations. First, there is no occurrence of the personal name *Adam* in this narrative. In Hebrew (unlike Greek), personal names do not accept a definite article. Second, such an articular noun used to refer to an individual has two linguistic properties: meaning and reference. A common noun such as *ʿādām* in Genesis 1 has meaning insofar as *ʿādām* is capable of a definition, namely, “humanity.” However, it has limited reference. *ʿādām* does not distinguish one individual from another or one group from another. A proper name (e.g., Adam), on the other hand, has little meaning. Although many personal names in modern society have no conscious meaning, in the ancient world nearly all names carried some sort of meaning. This is true of Adam, especially since there is wordplay between *ʿādām* and *ʿādāmā*, the ground from which the *ʿādām* was taken and to which he will return. However, in all cases the primary concern of a personal name is reference, to distinguish the name bearer from everyone else. “The man” of Genesis 2 fulfills both roles. Like a common noun, it has meaning insofar as it is translated and that translation enhances the understanding of the first man. Like a proper name, it has reference insofar as it designates the first man in the garden of *Eden. This in-between state is occupied by one class of nouns (among others): titles.

How is *ʿādām* a title in Genesis 2 (Hess 1990, 5-7)? As an articular noun it can be translated “the man.” This means that it is definite. Another way of giving a noun definition in Semitic languages is to place it in construct with a definite noun that follows. There are a number of examples of a word translated “man” being rendered definite in this way. However, it is not *ʿādām* but *ʾīš* that is used in these cases. Most significant is the use of this construction to describe rulers of a town or region. Thus in 2 Samuel 10:6 and 8 the expression *ʾīš tōb* may be rendered, “ruler of Tob.” If so, this understanding has parallels in cuneiform texts throughout

the ancient Near East. Especially interesting are the titles given rulers of Palestine and Syria in the fourteenth-century B.C. Amarna letters. There the logographic sign for “man” is *lú*, which is followed by a place name to designate an individual as ruler of that town or region. This includes the local leaders of Acco, Amurru, Ashkelon, Beirut, Byblos, Gezer, Lachish, Megiddo and Sidon.

It is appropriate to compare this usage of *lú* to that of *ʿādām* as found in Genesis 2. Both of these terms have a similar semantic range, referring both to “man” in particular and to “humanity” in general. In Genesis 2 and the titles discussed above, both are definite, since *ʿādām* is preceded by a definite article, and *lú* is in a construct state with a definite noun. Both refer to a particular individual who is given the responsibility of caring for or ruling over a particular area of geography, whether a city or a garden.

These similarities imply that *ʿādām* is a title that reflects a middle point in the continuum from the general usage of *ʿādām* in Genesis 1 to the personal name Adam at the end of Genesis 4 (Hess 1990, 8). The responsibility of the *ʿādām* in Genesis 2 is detailed by the instructions that God gave in Genesis 2:15-17. There the *ʿādām* is to work and take care of the garden (*ʿbd* and *šmr*). He is also forbidden to eat of the tree of the knowledge of good and evil. The first part of this illustrates the stewardship responsibility that the *ʿādām* has, namely, ordering and watching over the garden that God has created. The second part describes a limit placed upon the *ʿādām*: he is not to touch one tree. The longer description anticipates the dialogue between the snake and the woman in Genesis 3. Genesis 2:18-20 illustrates another expression of the image of God. The *ʿādām* is not only responsible for the garden but also the one who takes care of the animals. He does this by naming them and thus discerning the essential characteristics of each. This is not so much an expression of authority as it is a classification of the animal kingdom and thereby an ordering of them (Ramsey). In this way the *ʿādām* continues in obedience to the will of God to reflect that will in the image of God by ordering and promoting the welfare of the created order (just as God had done in the creation itself).

The creation of the woman is the culmination of God’s acts through which he finds an ap-

propriate helper (*‘ezer*) for the *’ādām* (see Eve). The helper is recognized as one who comes from the flesh of *’ādām* and is thus of the same material, unlike either the garden or the animal world. Through the act of naming, the *’ādām* also recognizes the newly created being as “woman,” *’iššā*, taken from the “man,” *’is*. The wordplay introduces a new Hebrew word for man, *’is* rather than *’ādām*. This is necessary because the addition of a feminine ending to *’ādām* would result in the word for ground, *’ādāmā*, as already noted. However, the addition of the same ending to *’is* produces the desired result of a word for “woman,” *’iššā*. This wordplay leads to the pronouncement that the man will leave his family and create a new family with his wife (again, *’iššā*). The concern of Genesis 2:24 is to bring back into one flesh what was divided in the creation of woman in Genesis 2:22.

In Genesis 3 the man recedes as the woman and the snake engage in conversation and then action. Only at the conclusion in Genesis 3:6 does the *’ādām* participate. Even then it is a passive role in which he receives and eats what the woman has given to him. Yet it is to the *’ādām* (Gen 3:9) that God calls. He is the one who first confesses the shame of nakedness that the fruit has now enabled him and the woman to experience. It is this shame that separates him from God and, as he blames the woman (Gen 3:12), alienates him from her as well. Thus the harmony of relationships established at the end of Genesis 2, and symbolized there by the absence of shame despite nakedness, begins to disintegrate here and throughout the remainder of Genesis 1–11 and throughout human history (Hauser). This alienation is defined by the judgments that God proclaims upon the snake, the woman and the man.

The desire of the woman for the *’ādām* and his dominion in Genesis 3:16 must be compared with the words of God to Cain in Genesis 4:7, where the rare word for “desire” as well as the word for “rule” also appear together (Hess 1993a). In both cases the desire is one of authority, and the struggle is one of the wills that exists between people. The statement of male dominance is a judgment of the way life would be, not an expression of the divine will. It is no more sinful to reject and seek to overturn it than it is sinful to use weed killer in light of Genesis 3:18.

Although the *’ādām* of Genesis 3:17 was not cursed, the *’ādāmā* (“ground”) received a curse. Again, the wordplay calls to mind Genesis 2:7 and the dependence of the man upon the ground. The curse not only alienated the *’ādām* from the ground but also increased the labor required to complete the tasks of tilling and keeping the garden. However, this was not to last long because the *’ādām* and the woman were expelled from the garden and left to face the world apart from the close relationship with God that they originally enjoyed. This follows the three events of Genesis 3:20–22: the naming of Eve, divine provision in the garments of skin and God’s recognition that the *’ādām* has become like the divine because he knows good and evil. As with the previous namings, that of Eve reflects a discernment derived from the judgments of Genesis 3:15–16. God’s provision of leather garments may anticipate the *sacrifices of Leviticus in providing access to God through the death of an innocent animal. However, at this point in Genesis its main purpose is to provide a permanent means of ending the shame of nakedness. Because this is associated with the knowledge of good and evil obtained from eating the fruit, it is appropriate that the discussion of these implications should follow in Genesis 3:22. This knowledge was gained in explicit disobedience to God, so the “eternal life” derived by eating from the tree of life (see Eden, Garden of) would also be contrary to the divine will.

3. *’ādām* in Genesis 4.

The noun *’ādām* appears again in Genesis 4:1, 25 and 5:1–5. All of these are birth announcements. Genesis 4:1 describes *Cain’s birth. Although most translations render the *’ādām* here as the personal name Adam, that is incorrect. Alone among its occurrences in Genesis 4 and 5, in 4:1 it has the definite article. Grammatically, it cannot be a personal name in Hebrew. It is better rendered, “the man,” as in Genesis 2 and 3. Thus this usage ties the *’ādām* of the preceding chapters with the founder of the human race and the line of Cain (Gen 4:1). The occurrence of the same phrase in Genesis 4:25 suggests that the nonarticular *’ādām* there is identical to the one in verse 1. As the founder of Seth’s line, *’ādām* here becomes the personal name Adam. Just as the *’ādām* with the article tied together these genealogies with the story of the garden of Eden, so the Adam of Genesis 5:1–5 relates this genealogy to

the figures described in Genesis 1:26-28 by the references to the image of God in both texts.

As a personal name, Adam occurs again in the OT only at the beginning of the great genealogy of Chronicles (1 Chron 1:1). There it refers to the Adam of Genesis 1—5. No other usage of the personal name Adam can be found in biblical Israel.

4. The Name Adam Outside the Bible.

The name *Adam* is not unknown outside the Bible (Hess 1993b, 59-65; 1997, 31-32). As early as the third millennium B.C. at Tell Mardikh, the site of ancient Ebla in northern Syria, the personal name occurs as *a-da-ma* and variants. It may also occur there as a divine name, *Adama*, which forms part of a name for a month on the Eblaite calendar. In the early second millennium B.C. there is a female name at Mari, *a-da-mu*. Other names with the “Adam” form come from different sites at this time. The name virtually disappears from records in the late second millennium B.C. Only at thirteenth-century Emar (in northern Syria) is it found, and there it is as a divine name, *a-dam*, that is part of a month name, just like at Ebla. Otherwise, there is no certain occurrence of the personal name in West Semitic before the Hellenistic period. The implication is that the earlier into West Semitic texts that one looks, the more likely one is to discover the use of the name Adam. The name all but disappears from the textual record by the time of Israel’s settlement in the land of Canaan. Therefore, as a personal name Adam preserves an authentic memory of an early time when it was so used. A similar pattern of occurrences can be found with many of the other names in the early *genealogies of Genesis 1—11.

AGRICULTURE

Agriculture, or farming, involves raising crops and livestock for human consumption. It is the foundation of survival for any nation, since it provides, among other things, the food supply for its population. Members of some societies are further removed from agricultural concerns, since they are able to acquire its products through barter or purchase. In preindustrial societies such as ancient Israel, however, all people were more directly involved in the processes of agriculture. While Canaan is portrayed as a fertile land (Deut 8:8-9), in reality expertise in the means of production was vital because it was an area where the climatic and soil conditions were often marginal at best. Acquisition of agricultural expertise and its dissemination was one of the functions of the *family unit.

Family life among the patriarchs was agriculturally based. Their herds and flocks were an important part of their holdings (e.g., Gen 13:5; 26:14; 32:7; 45:10). They also grew the crops necessary to sustain themselves and their livestock (Gen 18:6; 27:28; 37:7). While their life at first glance might appear to have been that of

nomads, constantly wandering from place to place, they needed to be at least semisedentary, remaining in one location long enough for the maturation of the planted crops. Some of their number also moved to different locations seasonally in order to pasture their flocks in optimum grazing land (Gen 37:12-17). This type of mix between having a permanent abode for the sake of crops and also seasonally changing locations for the sake of herds and flocks, known as “dimorphic pastoralism” or “enclosed nomadism,” was common in the ancient Near East (Rowton 1974; 1976).

1. Geography
2. Livestock
3. Crops
4. Theology

1. Geography.

Geography and climate were the biggest challenges to agriculture in Canaan. Water supply was determinative of what could be grown, as well as where and when it could be grown. These factors were not uniform throughout the area. Water in *Egypt, for example, was provided by the flooding Nile and by irrigation (Deut 11:10), and areas of Palestine were similar in at least some periods (cf. Gen 13:10). Israel's supply was generally depicted differently (Deut 8:7-9), with rainfall, which was seasonal, having an important place in agricultural production (Deist, 124). Mainly carried by winds from the west over the Mediterranean, rainfall amounts were usually higher closer to the sea and decreased further inland as well as from north to south (Hopkins, 84-94, 325; King and Stager, 86). Since rain was so important to agriculture, Hebrew has several different terms for various types and times of rainfall (Deist, 106, 125). Other water sources besides streams, which were often seasonal, and rain included pools and springs, as well as man-made wells (Num 21:17-18) or cisterns and even dew (Deut 33:28; Hopkins, 98-99).

Topography was also problematic in the central hill country, where much of the Israelite habitation was located prior to the Iron Age, since there was little level land on which to plant. Terraces, which were labor intensive to construct and maintain, were needed to help prevent erosion and preserve rainwater (Hopkins, 173-86; King and Stager, 87; Meyers, 9). All of these factors and others contributed to the at

times very indistinct boundary between *land that was fertile and usable, and the *wilderness, or steppe, which was too marginal to support permanent sedentary habitation.

2. Livestock.

Animal husbandry is reflected in Scripture as being an ancient practice (Gen 4:2). Animals were domesticated for two purposes: as beasts of burden and as sources of material products, such as hair, hides, meat, milk and the like. The former use is discussed in more detail elsewhere (see Zoology §7). Lists of livestock belonging to people most often include donkeys, oxen, camels and sheep (Gen 12:16; 30:43; 32:5; Ex 22:9). Camels were used for long-range transportation (e.g., Gen 24; 31:17). Donkeys were also used as beasts of burden (Gen 42:26; Ex 4:20; Num 22:21) and joined bovines in plowing the fields in preparation for sowing (Is 30:24). Cattle were also used to tread out grain (Deut 25:4).

Cattle terminology is rich in the Bible, since they were so important to the economy. F. Deist usefully lays out the various terms employed, showing those which designated domesticated cattle generally (*bāqār*; e.g., Gen 33:13; Ex 22:1 [MT 21:37]), farmyard cattle (*šôr*; Ex 34:19), those used in agriculture (*ʿelep*; Deut 7:13; 28:4, 18, 51), their young (*ʿegel* or *ʿeglâ*; Gen 15:9; Lev 9:2, 3, 8; Deut 21:3, 4, 6), those used for sacrificial purposes (*pār*; Ex 29:1; Num 28:11) and the bull (*ʿabbîr*; Is 34:7; cf. Gen 49:24). There is some overlap between the uses of these terms. At times the meat of cattle was used for food (Gen 9:4; 18:7; Deut 14:4; cf. 1 Sam 28:24; Lk 15:23-30), though this was relatively rare and only on special occasions, since it would deplete the “capital” of the herds rather than using the renewable “interest,” such as their milk, which was more widely consumed (Gen 18:8; Deut 32:14; cf. Hopkins, 247-48). Leather, from either cattle or the flocks, was used for clothing (e.g., Gen 3:21; Lev 13:48, 56-59; Num 31:20; e.g., shoes, EA 22.23), water vessels (Gen 21:14; Num 24:7) and, in the Amarna tablets (fourteenth century B.C.), for such military applications as shields and armor (EA 22.37-41), though these are not mentioned in the Pentateuch (cf. 2 Sam 1:21; Is 21:5; Nahum 2:3).

Cattle are important enough that they are included among those things to be provided with *sabbath rest (Deut 5:14), and they are to be returned to their rightful owner if they stray (Ex

23:4). Part of this importance was due to the role they played in the sacrificial system (Gen 8:20), where they were offered on behalf of the people as burnt (Lev 1:3), fellowship (Lev 3:1) and *sin offerings for the priest and the people (Lev 4:3, 14). Part of the meat of some of these sacrifices was also a major portion of the priestly livelihood (Lev 6:26; 7:32-34).

Flocks of sheep and goats played even a more important role in Israel's daily life, since they were more plentiful and thus available to a wider spectrum of society (see the economic distinction between those having access to cattle, sheep or birds for sacrifice in Lev 1). Deist (161-62) provides a useful discussion of the Hebrew words used in this semantic field. The flock also provided milk (Gen 18:8; Ex 23:19; 34:26; Deut 14:21; 32:14) and meat (Gen 27:9; 31:38; Ex 12:8; Deut 32:14). Their skins (Ex 25:5; 26:14; 35:7) and hair or wool (for cloth: Ex 25:4; 35:6; Lev 13:48; Num 31:20; Deut 22:11; in ritual: Num 19:5-6) were also useful. The flock played a major role in the Israelite sacrificial system (see, e.g., Gen 4:4; 8:20; 15:9; 22:7-8, 13; Ex 12:21; Lev 1—7). Sheep and cattle were used in a covenant ceremony, possibly as a ratification gift offered by the lesser of the parties to the greater (Gen 21:28-31; Wenham, 93). They could also be the means of compensation for shepherding (Gen 31:8, 41) or even for prostitution (Gen 38:17).

Birds were also used both for food (quail: Ex 16:13; Num 11:31-33) and as sacrifices (Gen 15:9; Lev 1:14; 5:7; 12:6; 15:14, 29-30). These would have been available for capture, though they might also have been domesticated. There is not sufficient textual or archaeological evidence to determine this.

Though not usually considered among livestock, the bee, which was domesticated in Egypt from the early dynastic period, was exploited for honey in Israel (Deut 32:13). However, most of the references to "honey" in the Pentateuch probably refer to a product derived from fruit rather than from the honey bee (see 3.5 below).

3. Crops.

According to the biblical text, the use of field crops is as old as humanity itself (Gen 4:2). The importance of crops to the Israelite domestic economy is shown by several calendars that describe the agricultural year. The Gezer Calendar, from the tenth century B.C., speaks of an agricultural year's activities beginning in the au-

turn. They are laid out in the following order: the harvest [of grapes and olives; 'sp], sowing [of grain], late-planting, chopping flax, barley harvest, harvest and measuring(?), pruning [of vines] and summer fruit (COS 2.85.222; cf. Ex 23:14-19; 34:18-23; Lev 23:9-43; Deut 16:9-17). These crops will be studied in that order.

3.1. Grapes. Grapes provided the area of Canaan with food and drink from as early as the Early Bronze I period (3500-3000 B.C.; Walsh, 13; King and Stager, 98-102; cf. Gen 9:20). They provide what is proverbially stated as one of the nation's three staples of "grain, new wine and oil" (e.g., Num 18:12; Deut 28:51). Israel's warm, dry climate lent itself to grape production, as did the low humus, a high alkaline soil of the hill country (Walsh, 31). Vines require water in the winter, which is Israel's rainy season, but they prefer the heat and dryness of Israel's summers, so conditions, like those of other places on the Mediterranean, such as Italy and France, are ideal for viticulture (Hepper, 97; Walsh, 30). Selecting the best ground, building and maintaining terraces to retain the meager water, planting and protecting the developing crop, and harvesting and processing fruit in wine presses and fermentation vats made grape and wine production a very labor intensive activity (cf. Is 5:1-2; Walsh, 87-207; King and Stager, 98-101).

The fruit of the vine could be eaten fresh (Is 65:21) or dried and preserved as raisins (Hepper, 100), but much of it was made into wine, a common Israelite beverage. There are several terms for wine, denoting different types, colors or even locales. The Hebrew word *yayin* is the most widely used term, occurring 141 times in the OT and twenty-six times in the Pentateuch. The Hebrew *tirôš* ("new wine") occurs thirty-eight times in the OT, ten times in the Pentateuch; *āsīs* (unfermented juice) five times in the OT, none in the Pentateuch; and *hemer* ("red wine") occurs only in Deuteronomy 32:14. A distillate of the grape, a type of brandy, is probably what is meant by *šēkār* ("strong drink"), which occurs twenty-three times in the OT, six times in the Pentateuch. Wine was provided not only for guests (e.g., Gen 14:18) but also for everyday consumption (Gen 19:32; 27:25). The use of any grape product was forbidden for the Nazirite, a person who was specially consecrated to God (Num 6:1-8).

3.2. Olives. Olives provided the second of the three Israelite staples, oil (see 3.1 above). Olive

trees were also well suited for the climatic and soil conditions of the Israelite hill country and foothills (Hepper, 103-9; King and Stager, 95-98). Wild olives were used as early as the seventh millennium B.C., with domesticated olives dating from the Chalcolithic period (Eitam, 19; King and Stager, 96). The time it takes from planting an olive tree to its maturing means that olive growers must be sedentary. Harvesting the ripe fruit was done by hand or by striking the branches with a stick (Deut 24:20; Is 17:6; 24:13) before the overripe olives could fall off of their own accord (Deut 28:40). The ripe fruit was then crushed in an olive press in a two-step process. First it was crushed between two heavy stones, with hot water poured over the mash and the rising, first-quality, virgin olive oil skimmed off the top (Ex 27:20; Lev 24:2). Additional, lower-quality oil was then squeezed out of the pulp using a beam-press (Eitam, 21-22; King and Stager, 96-97, with illustrations).

The Hebrew word *zayit* designates the olive and occurs thirty-eight times in the OT, ten times in the Pentateuch. Oil is called more generally *semen*—193 times in the OT, 105 of these in the Pentateuch—or *yishār*, twenty-three times in the OT, seven of these in the Pentateuch. It is textually unclear whether the unprocessed olive was consumed (see Hepper, 107), but the oil was ubiquitous not only in Israelite society but throughout the ancient Near East. It was used in food (Num 11:8), as an emollient for the body (Deut 33:24) and for medical purposes (e.g., Is 1:6; Lk 11:34). The majority of biblical texts that speak of the use of oil are regarding religious rituals. It was used as fuel in lamps within the sanctuary (Ex 25:6; 27:20) and also had this use in domestic contexts (e.g., Mt 25:1-5). It could be poured or dabbed on an object or person for anointing (e.g., Gen 28:18; 35:14; Ex 29:7, 21), purifying and dedicating what was anointed. Sometimes it took the form of ointments and perfumes, where aromatic elements were added for scent to the oil (e.g., Ex 25:6; 30:22-29). Oil mixed with grain also played an important role in various *sacrifices (e.g., Ex 29:2, 23, 40; Lev 2:1).

Another useful product of the olive tree was its wood, which was used for construction (Liphshitz, 141).

3.3. Grain. The third staple for societal life (see 3.1 above) was grain. The two main varieties grown in the region were barley and wheat. The

field was probably prepared by two separate plowings, initially after the first rain in the fall in order to break up the soil so that it would better hold the moisture, and then in association with sowing (Is 28:24; Hopkins, 214). This would have been done with a “scratch plow” made of a blade or share with a metal, hardwood or stone tip (iron tips would appear later in Israel’s history) attached to a stick that was held to guide the plow. This stick was fastened on a longer pole, which was itself attached to a perpendicular yoke. Oxen or donkeys pulled this implement (Deut 22:10), making a scratch in the earth (King and Stager, 92). The seeds would then have been broadcast or planted in furrows and covered (Gen 8:22; Ex 23:10, 16; Lev 25:3, 11; Deut 28:38). Wheat (*ḥiṭṭā*; thirty times in the OT, six times in the Pentateuch) is usually mentioned first of the two grains (e.g., Deut 8:8; Is 28:25). Three different types of wheat were grown: einkorn, bread (or common) and emmer (perhaps *kussemet* [“spelt”], Ex 9:32; King and Stager, 94), the last being most important (Hepper, 85). One variety of emmer had seven ears (Gen 41:5; Hepper, 85). Barley (*šē’orā*; thirty-four times in the OT, five times in the Pentateuch) was more salt resistant and needed less water than wheat, and so it had a wider growing range and a quicker maturing cycle (King and Stager, 94).

Wheat was planted in December, later than was barley, and harvested soon after it as well (Ex 9:31-32; Committee, 196; Hopkins, 224). D. C. Hopkins describes the various stages of the harvesting process for both grains: cutting the stalks, collecting and moving them to the threshing floor, drying so that the seeds would more easily separate from their covering, threshing to separate seed from hull, winnowing to let the lighter chaff blow away from the heavier grain, measuring and storing (Hopkins, 224; Deist, 153-54). Cutting or harvesting (*qāṣir*; Gen 8:22; 30:14; Ex 34:21) was done with a sickle (*hermēs*; Deut 16:9; 23:25 [MT 23:26]) made of small blades of flint attached to a handle of wood or bone (Borowski 1992, 3.64). Before use, grain was either roasted or ground and milled using stones (Ex 11:5; Deut 24:6). Barley was coarser and seems to have been considered inferior, the food of animals and the poor (1 Kings 4:28 [MT 5:8]; cf. 2 Kings 7:1, where barley is half the price of wheat). Both wheat and barley were used for food (e.g., Gen 18:6; 2 Sam 17:28; 2 Kings

4:42) and also for rituals, though wheat, due to its higher value, was used more than barley (e.g., Ex 29:2; Lev 2; 5:11; 6:15 [MT 6:8]; 7:12; 14:10, 21; cf. Num 5:15 for barley).

In Mesopotamia, beer was made from wheat and barley and was among the most common beverages. It is not clear that the Israelites used this, since wine was so plentiful (King and Stager, 102).

3.4. Late-Planting. That which was planted late according to the Gezer Calendar could have been various vegetables, which were planted during the winter (cf. Thompson, 141). They are not mentioned in relation to the land of Canaan but were an element of Egyptian society for which the wandering Israelites longed: “We remember the fish we used to eat in Egypt for nothing, the cucumbers, the melons, the leeks, the onions and the garlic” (Num 11:5). The first two terms—*cucumbers* and *melons*—occur only here in the Hebrew Bible (Is 1:8; Jer 10:5 are from the same lexical root as the first term), which could indicate that they were not commonly grown in Israel, possibly due to the amount of water needed by these succulents. The latter three are members of the lily family and were common in Egypt (Committee, 159-60). They are less likely to have survived and be found by archaeologists, though some have been recovered in Israel (Hepper, 126-27).

3.5. Summer Fruits. The Hebrew term *qayis* (“summer fruits”; cf. Jer 14:10, 12; Amos 8:1) does not occur in the Pentateuch other than in Genesis 8:22, where its use as the opposite end of the spectrum from winter signifies the season of summer. Deuteronomy 8:8 does list several candidates for inclusion in the category of summer fruits, namely, grapes, figs, pomegranates, olives and honey. The fig (*tēʿenâ*; thirty-nine times in the OT, four times in the Pentateuch) is often mentioned in conjunction with the grape (e.g., Num 20:5). Proper care of the fig tree allows for two or three harvests per year, one of the reasons that it was such an important crop (Committee, 118; King and Stager, 104). Its high sugar content made it a valuable source of energy. Pomegranates (*rimmôn*; thirty-two times in the OT, eleven times in the Pentateuch) were used for their juicy pulp, and their flowers have medicinal value (Committee, 169). Its importance, along with figs and grapes, is shown by the spies bringing them back to indicate the

bounty of the land (Num 13:23). They were also symbolically important since ornaments based on their shape were used as part of the *priestly clothing (Ex 28:33; 39:24) as well as for the columns of Solomon’s temple (1 Kings 7:20). Honey seems out of place in this list of crops, but it is unlikely that it here refers to the product of the bee (see 2 above). It probably refers to the sweet nectar of the date (Hepper, 118; King and Stager, 104).

The date is one of several other fruits not included in the list in Deuteronomy 8:8. The date palm (*tāmār*; twelve times in the OT, four times in the Pentateuch) was such a common part of life that several places and people were named after it (e.g., person: Gen 38; 2 Sam 13; city: Gen 14:7; Ezek 47:19; 48:28; cf. Jericho, “the city of date palms,” Deut 34:3). Its sweet fruit was eaten fresh or dried into cakes (2 Sam 6:19). Its representation was also used in religious art of the temple (1 Kings 6:29, 32, 35). Its wood was used for building, as were its leaves for roofing material, to make booths during the *wilderness wandering for the *Feast of Tabernacles (Lev 23:40; cf. Mt 21:8; Mk 11:8) and to make baskets (Hepper, 117; King and Stager, 104).

Nuts were also part of the diet of Israel, pistachios (*botnim*; only Gen 43:11) and almonds (*šāqēd*; four times in the OT, twice in the Pentateuch) being part of “the best products of the land,” gifts fit for a pharaoh (Gen 43:11). The almond was given a place of honor by having *Aaron’s almond-wood staff that miraculously budded (Num 17:8) placed in the ark as a permanent reminder of God’s power (Heb 9:4).

4. Theology.

In the OT, God is understood as not only the creator of all things but also as the sustainer and provider of everything necessary for life. This includes plants (Gen 1:11-12) and animals (Gen 1:24-25). At *creation, God gifted his creatures, human and beast, with vegetation for food (Gen 1:29-30; cf. 2:9; 3:18-19). Subsequently, after the Fall, humanity was permitted to eat flesh (Gen 9:3), though that had not been specifically denied to them earlier (Mathews, 401). Its earlier consumption is implied by Abel’s occupation as shepherd and the use of animals in sacrifice (Gen 4:2-4). As a reminder of the ultimate source of these foundational elements of life, Israel was called to present a tithe of them back to God (Deut 12:17; 14:23) for the use of his ministers,

the priests and Levites (Num 18:8-13; Deut 18:4).

While these good gifts were made available to all, special abundance was promised for those who maintained their covenant relationship with God (Deut 7:13-14). Israel viewed God's provision as more than simply the products themselves, but also the prerequisites for these agricultural products. The very rain and its timing, so vital to adequate yields in a marginal environment, were under God's control (Deut 11:13-15). These verses show that Israel was well aware of the "circle of life"—rain providing for the grass that was consumed by the cattle, which were in turn for human use.

An agricultural product, the fruit of a forbidden tree, was pictured as the immediate precipitating factor in causing a breach between God and his creatures (Gen 3:6-7); and another, the leaves of the fig tree, was used by Adam and Eve to try to ameliorate the resulting situation (Gen 3:7). God used the very agricultural endeavor itself to punish the rebellion in Eden, increasing the labor and the hindrances to full production (Gen 3:17-18), but God also exhibited *grace in allowing the agricultural cycle to continue to provide for fallen humanity (Gen 3:18). God could also withhold his bounty when his people subsequently rebelled, breaking their covenant with him (Deut 28:18, 23-24, 38-42, 51). This is not the final word, however, since *Moses in his farewell song and blessings reminds the people of the literal fruits of faithfulness in their past (Deut 32:13-14), which could also be their future (Deut 33:28).

ALIEN, FOREIGN RESIDENT

The position of the "alien" in ancient Near Eastern society was generally one of dependence, with a certain amount of cultural isolation. This was the fundamental experience of Israel's own great patriarchs in Genesis, from the point when God called *Abraham to abandon his own land, people and family in favor of God's *covenant. Exodus expands this identity to the entire community of Israel as they "sojourn" in Egypt at the point of their formation as a nation, making this concept foundational to Israelite self-understanding. Within pentateuchal law the "alien" was generally assumed to be a non-Israelite foreigner residing within the community. As such, with a few exceptions, the alien was generally subject to Israelite law, including religious law. The traditional application of alien status to the patriarchs shows that it was not simply an indication of foreign ethnicity, however, but a particularly vulnerable socioeconomic status calling for special protections in line with ancient hos-

pitality traditions. The pentateuchal laws regarding aliens demonstrate a clear humanitarian concern, including guarantees of evenhanded justice without prejudice to their status, fair payment of wages, gleaning rights to the leftover harvest, other provision of food from the triennial tithe, inclusion in feasts alongside the *orphan and *widow, and inclusion in the *sabbath rest. The call to treat the alien with justice and special consideration was motivated by Israelite identification with the vulnerable position of the alien, which had been such a formative part of their own experience.

1. Terms and Translations
2. The Identity of the *Gēr*
3. Treatment of the Alien in Pentateuchal Law

1. Terms and Translations.

The English word “alien” in the Pentateuch most commonly translates the Hebrew word *gēr* (root: *gwr*), but also on occasion *zār* (root: *zwr*) or *nokrî* (root: *nkr*) and its cognates. Hebrew *gēr* has been translated variously as “alien,” “sojourner,” “stranger,” “foreigner,” “non-Israelite,” “immigrant,” “temporary resident,” “resident alien,” “foreign resident,” “protected citizen” or “client.” Perhaps its closest modern equivalent, in terms of its most common usage for people who have been displaced by famine (as in Gen 12:10; 26:3; 47:4; Ruth 1:1; 1 Kings 17:20; 2 Kings 8:1) or war (as in 2 Sam 4:3; Is 16:4), would be “refugee.” It often occurs in conjunction with *tôšāb* (“resident, dweller,” or perhaps more aptly “squatter”), where they should properly be understood together as a hendiadys meaning “resident alien” (similarly to “resident hireling” for *tôšāb* plus *šākîr*), as argued by J. Milgrom.

Gēr is a noun deriving from the Hebrew root *gwr* (“to sojourn, tarry as a sojourner”), with likely cognates in Arabic (“neighbor, patron, protector”), Ethiopic (“neighbor”), Ugaritic (“dweller?”) and Aramaic (“client”; later Christian Palestinian usage associates it with proselytes or neighbors and in some cases with adultery). A connection with Akkadian *gerû* (“to be hostile”) and its participial form *gārû* (“enemy”) is also possible, arguably tying in with Hebrew roots *gwr* II (= *grh*: “to attack, strive”) and *gwr* III (= *ygr*: “to be afraid”). The root is also attested in Phoenician personal names, where it would seem to denote dependence or client status in relation to a deity, as in “client/protégé of

[deity].” In a Moabite inscription (the Mesha Stela) it appears to designate a distinct people-group, male and female, within Israel. The nominal forms of *gēr* occur over ninety times in the Hebrew Bible, with its verbal root *gwr* I occurring over eighty times in the Qal. An appreciable percentage of these are found in Leviticus, with Deuteronomy and Jeremiah also claiming a good share (see further BDB; Kellermann).

In many legal contexts *gēr* is used as a technical term for a particular social status, carefully distinguished from and standing between the “native” (*‘ezrahî*) and “brother” (*‘āh*) on the one hand, and the “foreigner” (*nokrî*) on the other (Milgrom, 2252; Kellermann; Spencer). In other instances usage of the terms *nokrî* and *zār* (“stranger, foreigner”) overlap with *gēr*, and they are occasionally found in poetic parallel with it, but they more clearly address the ethnic “foreigner” as non-Israelite. These terms or their cognates are often used of foreign *women/wives (1 Kings 11:1, 8; especially in Ezra) as well as foreign worship of “strange” or foreign gods (Gen 35:2-4; Deut 31:16; 32:12; cf. Josh 24:20, 23; Judg 10:16; 1 Sam 7:3). The *nokrî* is distinguished as a non-Israelite (one “coming from a distant land” in Deut 29:22 [MT 29:21]) who is barred from the throne (Deut 17:15) and excluded from the privilege of interest-free charity loans for which impoverished Israelites qualified (Deut 23:19-20 [MT 23:20-21]), as well as being excluded from the debt release (Deut 15:3; cf. the exemption of aliens from the prohibition of permanent servitude in Lev 25:45). D. Kellermann proposes that during the late monarchic period, as *gēr* was applied increasingly to displaced northern Israelite refugees or, in the later period, to foreign proselytes, the term *nokrî* was used in legal contexts to replace the older position of *gēr* as the sojourning foreigner. Since *gēr* is used for both *Israelites and non-Israelites in different contexts, it clearly indicates something more than simple ethnicity, but the relationship between these three terms is complex, as is the identity of the *gēr* in the first place.

2. The Identity of the *Gēr*.

While the primary identity of the *gēr* in pentateuchal law is that of the non-Israelite foreigner, it is significant that the term is applied within the Pentateuch not just to people who are ethnically non-Israelite but also to Israelites

themselves when they find themselves in a comparable socioeconomic situation of the temporary resident with no land and no established family support network.

2.1. The *Israelite* *Gēr*. The complex nature of what it means to be a *gēr* is revealed by its assignment to Israelites of various categories. The patriarchs themselves all carried this status initially within the land of Canaan and other places where they traveled, as well as later in the land of *Egypt. This is, in part, how the Israelites conceived their own self-identity. In the creedal formula of Deuteronomy 26:5 we find the “sojourner” designation applied to the generic ancestor of Israel thus: “My father was a wandering [*ʾōbēd*] Aramean; he went down to Egypt and sojourned [*gwr*] there.” A similar pronouncement of historical self-identification with the *gēr* is found in Psalm 39:12 (MT 39:13)—“For a sojourner [*gēr*] am I with you, a squatter [*tôšāb*], like all my fathers;”—as well as in 1 Chronicles 29:15: “For sojourners are we before you, and squatters, like all our fathers.”

The term *gēr* and its cognates are applied to each of the patriarchs individually—to *Abraham (Gen 17:7-8; 20:1; 21:34; 23:4), *Lot (Gen 19:9), *Isaac (Gen 35:27; 37:1), *Jacob (Gen 28:4; 32:4 [MT 32:5]), *Esau (Gen 36:6-7) and *Joseph and his brothers (Gen 47:4, 9)—and collectively, in the context of their time in Canaan (Gen 17:7-8; 21:23; 23:4; 36:6-7; Ex 6:4 [cf. Ps 105:6-15 = 1 Chron 16:13-22]) and their more temporary stays in other places, such as Gerar (Gen 20:1; 26:3), *Haran (Gen 32:3-4 [MT 32:4-5]) and Egypt (Gen 12:10), often because of situations of famine. Abraham applied the term to himself among the Hittites at Hebron in Genesis 23:4 when he sought to purchase a burial plot for his wife Sarah: “I am a resident alien [*gēr wētôšāb*; i.e., a sojourning squatter] among you.” The patriarchs were thus conceived as being nomadic wanderers, native to neither Egypt nor Canaan, having left family and inheritance behind in accordance with God’s call in Genesis 12, and not owning land save a *burial cave at Hebron (Gen 23) and a small plot on which to pitch a tent near Shechem (Gen 33:19).

Gēr status in the Exodus tradition is even more revealing. *Moses is given *gēr* status with respect to his time in Midian (Ex 2:22; 18:3). For the Israelites generally, it is applied to their longer experience in Egypt (Gen 15:13; 47:4, 9; Ex 22:21 [MT 22:20]; 23:9; Lev 19:34; Deut 10:19;

23:7 [MT 23:8]). The Israelite experience as aliens in Egypt is then used regularly in the *law as an argument not to mistreat non-Israelite foreigners (Ex 23:9; Lev 19:33-34; Deut 10:19; 16:9-12). The same usage also then appears with respect to Israelites exiled in Babylon (Ezra 1:2-4), a situation directly parallel to the Israelite position in Egypt or in other foreign lands in the Pentateuch. The experience of the alien is thus fundamental to the character of Israel, being conceived as a basic part of their self-identity as a nation from their very formation in the exodus.

Interestingly, while *gēr* is not applied to *Levites in its nominal form, they are said to “sojourn” (*gwr*) in the sense that they did not receive their own tribal inheritance of land in Israel (Josh 13:14) and thus “sojourn” among the other Israelite tribes (Deut 18:6; cf. Gen 49:5-7; Judg 17:7-9; 19:1). In other texts the Levites are listed *alongside* aliens, widows and orphans as qualifying to benefit from the tithe (Deut 14:29; 26:12-13) and joining in celebrating the *Feasts of Weeks and Tabernacles (Deut 16:11, 14). Thus the special legal status and protections otherwise applied to foreigners (as well as orphans and widows) were also conferred on them, just as the “poor brother” in Leviticus 25:35 was also to be treated kindly as given *gēr* status. Thus here the force of the term is to confer a special status of “protected citizen” by virtue of landlessness (cf. 2 Chron 15:9, where the term is applied to people of Ephraim, Manasseh and *Simeon “sojourning” in Judah). Leviticus 25:23 also applies the term to Yahweh himself as a mark of solidarity with Israel (cf. Jer 14:8).

2.2. The *Gēr* as a Non-Israelite Foreigner in Legal Contexts. The situation as envisioned in Genesis for the preconquest, patriarchal experience of sojourning then also clearly fits the *primary* understanding and usage of this term within pentateuchal law (especially clear in the second half of Leviticus) for non-Israelite foreigners later dwelling within the land of Israel, anticipating the post-settlement period. The *book of the covenant in Exodus (e.g., Ex 22:21-24 [MT 22:20-23]; 23:9-12) stresses fair treatment for the *gēr* in legal disputes, proscription of oppression and benefit from the sabbath rest (as also in Ex 20:10). It then offers a clear justification of identification: “Do not oppress the alien . . . for you were aliens in the land of Egypt” (e.g., Ex 23:9). Here, as commonly in Leviticus, the law assumes

the *gēr* to be living as a dependent within an Israelite household. J. Joosten (54-76) argues that this usage of *gēr* in the second half of Leviticus is evidence for an assumed audience of Israelites already living within the traditional *borders of the land of Israel. The most detailed recent treatment of this topic, written from a documentary perspective, is given by C. van Houten, who attempts to distinguish the legal status and treatment of the *gēr*, as well as the identity of the *gēr*, historically through several distinct periods.

2.3. *Gēr as Denoting Dependent Socioeconomic Status.* The Hebrew term *gēr* refers generally to a person not native to the local area and thus usually without family ties or landed property (Ex 12:19; Lev 24:16; Num 15:30). In Israel such a person would generally not be *able* to obtain property, at least not permanently (according to the Jubilee laws in Leviticus 25). One possible exception to this would be the *gērūt kimhām*, or “guest’s feudal tenure,” granted by David to Barzillai the Gittite (2 Sam 19:31-34; 1 Kings 2:7; Jer 41:17), as noted by Kellermann (444, citing Alt). This case is truly exceptional however. The natural expectation is that the *gēr* would be a landless, seminomadic wanderer (as the patriarchs were) or else some sort of dependent client or “hireling” (i.e., of a *land-owning Israelite)—perhaps a day-laborer or a mercenary in the army (2 Sam 1:13). Such people were reportedly used by David and Solomon as stone-cutters and burden-bearers (1 Chron 22:2; 2 Chron 2:16-18). They were not automatically *slaves, however, and were able to own possessions, herds and even slaves (as did the patriarchs in their status as wanderers). Lot apparently even owned his own house, though dwelling as a *gēr* in Sodom (Gen 19:9). In Leviticus 25 we have indication of a real possibility that a *gēr* might prosper substantially (through a trade of some sort) and thus acquire the means to purchase property and slaves or otherwise settle in the land as an independent/non-dependent party and even act as a creditor (as in Deut 28:43-44, where such a condition is construed as a societal curse). In this case the main concern of the text is that this reversed state of affairs—foreigners owning and enslaving Israelites and their land—should not be perpetuated. Likewise in Genesis 19:9 the Canaanites are insulted that Lot, as an “alien,” would presume to act as a “judge” over them. Strong evidence indicates

that these “resident aliens” were not initially assimilated to mainstream Israelite society but continued to be distinguished as foreigners (as shown in the Moabite Stone, where they are specified as a separate group among the Israelites) in ways that affected the application of law as well as social status. Van Houten suggests that the “outsider” may initially have been defined as a “noncitizen” in the wake of the creation of a centralized monarchic state. F. M. Cross explains the social situation in the context of kinship-based early Israelite society, demonstrating the necessity of such protections as were afforded the alien at a time when tribe and clan were the basis and seat of legal status as well as economic security and opportunity. Interestingly, he also identifies in this context the self-designation of “Hebrew,” relating to Egyptian *‘apiru*, as originally indicating a similar sort of “client-class” status that only later took on “ethnic overtones” (Cross, 69 n. 57). C. J. H. Wright (253-59) proposes that the term *Hebrew* in Deuteronomy 15:12 likewise be understood as a landless Israelite (disputed, however, by Milgrom, 2252). These proposals create a remarkable parallel to the earlier Israelite identification with and usage of the term *gēr*. In this context, the *gēr* (as client) may be seen to indicate an individual with no family or tribal affiliation in the community and without full rights of citizenship. That is, such a one is not a “full member of Israelite society, but someone of different and lower status” who is thus “dependent on a patron for protection” (Spencer, 103).

3. Treatment of the Alien in Pentateuchal Law.

In legal matters, with a few exceptions, the alien was generally to be treated the same as the native Israelite, or with greater consideration. In matters of criminal and even civil law it is not at all surprising that a foreign resident would be fully subject. Equal treatment under the law was maintained out of a sense of justice and equity, as well as for the protection of the community. Application of religious and ritual law to foreigners is a bit more surprising, though within the Holiness Code in the second half of Leviticus, the need to maintain purity in the community and prevent “contamination” of the land may have had an influence. Where “alien” status may have been applied in later stages to northern Israelite refugees (Kellermann, van Houten), full subjection to Israelite religious

laws would be expected. However, as applied to non-Israelite foreigners, exclusion from certain religious obligations and privileges is only logical, as is found in a number of instances. Special protections were afforded aliens (along with the orphan and widow) out of consideration for their more vulnerable socioeconomic position.

3.1. The Alien as Generally Subject to Israelite Law, Including Religious Law. The resident alien in pentateuchal law would seem generally to be envisioned as subject to Israelite law, just as a native Israelite would be. He was responsible first of all to know the law and was subject to its standard punishments. Thus Deuteronomy 31:10-13 explicitly includes the alien (*gēr*) in the assembly gathered to hear the reading of the law each seventh year, while Deuteronomy 29:11 (MT 29:10) specifies that resident aliens working as wood-choppers and water-carriers in the camp were included in the covenant renewal, just as Joshua 8:33 depicts the alien and native standing alike together at the renewal of the covenant at Shechem. The equal application of criminal law, in which “the same law must apply to the alien as to the native-born” (as in Lev 24:22, probably referring specifically to the collection of personal injury laws in Lev 24:17-21, and in Num 35:15, where *cities of refuge are available to Israelites and aliens who kill someone accidentally), is only logical, as is the call to treat the alien justly (Lev 19:33-34; Deut 24:14-15, 17-18).

Significantly, however, the laws imposed on aliens include not only criminal laws but also a number of religious laws as well, and this would seem to be true across all of the pentateuchal sources as defined by critical scholarship (see Source Criticism). Laws explicitly applied to the alien include ritual dietary restrictions (e.g., Ex 12:19, where anyone eating yeast during Passover must be cut off from the community of Israel, whether alien or native-born, and Lev 17:10-15, where Israelites and aliens alike are forbidden to eat blood but must drain out the blood from any hunted animal and cover it with earth or be cut off) and sexual taboos (e.g., Lev 18:26, where the risk of defiling the land demands that native-born and resident alien alike be subject to the various sexuality and other laws as specified in Lev 18:6-23). Aliens were even subject to religious purity laws (e.g., Num 19:10, where ritual cleansing laws are applied to Israelite and resident alien alike). In the Holiness Code we find

harsh standards of judgment imposed on impious aliens equally as on natives, with the alien being subject to the death penalty for religious crimes such as blasphemy and foreign worship. A blaspheming son of mixed Egyptian-Israelite marriage is put to death (Lev 24:10-14). Blasphemers are subject to the death penalty, whether alien or native-born (Lev 24:15-16). Israelites and aliens alike are subject to the death penalty for giving children to Molech (Lev 20:2). According to Numbers 15:30-31, anyone sinning defiantly, native or alien, was to be cut off from the people as a blasphemer for despising Yahweh’s word.

On the other hand, aliens could also find forgiveness of *sin before Yahweh through ritual atonement, as in Numbers 15:26, where aliens are forgiven for unintentional sin along with the rest of the Israelite community when atonement is made, or Numbers 15:29, where it is stated that the same law applies to anyone who sins unintentionally, whether alien or native. Aliens could offer *sacrifices and burnt offerings to Yahweh and fulfill religious vows as long as they abided by the same regulations as Israelites. For example, an alien could offer burnt offerings or sacrifices, but had to do so only at the tent of meeting or be cut off from the people (Lev 17:8-9), with the sacrifices subject to the same requirement of being without defect as were those of Israelites (Lev 22:18-20). They could present burnt offerings, but only in accordance with the law, the same rules applying to the alien as to the native (Num 15:13-16).

Resident aliens were in some instances allowed or even required to participate in and benefit from Israelite religious festivals, including the sabbath rest (Ex 20:10; 23:12; Deut 5:14), the Day of *Atonement—when native-born and resident alien alike were to fast and refrain from work because “atonement is being made for you, to cleanse you” (Lev 16:29-30)—and the Passover (as seen in Exodus 12:48-49, where circumcised aliens could participate in Passover, the same law applying to the native-born and the resident alien, and in Numbers 9:14, where a resident alien could celebrate Passover, but only in accordance with the law, the same laws applying to the alien and native-born). The alien was also explicitly allowed to participate in the harvest feasts of Weeks (Deut 16:11), Tabernacles (Deut 16:14) and Firstfruits (Deut 26:11).

In Exodus 12:48-49, the general principle ap-

plying the same law to the alien (*gēr*) as to the native (*‘ezrah*) was established in the context of provision for circumcised aliens and purchased slaves to participate in the Passover, while uncircumcised hirelings (*śākīr*), temporary residents (*tōśāb*) and foreigners (*nēkār*) were to be excluded. Thus, on condition of circumcision, the alien here would seem essentially to have been allowed to become an Israelite (a “convert” or “proselyte,” as translated in the LXX), since the circumcision indicated full covenantal commitment and integration. Thus D. Kellermann (447) notes that in a number of pentateuchal passages the *gēr* is treated as a “fully integrated proselyte” (cf. Ezek 47:22-23, where the *gēr* even qualifies to receive a portion of land as an inheritance, equally with the native Israelite). Through all of this one gains the distinct general impression that resident aliens were envisioned as being accorded equal treatment under the law (Lev 19:33-34; cf. Deut 24:14-15, 17-18), with only a few exceptions.

3.2. Exclusion of Foreign Residents from Legal Obligation or Privilege. In some instances aliens or foreigners were excluded from certain obligations and privileges. For example, resident aliens and foreigners were apparently exempt from certain dietary restrictions (see Foods, Clean and Unclean). Eating the meat of animals that were found dead was acceptable for foreigners and aliens “living within your gates,” but not for Israelites, who were to be a people holy to Yahweh their God (Deut 14:21). On the other hand, a resident alien (*gēr*) could face permanent slavery, in contrast to the native Israelite, who was protected from that fate (Lev 25:39-43, 46, 54-55), since the slave release granted to the impoverished “brother” (along with “resident hireling” status) was explicitly denied to slaves bought from surrounding nations (*gōyim*) and to resident aliens, who could be considered as inheritable property (Lev 25:44-46). Thus, according to this passage, the “alien” was clearly treated differentially as a “second-class citizen.” The “foreigner” (*nokri*) was similarly excluded from the debt release (Deut 15:2-3) and the prohibition on taking interest (Deut 23:19-20 [MT 23:20-21]), in contrast to the brother (*‘āh*) and companion (*rēa’*). Deuteronomy 17:15 further specifies that no foreigner (*nokri*) could be king, but only “one from among your brothers.”

In the context of the conquest, according to the command of Deuteronomy 7:1-4, foreign in-

habitants of the Promised Land were subject to the “ban” (see *Hērem*) and intermarriage with foreigners was forbidden out of fear of religious contamination. While some accommodations were made (as in Deut 21:10-14, where Israelites were allowed to marry captive women from among their conquered enemies, presumably of foreign ethnicity), intermarriage continued to be frowned on (Gen 24:3; 27:46; 28:1-2, 6-9; Ex 34:16; Lev 21:14; Num 12:1; Josh 23:12; Judg 14:3; more vehemently in postexilic Ezra and Nehemiah), usually on the grounds that it would lead to idolatry. The proposal of the Shechemites to intermarry with the Israelites on the condition of circumcision in Genesis 34 was quickly followed by a massacre of the Shechemites by Simeon and Levi. Foreign wives also played a part in the downfall of Samson, Solomon, Ahab and others. Yet some notable exceptions to this rule are evident, where foreign wives are depicted positively as capable of being fully integrated to Israelite laws and societal expectations. Tamar (Gen 38), Zipporah (Ex 4:24-26; 18:1-6; Num 12:1), Rahab (Josh 2) and Ruth serve as exemplary models of righteousness and faith that put native-born Israelites to shame.

The foreign alien could also be singled out for special scrutiny. Israelite slaves acquired by resident aliens were seen as being at special risk for the abuses prohibited by Israelite law, lending a special urgency to rights of redemption. Israelites were therefore enjoined to check up on resident aliens, since it was not assumed that they would abide by the laws voluntarily. The law of release, along with the non-oppressive treatment clause, was to be enforced on the alien creditor by Israelite kinsmen, who were to ensure that the laws were honored (Lev 25:47-55). Israelite authority to impose such provisions via traditional kinship institutions was assumed. The implicit assumption here is that the foreigner is less likely to be swayed to obedience by appeal to religiously based justifications, and thus would need more immediate inducement. The great irony of the Levite’s concubine was that a Canaanite town had been bypassed in favor of an Israelite town precisely out of an expectation of finding greater kindness among the Israelites (Judg 19:11-15).

Pentateuchal law made no provision for aliens to gain full Israelite status (at least until the third generation for Edomites and Egyptians [Deut 23:7-8]). Certain protective accommoda-

tions were made, however, and even the differential treatment of the alien in Leviticus 25 (as noted above) is matched by more positive elements. The assumed audience of Israelite land-owners is urged to help the “brother” (*’āh*) who becomes poor “as one would help a resident alien” (*gēr wētōsāb*; Lev 25:35), implying that charitable treatment of aliens was assumed. This is followed directly by a proscription of taking interest on loans to the impoverished brother (Lev 25:36-37). While the alien is not mentioned in this provision, the context and literary structure suggests that the interest-free charity loan to the brother was modeled after established practice for the resident alien, who had traditionally enjoyed the special protected status of the orphan and widow. In Leviticus 25:47-55, meanwhile, it appears possible for the resident alien to acquire land (at least temporarily) and even Israelite slaves, showing that the barriers to success were not insurmountable. Certain foreigners (Edomites and Egyptians) were even explicitly approved for acceptance into the congregation in the third generation (Deut 23:3-8), with Israel’s past experience as aliens in Egypt cited as justification.

3.3 Special Protections Afforded to the Alien, Rooted in Hospitality. Along with other particularly vulnerable groups in Israelite society such as the orphan and widow, who were also most likely to be landless and thus incapable of economic independence, the alien was afforded a number of special protections in pentateuchal law. This demonstrates a clear humanitarian concern. The protected status also reflects the fact that these groups were especially vulnerable to injustice—easily taken advantage of for lack of anyone naturally obliged to stand up for them. Yahweh himself thus takes on the role of ensuring justice for them (Deut 10:18-19).

It may well be that these protections were rooted in and modeled after an older ancient Near Eastern tradition of hospitality toward the traveler. From the earliest hospitality traditions, as reflected in Genesis, the *gēr* was accorded special consideration both in charitable provision for basic needs of food and shelter and also in protection from injustice. As observed by van Houten (160), these hospitality traditions (and *gēr* status) clearly could apply to any kind of stranger, including Israelites from other tribes as well as foreigners (see, e.g., its application in Judg 17:7-13; 19:16-21). In the earliest settings

we find a number of stories reflecting a strong emphasis on requirements of hospitality to strangers (Gen 18:1-8; 24:10-33; 26:1-11; cf., e.g., Job 31:32). Clearly Israelite and other ancient Near Eastern hospitality traditions would seem to apply most directly to the sojourner, perhaps in part a function of this special legal status. It was this violation of the hospitality tradition, and possibly violation of the protected *gēr* status, that contributed to the horror of the crimes of Sodom in Genesis 19:6-9. The *gēr* was expected to receive special protection, as did Isaac in Gerar (Gen 26:11).

Special protections against injustice were invoked for the alien in formal legal contexts as well, perhaps modeled after hospitality traditions but formalized as law. Thus the Covenant Code dictates that Israelites were neither to mistreat nor oppress an alien, for they had been aliens in Egypt (Ex 22:21 [MT 22:20]; 23:9). The same motivation was used to encourage the Israelites to treat aliens just like the native-born, loving them as themselves (Lev 19:33-34). Specifically this meant providing fair judgment in legal disputes for Israelites and aliens alike (Deut 1:16-17), not taking advantage of a needy hireling, whether alien or native, but paying wages on time (Deut 24:14) and not depriving an alien of justice, again remembering the former Israelite slavery in Egypt (Deut 24:17-18). Deuteronomy 27:19 highlights the withholding of justice from the alien as a cause for bringing curses on the people. Aliens were to be treated fairly and righteously, against all temptation to take advantage of them.

Out of consideration for their especially vulnerable economic position—that is, not having any inheritance of land or family ties to fall back on in time of crisis—aliens were given rights and privileges similar to or even exceeding those of the native Israelite. Pentateuchal law answered their precarious vulnerability to economic hardship with charitable provision of basic necessities like food for the alien. The gleanings of the harvest and the leftover or fallen grapes were reserved for the poor and the alien (Lev 19:10; 23:22; Deut 24:19-22). The triennial tithe was to be available for aliens along with Levites, orphans and widows (Deut 14:28-29; 26:12-13). Aliens were to be included in celebratory feasts along with orphans and widows (Deut 16:11, 14). The alien was also to share freely in the sabbatical-year produce, which was

to be available for aliens along with landowners' families, slaves, hirelings and animals (Lev 25:6; cf. Ex 23:11, where it is to be given to the poor generally and then the wild animals).

Thus Israelite law made special provision for resident aliens, along with orphans and widows, to safeguard their more vulnerable socioeconomic condition. Leviticus 19:34 takes the principle of Leviticus 19:18, to love one's neighbor as oneself, and extends it to the alien, specifying that the "alien [*gēr*] sojourning [*gûr*] with you" was to be treated just as the native-born (*ezrah*): "You must love him as yourself, for you were aliens in the land of Egypt. I am Yahweh your God!" Deuteronomy 10:18-19 then takes this concern to a profound theological level by identifying Yahweh as one who loves aliens by giving them food and clothing. Indeed, since Yahweh himself loves aliens, the Israelites were also to love them, remembering that they had been aliens in the land of Egypt. Thus loving aliens becomes a type of *imitatio Dei*—realizing our nature as being created in the *image of a loving God.

ALTARS

Altars appear both in the narratives and cultic codes of the Pentateuch. Generally speaking, any place at which *sacrifices or offerings are made to a deity may be called an altar. The Hebrew equivalent, *mizbēah*, derives from a verb that denotes the slaughter of animals or the offering of blood sacrifices, signifying the integral connection between the site and its function. The term is extended in the Pentateuch to include an edifice (crude or elaborate) on which any kind of offering is made. Because altars constitute central elements of the sacrificial cult, much of the priestly legislation in the Pentateuch is concerned with regulating activities associated with them. Within the narrative portions of the Pentateuch, altars assume a significance beyond marking places of sacrifice and serve as memorials and shrines. They may also acquire a metaphorical sense and appear at key points to mark transitions in social status or in human/divine relationships.

1. Types of Altars
2. Altars and Sacrifice
3. The Symbolic Significance of Altars

1. Types of Altars.

The altars mentioned in the Pentateuch may be divided into two categories: open-air altars and altars connected to the *tabernacle. Open-air altars stand alone, apart from other structures. Various individuals construct them throughout the Pentateuch as impromptu places of sacrifice and worship. *Noah builds an altar and offers sacrifice upon disembarking from the ark (Gen 8:20-22). *Abram constructs a series of altars in the land of Canaan, at Moreh (Gen 12:7; cf. Gen 22:2), between Bethel and Ai (Gen 12:8; cf. Gen 13:3-4) and at Mamre in the vicinity of Hebron (Gen 13:18). *Isaac and *Jacob follow suit and erect altars at Beer-sheba (Gen 26:25), Shechem (Gen 33:20) and Bethel (Gen 35:1-3, 7). *Moses

also builds altars, one to mark Israel's victory over the Amalekites (Ex 17:14-16) and another to ratify the *covenant at Sinai (Ex 24:4-8). In thematic counterpoint, *Balaam repeatedly directs that seven altars be constructed for the sacrifice of burnt offerings as requisites for the reception of divine oracles (Num 23:4-7a, 13-18a; 23:27—24:3). Taken together these instances reveal that a solitary altar could be constructed either to provide a location for a particular sacrificial act or to establish a permanent site of worship (cf. 1 Sam 14:33-35; 1 Kings 18:23-38).

The open-air altars mentioned in the Pentateuch seem generally to have been constructed from earth and stone and have much in common with those constructed throughout Syria and Palestine. Earthen altars are in evidence at Mari, and altars carved or fashioned from stone are widely attested (although most of these seem to have been located within temple enclosures). Altars at Megiddo, Hazor, Arad and Beer-sheba represent some of the better-known examples. An Iron I cultic site on Mount Ebal has been associated with the altar that Joshua constructed (Deut 27:1-9; Josh 8:30-35), but the identification has been disputed.

A series of three laws dictates how earthen and stone altars are to be constructed (Ex 20:24-26). The first law declares that altars made simply of earth may be constructed anywhere sacrifices are offered and Yahweh's name is invoked (Ex 20:24). The second authorizes altars of stone but stipulates that the stones may not be cut by any implement, explaining that such a practice would profane the altar (Ex 20:25). The rationale behind the practice is not clear, although the context suggests a concern to differentiate the stone altars of Israel from those of the surrounding nations. The proscription against altar steps (Ex 20:26) may express a similar concern. The rationale, "that your nakedness not be exposed," may intend to thwart any connection between sexuality and sacrifice, an association common in Canaanite cults (cf. Deut 12:27).

The altars associated with the tabernacle display a much different character. Instead of stone or earth, these altars are carefully crafted out of wood and metal. Instructions for the tabernacle include directions that an altar for burnt offerings be constructed of acacia with bronze overlay and placed in the outer courtyard of the complex

(Ex 27:1-8; 40:6-7). Also included are directions for a second, smaller altar that is to be fashioned out of acacia, but with gold overlay. Set inside the tent on the tabernacle's central axis, it was located in front of the curtain that marks off the most holy place where the ark of the covenant was located (Ex 30:1-10). Both the metals and placement of the two altars symbolized the gradation of sacred space that characterized the tabernacle complex. The sacrificial altar, associated with *blood and death, was made of a less precious metal and placed outside the tent, well out of view of the ark. The incense altar was covered with pure gold. It sent up a fragrant cloud that permeated the tent, and it was strategically placed to mark the transference of items from the courtyard into the holy place.

Unlike the open-air altars constructed elsewhere in the Pentateuch, the altars for burnt offering and incense were portable. Poles could be inserted into rings attached on opposite sides, ensuring that both could be quickly and easily transported (Ex 27:7; 30:4-5; 38:5-7; cf. Num 4:5-15). Those ministering before these altars also differed from those who served at open-air altars. Whereas ministry at the latter was undertaken by a variety of individuals, often on an occasional basis, ministry at the altars of the tabernacle was restricted to *Aaron and his sons (Num 18:1-7) and involved regular as well as occasional sacrifices (Ex 29:38-42). Because the offerings presented on these altars ascended to Yahweh, the altars themselves represented the unifying center of Israel's religious and communal life.

Horns extended from the four corners of the bronze altar and incense altar. The purpose of the "horns of the altar" remains unclear, although the feature is common on Canaanite altars, and horns are present on a large sandstone block altar discovered at Beer-sheba. Whatever their function, the protuberances marked the extremities of the altar. Dabbing the blood of the sin offering on the horns purified the entire altar, just as dabbing blood on the earlobes, thumbs and big toes of the *priests purified the entire person (Lev 4:4, 7; 8:14-15, 22-24; cf. Ex 30:10). Grasping the horns of the altar provided sanctuary for fugitives, probably because the individual doing so participated in the *holiness of the altar and thus was not to be killed (Ex 29:37; compare, however, Ex 21:14; 1 Kings 1:49-53; 2:28-31).

2. Altars and Sacrifice.

Because they represented the locus of interaction between Israel and Yahweh, the altars of the tabernacle constituted the symbolic center of the priestly cult, and activity connected with them was strictly regulated. Only Aaron or his descendants were to approach these altars with offerings and then only in a state of ritual cleanliness. In addition, any of a number of physical abnormalities could disqualify a prospective priest (Lev 21:16-23). Offerings presented on the bronze altar followed a prescribed set of protocols. Aaron (and by extension those who would serve as high priest) wore an elaborate set of vestments, comprising an ephod of rich colors, a breastplate with precious stones (containing the Urim and Thummim), a blue embroidered robe, a turban with a blue cord and gold rosette, and a fringed tunic (Ex 28:1-39; *see* Priestly Clothing). Aaron's sons (the priests) also wore special garb, consisting of tunics, sashes, headdresses and linen undergarments (Ex 28:40-43).

Rituals for the various blood sacrifices followed prescribed rules and sequences. As was the case with priests, animals displaying physical abnormalities could not approach the altar (Lev 1:3; 3:1; 4:3; 5:15; 22:21-25; cf. Ex 30:9). Those bringing the sacrifice (lay or priest) slaughtered the animal, skinned it and cut it in pieces. The priest and his attendants tended the altar fire and burned designated portions, arranging them on the altar after the entrails and legs had been washed (Lev 1:1-9). In all forms of blood sacrifice, the blood of the victim, which had been collected in basins, was dashed against the sides of the altar (Lev 1:5; 3:2; 7:2; 17:6), although in the case of the purification offering the blood was applied only to the horns, with the remainder poured at the base of the altar (Lev 4:7, 18, 25, 34). After the sacrificial portion had been burned, the priest removed the ashes from the altar and dumped them in a ritually clean area (Lev 6:8-11 [MT 6:1-4]).

The laws defining the proper approach and procedures before the tabernacle altars were of the utmost importance. The seriousness of the laws is underscored throughout priestly literature by warnings that those who breach sacrificial protocols are subject to death (Ex 28:43; Lev 8:35; 16:1-5; Num 4:17-19; cf. Lev 10:1-7; *see* Nadab and Abihu). The warnings were deemed necessary in order to preserve the sanctity of the altars and their environs. The altars marked the

intersection of the mystical and the material, a site where transitions and transactions could take place between the ordinary world of human experience and the holy sphere that marked the divine world. The incense altar and the altar for burnt offerings possessed an intense degree of holiness; both were designated "most holy" (Ex 30:10; 40:10).

The holiness of the altars was imparted through rituals of consecration. The altar for burnt offerings received particular attention and was anointed with a unique fragrant oil that was also used to anoint Aaron and his sons during their investiture as priests (Ex 30:22-33; 40:9-15). The application of oil and blood both to the altar and to Aaron, his sons and the vestments signified an integral and exclusive connection between the altar and those who were to attend it (Lev 8:10-30). Once the altar had been consecrated, a perpetual fire was kept burning on it, symbolizing the abiding and unchanging holiness that infused it (Lev 6:12-13 [MT 6:5-6]).

The holiness possessed by the altars could be communicated to anything that came into contact with them; whoever or whatever touched the altar became holy as well (Ex 29:35-37). This heightened degree of holiness, however, also made the altars particularly vulnerable to defilement. Contact with unclean objects or individuals or the presentation of unsuitable or inappropriate offerings could profane the altars, that is, rob them of their resident holiness. With the loss of holiness, they could not continue as portals to the sphere of the holy and thus were no longer suitable places for offerings to Yahweh. For this reason, one of the most important priestly tasks involved maintaining and guarding the boundaries around the altars.

Particular rituals were undertaken to purify the altar of any uncleanness that may have become attached to it. Blood from the sin offering, the sacrifice specifically devoted to purifying people and objects from inadvertent or prolonged uncleanness, was applied to the altar as well, cleansing it from any defilement that may have accrued from the sacrificial event. Part of the purification ritual for those who had become ritually unclean involved sprinkling blood seven times before the curtain of the sanctuary, dabbing blood on the horns of the incense altar (located in the holy place) and pouring the rest of the blood at the base of the altar of burnt offerings outside the tent of meeting (Lev 4:1—

5:13). The Day of *Atonement (Lev 16:1-34) also aimed at purifying the altars as well as the nation. During the day a goat was slaughtered and its blood was brought first into the holy place. The priest sprinkled its blood on and before the mercy seat, which purified the sanctuary of uncleanness. The priest then brought blood back out to the sacrificial altar and applied its blood, along with the blood of a bull slaughtered earlier, to the horns of the altar. He concluded by sprinkling blood on the altar seven times, and with this action the purification of the altar was completed (Lev 16:16-19).

3. The Symbolic Significance of Altars.

Because they marked the intersection of existential boundaries, altars could assume a significance beyond their role as a place of sacrifice. The Pentateuch contains many references to the construction of altars that functioned more as memorials and shrines. The phrase "X built an altar there to Yahweh" occurs frequently, generally with no report that sacrifices were offered on it. Noah constructed an altar to Yahweh after the *flood and offered sacrifice on it as an act of thanksgiving and worship (Gen 8:20). However, there is no mention of sacrifice in the stories that report the construction of altars at Moreh (Gen 12:7), Mamre (Gen 13:18), Beer-sheba (Gen 26:25), Shechem (Gen 33:20) and at sites in the environs of Bethel (Gen 12:8; 35:7). Instead, the stories intimate that the altars were constructed for various purposes. Abram constructed the altars at Moreh and Mamre to confirm the divine blessings of descendants and land (Gen 12:7; 13:18). Isaac and Jacob built altars to mark the sites of theophanies (Gen 26:25; 35:7), and the stories connected with the events emphasize the transmission of the patriarchal *promises and blessings. Jacob erected an altar in the field of Hamor to establish possession of a plot of ground in Canaan (Gen 33:20), thereby marking his claim to it. Similarly, Moses commemorated Israel's victory over the Amalekites by constructing an altar (Ex 17:15). These instances reveal that altars functioned in diverse ways beyond their association with sacrifice: as reminders of divine promises, claims to property, and memorials of divine encounters and great events.

Altars served as meeting places between God and human beings. The stories associated with the construction of altars display etiological concerns that demonstrate the continuing rele-

vance of the sites as places of worship. (Explanations of a sanctuary's origins would be of particular interest to those who worshiped there.) Bethel and its environs receive particular attention in the biblical text. Abram, after traveling the length of the Promised Land, returned to the altar between Bethel and Ai and called on the name of Yahweh there (Gen 13:3-4). Likewise, Yahweh commanded Jacob to return to Bethel, the site of an earlier theophany, and to erect an altar there (Gen 35:1). Jacob did so, and another theophany soon followed (Gen 35:5-15). Bethel would later become one of the most prominent shrines in Israel and, after the division of the Israelite kingdom, the primary sanctuary of the northern kingdom (cf. Amos 7:13).

Names ascribed to altars reinforced their role as memorials and places of worship. The altar at Bethel was given the name El-Bethel ("the God of Bethel"), that near Shechem was called El-Elohe-Israel ("God, the God of Israel"), and the altar built to commemorate the victory over the Amalekites was named Yahweh-Nissi (a title of uncertain meaning, often translated "Yahweh is my banner"). The divine elements in each of these names forged a conceptual link between the deity and the altar, intimating that the site itself was permeated with the holy.

Altars also function as metaphors in the narrative literature of the Pentateuch. Their significance as sites of transference and transformation make them powerful symbols for communicating cosmic and social transition. Such is the case with Noah, whose construction of an altar and offering of sacrifice signals a recreation and renewal of the earth after the flood. The construction of altars also marks the beginning and end of Abraham's story. The biblical text places a report that Abram built altars in Canaan at the beginning of the narrative, shortly after the introduction of the divine promises (Gen 12:1-3, 7-8). The promises are reaffirmed near the end of his story after he nearly sacrifices Isaac on an altar he has constructed on Mount Moriah (a site reminiscent of Moreh, where he had initially constructed an altar; Gen 22:2, 9; cf. Gen 12:6-7). Jacob's story also appropriates an altar as a framing metaphor. While fleeing to Paddan-aram, Jacob experienced a theophany at Bethel and erected a sacred pillar to mark the spot (Gen 28:1-22). On his return from Paddan-aram, God commanded him to build an altar at Bethel, which he did af-

ter experiencing another theophany (Gen 35:5-15). Finally, the construction of an altar and the offering of sacrifices marked the transition of Israel from a nation of escaped slaves to the covenant people of Yahweh (Ex 24:4-8). A further transformation is anticipated by the command that the Israelites erect a stone altar after entering Canaan, thereby symbolizing their transition from a nomadic people to a landed nation (Deut 27:5-8).

ARCHAEOLOGY

This article will survey the material and textual remains from the regions that played a major role in narratives of the Pentateuch. The regions that will be most discussed will be the

Tigris-Euphrates Valley (i.e., Syro-Mesopotamia and southeast Turkey south of the Taurus Mountain range) and coastal Syria, where civilization began and the patriarchs originated, according to Genesis. The Egyptian Delta region, Sinai and Palestine (the coastal areas, inland and the other side of the Jordan) will be analyzed to a lesser extent. In terms of chronology, we will survey the Near East from the advent of urbanism in the eighth millennium B.C. to the end of the Late Bronze Age (c. 1200 B.C.), probably the latest possible date for the exodus and wilderness sojourn. This is a general survey of the archaeology of the ancient Near East. Many more specific links with the Pentateuch will be addressed in appropriate articles.

1. Introduction
2. Tigris-Euphrates Region
3. The Prehistoric Periods of the Near East
4. Early Bronze Age (c. 3000-2100 B.C.)
5. Middle Bronze Age (2100-1600 B.C.)
6. Late Bronze Age (1600-1200 B.C.)

1. Introduction.

For the ancient Near East, the historian is almost exclusively dependent upon archaeological investigation, unlike the later classical periods, which have a continuous literary tradition. Even Egypt has the dubious benefit of Manetho, an Egyptian priest living during Ptolemaic rule (third century B.C.), who has virtually formed our framework of Egyptian history. However, the works of his Mesopotamian equivalent, Berossos, survive only in a very fragmented form. Because of this, the potential contribution of archaeology to history in the remainder of the Near East is immense. For the ancient Greek, the term "archaeology" was synonymous with "ancient history." Both Thucydides in his prologue (1.2-17) and Josephus in his title (*Antiquities* [or *Archaeology*] of the Jews) used the word to denote the study of texts and monuments or the study of antiquities (i.e. ancient history). Strangely enough, the term *archaiologia* did not pass into Latin and thus did not enter into Western Europe until it was "resurrected" by scholars in the seventeenth century, who modified the meaning somewhat. The word now designates the study of the material remains of an ancient civilization, while written sources, even if discovered in archaeological excavations, are usually the domain of the sciences of epigraphy or philology. Only recently have

the disciplines been interested in reuniting the study of the texts and material remains. This is why we have purposed in this study to analyze both material and textual remains.

Those who study the ancient Near East study a dead civilization. When Xenophon, the Greek general and historian, traversed the boundaries of Assyria at the beginning of the fourth century B.C., he traveled past both Nimrud and Nineveh. Although he noticed both of these cities, he called them by their Greek names, and assumed that the region was part of Media and that the Persians destroyed the two cities. Thus, he was unaware that they were two of the great Assyrian capitals, which had become abandoned mounds in the preceding two centuries. The Bible and various Greek sources became powerful factors in keeping alive the memory of ancient Near Eastern civilizations.

Yet it was not simply the interest in biblical studies that drove the Europeans to the Near East in the early nineteenth century. France and Great Britain were looking for land routes to India and took great means to exert their influence on these areas. Archaeology was thus an unconscious extension of European imperialism.

The French under P. E. Botta, who had begun working unknowingly at Nineveh in 1842, carried out the first major excavations. The ancient name of the mound was Ninua, a fact that was known by the medieval Arab geographers and Jewish travelers (e.g., Benjamin of Tudela in the twelfth century A.D.), but not to the European travelers or, for the most part, the European adventurers. Botta soon left Nineveh and directed his attentions to Khorsabad, where he found the palace of the Assyrian king Sargon II. Ironically, he mistakenly thought he had discovered Nineveh. Botta's discoveries at Khorsabad created an immense interest in Mesopotamian antiquities in Europe. Although the French government sponsored work on drawing the reliefs that had been brought to Paris, Botta never received the public recognition afforded many other adventurers to the Middle East.

Soon thereafter, the Englishman A. H. Layard began work at Nimrud in 1845. Like Botta, he also thought he had found Nineveh, and his famous work, *Nineveh and Its Remains* is in fact primarily a discussion of material from Nimrud. Layard found at Nimrud the first dramatic sculptural link to the OT, the Black Obelisk of Shal-

maneser III and the citation concerning Jehu of Israel. But this link was not proven until the obelisk was deciphered years later.

2. Tigris-Euphrates Region.

The Tigris-Euphrates region, known in Greek antiquity as Mesopotamia, played a significant role in the first book of the Pentateuch, Genesis. The writers of the Bible claimed that their ancestors originated in this area from Haran (or Harran; *see* Haran) in the Upper Euphrates region. The past century and a half of archaeological research in this region has offered a great deal of background information on the greater geographic and chronological background to pentateuchal history, religion and culture. Although research in Iraq has been interrupted because of the Gulf War in the 1990s, scholars have had the opportunity to analyze material from the previous years of research in Iraq. The situation in the Syrian portion of Mesopotamia, however, has been somewhat different. Compared to Iraq, Syria had not been the recipient of much archaeological investigation until the past generation. There are now, however, numerous archaeological expeditions to Syria, many of which are concerned with periods that shed light on the Pentateuch. Like Iraq, the last generation of research in Syria has witnessed salvage projects in areas threatened by modern dam construction and other development projects, as well as many major projects that have revolutionized our understanding of the region.

3. The Prehistoric Periods of the Near East.

3.1. The Early Neolithic Periods (c. 10,000-5200 B.C.). It is not possible at this point to place the first eleven chapters of Genesis into a working chronological context that is consistent with archaeological investigations. However, a study of the early Neolithic periods of the Near East provides an excellent working context in which to understand the early portions of Genesis.

Recent archaeological research has shown that the early Neolithic period in the Near East (before the Halaf period, c. 5200 B.C.) was far more widespread than previously considered. Not only did it flourish along coastal Palestine, but there is also now overwhelming evidence of widespread and uniform material culture from the Mediterranean coast to eastern Syria and northern Iraq.

The Natufian period (c. 10,000-8300 B.C.), which may have been centered in coastal Syria and Palestine, is also evidenced along the Middle Euphrates region of Syria at Dibsi Faraj, Nahr el-Homr, Abu Hureya and Mureybit, and the Eski-Mosul Dam region.

Our understanding of the Neolithic Hassuna/Samarra periods in Northern Iraq has also changed because of recent work. Previously, the earliest village known was Jarmo in the hill country of northeastern Iraq. However, obsidian blades and other cultural material unlike any previously found in Iraq have been found in the Sinjar area (about 60 km north of Mosul in northern Iraq), at the mounds of Yarim Tepe I, primarily at the site of Maghzaliyah. Other sites in the Sinjar region and at the sites of Umm Dabagiyah, Tell es-Sawwan and Arpachiyah show evidence for the beginning of agriculture and the transition to sedentary life. Furthermore, substantial houses with rectangular rooms grouped around a courtyard have been found at Hassuna, as well as unique pottery styles in graves at Samarra.

Syria likewise was a significant cultural force in the post-Natufian Neolithic periods with major centers of occupation in Habur and Balikh regions (both of which have been systematically surveyed) showing evidence of Neolithic levels at Tell Abu Hureyra, Tell Mureybet, Chagar Bazar, Bouqras, Tell Assouad, Tell Hammam al-Turkman, a brief sounding at Tell al-Sinn, and others. The Habur River region has exposed innovations in agricultural technology from the development of new cereals and livestock to the use of animal-drawn plows and new storage techniques.

3.2. Halaf (c. 5200-4800 B.C.). There appears to have been a sudden spread of Halaf-period (c. 5200-4800 B.C.) material culture into the remainder of northern Syria, Iraq and southern Turkey, as evidenced from the site of Yarim Tepe. A Halaf sequence from the Habur triangle has been found at Tell Aqab, south of the Turkish border. Moreover, there are a number of small Halaf-period sites in the upper Balikh Valley in Syria, as well as a few larger permanent settlements. In fact, the earliest seals in Syria have been found at Halaf-period levels at Sabi Abyad. A number of small sites (such as Khirbit Garsour) have also been recently studied in the northern Jezira in Iraq. The Halaf period in northern Iraq is well represented at Tell Ar-

pachiyah, the earliest levels at Tepe Gawra and sites in the Sinjar region. Similar to earlier periods, the Halaf cultures appear to have employed methods of administration and agriculture that did not include many large settlements. It is clear that the Halaf period was an integral part of the Near East, not an intrusive period, as was once thought.

3.3. Ubaid (c. 5500-4000 B.C.). The Ubaid culture of southern Iraq was the first to expand into the north and into the Syrian Euphrates region. Various Syrian sites have Ubaid-period remains, including Tell Brak, Tell Leilan, Tell Hammam al-Turkman, Tell Zaidan, Carchemish, Samsat, Tell Aqab, Tell Mefesh, a number of the mounds on the plain of Antioch and Hama. Of special interest are the Ubaid remains at Tell Mashnaqa, just south of the Habur triangle, where over a dozen Ubaid-period burials (probably attesting the existence of a cemetery) have been found, far removed from southern Mesopotamia. An entire ceramic sequence from the Halaf to Ubaid periods can be seen in Syria from Halula. In fact, sixteen Ubaid sites have been identified in a survey of the Balikh Valley. The gradual transition from Halaf to Ubaid culture is reflected in the change in pottery styles at Tepe Gawra, Telul al-Thalathat, Grai Resh in the Sinjar region and Tell Uqair.

3.4. Uruk Civilization. The site of Warka (ancient Uruk, or biblical Erech [Gen 10:10], reputedly built by Nimrod), along the Euphrates in southern Mesopotamia, has been the recipient of periodic archaeological excavations for well over a century. The site has indirectly shed light upon the beginnings of world history, as recorded in the early chapters of Genesis (primarily Gen 10-11). Uruk was a major Sumerian center for over four thousand years and is presently the earliest attested urban center in the history of the world. Massive urbanization began in the Uruk period in southern Iraq (c. 3800-2900 B.C.). Recent archaeological excavations and surveys in Syria and northern Iraq (and as far away as Turkey) have exposed evidence of Uruk-type material remains far from their origin in southern Mesopotamia. Some have theorized that there was an Uruk expansion or colonization into outlying areas. Because lower Mesopotamia lacked the natural resources to sustain their newly formed complex social system, it has been posited that the inhabitants had to import them from the periphery.

However, it is not certain as to the nature of this colonization. The establishment of a network of strategically located enclaves and garrisons may have accomplished it. The Uruk “colonies” may have had direct control of the upper Tigris and intensified trade contacts in other areas. There is also some archaeological evidence of military conflict between the colonies and indigenous populations.

In northern Mesopotamia, only a small number of urban-sized enclaves were found, surrounded by a cluster of dependent villages. The enclaves are found along the Euphrates, the Habur (e.g., Tell Brak) and Nineveh.

Many of the Uruk-type settlements were large and heavily fortified. Their locations suggest that the Uruk state(s) desired to facilitate downstream commerce. Smaller stations along the waterways also existed, which were linked between large urban enclaves. Although many of the enclaves were fortified, there does not appear to be evidence of an attempt to control the hinterland but rather a takeover of strategic locations, tapping into preexisting trade networks, causing some to call this an “informal empire.” This trading relationship came to an abrupt end in the succeeding Jemdet Nasr period (c. 3000 B.C.) but had a profound impact on the sociopolitical and economic evolution of the indigenous cultures in Syria and northern Mesopotamia in particular.

There is evidence of institutional change with the imitation of Uruk architecture, artifacts, ceramics and sealing practices at many sites in the outlying areas. The Uruk expansion may have acted as a catalyst to foster complex growth and independent sociopolitical systems in northern Iraq and Syria.

In particular, the sites of Tell Kannas, Habuba Kabira, Jebel Aruda and possibly Tell al-Hadidi on the Middle Euphrates attest to this widespread expansion of the larger urban centers in southern Mesopotamia. The central district at Habuba Kabira was a densely settled town with living quarters and workshops, as well as cult and administrative activities. The site provides the first evidence for town planning in Syria in this period. There is, however, no evidence of any agricultural activities that would have sustained the town. The site itself was occupied for less than two centuries. Moreover, further south on the Euphrates there is evidence of small and relatively isolated sites at Qrayya and

Tell Ramadi, where Uruk-period domestic architecture and artifacts have been found. Surface finds dating to the Uruk period have also been found at Tell Barri (ancient Kahat) in the upper Habur region.

Tell Brak was of great importance in this period. It had a sequence of Uruk-period temples similar to the slightly later Sin temples at Khafaje, in addition to a ring of late Uruk-period settlements surrounding it. The site, however, had a long prehistory and was not an implanted colony like Habuba Kabira. Some of the earliest stratified clay sealings in the ancient Near East have been found at Brak. The site was very large in this period, and the large corpus of sealings attests to well-developed administrative practices, showing a social and economic complexity previously not known in the Habur region.

The distribution of these sites appears to show a network of settlements along the Balikh and Habur River basins, as well as the Middle Euphrates region, forming a long chain of towns following the Euphrates River to the north into the Anatolian plateau, apparently consciously placed in strategic locations along lines of communication. Sites that show this widespread distribution include Tell Leilan and surface finds from Hamoukar in northeastern Syria, Tell Hammam al-Turkman, Tell Zaidan and Jebel Belene on the Balikh River; Carchemish and Samsat in the upper Euphrates region; and Hama and Tell Judeideh along the Orontes River. However, of great importance is the fact that there do not appear to be many Uruk-period sites away from the major rivers in the outlying regions, although there is some evidence in the Syrian Desert. Few sites were founded upon existing sociopolitical entities, with the exception of Samsat, Carchemish and Tell Brak.

The indigenous native settlements in Syria that were distant from the colonies continued to thrive with the traditions of agricultural and craft productions with which they were accustomed. There is evidence at Habuba Kabira that the local population supported the colonists with foodstuffs. It is still not clear as to whether these centers were directly under southern control or were dominated by local elites. The function of these so-called colonies witnesses to the Uruk culture's need for materials that were not present in the south but only available over great distances. Such commodities may have included copper ores, lapis lazuli and other semi-

precious materials. The nature of the exchanges remains obscure. The Uruk culture was apparently not interested in a broad acquisition of territory or domination of agricultural enterprises. The colonies, however, were relatively short-lived, and none were maintained in the succeeding periods. This abandonment may indicate that either other sources for materials were now available, that local communities had successfully thwarted the southern domination of trade routes or that the need for colonists became obsolete due to the emergence of other forms of exchange.

The first evidence of *writing (in the form of the archaic cuneiform script) in human history comes during the late Uruk period. Over five thousand discarded archaic tablets and fragments dated to 3100 B.C. have been found at Uruk, most of which were found in a refuse area in the sacred precinct. Many of these texts shed light on early accounting practices. Some have argued that writing did not originate as a means of rendering language but as a system of recording information, developing as a consequence of the increasing demands of an expanded state and economy. Moreover, it was expected that earlier stages of pictographs existed (most likely written on perishable materials) because of the uniformity in the use and shape of particular signs in the archaic script. Although many Neolithic sites employed counting symbols (normally called tokens) as early as the ninth millennium B.C., by the early Uruk period the tokens were for the most part discarded and impressed clay tablets were used, soon replaced with the pictographic texts. A number of the signs employed in the impressed texts were later graphically represented in the archaic cuneiform texts. It has therefore been argued that the archaic script was the solution for an immediate problem and that writing was the next stage in the process of recording information.

It is unclear, however, where to place the early chapters of Genesis in the framework of the Uruk civilization. The term *Eden, for example, has a Sumerian counterpart, *edin*, a term used for uncultivated pastureland in the south of Mesopotamia. It also has been assumed that Shinar, the land that was repopulated after the biblical *flood, was the Hebrew name for Shimmer (or Sumer). Although this provides a cultural context for the early chapters of Genesis, it is not possible at present to place the early Gen-

esis material in any chronological context or specifically equate it with the Uruk civilization of the fourth millennium B.C.

4. Early Bronze (c. 3000-2100 B.C.).

The Early Bronze Age represents the rise of city-states in the southern part of Iraq, or Sumer, the homeland of *Abraham. Thus, a study of this period provides a context in which better to understand the early chapters of Genesis.

4.1. Southern Mesopotamia. Although there has been ongoing work at Abu Salabikh and reconsideration of work at Fara (ancient Shuruppak) and Kish, recent large-scale excavations at Tell al-Hiba (ancient Lagash) have arguably helped the most to shed light on the Early Dynastic (or Early Bronze) periods of Mesopotamia (c. 2900-2300 B.C.). For example, the Ibgal temple at Lagash has an oval exterior similar to the oval temple type found at Khafajeh. The earliest brewery yet found was at Lagash, dated to about 2500 B.C. Research has shown that much of the city of Lagash was abandoned in the late Early Dynastic period, only to be rebuilt by Gudea in the twenty-second century B.C.

The city of *Ur (biblical Ur of the Chaldeans) in southern Mesopotamia, well known as the city of Abraham's youth (although many are arguing for a northern location of Ur, since a modestly sized city with that name has been located near Haran), was a significant Early Bronze Age cultural and political center. Numerous royal (or aristocratic) tombs have been found dated to the mid-third millennium B.C., showing the rich and lavish state of affairs in this city. Moreover, Ur was the centerpiece of a powerful unified state (known as the Third Dynasty of Ur) in Mesopotamia in the last century of the third millennium B.C. It was the last major state that employed Sumerian as the language of governmental bureaucracy. There is also strong evidence at Ur in this period of a new ethnic group in southern Mesopotamia, the Amorites, who began slowly to infiltrate the region from Syria by the last quarter of the third millennium B.C. Although there are no texts in Amorite, it is apparent by a study of their personal names that Amorite was a West Semitic language, related to biblical Hebrew. It is quite possible that Abraham's ancestors were Amorites who entered into southern Mesopotamia and resided at Ur.

In this period, the indigenous cultures in northern Iraq and Syria became more powerful,

and there is less evidence of southern Mesopotamian interference until the middle of the third millennium B.C., when the Sumerian and Sargonic kings struggled to control these regions. Thus, southern Mesopotamia was no longer unique in its urbanism. The political and economic organization of northern Iraq and Syria in the first half of the third millennium B.C., however, is presently unknown but was probably centered around small towns without any central control. It is not clear whether these newly created walled towns were initiated by the southerners or were autonomous creations.

The ceramic remains for this period for northern Iraq and Syria have been called Ninevite V after the pottery style found at the prehistoric sounding at Nineveh. The pottery type is found from Assyria to the Habur Plains and is dated 3300 to 2500 B.C. Nineveh V pottery has specifically been found in the Lower Jagjagh survey, around Leilan and on the Middle Habur. It is especially prevalent in northern Iraq at Tepe Gawra, Tell Billa, in the Sinjar region at Telul al-Thalathat V (where there is an extensive granary with a Nineveh V assemblage) and Tell Mohammed Arab in the Eski-Mosul Dam region. Survey data concerning Nineveh V ware has also been done.

Whereas the Uruk culture was able to penetrate the northern areas with relative ease, by the mid-third millennium B.C. the Sumerian and Sargonic kings were required to exercise force to control local rulers and walled towns, as the south was no longer unique in its incipient urbanism. A new type of settlement in dry-farming regions began to foster a new relationship with southern Mesopotamia. Both the Habur region (Hamoukar, Tell Leilan, Tell Mozan, Tell Brak, Tell ʿAtij, Tell Khuera and Tell Gudeda) and the plains of Aleppo in coastal Syria (Byblos, Homs, Ebla and Qatna on the Euphrates) permitted the extensive cultivation of wheat and barley without major irrigation. Instead, farmers employed dry-farming and extensive raising of sheep and goatherds.

4.2. Northern Iraq. There are extensive urban remains in northern Iraq from the second half of the second millennium at a number of sites. There is a sequence of rebuilding of an Ishtar temple at Ashur as well as remains from nearby Yorghun Tepe, including some tablets from the Old Akkadian period. A deep sounding at Tell Taya on the Sinjar Plain produced occupation

levels in the late Early Dynastic III/Sargonic periods. A deep sounding was also done at Tell al-Rimah. Akkadian-period remains have been found in the Hamrin Basin at several sites, including Akkadian texts that have been located in the Hamrin Basin at Tell Sleimeh, some of which indicate that the site's ancient name was *Awal*.

4.3. Upper/Middle Euphrates/Balikh Regions.

The northwestern portion of the Euphrates River holds a special place in the study of Genesis, as it was the ancestral homeland of the patriarchs, who apparently were based in the vicinity of Haran along the upper Euphrates River Valley. Thus, this area (biblical Aram Naharaim) provides a context for some of the narratives in Genesis.

Along the upper Euphrates, the Euphrates Salvage Project has uncovered on the mounds of Tell Banat a series of White Monuments dated to the second half of the third millennium B.C. In fact, the presence of such monumental construction, as well as other public buildings, and a sophisticated ceramic industry suggest a very complex social hierarchy for this region during this period. The excavators have postulated that Tell Banat may have been an autonomous state or functioned as a cultic or mortuary area. Further south near the confluence of the Euphrates and Balikh Rivers is Tell Bi'a (ancient Tuttul), which has remains dating to the Early Dynastic Period (c. 2900-2300 B.C.). Along with a number of public buildings, the excavators have uncovered four above-ground tombs belonging to rulers of Tuttul. These tombs bear a striking resemblance to the roughly contemporary royal tombs at Ur (although they are subterranean). The Tuttul tombs were partially looted in antiquity but had ceramics, jewelry and furniture like the Ur tombs. Moreover, the Shakanakku Palace (c. 2100 B.C.) is a more modest version of one found at contemporary Mari.

Further north in the Middle Euphrates region there is also evidence of occupation in the late third millennium B.C. at Selenkahiye and Tell al-Hadidi. Selenkahiye appears to have been founded about 2400 B.C. and was possibly a merchant colony of a Sumerian city. Its destruction coincides with the fall of the Ur III dynasty (c. 2000 B.C.). The Early Bronze remains at Tell al-Hadidi have shown it also to be a new urban center in the latter half of this period. Still further north, the Tishreen Dam Salvage

Project, just south of Carchemish on the Euphrates near the Turkish border, has revealed occupation in that area, showing an increase in the number of settlements in the second half of the third millennium B.C., including Tell Gudeda and Tell el-Bazey. Of note is the site of Tell es-Sweyhat, which had a substantial settlement with an upper and lower town in the late third millennium B.C. A series of salvage operations undertaken since 1993 have revealed a cemetery that may have had over one hundred tombs, some of which had not been looted. One tomb in particular had at least ten individuals, one of whom was a woman who was near two crossed bronze/copper straight pins, limestone rings and a series of beads at her breast. The arrangement of the beads is reminiscent of those worn by females on contemporary Mari reliefs.

4.4. Lower Euphrates Regions. During the third millennium B.C., Mari (Tell Hariri) on the Euphrates exhibited notable cultural independence from the Sumerian south. Recent excavations have shown that the city may have been founded either at the end of the Early Dynastic I or the beginning of the Early Dynastic II period. The excavators may have located a dike in the hills south of the mound, a branching canal that traversed the city and a number of canal feeders, permitting the production of wheat. The city had a large wall, three rebuildings of the Ishtar temple and a large Sargonic palace. Graves reminiscent of tombs of the Ur III period have been uncovered in a small structure of the same period (c. 2100 B.C.). Forty Akkadian-period texts have been recently found at Mari. North of Mari on the Euphrates River is the site of Tell Ashara (ancient Terqa), which had a massive defensive system rivaling any other site of this period. The continuing excavations in this region reveal that this area was of paramount importance in the third millennium B.C.

4.5. Habur Region. Investigations in the Syrian Habur region have also revealed much about the Hurrians, a major ethnic group firmly rooted in the Mesopotamian tradition. The origins of the Hurrians are shrouded in obscurity. They are first described in Sumero-Akkadian sources as inhabiting the land of Subartu, a term used primarily to describe upper Mesopotamia (the Habur and Balikh River basins in Syria, as well as the Tigris River basin in northern Iraq). Although the earliest attestation of the term *Subartu* dates to about 2400 B.C., evidence of Hur-

rian occupation of the area does not appear in sources until the reign of the Sargonic king Naram-sin (c. 2200 B.C.), where we find names of Hurrian chieftains, place names and names of individuals who were prisoners of war. Since their language is similar to the later Uartian tongue, it is presumed that the Hurrians immigrated to the area sometime before this from the north, possibly from the Trans-Caucasian region in Armenia. At any rate, by 2200 B.C. north Mesopotamia was thoroughly Hurrianized, with well-established Hurrian states, which continued until the rise of a powerful, Hurrian-based kingdom of Mitanni (c. 1600 B.C.). The earliest historical text relating to a Hurrian monarch (a bronze tablet now in the Louvre) mentions a certain Atal-Sin, king of Urkesh and Nawar (c. 2200 B.C.). The city of Urkesh is also mentioned in the earliest-known document in the Hurrian language, a building inscription of Tish-atal, king of Urkesh (c. 2100 B.C.).

One of the main Hurrian sites was Tell Khuera, which had similarities with the Sumerian south. It showed evidence of the large stone architecture of this period as well as a clearly defined upper and lower citadel typical of many of the northern Syrian centers. Judging from the absence of Uruk-period occupation, it is apparent that this site was founded during this period. Another nearby Hurrian center in the last quarter of the millennium was Tell Barri.

Also in the Habur region is the site of Tell Beydar, which has a major defense system, an upper and lower citadel, and evidence of nearly 150 tablets contemporary with Early Dynastic texts found at Ebla, Abu Salabikh and Fara. Nearly all of them were found under the original floor of a domestic residence.

Tell 'Atij along the Middle Habur Valley was occupied during the first half of the third millennium B.C. It consists of two small mounds with a thirty-meter-wide river channel in between. The most conspicuous buildings on the site are a series of semivaulted silos that were used as grain storage facilities. Near the structures were a number of clay tokens, probably used to calculate grain quantities. The site apparently specialized in the storage of agricultural products and was likely a trading post, possibly having an economic relationship with the site of Mari in the south. In fact, other small sites have been identified as specializing in agricultural production, including Tell al-Raqa'i,

Mashnaqa and Ziyada. Moreover, defensive systems were found protecting storerooms at Rad Shaqrah, Kerman and Tell Gudeda, while a massive wall protected the entire site of Bderi. No such wall or storage facilities have yet been found at the large site of Melebiya. Small traces of third-millennium B.C. material have been found at Mulla Mutar. In sum, the Middle Habur Valley was well populated in this period and likely had close connections with southern Mesopotamia.

Another large site excavated in this region is Tell Mozan (ancient Urkesh), which has a city wall and one of the largest bent-axis temple structures in this period, which was located on the high mound. The structure has walls 1.6 meters wide and a statue of a lion in a building interpreted as a cella. The first stratified epigraphic remains in the Habur Plains of Syria have recently been found at Urkesh (c. 2300-2200 B.C.). Two stratified administrative tablets written in Akkadian, but with Sumerian and Hurrian personal names, have been discovered. The most recent seasons of excavation have established that Tell Mozan, a Hurrian capital in the third millennium B.C., was indeed Urkesh. Seal imprints with the name "Tupkish, King of Urkesh" have been found, along with the name of Queen Uqnitum and her many retainers. In fact, most of the seal impressions belonged to the queen and her staff. The glyptic style is distinct from that found in southern Mesopotamia and even from nearby Tell Brak. Of over one thousand impressions found, more than 170 were inscribed. It has even been suggested that a Hurrian scribal equivalent to Semitic Ebla may have existed in this region.

Tell Brak (ancient Nagar) had a number of large Akkadian-period buildings and a unique ceramic sequence from the Uruk to Akkadian periods. Hundreds of clay sealings have been uncovered that contain scenes such as banquets, chariots and contests. One trench (HS3) exposed a large hoard of silver objects.

Near the border of Iraq on the Habur Plains of Syria is Tell Leilan. There the lower town shows evidence of third- and second-millennium B.C. settlements, where a number of domestic units, drain-filled alleys and planned streets were encountered. The lower town appears to have been built about 2600 to 2400 B.C., and the excavators have speculated that there was a profound social transformation that oc-

curred soon after, changing Tell Leilan into a class-based society. The excavators have noticed that many walled cities of the type at Tell Leilan were constructed at this time. It also has been speculated that these cities were not formed through intimate contact with the southern centralized states (i.e., Sargonic Akkad) but were the result of an indigenous and autonomous process. Probably the urbanization in this area may have caused the southern states to move into the area during the Sargonic period. Many of these walled towns were in fact larger in size than their southern counterparts. A recent survey confirmed the fact that after the period of Akkadian centralization at Leilan, there is no evidence of occupation at the site for a period of about three centuries (c. 2200-1900 B.C.). The town was thus repopulated and became the basis of Shamshi-Adad's state at the end of the nineteenth century B.C.

4.6. Coastal Syria. The most important site along coastal Syria in this period, no doubt, was Tell Mardikh (ancient Ebla), near the Orontes River. Ebla was one of the few sites west of the Euphrates that showed signs of sophistication equal to any contemporary urban center in southern Mesopotamia. The city displayed cultural autonomy but historical continuity with Sumer, as the inhabitants employed the cuneiform script. Thousands of cuneiform tablets have been uncovered, predominantly from a major palatial archive, written in a previously unknown Semitic language now called Eblaite. For example, many of the religious texts at Ebla have their counterparts in the southeast; however, incantations written in Eblaite have no counterpart elsewhere and feature geographic and divine names pointing to a native Syrian context. In fact, both Ebla and Mari shared a common writing system, language and calendar in this period. Most likely, Ebla borrowed cultural phenomena from the east. Recently excavators at Ebla have uncovered a large palace (called the Archaic Palace) dated to about 2150 B.C., which was probably the royal palace at Ebla during the Ur III period. After a brief abandonment following the intrusion of Sargonic Akkad, settlement reappeared in the northern region of the town, centered on this palace. Although it is apparent that our knowledge of northern Mesopotamia in the third millennium B.C. is fragmentary and that no complete synthesis can be made, this region provides a rich and diverse context for understand-

ing the sociocultural and historical context of the world of the Pentateuch.

4.7. *Palestine.* Palestine as described in the Pentateuch was, at the end of the Early Bronze Age (c. 2400-2000 B.C.), in a posturban phase but had numerous small settlements, camps and isolated cemeteries in the Jordan Valley and the Negev-Sinai. Many of these small settlements are permanent agricultural villages that were not built on the older urban sites, most of which were abandoned. However, there is pastoral nomadism, as well. Palestine during this period appears to have been an isolated appendage of Syria, which, as has been seen, was heavily urbanized (e.g., the international character of the Ebla archives). Contact between the two areas is evident in Syrian pottery at several sites, probably brought by migrating pastoralists, somewhat like the description of Abraham's travels in Genesis. Contacts with Egypt in this period are nearly nonexistent.

It is not certain just how the patriarchal narratives relate to this sparse description of Palestine. Certainly the patriarchs experienced a Palestine that was sparsely populated, with few, if any, major urban centers. If one takes a conservative view of biblical chronology, then Abraham flourished beginning about 2100 B.C. during a period of great upheaval and abandonment of major urban centers in both Syria and Palestine. It is equally possible, however, that Abraham and his family lived in the succeeding Middle Bronze Age, which has a good deal more documentation that sheds light on the narratives (see 5.2 below).

4.8. *Egypt.* Evidence for Semitic involvement in Egypt during the Old Kingdom (c. 2700-2190 B.C.) comes primarily from epigraphic sources and artistic depictions on reliefs. First Dynasty monarchs were required to defend Egypt's borderlands from hostile Sinaitic bedouin, as depicted in numerous reliefs and short inscriptions. Egypt's Delta certainly provided excellent grazing grounds for the Asiatic bedouin. The biography of Weni, a Sixth Dynasty bureaucrat, describes a number of offensive raids against the pastoral nomadic population in Palestine.

5. Middle Bronze (2100-1600 B.C.).

5.1. *Syro-Mesopotamia and Coastal Syria.* Although the large sites of Isin, Larsa and Tell ed-Der have exposed Middle Bronze Age material that is roughly contemporary with the Genesis

patriarchs, a number of moderately sized sites have also been excavated in both Syria and Iraq that have increased our overall understanding of this period. One of these is Mashkan-shapir in the northernmost part of the confluence of the Tigris and Euphrates. The city was a major trade center and the residence of the last Larsa kings. Its heyday was brief, but whole building plans have been uncovered that have increased our understanding of regional urbanism and town planning.

Khirbit ed-Diniye (ancient Haradum, 90 km southeast of Mari, situated on the Iraqi portion of the Middle Euphrates) was a new river town apparently founded in the eighteenth century B.C. (after the fall of Mari) as a frontier province of Babylon, lasting for over a century. Although the site of Haradum is small, it had town-wall fortifications. It was a planned urban center exhibiting a regular town layout, with straight streets connecting at right angles. The regularity of the city plan is a rare discovery in Syro-Mesopotamia, permitting the student a chance to view an elaborate urban plan.

In this period (named the Old Syrian period in Syria), Syria continued to have close cultural relations with the Mesopotamian south. Excavations have been made at a number of major political centers, such as Shubat-Enlil (Tell Leilan), a major Assyrian center at this time ruled by Shamshi-Adad I (1814-1781 B.C.). It is evident that during his reign the upper Habur triangle emerged for the first time as a dominant power. The area had not previously been integrated into a unified political system. However, soon after his reign the area reverted back to small, relatively independent and unintegrated city-states, much like the political polities of the third millennium B.C.

About 50 kilometers north of Mari was Terqa, which gained importance later in this period. There is a body of architectural documentation (a temple complex, an administrative complex and private houses) coming from this site dated to the so-called "dark age" between the fall of Mari (c. 1760 B.C.) and Babylon (c. 1595 B.C.). At this time, Terqa was most likely the capital of the kingdom of Khana on the Middle Euphrates. Moreover, Terqa was a major Amorite center in this period and thus sheds light on the overall cultural environment of the patriarchs.

5.2. *Palestine.* There was a major change in settlement patterns during the Middle Bronze

Age in Palestine, as many of the Early Bronze Age sites in the central agricultural zone were reoccupied, and many new small, unwalled sites were established, such as Aphek (which became urbanized later in the period). Ceramics at many sites (Dan, Akko, Beth-shan [Beth-shean], Shechem and Gezer) betray a continued Syrian influence upon Palestine. By about 1800 B.C. there were a large number of major urban centers, such as Dan, Hazor, Akko, Shechem, Aphek, Jerusalem, Jericho and Ashdod. There is clear evidence in Palestine of Egyptian and Cypriote imports. By the end of the period (c. 1650-1500 B.C.) there were a number of new heavily fortified sites (e.g., Gezer), and many older sites were refurbished with embankments, plastered glais, outer revetment walls, casemate walls and dry moats. Two of the largest of these refurbished sites are Shechem and Gezer, both of which also exhibited large towers, a citadel and large gates with multiple entries.

However, by about 1550 B.C. virtually every major urban center was destroyed, most likely due to the removal of the Asiatic Hyksos from Egypt. The destruction is best evidenced at Gezer and Shechem. There is clear evidence at the end of the Middle Bronze Age of literacy in Palestine, as some examples of the Proto-Sinaitic script have been found at Gezer and fragments of cuneiform texts have been found at Hazor, Megiddo, Gezer and Hebron (*see* Writing).

5.3. Egypt: Middle Kingdom/Hyksos Period. Evidence of Semitic involvement in Egypt is even more significant during the Middle Kingdom and Second Intermediate Period (c. 2000-1550 B.C.) than in the third millennium B.C. Many Asiatics were prisoners of war, merchants or individuals sent to Egypt as diplomatic gifts. Moreover, there is archaeological evidence for Semitic settlement in the northeast Delta at Tell el-Dab'a, Wadi Tumilat, Tell el-Maskhuta and elsewhere. The Genesis patriarchs appear to fit a period about 1800 to 1550 B.C. for being in the area, somewhat contemporary with the Hyksos rule. It has been speculated that since the Hyksos had a predominantly Semitic population, the Hebrews would have been more "welcome" in the Sinai region in this period and that the Hyksos dynasties would have been more amenable to a Semitic Hebrew such as *Joseph in a position of authority. Of course, there is no concrete evidence for Joseph and his clan in Egypt as of yet, although the heavy Semitic pres-

ence in the area argues for the plausibility of the biblical traditions of patriarchal (and preexodus) involvement in the region.

6. Late Bronze (1600-1200 B.C.).

6.1. Syro-Mesopotamia and Coastal Syria. Archaeological investigations have shown evidence of an abandonment of much of southern Mesopotamia at the end of the eighteenth century, lasting for about four centuries. This was a long period of deurbanization, possibly resulting in part from a change in the course of the Euphrates River. Work at the site of Dilbat in central Iraq, however, has closed this intellectual gap in knowledge. Surface surveys in the surrounding area and countryside show that earlier sites were under later accumulation of the alluvium.

Syria in this period suffered domination from both Egypt and the Hittites and endured a Mitanni dynasty in the Habur River region, in addition to nomadic pressure and sedentarization especially from the Arameans. Arising out of the ruins of Babylon, the Hurrians (kingdom of Mitanni) reasserted themselves in the Habur region, uniting Syria for first time since Shamshi-Adad I.

The kingdom of Mitanni was a confederation of Hurrian states in upper Mesopotamia in this period. Its capital was Washukanni, which has not been located for certain but may have been Tell Fekheriye located near the headwaters of the Habur River. By at least 1450 B.C., Mitanni was the most powerful state in the Tigris-Euphrates region. Our knowledge of Mitanni does not come from palatial archives but from correspondence with neighboring polities, including Egypt, the Hittites and Babylonia, as well as Mitanni vassal states such as Nuzi, Terqa and Alalakh. From these fragmented sources, it is apparent that *Mitanni* was a political term used most often to describe the confederation of Hurrian states and vassals. In fact, each of these vassals had its own king who was bound to Mitanni by a treaty sworn by oath and sacrifice. Although the state of Mitanni was composed primarily of Hurrians, there was a significant substratum of individuals with Indo-European personal names as well as West Semitic speaking peoples, Hittites and Assyrians.

One of the most influential coastal Syrian cities during this period was Ugarit. It was a major trading post on the Mediterranean coast that

was tributary to Hatti and not Mitanni. The art and architecture of this site have proved to be different from other earlier Syrian excavations, providing evidence of an independent cultural tradition. Current hydrographic surveys show that the town water at Ugarit evidently came from two small rivers encircling the mound. Furthermore, remains of a stone mound have been discovered and have been interpreted as functioning as a river dam. This research enabled archaeologists to locate the main entrance to the town.

Although much of Syria was under political domination by Hatti in the latter part of this period, it had many thriving centers other than Ugarit with independent cultural traditions, such as Emar on the Euphrates. Although there is evidence of Hittite presence at Emar, especially as regards architecture, there was apparently no influx of Hittite population, and the culture was not deeply affected by their political and bureaucratic presence. Emar has not had the publicity of either Ebla, Mari or, for that matter, Ugarit, but the texts of Emar may shed more light on biblical customs than do the other textual corpora. It is physically closer in proximity to Israel than any of the others, and nearly two thousand texts were found at the salvage operations at Emar. The relationship of Emar to biblical studies is most striking in the religious sphere. The concept of anointing is found at Emar, as the NIN.DINGIR priestess is anointed on the first day of the festival. The Emar festivals have various requirements that are to be compared to the *levitical regulations, and the elements of the biblical festival system have some correspondence to the *zukunft* calendar. Emar also has the prophetic office of *nabu*, already well known at Mari. Some have argued that the Emar inheritance texts bear a resemblance to the Nuzi material and thus to the social customs mentioned in Genesis 31. There also appear to be connections concerning the care of the dead at Emar and Israel. In fact, it is possible that Emar's diverse urban and village Syrian communal life offers a closer social comparison for Israel than even Ugarit. At any rate, the Emar indigenous ritual texts represent a unique source of understanding ancient Syrian religions, with texts that are distinct from the Ugaritic corpus.

Archaeological investigations at Alalakh on the coast of Syria have shed light on the greater

Syro-Palestinian context of the Bible. The Habiru have also been attested there but are viewed as an important mercenary class in the Alalakh texts. This term, of course, has been compared to the biblical term *Hebrew* on many occasions. The social customs at Alalakh (e.g., marriage contracts) have been compared to the patriarchal periods, although it is admitted that the parallels from Alalakh are less clear. Certainly the connection of Alalakh *hupšu* (CAD H.241-42) with Hebrew *hopši* ("free") is vague at best. The cumulative weight of comparisons with the Bible shows a common cultural milieu for both, and one needs to view Alalakh and patriarchal comparisons on a case-by-case basis.

The cuneiform texts discovered at the excavations at Nuzi (1925-1931) have long been a mine of comparative information for the OT. Very soon after their discovery there was a flurry of scholarship observing the striking, putative parallels to the biblical patriarchs in the socioeconomic and legal spheres (B. Eichler). The consensus was that the two also must have shared the same chronological proximity. However, in the past generation there has not been a consensus as to the relative importance of the Nuzi material for biblical studies (see B. Eichler; Selman; and Morrison). There has been a re-evaluation, and some have rejected any Nuzi connections to the Bible altogether. However, the academic pendulum has swung back to the middle, with a more responsible attitude toward the usefulness and importance of the Nuzi tablets for understanding the Pentateuch. Though the Nuzi-biblical parallels cannot solve chronological issues, they are a source of documentation for the socioeconomic practices in Mesopotamia, which will help illuminate biblical law and practices. Other text collections (e.g., from Alalakh and Emar) show that the Nuzi customs may have been common throughout a wide chronological and geographic range.

6.2. Egypt: New Kingdom. As in previous periods, there was a large Semitic population in Egypt during the New Kingdom period (c. 1540-1100 B.C.). Laborers making bricks are depicted on the tomb of Rekhmire, vizier of Thutmose III (1479-1425 B.C.), some of whom were taken as prisoners of war from Canaan. In fact, the annals of Thutmose III and later New Kingdom pharaohs describe thousands of such Asiatic prisoners taken in this manner. Ramesses II (c. 1279-1213 B.C.) campaigned extensively in

Canaan during this period. At any rate, it appears that there were thousands of Asiatics in the Delta region of Egypt, who were most likely assigned to various building projects.

6.3. Palestine. Late Bronze Age Palestine shows clear evidence of Egyptian New Kingdom dominance and political control, especially in the later half of the period (c. 1400-1200 B.C.), because of the Amarna archives from Egypt. A number of significant sites have been excavated, including Tell Abu Hawam, Aphek, Gezer and Jerusalem in the Sorek Valley; Lachish and Ashdod in the northern Negev; as well as Tell Deir 'Alla and Pella across the Jordan River. These sites and others exhibited a reuse of Middle Bronze Age fortifications or were unwallled (except Gezer). Large Egyptian-type buildings have been found at Gezer, Aphek, Ashdod and elsewhere, and rich tombs have been found at Dan, Shechem, Gezer and Jerusalem. The archaeological record appears to confirm the Amarna letters, which describe Palestine as tributary to the Egyptian Empire. They also describe the Habiru, a people-group who apparently harassed the local chieftains in Canaan who were tributary to the Egyptian Empire. The relationship of the term Habiru to the Hebrew tribes is, at best, unclear. There is also evidence of destruction at the end of the period (c. 1250-1150 B.C.) at sites such as Hazor and Lachish. Other sites (Aphek and Ashdod) appear to have been destroyed by the Philistines or other "Sea Peoples," while still others (Megiddo, Beth-shan [Beth-shean], Shechem and Gezer) show little evidence of destruction and continuity with the later Iron Ages.

It will doubtless take generations for biblical scholars to digest the relevant archaeological data from Syro-Mesopotamia and elsewhere in the Near East that will shed light on the general and cultural milieu of the Pentateuch. The sheer wealth of information coming from these regions affords many opportunities to understand better the biblical world.

ARTS AND CRAFTS

Some aspects of culture require the skills of artisans or craftspeople. In societies having sufficient economic resources, such folk can be set aside for these tasks with a primary eye toward products functioning as artistic expressions. In societies such as developing *Israel in the Pentateuch (in contrast to neighboring *Egypt and Mesopotamia), without an economic foundation strong enough to permit many society members to produce much "art for art's sake," skilled work served a more practical function. Even when life was directed toward subsistence, however, aesthetics still augmented practicality.

A useful entrée into this field is the record of the development of culture in the *genealogy in Genesis 4:19-22. Jabal is associated with tents and livestock (Gen 4:20). The latter is an aspect of *agriculture, but the production of the former involved technical expertise in either leather or fabric work. Jubal, his brother, is linked with music, specifically the harp and flute (Gen 4:21). The former, some kind of stringed instrument (King and Stager, 291-94; Lawergren), probably

derived from military applications, as is the case with much contemporary Western technology. The archer's bow had been in use for millennia, and the sound of its strings was adapted in the production of the harp and lyre (see Braun, 58-65, concerning early harps). The flute, a wind instrument (King and Stager, 294-97), was most probably carved out from bone (Mitchell, 42). Percussion instruments also play a role in the Pentateuch (Ex 15:20). Music and dance play an important part in celebration (Gen 31:27; Ex 15:1-21; 32:19).

Tubal-cain "made all kinds of bronze and iron tools" (NRSV; cf. Deut 8:9). If this is taken as indicating a skill in metallurgy (either compounding alloys or separating metals from their ores), the production of iron in particular would be anachronistic since such skills were developed only in the eponymous Bronze (3500-1200 B.C.) and Iron (1200-586 B.C.) periods. Native arsenical copper was mined and worked in the areas of Arad and Beer-sheba, with a significant production complex at Timna^c from as early as the Chalcolithic period (4500-3500 B.C.; Rothenberg; King and Stager, 164-67). It is soft enough that it can be cold-hammered for shape. Bronze, an alloy of tin and copper, was stronger and longer lasting, but its production developed later (cf. 1 Kings 7:45-46; Ezek 27:12). Iron ore was found in Palestine (Deut 8:9), but its smelting and casting required high temperatures that were not attainable technologically before the nineteenth century B.C. (King and Stager, 167-69; Deist, 211-14). Natural, meteoric iron was available early, however, though it would be rare. It requires neither smelting nor casting, just shaping, which could be done by grinding (Mitchell, 42). Its rarity in the earlier periods is indicated by its restriction to the elite (Deut 3:11; cf. Josh 6:19) and the biblical comments that others had iron technology prior to its availability to Israel (e.g., Josh 17:16, 18; Judg 1:19; 1 Sam 13:20-21).

Two main spheres constitute the life of a people: the domestic or private, and the public, which includes religion and trade. While there is overlap between these in a number of ways, they each have special areas of skill relevant for this study. These will serve as the organizing framework here.

1. Domestic Sphere
2. Public Sphere

1. Domestic Sphere.

Families provide the context for the continuation of a society through childbearing and nurture. The latter aspect includes aspects of socialization into the larger culture, as well as into the dynamics of the family unit itself. This education includes those skills necessary to provide for the sustenance and livelihood of the family unit. The society of the Israelites and their ancestors as presented in the OT was mainly agriculturally based throughout their history, but especially in the earlier, presettlement period described in the Pentateuch. The various aspects of agricultural preparation and production, which are necessary skills for the family, are treated elsewhere (see Agriculture). The production of foodstuffs was not the end, however, since *food processing* was needed both for consumption and for storage.

The females did most of these tasks. They were especially burdened since they had to do this work in addition to childbearing and seasonal labor in agriculture. Much of this work was procedural, involving several sequential steps, and thus required skill. For example, the provision of bread for guests involved several steps, some of which are noted in Scripture. When *Abraham asked *Sarah to provide for visitors (Gen 18:6; cf. 27:17; Ex 2:20), she needed to “get flour,” which would have necessitated the prior soaking, milling and grinding of the grain. Milling and grinding were done with two flat stones (called *rēḥayim*, a grammatically dual form indicating the two stones; Ex 11:5; Num 11:8). The smaller upper stone (*rākeḥ*; Deut 24:6) was small enough to lift easily (cf. Judg 9:53), while the lower stone was much larger (Job 41:24 [MT 41:16]). This implement was so important to the life of the people that it was protected from confiscation for debt (Deut 24:6). Sarah was to take the flour and “knead it,” which would have been preceded by mixing it with other ingredients that had also been previously gathered and prepared, setting it to rise before kneading it. It would then have been baked in an oven for which wood had been cut and provided and which would have been heated to a temperature previously found to be ideal for the bread. Moreover, the baking would have necessitated a certain time in the oven, which also would have been determined by previous experience (cf. Gen 40:1, where this process was undertaken by a professional baker). Two hours

per day is the estimated time required for this part of a woman’s daily tasks (Meyers, 25; see King and Stager, 65-67, 94-95). Other foodstuffs needed time and skill in preparation, much of it within fairly tight time parameters, since refrigeration was unknown. Food needed processing soon after it became available lest it spoil. This included, in addition to the previously mentioned grain, olives (Deut 8:8; King and Stager, 95-98), dates and other fruit (Deut 8:8), herbs and spices (Gen 43:11; cf. 37:25; Num 11:5-6; King and Stager, 103-7), vegetables, legumes and milk products (Gen 18:8; cf. Deut 32:14; Job 10:10).

Food preparation also necessitated its storage, which involved the use of *pottery*. To produce pottery, clay is formed into the desired shape and then fired in a kiln at high enough temperatures that the very chemical composition of the clay changes, resulting in a material as indestructible as stone. Since pottery is in this form (rather than the carbon-based material of much else discussed in this article, which quickly decays), it is much more widely preserved in archaeological sites. Its ubiquitous remains at archaeological sites, as well as its stylistic change over time (which has been typologically classified by archaeologists), makes it a useful resource for relative dating between various ancient sites as well as for providing a useful diachronic timeline not only of Israel but of the entire ancient Near East (e.g., Lapp, 5.433-44; Amiran). Early pottery was simply shaped by hand, but by the Middle Bronze Age (MB; 1925-1550 B.C.) wheels were developed on which the material could be more consistently turned and formed. These could be hand-turned or foot- or kick-turned, the latter being much faster.

The pottery production process had several stages. The right kind of clay needed to be located and collected. It was then kneaded or trodden to increase its plasticity and to remove air bubbles. Sometimes this also involved tempering by adding foreign material such as straw, dung or minerals to give it the desired consistency. It was then placed in a pit with water for storage and to settle. When ready for use, it was brought to the wheel, where it was thrown or shaped. It was at this stage that aesthetic elements could be incorporated, adding decoration to function. Various colored slips or emulsions of fine clay suspended in water, with added coloring, could be applied to the outside of the ves-

sel. In the Late Bronze Age (LB; 1550-1220 B.C.), for example, a white slip was added and decoration was painted with a chocolate color. Other painted or incised patterns were used through the various periods. In the Early Bronze Age (EB; 3200-2250 B.C.) one of the earliest designs is known as basket-weave or net painting, with lines and designs making it look like a basket (Amiran, 46-59; Stager, 1990). The LB was characterized by bichrome ware, designs in red and black (see King and Stager, 133-46; Deist, 214-16).

In addition to preparing and storing food-stuffs for the family, there was also a need for *clothing preparation*. An important aspect of agricultural life in the ancient Near East was raising sheep and goats (e.g., Gen 32:5; 47:16; Deut 14:4). In addition to milk, and to a much lesser extent meat, these both provided wool. Preparing wool for use involved skill in shearing (Gen 31:19; 38:12-13; Deut 15:19), cleaning, carding and spinning (Ex 35:25) to make the threads (cf. Gen 14:23). Thread and cords were also made from flax (linen; cf. Ex 9:31; Gezer Calendar in *COS* 2.85:222) and cotton (cf. Lev 19:19; Deut 22:9-11). All of these could be dyed (Ex 25:4; Num 15:38; King and Stager, 159-62; Deist, 217-18) and woven (Ex 35:35; King and Stager, 152-58; Deist, 218-20) to produce cloth, then sewn (Gen 3:7) or tailored (Ex 28:3) to produce the garments (Gen 41:42; see Deist, 216-20; King and Stager, 146-62). Mention of such domestic work is rare in the Pentateuch, but archaeology shows such skills in use from as early as the Neolithic period.

In addition to fabric garments, some clothing (e.g., sandals) was made from *leather*, which was produced by tanning animal skins. This involved preparing the leather by removing dirt, hair, flesh, fat and blood. Leather garments are mentioned but once in the Pentateuch (Gen 3:21; cf. 2 Kings 1:8), though archaeologists have found leather artifacts from the period (King and Stager, 163-64). Animal-skin water containers are mentioned in the Pentateuch (Gen 21:14).

Feeding and clothing the family was supplemented by a need for *medical care*, since injuries and other maladies were common (Deut 28:22). While Yahweh was the main provider of *life and health (Ex 15:26), there needed to be some people in society who had special medical skills, such as the midwives who looked after Israelite

births in Egypt (Ex 1:15). Others likely had skill with the medicinal properties of herbs (e.g., Gen 30:14-15 [mandrakes as aphrodisiac or for contraception]; 37:25; 43:11 [balm]). Part of the job of the *priests was to diagnose and prescribe rituals for purification, if not for healing (Lev 13-14; see King and Stager, 71-84).

2. Public Sphere.

Many of the domestic crafts were also employed in the cultic setting as well, mainly in association with shrines such as the *tabernacle. Such works were not simply utilitarian; rather, aesthetics played a greater role in this public presentation to God, so special workmanship found a place here. The description of tabernacle construction (Ex 25-31) shows several of the elements discussed above. Regarding the Israelites' donations to build it, Moses was instructed: "This is the offering that you shall receive from them: gold, silver, and bronze, blue, purple, and crimson yarns and fine linen, goats' hair, tanned rams' skins, fine leather, acacia wood, oil for the lamps, spices for the anointing oil and for the fragrant incense, onyx stones and gems to be set in the ephod and for the breastpiece" (Ex 25:3-7 NRSV). In addition to bronze, gold and silver were also part of the fabric of the shrine. People used gold for jewelry (Ex 11:2; 32:2; 34:4-6; Num 31:50; see the picture of a LB II jewelry hoard in King and Stager, 172), and it could be cast or hammered into statues (Ex 25:18; 37:7) or furniture (Ex 25:31, 38; 37:17, 22; Num 8:4) as well as made into thread. This thread, woven (Ex 35:35) in with the dyed threads of mixed wool and linen (Ex 25:4), made up the high-priestly ephod (Ex 28:6; 39:3) and possibly the tabernacle curtains (Ex 26:1, 31; 36:8, 35) if the cherubim embroidered into these were done with the gold thread. Silver, often used with gold, both sharing a malleable character, also found a place in the tabernacle furnishings (Ex 26:19; 36:24; cf. 3:22; 11:2; 12:35; King and Stager, 169-76).

Leather from a sea creature was also prepared and used in ways similar to that of mammals, here in the outer layer of curtains of the tabernacle (Ex 26:14) as well as for coverings (along with other fabrics) for the tabernacle implements when transported (Num 4:6-14). Wood, in addition to its use in shipbuilding (Gen 6:14), was used for framing the tabernacle shrine (Ex 26:15; 36:20) as well as for furniture such as the tabernacle equipment (altars: Ex 27:1; 30:1;

37:25; 38:1; ark: Ex 25:10; 37:1; Deut 10:3; table: Ex 25:23; 37:10). The ease with which one can carve wood also made it a suitable material for making idols to pagan gods (Deut 4:28; 28:36).

The stimulation of the olfactory senses was also part of cultic practice, with incense and other scents being employed (Ex 25:6). Olive oil was the base of the scents, though some could be used dry. Various ingredients from plants and animal excretions were mixed to produce the desired scents (e.g., Ex 30:23-25, 34-36; 37:29; Matthews, 226-28). They were used not only for incense (cf. Lev 2:1-2, 15-16) and as a cosmetic but also as part of *burial procedure (Gen 50:2-3, 26; Jn 19:39; Bloch-Smith, 1.785; Jones, 490-95).

Precious and semiprecious stones also found a place in cultic practice. Onyx was used in the *priestly clothing, inscribed with the names of the twelve tribes “in the way a gem-cutter engraves a seal” (Ex 28:9-11, quote from v. 11; 35:9; 39:6). Seals were common in the ancient Near East. Since many rulers and administrators could not write, they used professional scribes, and the impressed seal indicated under whose authority the document had been produced. Seals were generally either circular, as on a ring, or a cylinder that could be rolled onto a document, which was often written on clay (*see* Writing; cf. Gen 38:18). These, while fulfilling a mundane function in commerce, could also find a place in the cult. They were often things of beauty, at times due to the material from which they were made and at times due to the intricate carving, which could include scenes as well as writing (Albenda, 420-21, 424-25; Magness-Gardiner, 1062-64; Collon; Deutsch and Lemaire).

Within the context of preparing the cultic furnishings, two men are singled out. Bezalel and Oholiab were designated as skilled craftsmen (Ex 31:1-11; 38:22-23) and were involved in numerous different areas. The fact that they were from the tribes of *Judah and *Dan respectively (Ex 31:2, 6) indicates that skills were not the realm of just one tribe, as was the priesthood, which was the exclusive province of the tribe of *Levi. These two seem to have been master craftsmen who would have supervised other skilled workers in performing the massive task before them.

Not all the products of skilled workers were destined for domestic consumption. Some were available to the wider community or even those

outside the community. While there was trade in agricultural products (e.g., Gen 41:56—42:6; Ex 22:1; Deut 2:6; Ezek 27:17), processed goods also became an element of trade and commerce (King and Stager, 189-200; Snell, 6.625-29). This is evident from the imported pottery found in Palestine, though there is little evidence of Israelite export of pottery. Trade in metals such as copper and silver is evidenced from the El Amarna tablets of the fourteenth century B.C. (EA 35.10-22), where we also learn of the exchange of diplomatic gifts in the form of (semi)precious stones (e.g., EA 2:rev.6-9; 7.49-62; 8.43-47; 10.43-49), gold (e.g., EA 3.13-22; 4.36-50; 7.63-72), furniture of ivory and ebony (EA 5.13-33), cloth (EA 12.12-22), and chariots and horses (EA 16.9-12; 17.36-40). Two texts provide lengthy lists of goods for dowries (EA 13, 14).

When commerce and trade become an important motivation for producing goods within a culture, there is a corresponding shift away from the domestic base in which production started. One aspect of this shift is the new need to produce items in bulk rather than individually. It is not clear that this stage of production reached a significant level in Palestine during the period covered by the Pentateuch, though it was attained during the course of OT history. While surrounding areas such as Egypt and Mesopotamia yield archaeological remains of workshops and special quarters in the towns where craftsmen worked, the evidence is not as clear in Palestine. Some of the domestic crafts, however, could have reached the status of a “cottage industry” in which commercial goods were produced at home. This is difficult to determine archaeologically, however, and there is no clear evidence of it in the texts.

ASHER

There is no certainty about the origin of the name *Asher*. It may have a religious origin as the male form of Asherah (the consort of El, leader of the Canaanite gods; Edelman, 482). On the other hand, it may be linked with the god Ashur of Assyria or be the abbreviation of a name such as Asarel, meaning "El has filled with joy" (Wenham, 246). Because of the wording in Genesis 30:13 and the similarity of *Asher* to the Hebrew noun *ʾāsrê* ("blessing, happiness"), the name is sometimes linked with a hypothetical verbal root meaning "to call blessed" (see also Ps 72:17; Prov 31:28). In the Pentateuch *Asher* refers to one of the sons of Jacob and the clan of Israel that bears his name.

1. Son of Jacob
2. Israelite Clan

1. Son of Jacob.

Asher was born into a strife-filled family at Padan-aram in Mesopotamia, the eighth son of the patriarch *Jacob. Jacob's two wives, Leah and Rachel, were rivals, and each gave their servants, Zilpah and Bilhah respectively, to Jacob

to produce children through them. When Leah's servant Zilpah bore her second son, she named him Asher as a mark of her happiness. Asher's elder brother was *Gad (Gen 30:12-13; 35:26). These two men were among the twelve sons of Israel who, with their households, accompanied the patriarch Jacob/Israel into Egypt (Ex 1:4). Asher himself had four sons—Imnah, Ishvah, Ishvi and Beriah—and one daughter, Serah (Gen 46:17; 1Chron 7:30 with an extended genealogy).

2. Israelite Clan.

2.1. The Clan's History: From Egypt to Canaan.

The fighting-age males of the clan numbered 41,500 at the start of the *wilderness experience; when the wanderings came to an end some thirty-eight years later, that number had increased to 53,400 (Num 1:41; 26:47). Recent studies of the large numbers involved in these lists have suggested that they are symbolic, intended to make a theological point, namely, that God's promise to the patriarchs of countless descendants was in the process of being fulfilled (Davies). Alternatively, C. J. Humphreys has revived and refined an older argument that the word *ʾelep* can mean a military unit ("troop") and that this should replace the translation "thousand." This gives Asher forty-one troops with a total of five hundred fighting men in Numbers 1 and fifty-three troops with a total of four hundred men in Numbers 26. The numbers of men in each troop varied.

The order of the clans varies in the different lists, which is probably due to the different purposes of the lists. Sometimes the interest is *genealogy; at other times the arrangement reflects the order for camping or marching. This accounts for the different positions given to Asher (Ashley, 51-53). Pagiel was the clan leader during the wilderness experience (Num 1:13; 7:72-77). When the *blessings and curses were to be announced on Mount Ebal in the Promised Land, Asher was designated to be among those clans representing the curses (Deut 27:13). These clans were the descendants of Jacob's relationships with the slave women.

2.2. The Clan's Prospects. The future for the Asherite clan was predicted in Jacob's patriarchal blessing on his son: "Asher will feast every day and provide dishes fit for a king" (Gen 49:20). Some interpret this as a sarcastic reference to highlight the absurdity of the political

and economic situation of the writer's day. For example, Gevirtz translates it, "Asher, who rations his bread, he gives delicacies to (the) king!" meaning that Asher, though so poor that it rations its bread, still provides the king with delicacies. He holds that this reflects a time near Solomon's death, after he had surrendered twenty cities to Hiram, king of Tyre (1 Kings 9:10-14; Gevirtz 154, 159, 161). However, good fortune was also predicted for the clan of Asher by Moses in his final blessing: "Asher is the most blessed of sons; may he be the favorite among his brothers and bathe his feet in oil. May your bolts be of iron and bronze and your strength last as long as you live" (Deut 33:24-25). Porter has recently suggested that these verses picture Asher as an individual warrior. He points to the principal concern of the chapter with military matters and says that *min'āl*, translated "bolt," can also mean "sandal" or "shoe" (cf. KJV). Taken with the references to "iron and bronze," the text predicts that Asher will walk over his defeated enemies.

2.3. Historical Questions. In the mid-twentieth century it seemed to scholars that the world of the patriarchs was emerging with considerable historical clarity. However, the tide has turned back somewhat. P. K. McCarter, for example, has returned to the view of the first half of the twentieth century when he writes, "The 12 sons of Israel are fictional eponyms of the 12 tribes of Israel" (McCarter, 28-29). In this view, the blessings reflect the work of later clans seeking a narrative justification for their relationship. It is also argued that the people of Asher were "an indigenous Canaanite group of people" who were incorporated into Israel only at the time of the monarchy (Ahlström, 278-79). Evidence for this is found in some thirteenth-century Egyptian references (Ahlström, 278-79). The case for a historical reading of the patriarchs and the biblical text also has its supporters. K. A. Kitchen, for example, argues that the proper Egyptian transcription of the name *Asher* is *i-š-r*; thus, the Egyptian references to *i-s-r* are irrelevant (1966, 70-71). In a later article Kitchen cites W. F. Albright's evidence for an authentic Northwest Semitic personal name from about the time of Jacob (c. 1750 B.C.; Kitchen *IBD*, 130; text in *ANET*, 553-54). Given the nature of the archaeological discoveries, it is highly unlikely that evidence proving beyond doubt the existence of Asher and his descendants will ever be uncov-

ered. Absence of evidence, however, is not proof that Asher did not live.

ATONEMENT. See SACRIFICES AND OFFERINGS.

ATONEMENT, DAY OF

The Day of Atonement, observed on the tenth day of the seventh month, is the most solemn day in the Jewish calendar. There are three high days in the seventh month of the Jewish calendar: the blowing of trumpets on the first day, the Day of Atonement on the tenth and the Feast of Booths, or Tabernacles, observed from the fif-

teenth to the twenty-second (Lev 23:23-36; *see* Festivals and Feasts). In contrast to the Feast of Booths, the most gala festival, the Day of Atonement is a day of deep solemnity, requiring fasting and self-denial.

Observance of this day in ancient Israel laid the foundation for God to forgive the people all sins committed since the previous Day of Atonement. Thereby God could continue to be present, blessing the covenant community. By faithfully performing the disciplines of this day, the people reaffirmed their relationship with God.

The Day of Atonement was so strategic in Israel's covenantal relationship with God that the year of Jubilee, the fiftieth year, when all family property returned to the original owner and all enslaved debtors were released, began on the Day of Atonement (Lev 25:8-12). This year of liberty appropriately began on the day that won for all Israelites release from the burden of the past year's sins. For those who had been compelled to lease out their land or who had become bondservants, this solemn day was assuredly a glad day.

1. References to Day of Atonement
2. The Day of Atonement in Leviticus 16
3. Prescription for Future Observance
4. Azazel
5. Implications for Jesus' Death

1. References to Day of Atonement.

The primary description of the Day of Atonement is found in Leviticus 16. Other regulations pertaining to this day are found in the cultic calendars in Leviticus 23:26-32 and Numbers 29:7-11. Although the historical books, Joshua—2 Kings and 1 Chronicles—Ezra, do not mention the Day of Atonement, this fact is not that surprising because it was a single day's observance that did not require the people to make pilgrimage to the central shrine. The importance of this day in the preexilic period is, thus, hard to assess. The clearest NT reference to it comes in Acts 27:9, where it is referred to as "the Fast."

2. The Day of Atonement in Leviticus 16.

2.1. The Structure of Leviticus 16. The primary description of the Day of Atonement appears in Leviticus 16, the center of the book of Leviticus, which itself is the center of the Pentateuch. The very position of the regulations for the Day of Atonement in the Pentateuch underscores its

importance in Israel's life before God.

The basic outline of Leviticus 16 is as follows:

- A. A historical connection (Lev 16:1)
- B. Instructions about the Day of Atonement (Lev 16:2-28)
 1. General instructions on preparations for this high day (Lev 16:2-10)
 2. The rituals (Lev 16:11-28)
 - a. The central rituals (Lev 16:11-22)
 - 1) The high priest's presentation of a bull as an offering (Lev 16:11-14)
 - 2) The high priest's presentation of the people's goat as a purification offering (Lev 16:15-19)
 - 3) The confession of sins over the living goat (Lev 16:20-22)
 - b. Additional presentation of two whole offerings (Lev 16:23-28)
 - C. Regulations about annual observances of this day (Lev 16:29-34)

The material in Leviticus 16 has two major purposes. First, within the narrative of Israel's journey from Egypt to the Promised Land it recounts the first observance of the Day of Atonement shortly after God killed *Nadab and Abihu, Aaron's sons, for having offered unauthorized fire (Lev 10:1-5). The rites performed on that observance of this high day not only cleansed the sanctuary from the sins of the *priests and the people but also removed the pollution released by the brazen offense of Nadab and Abihu. Second, this account serves as the regulation for the annual observance of this day of purgation. This latter purpose clearly comes to the fore in Leviticus 16:29-34. The instructions in that section specifically address future generations; that is, reference is made not to Aaron but to the high priest who is consecrated to serve in his father's place (Lev 16:32).

The key rituals performed on this day achieved three spiritual goals. (1) The purification (or sin) offerings and the whole offerings expiated the sins of the priests and of the entire congregation and (2) cleansed the sanctuary from the pollution of those sins. (3) The release of the goat to Azazel removed from the community all liability for those transgressions.

In seeking to understand these achievements, it is important to be aware of the multiple consequences that result from a sin. In committing a sin, a person harms the one sinned against and simultaneously commits an offense against God. In addition, every act of sinning re-

leases a pollution. In ancient Israel the penetrating force of that pollution into the tabernacle depended on the standing of the one who had sinned and on the character of the sin (cf. Lev 4). Pollution from inadvertent sins committed by individuals became attached to the horns of the *altar of whole burnt offering. Pollution from the sins of the congregation as a whole, and the Aaronide priests in particular, penetrated as far as the altar of incense in the outer room of the tent of meeting. Pollution released by blatant sins entered the very holy of holies. In addition, committing a sin unleashed a negative power that strengthened the force of evil in the community.

In order to achieve complete atonement, all of these consequences from a sin had to be addressed. In ancient Israel, a person or the community, on becoming aware of having committed a sin, addressed the first two consequences by presenting either a purification (sin) offering (Lev 4:1–5:13) or a reparation (guilt) offering (Lev 5:14–6:7 [MT 5:14–26]), depending on the nature of the transgression. The other consequences were removed by the rites performed on the Day of Atonement. On that day the blood rites from the two purification (sin) offerings purged the sanctuary of the accumulated pollution released by all the sins committed during the year; as a result, the sanctuary was empowered to continue to function as the place for the people to meet God. The rite involving the scapegoat removed the burden or power of those sins from the community, thereby freeing the people from all obligation for their sins.

2.2. Initial Preparation for the Day of Atonement. Leviticus 16:2–10 sketches the proceedings for the Day of Atonement, focusing on the garments the high priest wore and the animals to be sacrificed.

2.2.1. The High Priest. The key player on the Day of Atonement was the high priest. After bringing a bull and a ram into the court of the sanctuary as his own offerings, he put on garments made of linen—tunic, pants, sash and turban—rather than his special high-priestly garments that conveyed dignity and glory. His linen garments were similar to those of the other priests, though not identical (e.g., the high priest wore a turban on this occasion, not his regular headdress).

As some rabbis note (y. *Yoma* 7:2), angels are clothed in linen (cf. Ezek 9:2–3). The similarity

between the high priest's simpler linen clothing and that worn by angels establishes a solid basis for explaining how the high priest could enter God's very presence being clothed more simply than on the other days he officiated at the sanctuary. The simplicity of these clothes meant that he entered God's presence devoid of arrogance. His appearing in simpler garments for the main rituals of this day may also have had practical value. As he performed the several blood rites, his clothes would likely have become stained with blood. As a result, he would have needed a change of clothes sometime during the ceremony. If the high priest had been permitted to wear his special garments at the outset, he would have needed two sets of the elegant clothes, which would have been very costly. Furthermore, because his elegant attire had gold worked into the fabric, it would have been very difficult to clean them from the blood that would have gotten on them while performing the various rites.

The high ceremonies began with Aaron bathing his entire body rather than only his hands and feet, as he regularly did when serving at the altar (Lev 16:4b; cf. Ex 30:19). Immersion was required to make sure that the high priest did not enter the holy of holies with any dirt or uncleanness on his body. At the conclusion of the rituals in the holy of holies the high priest again bathed to make sure that he carried nothing away from this most holy chamber. The bathing of his entire body and the changing of clothes before and after the high rituals performed in the holy of holies served as the boundary markers for the most solemn rituals.

The regulation also addresses the acute danger that the high priest faced on entering the holy of holies. If he gazed on God's throne or was impure, the divine glory would consume him, just as it had devoured Nadab and Abihu (Lev 10:1–3). To protect himself, the high priest first entered the holy of holies with a censer, offering up incense to form a cloud that would screen him from beholding God.

2.2.2. Presentation of the Sacrificial Animals. At the beginning of the Day of Atonement, the high priest and representatives of the congregation brought the animals for sacrifice to the tent of meeting. The high priest presented a young bull to serve for a purification (sin) offering and a ram for a whole burnt offering (Lev 16:3). A bull, the most prized sacrificial animal, was re-

quired because of the high priest's high standing in the covenant community. Then the high priest received from the congregation two male goats, one for a purification (sin) offering and one to be released into the wilderness, and a ram for a whole burnt offering. The high priest took the two goats to the entrance of the tent (i.e., presented them before Yahweh). There he cast lots over them. One lot designated the goat that was for Yahweh; it was to be sacrificed at the altar. The other lot designated the goat for Azazel; it was to be released into the wilderness.

2.3. The Main Ritual. The high ritual for the Day of Atonement is described in Leviticus 16:11-28 and has three distinct stages: (1) special blood rites were performed with the blood from the purification offerings in the holy of holies; (2) sins were confessed over the goat for Azazel, and it was released into the wilderness; and (3) regular whole offerings were presented.

2.3.1. The Presentation of the Purification Offerings. The high priest sacrificed his bull as a purification offering for himself and his house at the main altar. This offering had to be made first so that the priest might be able effectively to present the congregation's purification offering.

Before entering the holy of holies with the blood of his bull, the high priest took a censer filled with burning coals. In the outer room of the tent, close to the curtain, he most likely placed on the coals the special fine incense, fragrant and finely ground, so that as he entered the holy of holies a cloud would rise from the censer filling that room with smoke to protect him from beholding God's presence. Since the fragrances prescribed did not produce much smoke, rabbinic tradition says that the high priest had to add a smoke-producing substance to the incense to make sure there was a cloud (cf. Lev 16:2, 12-13; Milgrom 1991, 1024-31). He then went out to the main altar, took from the sacrificed bull's blood, which had been put in a basin and stirred by a priest to keep it from coagulating, and brought it into the holy of holies. There the high priest sprinkled some of the blood once at the east side on the atonement slate, and then he sprinkled it seven times before the mercy seat, or atonement slate (*kappōret*). According to the Mishnah (*m. Yoma* 5:3), he sprinkled blood seven times downward rather than directly toward the atonement slate. It is not stated that the high priest was to put blood directly on the atonement slate, probably

because the cloud hindered him from seeing it clearly. Since he sprinkled blood in the direction of this slate, some blood would likely have fallen on it.

It is important to make a note about the "mercy seat," or "atonement cover" (NIV). This object made of gold sat on the ark of the covenant and was the base for the *cherubim. Although some scholars hold that it functioned as a lid for the ark (chest) of the covenant, the weight of opinion does not favor that view. Its name (*kappōret*) comes from the root *kpr*, "to atone." This name conveys that its primary purpose was to function as the place where Israel could find full expiation from her sins in order to keep in force her covenant relationship with the holy God. In this light the translation "atonement slate" is preferable. Its location between the ark that housed the tablets of the covenant and the cherubim over which God was enthroned communicated that expiation was foundational for Israel to maintain the covenant with a holy God. The blood rites in the holy of holies thus provided a spiritual-judicial basis that enabled the holy God to forgive the sins of the priests and the congregation and thus preserve the covenant relationship with the people he had redeemed from slavery.

2.3.2. The Congregation's Purification Offering. Having made expiation for his own sins and those of his house, the high priest went out to the main altar and sacrificed the people's goat as a purification (sin) offering in the court. He then took blood from this goat into the holy of holies. There he sprinkled the blood just as he had done with his own purification offering, cleansing the sanctuary from the impurities released by the congregation's sins.

The high priest moved to the outer room of the tabernacle and performed blood rites there (Lev 16:16b). In Leviticus 16 the directions for these blood rites are cryptic, probably because they were the same as those for the high purification offerings regulated in Leviticus 4:6-7, 17-18. The Mishnah says the high priest set down the basin holding the blood from the people's purification (sin) offering and took up the basin containing the blood of his own offering (*m. Yoma* 5:4). If he followed the regulation in Leviticus 4:6-7, he sprinkled some of that blood seven times before the curtain that separated the outer room from the holy of holies (Lev 4:6, 17) and then daubed blood on the horns of the altar of

incense. He then set down this basin and took the basin with the blood from the congregation's offerings and performed the same rites. The Mishnah says, however, that he sprinkled the curtain in an upward direction one time and then downward seven times. It makes no mention of his sprinkling the incense altar, but other rabbinical sources interpret the first sprinkling as done on the incense altar. According to tradition, after this sprinkling he mixed the blood from the two sacrifices for the rituals at the main altar.

2.3.3. Rituals at the Main Altar. The high priest next went out to the main altar. There he daubed blood from these offerings on the four horns of the main altar and sprinkled blood on it seven times. These blood rites cleansed the main altar from the pollution of the congregation's inadvertent sins, thus restoring its power as on the day of its consecration (Ex 40:10).

After the high priest completed these blood rituals, all the remains from the two purification offerings, including the flesh, hides and dung, were taken outside the camp and burned. The person charged with this duty returned to the camp, but only after bathing to remove all uncleanness.

2.4. Presentation of the Living Goat. Next the living goat was brought to the high priest, who laid both hands on it and confessed over it the sins of the priests and the congregation, thereby transferring the burden or obligations of all the sins committed within the last year onto this goat. Three terms for sins are employed in his confession (Lev 16:21): wickedness (*ʿāwōnōt*), rebellion (*pēsā'im*) and sins (*ḥaṭṭā'ōt*). These three terms encompass the entire spectrum of human sinning, from blunders to premeditated wrongs. Laden with all the congregation's sins committed during the past year, this goat was released into the wilderness, which was viewed by the ancients as an ominous region (see 4 below). The goat carried the congregation's sins to the realm of demonic power, thereby breaking the power of these sins for producing disharmony and harm in the community. In later times the priests made sure that the goat did not return to the inhabited area by pushing it over a cliff (*m. Yoma* 6:6).

2.5. The High Priest Offering Up Whole Offerings. Having completed these special rituals, the high priest took off his clothes, bathed and put on his elegant attire. At the main altar in the

court he then offered up the two whole burnt offerings: one for himself and one for the people. As the first offerings after the high rites of atonement, they inaugurated worship for the new liturgical year and made atonement for both the priestly order and the congregation. The text does not state what these sacrifices expiated. Possibly they made atonement for human sinfulness in general.

3. Prescription for Future Observance.

The paragraph at the end of the ritual (Lev 16:29-34) establishes the preceding regulation as the basis for annual observances of the Day of Atonement. In addition, it instructs the people to afflict themselves and not to do any work. The prescription for this day found in Leviticus 23:26-32 likewise lays great stress on these two disciplines. The term "sabbath of solemn rest" (Lev 16:31) is a superlative that forbids work of all kinds, even activities allowed on other holy days. In addition, the people are to afflict themselves. The text does not prescribe what is included in this self-affliction. Generally this requirement is understood to mean a fast of both food and water. Yet other self-disciplines are intended, otherwise the ordinary word for "fast" would have been used. Most likely included were abstinence from contact with the opposite sex, from anointing or bathing oneself and from wearing sandals (*m. Yoma* 8:1). That is, all things done for pleasure were to be avoided. Over the centuries the rigor of the self-affliction most likely increased. The penalty for not afflicting oneself was exclusion from access to the sanctuary and possibly from the community itself, and God would destroy whoever worked on this day (Lev 23:29-30).

While the regulations of Leviticus 16 center on the external ritual, this emphasis on self-affliction offers insight into the personal attitude that God desired each Israelite to have on this day. In the thought of the OT, self-affliction (*innā nepes*) was aimed at humbling the inner spirit so that a person sought God earnestly and contritely (cf. Ps 51:17 [MT 51:19]). Contrite repentance fortified the high blood rites performed in the most holy place.

In these instructions there is no requirement for the people to go up to the temple in Jerusalem as part of the observance. Apparently the majority of citizens remained at home, observing this high day by solemnly keeping the disci-

plines of self-affliction, while the high priest faithfully carried out the rituals of this day. The people were, nevertheless, aware of the activities taking place at the central shrine, for the account in Leviticus 16 was recorded for their instruction.

4. Azazel.

The congregation's second goat was designated "for Azazel." There are three main interpretations for this term. First, some argue that Azazel is the name of the goat that carried away the sins, that is, "the scapegoat." Azazel is then a composite Hebrew term meaning "the goat that departs." This position goes back to the versions. The Septuagint renders Azazel "the one who carries away" (*apopompaios*, Lev 16:8, 10a) and "the one set apart for release" (*ho diestalmenos eis aphenin*, Lev 16:26). The Vulgate employs "scapegoat" (*capere emissarius*). The major obstacle to this position is that the regulation "for Azazel" stands parallel to "for Yahweh" (Lev 16:8), suggesting that Azazel in some significant way is similar in position to Yahweh, rather than being a term for the goat released.

Second, some suggest that Azazel is the name of a remote, forbidding place in the wilderness where the sin-laden goat went. Statements in the Targum and the Talmud support this position (*Tg. Ps.-J.*; *b. Yoma* 67b). However, assigning a name to the place where the goat went would have had little value since throughout the centuries Israel observed this day in a variety of places. A stronger argument against this position is the fact that the place where the goat goes is called "a solitary place" in Leviticus 16:22. Referring to that place with this rare term would have been superfluous if Azazel itself meant a desolate place in the wilderness.

A third view takes Azazel as the name of a demon that lived in the desolate wilderness. These remote desert regions were occupied by wild animals that gave off eerie howls and screams, taken by the ancients to symbolize death and destruction (Is 34:11-15). Satyrs, goatlike demons, were thought to live in these remote, waterless places. In fact, the Hebrew word for *satyr* (*šā'ir*) is literally "the hairy one," and this word is also used for goats. In a few places it means "goat idols" or "goatlike demons" (Lev 17:7; 2 Chron 11:15; Is 13:21; 34:14). Thus this sin-laden goat was driven to a goatlike demon named Azazel.

Intertestamental apocalyptic literature, most

likely drawing on language from the ritual for the Day of Atonement, took Azazel to be the prince of the demons (*1 Enoch* 8:1; 9:6; 10:4, 8; 13:1-2; cf. 11QTemple 26:3-13). Several ancient rabbis espoused this view. The position is supported by the fact that the expression "for Azazel" in Leviticus 16:8 stands parallel to "for Yahweh," suggesting that the two parties belonged to similar categories. In this case the two were opposing spiritual forces. According to this view, this goat took Israel's sins away from the congregation into a desolate region, the abode of Azazel, in order to remove completely from the community the evil power generated by Israel's sins. In returning all these sins to the demonic power, this ritual removed the power of these sins for harm and discord in the congregation.

A strong argument against the identification of Azazel as a demon is that God would not tolerate any sacrifice being offered to a demon. In response, there are four solid facts that prove that this goat was not a sacrifice: (1) it was not ritually slaughtered; (2) its blood was not manipulated at the altar; (3) since the sins of the people made it unclean, it could not be presented as an offering to Yahweh; and (4) it was Yahweh, not the congregation, who determined which goat took on this role. Thus there are no indications of any kind that this goat was a sacrifice. Moreover, there is no hint that Azazel even desired to receive this goat. So the identification of Azazel as a (chief) demon does not detract in any way from Yahweh's complete sovereignty in all the rituals performed on the Day of Atonement. This identification, however, acknowledges that a sin, being more than an act, participates with the force of evil present in this world.

5. Implications for Jesus' Death.

The book of Hebrews in particular pictures Christ as the great high priest who achieved in his death once for all time the entire efficacy of the annual Day of Atonement (Heb 9:1-10:14; 12:2; see *DLNTD*, Death of Christ §2). Being himself free from sin, Jesus functioned as the perfect high priest. In contrast to the ancient high priest, Jesus did not have to offer any sacrifice for himself first, nor did he have to offer a sacrifice every year. In his death Jesus was at the same time the perfect sacrifice. After shedding his blood on earth, Jesus ascended into heaven,

where he completed the work of atonement in the perfect heavenly sanctuary, the prototype of the earthly sanctuary.

Christ's sacrifice on the cross was far superior to the sacrifices offered on the Day of Atonement. Achieving full atonement for all who believe in him, his death eliminated the need for animal sacrifice and for the observance of an annual Day of Atonement. Whereas the ancient high priest entered the holy of holies, performed the rites while standing and then departed, not to return until the next Day of Atonement, Jesus ascended into heaven, sat down at the Father's right hand and is ever present in the heavenly holy of holies making intercession for all who believe in him. As a result, through the priestly work of Jesus a believer gains full reconciliation with God and also has direct access to God for all petitions. Thus an understanding of the Day of Atonement sheds great light on what Jesus achieved in his sacrificial death.

According to Hebrews 13:9-12, God has given believers an altar at which they have higher privileges than the priests who ministered at the altar in the sanctuary. This altar is a metaphor for Jesus' death on the cross. In fact, his sacrifice was the perfect antitype of the purification (sin) offerings made on the Day of Atonement, for like the carcasses and remains of those offerings, which were completely consumed by fire outside the camp (Lev 16:27), Jesus died outside the walls of Jerusalem. His blood, therefore, sanctifies all those who believe, giving them firm confidence in their relationship with God. At this altar believers continually receive spiritual nourishment by faith.

Paul too may have the Day of Atonement in mind when writing in Romans 3:24-25: "through the redemption that is in Christ Jesus, whom God put forward as a place of atonement [NRSV mg.; NIV and NRSV translate *Gk hilastērion* as "a sacrifice of atonement,"] by his blood, effective through faith" (NRSV). This may be a reference to the atonement slate and its efficacious role on the Day of Atonement. The Greek term *hilastērion*, "a place of atonement," is used to translate Hebrew *kappōret*, "atonement slate." But since this Greek term is not used exclusively in the Septuagint for *kappōret*, its usage here is not sufficient evidence for claiming conclusively that Paul meant the atonement slate. However, given Paul's goal of establishing the definitive,

superior achievement of Christ's sacrificial death, it is likely that he is alluding to the rites done in the holy of holies on the Day of Atonement, for those blood rites were the most powerful atoning rites in the OT legislation. As Jesus hung on the cross, God made Jesus' body the atonement slate, thereby empowering the shedding of his blood to achieve full expiation for all sins of all humanity. In God's economy, on that day the atonement slate, which was concealed behind the curtain in the holy of holies, was placed, as it were, in full public view, outside the walls of Jerusalem. Thereby Jesus' death achieved full atonement for all who accept his sacrifice, regardless of their race, gender or generation (see *DPL*, Expiation, Propitiation, Mercy Seat).

Thus what the annual observance of the Day of Atonement achieved for all Israelites for the coming year, Jesus achieved in his sacrificial death on the cross both for all people and for all time. Christ, as sacrifice and priest, accomplished also the benefits gained by the people's two goats offered on that day: like the goat for Yahweh, his death atoned for all human sins; like the goat for Azazel, his death and resurrection broke the power of evil energized by those sins.

AUTHORSHIP OF THE PENTATEUCH

During the past two centuries the quest to identify the author of the Pentateuch has become one of the most complex and provocative issues in biblical studies. For some, to doubt the long-standing tradition of Mosaic authorship is the greatest heresy. For others, to support unquestioningly the belief that Moses wrote the whole Pentateuch is the hallmark of blind, uncritical thinking. As a prelude to entering this minefield, we shall review briefly and somewhat selectively the history of biblical scholarship as it relates to the composition of the Pentateuch (for a fuller survey, see Pentateuchal Criticism, History of). After identifying the central issues relating to the subject of authorship, we shall explore three main strands of evidence.

1. Recent History of Scholarship
2. Summary of Main Issues Arising out of Survey of Scholarship
3. Date of Final Editing
4. Conclusion

1. Recent History of Scholarship.

Prior to the Enlightenment in the eighteenth century, Jewish and Christian scholars were in

the main unanimous in affirming Mosaic authorship of the Pentateuch. The origin of the first five books of the Bible was clearly associated with Moses, who consequently was venerated as one of the most outstanding figures in the history of ancient Israel (see Source Criticism §§1 and 2). While some scholars, for example, the medieval Jewish writer Ibn Ezra (1092/93-1167), were conscious that the Pentateuch contained material that appeared to contradict the concept of Mosaic authorship, the authority of synagogue and church on this issue was never seriously challenged.

All this gradually changed when the intellectual ideas associated with the Enlightenment elevated “human reason” over “divine revelation.” Those adopting this new approach distrusted other authorities, believing that the road to truth lay through reason, observation and experiment. In this climate some scholars began to express more openly reservations about religious traditions and dogmas, often in the context of exploring new approaches to other areas of human life. The English philosopher Thomas Hobbes (1588-1679) epitomizes this in *Leviathan*, a lengthy treatise on human government in which he argues against the divine right of kings to rule over others. Hobbes (417-18) devotes several pages to various arguments against Mosaic authorship of the Pentateuch.

While the Enlightenment introduced a new willingness to question traditional ideas, there was initially little momentum toward rejecting Mosaic authorship of the Pentateuch. Nevertheless, the door was opened for further developments to occur. Consequently, by the start of the twentieth century a new consensus emerged, supported by many leading Jewish and Christian scholars, rejecting the long-standing tradition that Moses was responsible for writing the Pentateuch.

During the final quarter of the eighteenth century and throughout the nineteenth century, various scholars experimented with the idea that the Pentateuch displayed signs of multiple authorship. In particular, the use of two different divine names in Genesis (Elohim [God] and Yahweh [LORD]; see God, Names of) led some scholars to suggest that either several documents or numerous fragments had been combined together to form the present text. In 1792 A. Geddes (1737-1802) argued that the books of Genesis to Joshua had been composed during

the reign of Solomon from fragmentary sources, some of which favored the name Elohim and others Yahweh. A more radical approach was advocated by W. M. L. de Wette (1780-1849) in 1805, when he suggested that the composition of the book of Deuteronomy should be linked directly to the religious reforms undertaken by King Josiah about 621 B.C. Building on this, de Wette proposed that the oldest parts of the Pentateuch came from the time of David at the earliest.

The dating of Deuteronomy to Josiah's reign became an integral part of further theories regarding the composition of the Pentateuch. Building on the concept of multiple authors, many scholars came to the opinion that the Pentateuch was composed of four main documents. Eventually, the theory evolved that these four sources—known today by the terms Yahwistic (J); Elohist (E); Deuteronomist (D); Priestly (P)—had been combined to form the Pentateuch. Although many scholars contributed to the debate regarding the nature of these four source documents, J. Wellhausen (1844-1918) did more than most in shaping and promoting the idea that these sources should be dated: J (c. 840 B.C.); E (c. 700 B.C.); D (c. 623 B.C.); P (c. 500-450 B.C.). On the basis of these dates, the Documentary Hypothesis, as it came to be known, clearly placed the composition of the Pentateuch long after the time of Moses. The impact of this new approach was such that by 1890 all but the most conservative of biblical scholars had rejected the concept of Mosaic authorship.

Having established a framework for future pentateuchal (and OT) studies, biblical scholarship proceeded to explore related issues. In the early twentieth century H. Gunkel pioneered studies in the oral traditions that lay behind the source documents, raising the possibility that traditions contained in J, E, D and P might have been composed some time prior to their inclusion in these sources. With attention now focused on the origin of the source documents, G. von Rad proposed that existing cultic traditions had been collected and edited by the Yahwist. Modifying slightly the Documentary Hypothesis, von Rad dated the Yahwist's activity a century earlier, to the time of David, arguing that the Yahwist had been an author and theologian of some genius.

Although further developments occurred, many scholars accepted that the Yahwist, more

than anyone else, had established the basic shape of the Pentateuch as we now know it. While biblical scholarship generally applauded the contribution of the Yahwist, the role of the Priestly writer, who was viewed as the one responsible for the final editing of the Pentateuch, received considerably less attention and almost no acclaim.

In spite of the broad support given to it, the Documentary Hypothesis was never without detractors, although initially they came chiefly from the ranks of conservative Christian and Jewish scholars. However, by the final quarter of the twentieth century, a new generation of scholars began to reexamine the process by which the Pentateuch was composed. Prominent among the advocates of a new approach are R. Rendtorff, J. Van Setters, J. Milgrom and N. Whybray (1987; for a fuller discussion of these writers and others, see Wenham 1999; Alexander 2002).

Influenced by what he saw to be irreconcilable incompatibilities between the approaches of source and *form criticism, Rendtorff has forcefully argued that there never was a Yahwist. In a different vein, Van Setters has redefined the nature of the Yahwist, arguing that he was a figure of the exilic period. Milgrom belongs to a growing band of scholars who, although broadly sympathetic to the idea of various sources, challenge Wellhausen's dating of them; in particular he proposes that P is to be dated prior to D. Rejecting the criteria by which the different source documents are distinguished, Whybray favors placing the composition of the Pentateuch in the exilic/postexilic period. While proponents of the Documentary Hypothesis still exist (e.g., Nicholson), there is an ever growing unease that it fails to provide the best explanation for the composition of the Pentateuch. As Whybray (1995, 12-13) has recently remarked: "There is at the present moment no consensus whatever about when, why, how, and through whom the Pentateuch reached its present form, and opinions about the dates of composition of its various parts differ by more than five hundred years."

2. Summary of Main Issues Arising out of Survey of Scholarship.

Although biblical scholarship is deeply divided on the issue of how the Pentateuch was composed, there is widespread agreement that the

Pentateuch, as it now stands, is an edited work and not a piece of literature that was penned *ab initio* by one individual. Various factors indicate strongly that the Pentateuch was created through a process involving the editing of already-existing materials, regardless of whether the editor was *Moses or someone else. The Pentateuch itself occasionally refers to the existence of other documents that were presumably written down before the whole of Genesis through Deuteronomy was composed (e.g., Gen 5:1; Ex 17:14; 24:7; 34:27; Num 21:14-15; 33:2; Deut 31:9, 22, 24).

Furthermore, biblical scholarship has struggled to explain the composition of the Pentateuch using various models: fragmentary; documentary; supplementary; or a complex mixture of these. Central to all of these is the idea that different kinds of material have been united. Whereas a fragmentary approach stresses the disparate nature of the materials that have been edited together, documentary and supplementary approaches emphasize a degree of unity running throughout much of the material. In Genesis, for example, the presence of the *tôlēdôt* headings ("These are the generations of . . ."; Gen 2:4; 5:1; 6:9; 10:1; 11:10, 27; 25:12, 19; 36:1, 9; 37:2) at the start of new sections within the book suggests that they have been used by the book's editor to give it a distinctive structure. In this process, the editor may well have taken over some already-existing headings that were attached to *genealogical lists (e.g., Gen 5:1). Given that the contents of Genesis span a long period of time and consist of different kinds of writing (e.g., genealogical lists; short narrative episodes [e.g., the tower of *Babel incident]; longer narratives [e.g., the *Joseph story]), it seems only reasonable to assume that one person was not responsible for composing everything. This would also seem to be the case as regards the different poetic portions found in Genesis (Gen 4:23-24; 9:25-27; 27:27-29, 39-40; 48:20; 49:2-27). Genesis 14 displays peculiar features that point to the incorporation of an ancient text into the account of *Abraham's life (e.g., the use of explanatory notes to provide updated names for several places), although this could also have occurred at a later stage involving the transmission of the whole Pentateuch (see Source Criticism §2.1.1). When we move beyond Genesis to the rest of the Pentateuch, it becomes even clearer that different blocks of

material, each with its own distinctive features, have been united to form the whole.

All of these factors point in the direction of preexisting material having been taken over and edited to form the Pentateuch as we now know it. This best explains features within the Pentateuch that point toward, on the one hand, the overall unity of the narrative plot and, on the other hand, a clear lack of homogeneity as regards the contents of the books of Genesis to Deuteronomy. In the light of these contrasting features, the Pentateuch is best understood as a literary collage. What remains in dispute, however, is the nature of the editorial process, the identity of the one (or those) responsible and the dating of it.

Throughout the final decades of the nineteenth century and most of the twentieth century, the Documentary Hypothesis has been the dominant explanation for the process by which the Pentateuch was composed. However, the history of Pentateuch criticism reveals that the solutions given by the Documentary Hypothesis to explain this process evolved over a long period of time. Today many of the assumptions, which were accepted toward the end of the nineteenth century, are no longer considered valid (Whybray 1987).

Furthermore, given our present knowledge and the lack of relevant, external evidence, serious doubts exist regarding the ability of scholars to uncover the process by which the Pentateuch was composed. While NT scholarship is almost unanimous in supporting the idea that Matthew had before him a copy of Mark's Gospel, it is highly unlikely that beginning with Matthew, scholars could uncover, using internal evidence alone, a source document identical to Mark. In the light of such considerations, we ought to ask seriously: Is it possible for contemporary scholars to recover with any certainty the process by which the Pentateuch was composed, especially when no other relevant texts are available (Alexander 1997)?

Accepting that the Pentateuch is a literary collage, the question of the date of final editing becomes even more complex, for editing allows for the possibility that different parts may have been composed over a wide range of time and by different writers.

Before asking what date should be assigned to the composition of the Pentateuch, a number of general observations will be made. First, it is

not possible to assign a date of writing to all of the individual components that make up the Pentateuch. Scholars differ greatly in the dates they give to particular portions, and often these dates tend to be relative rather than absolute. Second, even if it were possible to claim categorically that every passage in the Pentateuch was pre-Mosaic, this would not of itself prove that Moses was the final editor. While it allows for this possibility, it is equally feasible that an editor long after the time of Moses may have been responsible for the present shape of the Pentateuch. Third, even if it could be demonstrated beyond doubt that the date of final editing was late (e.g., exilic or postexilic), this does not automatically indicate that everything contained in the Pentateuch must also be dated to the exilic/postexilic period. It is always possible that traditions that go back many centuries have been brought together at a later time. Fourth, due to the very limited scope of extrabiblical sources from Palestine, our knowledge of the preexilic period in ancient Israel is limited, and scholars diverge greatly in their assessment of it. Much depends on the historical reliability that scholars assign to the relevant biblical material found mainly in the books of Genesis to Kings. Yet even if one accepts that this material provides an accurate picture of this period, the picture is far from comprehensive, and there are many gaps in our knowledge. These observations highlight the complexity of the main issues surrounding the authorship of the Pentateuch.

3. Date of Final Editing.

If the Pentateuch is a literary collage that was formed to a greater or lesser extent through the bringing together of disparate materials, what can we discover about the final date of composition? Three different approaches may help determine the date of editing, although, as we shall observe, they all present problems. First, if we can isolate and date the latest tradition preserved in the Pentateuch, then we may conclude that the final editing must have taken place after this date. Second, by discovering specific references to the Pentateuch in other writing, it may be possible to establish the date at which it came into being. Third, if we can ascertain the purpose behind the writing of the Pentateuch, this may guide us to when it was composed.

3.1. Latest Tradition. It goes without saying that the final editing of the Pentateuch cannot

be earlier than the date of composition of the latest tradition preserved in the books of Genesis to Deuteronomy. This, however, leads us into the very complex issue of determining the actual date at which every tradition within the Pentateuch was committed to writing. Given that the Pentateuch consists of a large number of traditions, representing a variety of literary genres, the task of dating each tradition is far from easy. Unfortunately, many of the individual traditions preserved in the Pentateuch lack criteria by which an absolute date may be assigned to them. Moreover, opinions may differ significantly regarding the date of a particular tradition; different scholars may assign the same passage to quite different periods of time.

The narratives in Genesis concerning Abraham and his immediate descendants provide many examples of the complexities of trying to determine the date of individual traditions. Due to the influence of the Documentary Hypothesis, toward the end of the nineteenth century and into the twentieth century, it was widely held that the stories about the patriarchs were invented by scribes living at the time of the Israelite monarchy. This view, however, was subsequently challenged during the middle of the twentieth century by various biblical archaeologists, the most prominent being W. F. Albright, who saw the patriarchal traditions as reflecting early second-millennium customs. Then, in the final quarter of the twentieth century, due largely to the influence of T. L. Thompson and J. Van Seters, the pendulum started to swing back in favor of the idea that the stories concerning the patriarchs should be viewed as literary creations from the middle of the first millennium B.C., having no links with the early second millennium B.C. Although the overall approach of Thompson and Van Seters has not gone uncontested (see Millard and Wiseman), some of their criticisms are valid regarding the way in which extrabiblical parallels have been used to justify the historicity of patriarchal traditions.

The problem of dating individual traditions may be illustrated using the following example based on Genesis 23. In 1953 M. R. Lehmann argued that the account of Abraham's purchase of the cave at Hebron reveals an intimate knowledge of Hittite law and custom dating from the second millennium B.C. According to Lehmann, the bargaining between Abraham and Ephron

was concerned not merely with the possession of a piece of land but also with obligations to the king entailed through ownership of land. Abraham wanted to avoid these obligations, but Ephron was keen to rid himself of them. Basing his argument on several statutes from a Hittite law code found at Boghazköy in Asia Minor, Lehmann concluded,

We have thus found that Genesis 23 is permeated with intimate knowledge of intricate subtleties of Hittite laws and customs, correctly corresponding to the time of Abraham and fitting in with the Hittite features of the Biblical account. With the final destruction of the Hittite capital of Hattusas about 1200 B.C.E., these laws must have fallen into utter oblivion. This is another instance in which a late dating must be firmly rejected. Our study again confirms the authenticity of the “background material” of the Old Testament, which makes it such an invaluable source for the study of all aspects of social, economic and legal aspects of the periods of history it depicts. (Lehman, 18; cf. Kidner, 146)

Given Lehmann’s suggestion, however, that Abraham wished to avoid any feudal services due to the Hittite king, it is surely strange that no reference, either direct or indirect, is made to the monarch.

A very different approach has been suggested by G. M. Tucker, who develops the idea that the account of Abraham’s purchase of the cave resembles in form a *Neo-Babylonian dialogue document*, used around 700-500 B.C. for the transference of property or other possessions. “The similarities between this type of contract and Genesis 23 are striking, though the OT narrative preserves a much fuller account of the negotiations. The dialogue document’s pattern is reflected in Ephron’s quoted ‘offer’ (VS. 15), Abraham’s acceptance described in the third person (VS. 16a α), the payment clause (VS. 16a β b), and the transfer clause (VSS. 17-18) which includes a description of the property” (Tucker 1966, 82). While Thompson (295-96) and Van Seters (98-100) have embraced Tucker’s claim that the legal details found in Genesis 23 reflect best Neo-Babylonian customs, several difficulties arise. First, Tucker’s suggestion that a “dialogue document” underlies Genesis 23 is restricted to only verses 15-18. Second, “dialogue documents” are attested in the early second millennium B.C. (Selman, 117/124). This under-

mines the suggestion that the legal aspects of the narrative are necessarily late.

An alternative approach to the legal features outlined in Genesis 23 has been proposed by R. Westbrook, based on what he terms “a legal fiction of double transfer.” Westbrook notes that in land transactions from Ugarit, “a number take the curious form of a tripartite transaction whereby the king intervenes not merely as a witness but as an intermediary through whose hands the property passes from one party to the other” (Westbrook, 36). Similar transactions are found in Hittite documents from Boghazköy and in Elamite documents dated about 1600 B.C. Westbrook suggests that the part played by the Hittites in Abraham’s purchase of the cave from Ephron can be explained best by this “double transfer” (cf. Gen 23:17, 20; 25:9-10). In the light of this, the account in Genesis 23 may possibly reflect a practice in existence long before the development of Neo-Babylonian dialogue documents.

As this example illustrates, it is possible to uncover various ancient Near Eastern customs that may possibly parallel the events recorded in Genesis 23. While the views of Lehmann and Tucker are less compelling than that of Westbrook, it may well be that none of the above suggestions is applicable.

In the light of this, some general observations should be made. Any attempt to date a particular tradition is hampered by the limited and sporadic nature of the evidence available. On the basis of past and current archaeological discoveries, it is not possible to reconstruct a continuous, detailed picture of life within every society throughout the ancient Near East. This is especially so for Israel/Palestine during the whole of the second millennium and the first half of the first millennium B.C. While much archaeological evidence has been uncovered, it represents, relatively speaking, only the tip of an iceberg, and many gaps in our knowledge exist. For this reason, due to the absence of more appropriate materials, scholars have often been forced to compare biblical traditions with customs found in Mesopotamia, hundreds of miles away. Not surprisingly, such parallels occasionally prove to be less than satisfactory.

A further complication is the fact that new archaeological evidence does not come to light in a uniform manner. A chance find may provide an abundance of artifacts relating to a specific

site. On the other hand, a systematic survey of part of a major site may uncover relatively little. As archaeologists have long acknowledged, *absence of evidence is not evidence of absence*. This becomes an even greater factor when we are dealing with the early second millennium B.C. Moreover, we need to have realistic expectations as to what kind of evidence is likely to be discovered after three or four thousand years. Is it likely, for example, that extrabiblical documents or artifacts shall ever be found documenting the lives of seminomadic people such as the patriarchs in Genesis?

In addition, it is always dangerous to assume that a particular social custom may be dated to a narrowly defined period of time. We now know that the custom of a wife giving her husband a slave girl (see Gen 16:1-4; 30:3-5, 9-10) was practiced over a period of one thousand years, ranging from the early second millennium B.C. through to the middle of the first millennium B.C.

Care also needs to be taken that we are not guilty of eisegesis regarding the biblical text. Often the biblical description of a custom is exceptionally brief and open to various interpretations (e.g., as noted above with Abraham's purchase of the cave of Ephron). The danger is ever present that an extrabiblical custom is "read into" the biblical text. E. A. Speiser's analysis of the wife-sister incidents in Genesis exemplifies the hazard of such an approach (see Speiser and the critique by Greengus).

All these factors make the task of dating the pentateuchal traditions, especially those associated with Genesis, exceptionally difficult. When scholars differ noticeably in their estimation of the date of a particular tradition, the reasons for doing so are often very tentative. Although it is clearly beyond the scope of this article to consider the dating of every tradition found within the Pentateuch, a number of general observations shall be made in support of the idea that greater weight ought to be given to the view that the pentateuchal traditions are authentic rather than later fictional creations, as some scholars have recently argued (e.g., Mullen).

As regards the book of Genesis, it is noteworthy that various social customs and religious practices stand at odds with what developed in the time of Moses and afterward. The freedom with which the patriarchs built altars at different locations and offered sacrifices (Gen 12:7-8;

13:4, 18; 22:9; 26:25; 33:20; 35:1, 3, 7) stands in marked contrast to the religious practices associated with Mosaic Yahwism, with its emphasis upon the role of priests and the importance of a central sanctuary (see Moberly; Pagolu). This contrast is even greater when we move to the postexilic period.

Similarly, there are several prominent examples of the patriarchs acting in ways that would have been abhorrent to those living under the legislation and customs associated with the Sinai covenant. According to Genesis 20:12 Abraham married his half-sister *Sarah, yet this practice is forbidden in Leviticus 18:9, 11; 20:17; and Deuteronomy 27:22. Similarly, whereas Leviticus 18:18 prohibits a man from marrying two sisters, Jacob married Leah and her sister Rachel (Gen 29:15-30).

The Pentateuch also contains traditions that stand strangely at odds with later attitudes. For example, as Nicholson (159-60) highlights, Esau's firstborn status in Genesis is unlikely to have been invented by a Jewish writer of the exilic/postexilic period. On the contrary, this would have been a major embarrassment to Jews who viewed the Edomites as archenemies (e.g., Jer 49; Lam 4:22; Ezek 25:12-13; 35:15; Obadiah). The same argument could also be applied to the prominence given to Joseph in Genesis, over against the less-important role played by his older brother Judah. If this latter tradition was created by a Judean writer, it is hard to imagine that he would have given pride of place to Joseph, from whom the Ephraimites, associated with the northern kingdom of Israel, claimed a royal lineage. This would suggest that the traditions concerning Esau and Joseph are preserved due to their authenticity rather than their appeal to contemporaries living in the exilic/postexilic age. Why invent traditions that give a special standing to those who were later viewed with some disdain?

Whereas the preceding comments have focused on Genesis, A. P. Ross (35) makes a similar point regarding the traditions concerning the *tabernacle. If these traditions were created in the exilic or postexilic period, it "yields the improbable scenario in which the nation in exile longs to return to their land but instead receives instructions to build a portable shrine for the desert."

Alongside the difficulty of explaining why various traditions should have been invented in

the exilic or postexilic period, other features point to the antiquity of various elements within the Pentateuch. For example, F. M. Cross and D. N. Freedman's study of the poetic sections embedded in the books of Genesis to Deuteronomy points to an early date of composition for these. Given that poetry, in contrast to narrative, is less likely to be modified by later editors, the dating of these materials is highly significant. Rendsburg (1982) notes that within the Pentateuch the Hebrew personal pronoun *hû*, which normally denotes the third-person masculine "he," occasionally refers to the third-person feminine "she." According to Rendsburg, this is best explained as reflecting an early linguistic feature. From a different perspective, G. J. Wenham (1980) observes the absence of personal names in Genesis that have been formed using a theophoric element derived from the divine name YHWH. This evidence points toward a date of composition prior to the first millennium B.C., when it became very common for personal names to incorporate elements from YHWH. (For further linguistic evidence supporting an early date for the pentateuchal traditions, see *Language of the Pentateuch*.)

Over against these indicators of ancient material, we should also observe that there are various features in the Pentateuch that point toward a date of composition after the time of Moses. For example, the use of the name Dan in Genesis 14:14 is anachronistic; according to Judges 18:29 the designation "Dan" was given to the city of Laish after the Israelites entered the land of Canaan. In addition, would Moses have written of himself, "Now the man Moses was very humble, more so than anyone else on the face of the earth" (Num 12:3 NRSV)? (For a fuller list of post-Mosaic traditions, see *Source Criticism* §2.1.1; cf. Aalders, 105-10.) Significantly, some of the features that are viewed as clearly post-Mosaic are in keeping with the idea that older traditions were edited at a later date.

3.2. External Evidence. Another way by which we may attempt to date the composition of the Pentateuch is to find references to it in other documents. While at first sight such an approach may seem straightforward, various difficulties arise regarding the Pentateuch.

There is a limited range of materials from which to glean evidence. Through to the postexilic period, we must rely almost exclusively on the biblical books of Joshua to Kings, alongside

the writings of the preexilic prophets. These writings provide a very limited picture of a period of history that spans about eight hundred years (for a discussion of several important extrabiblical texts, see Waaler).

The identification of references to the entire Pentateuch in the earliest relevant extant documents is complicated by the fact that no single title appears to have been used to denote the books of Genesis to Deuteronomy. The designation "Pentateuch" (derived from the Greek *pentateuchos*, "five-volume work") came into use about the third century A.D. Prior to this various expressions were used, often involving one or both of the terms *Moses* and *Torah* (usually translated as "Law," although "Instruction" would convey better the sense of the Hebrew word in English). Thus, in the prologue to the Greek translation of Sirach, written about 132 B.C., the author refers to the threefold division of the OT using the following expressions: "the Law and the Prophets and the others that followed them"; "the Law and the Prophets and the other books of our ancestors"; "the Law itself, the Prophecies, and the rest of the books" (NRSV). Here the term *Law* is clearly used to denote the Pentateuch.

Yet a survey of earlier materials, reveals that the term *law* is first used in a more restricted manner. According to the book of Deuteronomy, Moses set before the people "the law," a body of material that is introduced by the narrator in Deuteronomy 4:44 and extends from 5:1 to 26:19 (or possibly 30:20). Later Moses gave a written copy of this law to the priests (Deut 31:9), instructing them to read it to the people on a regular basis (Deut 31:11). In the meantime they were to place it beside the ark of the covenant (Deut 31:26). Interestingly, within the "book of the law," Moses gave instructions that the future king should make for himself a copy of "this law" in order that he would be guided by its contents (Deut 17:18-20). This same "book of the law" is referred to in Joshua 1:7-8: "Only be strong and very courageous, being careful to act in accordance with all the law that my servant Moses commanded you; do not turn from it to the right hand or to the left, so that you may be successful wherever you go. This book of the law shall not depart out of your mouth; you shall meditate on it day and night, so that you may be careful to act in accordance with all that is written in it. For then you shall make your way pros-

perous, and then you shall be successful" (NRSV). In the light of Deuteronomy, there can be no doubt, although this is not always appreciated, that the book of the law mentioned at the start of Joshua is *not* the Pentateuch as we know it. Rather, the expression "book of the law" denotes the contents of Deuteronomy 5–26 (or perhaps 5–30).

From this starting point, it becomes clear that further references to the "book of the law of Moses" (e.g., Josh 8:31; 23:6; 2 Kings 14:6; Neh 8:1), "the law of Moses" (e.g., Josh 8:32; 1 Kings 2:3; 2 Kings 23:25; 2 Chron 23:18; 30:16; Ezra 3:2; 7:6; Dan 9:11, 13), "the book of Moses" (e.g., 2 Chron 25:4; 35:12; Ezra 6:18; Neh 13:1), the "book of the law" (e.g., 2 Kings 22:8, 11; 2 Chron 17:9; cf. 2 Chron 34:14) and "the law" (e.g., 2 Kings 21:8; 2 Chron 25:4); probably refer to the material now preserved in Deuteronomy 5–26(30). On some occasions, there can be no doubt that the text of Deuteronomy 5–26 is in view. Quoting Deuteronomy 24:16, the author of 2 Kings 14:6 (cf. 2 Chron 25:4) states that Amaziah (c. 800-783 B.C.) "did not put to death the children of the murderers; according to what is written in the book of the law of Moses, where the LORD commanded, 'The parents shall not be put to death for the children, or the children be put to death for the parents; but all shall be put to death for their own sins'" (NRSV). Although no quotation is provided, Nehemiah 13:1 unmistakably alludes to Deuteronomy 23:3, which states that Ammonites and Moabites should be excluded from the assembly of God. On other occasions dependence upon Deuteronomy 5–26(30) is more difficult to prove. For example, Joshua 8:31, which states, "as it is written in the book of the law of Moses, 'an altar of unhewn stones, on which no iron tool has been used,'" would seem at first sight to be alluding to Exodus 20:25. However, there is no mention of *iron* in Exodus 20. Alternatively, Deuteronomy 27:5, which itself depends upon Exodus 20:25, specifically uses the term *iron*. It may be, therefore, that the author of Joshua 8:31 is alluding to Deuteronomy 27:5.

While the earliest OT evidence strongly suggests that the designation "the book of the law of Moses" and its related variants denotes the core chapters of Deuteronomy alone, an important development takes place in the postexilic period. At this stage, the designation "law" comes to embrace more than the material con-

tained in Deuteronomy 5–26(30). Thus, for example, a subtle change in wording by the Chronicler in 2 Chronicles 25:4 (compare 2 Kings 14:6) suggests that he may have viewed the "book of Moses" as a subset of "the law." More significantly, the reference in Nehemiah 8:13-14 to the written "law" probably relates to Leviticus 23:34-43, although H. G. M. Williamson (294-95) observes that at least one feature is dependent upon Deuteronomy 16:13-15. A similar observation is applicable to Nehemiah 10:34-36, which presupposes a knowledge of Exodus 13:13; 34:20; Numbers 18:15-18; and Deuteronomy 15:19-23. Interestingly, in these latter two examples, the name of Moses is not associated with the law; the "law of the LORD" encompasses the "law of Moses" but goes beyond it to include materials found in Exodus and Leviticus.

The evidence considered above does not go far toward supporting the idea that the Pentateuch, as we know it, existed in the preexilic period. The most that we can conclude is that much of the book of Deuteronomy existed in written form. However, even here we need to take into account the incident recorded in 2 Kings 22 concerning Hilkiah's discovery of the "book of the law" during the reign of Josiah. While, as we have noted earlier, many biblical scholars from the time of de Wette onward have mistakenly dated the composition of Deuteronomy to this event, about 620 B.C., a different implication may be drawn from the narrative. Josiah's reaction to the discovery of this document reveals that the detailed contents of this "book of the law" must have been largely unknown at the start of the final quarter of the seventh century B.C. This indicates that for some period of time it could not have been read. Indeed, apart from brief references to the "book of the law" in the time of David/Solomon (1 Kings 2:3) and Amaziah (2 Kings 14:6), little mention is made of it prior to 620 B.C. (Another brief reference to the law is found in 2 Kings 17:13, although it is not clear that this is the "book of the law." The "book of the law of the LORD" is also mentioned in 2 Chron 17:9 in connection with the reign of Jehoshaphat [c. 873-849 B.C.].)

It is hardly surprising, however, that knowledge of the "book of the law" should have been neglected, if not deliberately suppressed, by the Judean and Israelite monarchies. As the book of Kings reveals, the contents of Deuteronomy offer a serious indictment of the practices of many

kings. To take but one example, Solomon's desire for wealth (1 Kings 9:10–10:29), horses from Egypt (1 Kings 10:28-29) and many wives (1 Kings 11:1-8) stands in marked contrast to the advice given in Deuteronomy 17:16-17. Given the overall spiral of spiritual and moral decline that followed on from the reign of Solomon and eventually led to the destruction of the Jerusalem temple by the Babylonians, it is hardly surprising that specific references to the "book of the law" are few and brief.

While this is so, clear evidence exists that the "book of the law" (i.e., Deut 5–26 [30]) was composed well before the time of Josiah. We see this in the writings associated with the prophets. In particular, the book of Hosea presupposes that the prophet's contemporaries knew the "law of Moses" and accepted its authority. As F. I. Andersen and D. N. Freedman (75) state, "Hosea's discourses are threaded with Deuteronomic ideas in a way that shows they were already authoritative in Israel" (cf. Brueggemann, 38-40). Hosea, however, is not the only prophet to have been influenced by the legal traditions found within the Pentateuch. As Tucker (1988, 214), writing about the eighth-century B.C. prophets, observes, "The law, in the sense of authoritative and binding expectations for behavior, comes before even the earliest prophets." Marshall's study of the dating of the legal materials in the *book of the covenant (Ex 21–22) also points toward a premonarchic date.

Although there is a clear absence of external sources to confirm the composition of the whole of the Pentateuch as we know it prior to the postexilic period, the lack of evidence needs to be treated cautiously. Moreover, considerable evidence exists indicating that many traditions found within the Pentateuch were clearly known in the preexilic period. Consequently, we must ask, are these traditions known from a preexisting Pentateuch, or was the Pentateuch composed later on the basis of much earlier traditions? Given our present knowledge, the weight of evidence probably favors the latter of these options.

3.3. Purpose of Composition. What prompted the bringing together of the various traditions that now make up the Pentateuch? If this can be determined, it may prove a helpful guide toward the date of final editing.

As we approach this issue, it is important to observe that the individual books of the Pen-

tateuch have been linked together in two significant ways. First, specific connections exist between adjacent books. For example, the opening verses of Exodus presuppose that the reader is already familiar with the main details of the story of Joseph in Genesis 37–50. Exodus 13:19 refers back to Joseph's comments in Genesis 50:25 concerning his bones being taken up out of *Egypt. The account of the appointment of Aaron and his sons as *priests in Leviticus 8:1-36 presupposes the instructions given in Exodus 29:1-46. God's comment in Numbers 20:12 regarding the death of Moses outside the Promised Land is fulfilled in Deuteronomy 34:1-8. While these, and others, demonstrate that the books of the Pentateuch, in their present form, are interdependent, it should also be noted that this feature extends beyond the Pentateuch into the books of Joshua to Kings. Thus, the opening verses of Joshua presuppose that the reader is familiar with events narrated in Deuteronomy.

Second, the books of Genesis to Deuteronomy are bound together by a narrative plot that has at its heart two strands involving the divine *promises of (1) land and (2) a royal deliverer. Although the first of these is usually associated with the call of Abraham in Genesis 12:1-3, it has important antecedents in Genesis 1–11, where attention is drawn to humanity's special but troubled relationship with the ground/earth. The promise of land dominates the narrative plot in the Pentateuch, linking the patriarchs of Genesis with the deliverance of the Israelites from bondage in Egypt and their protracted journey to the land of Canaan. Closely associated to the theme of land, the promise of a royal deliverer is tied in Genesis to the unique lineage that is traced from Adam through Seth to Noah and then, via Shem and his descendants, to Abraham, Isaac and Jacob. Through this particular family line God's blessing will eventually be mediated to the nations (e.g., Gen 12:3; 22:18). While this anticipated royal line is initially associated with Joseph and his son Ephraim, leading directly to Joshua, we discover that in the time of Samuel God rejected this lineage in favor of another descended from Judah (Ps 78:59-72; see Alexander 2002, 101-28; cf. P. R. Williamson).

The divine promises of land and a royal deliverer both remain unfulfilled by the end of Deuteronomy, making the Pentateuch an "unfinished story." The absence of an account of

the Israelite occupation of the Promised Land led many scholars to think of a Hexateuch (Genesis to Joshua). A further development occurred when M. Noth introduced the concept of a Deuteronom(ist)ic Historian, who composed the books of Deuteronomy to Kings in the exilic period. Focusing on the unity of these latter books, Noth dismissed the concept of a Pentateuch in favor of a Tetrteuch (Genesis to Numbers). While Noth's proposal has been very influential, it is not without problems (see McConville), and it fails to account adequately for the important relationship between the Tetrteuch and the so-called Deuteronomistic History.

The narrative plot centered on the divine promises of land and a royal deliverer moves to a preliminary climax with the appointment of David as king and his establishment of Jerusalem as the cultic and political capital of the nation. At last, under David and Solomon, the Israelites come to possess all the land promised to Abraham. Furthermore, God guarantees David that his kingdom will be established forever (2 Sam 7:11-16; cf. Ps 89:19-37). Yet, as Kings reveals, the Davidic dynasty fails to mediate divine blessing to the nations, but rather, through its disobedience, brings God's wrath on itself and the nation of Israel. After Solomon, the kingdom is divided, with first the northern kingdom of Israel and then the southern kingdom of Judah being decimated by the Assyrians and Babylonians respectively. By the end of Kings, the promise of international blessing seems far from being fulfilled.

In the light of the coherent narrative plot that runs from Genesis through Kings, which cannot be easily broken at either the end of Numbers or Deuteronomy, it seems best to assume that all of the material in Genesis to Kings was brought together at one time to form the extended narrative that comprises these books. Given the diversity of materials and styles of presentation contained in Genesis to Kings, earlier traditions were clearly used to compose this complex literary collage.

The books of Genesis to Kings were probably given their present shape shortly after 561 B.C., the date of Jehoiachin's release from prison (2 Kings 25:27). While the process by which these books were compiled remains obscure, they were probably written to give hope to those affected by the destruction of Jerusalem and the temple, the demise of the Davidic dynasty, the

deportation of many leading Judean citizens to Babylon and the flight of others to Egypt. The books of Genesis to Kings not only offer an explanation for the occurrence of these traumatic events by focusing on the nation's failure to be faithful to Yahweh (see esp. Deut 28:15-68; 29:16-28), but they also preserve the hope that God will one day raise up a descendant of David through whom God will bless all the nations of the earth. Similar optimism comes in other writings, some of which originate prior to the exile (e.g., Is 9:1-7; 11:1-5; Jer 23:5-6; 30:8-9; Ezek 17:22-24; 34:23-24; 37:24; Amos 9:11-12).

4. Conclusion.

Since the Pentateuch itself offers no clear statement regarding the one responsible for creating it, we should exercise extreme caution before stating that its author can be identified with certainty. While the long-standing tradition of Mosaic authorship is based upon clear statements that Moses was responsible for writing substantial parts of the Pentateuch, the weight of evidence suggests that Moses probably did not compose the Pentateuch as we now have it (see Aalders, 105-58). This is not to say that the Pentateuch's claims concerning Moses' literary activity should be rejected. On the contrary, such assertions ought to be respected and given serious consideration, which unfortunately all too rarely happens.

As we have noted, two conflicting factors complicate the task of trying to identify the author of the Pentateuch. As a literary work, the Pentateuch displays evidence of both unity and disunity. Unity of overall composition, involving a narrative plot that binds disparate materials together, has to be balanced against the fact that the pentateuchal writings lack homogeneity, with different styles and types of writing having been placed side by side. These factors suggest that the Pentateuch was composed through a process of editing that involved the bringing together of already extant documents.

The task of determining when this editorial task was undertaken is far from straightforward. As we have noted, early traditions may be brought together at a much later date, leaving open the possibility that many centuries could pass between the original composition of traditions found within the Pentateuch and their incorporation into a single work. Acknowledging that any conclusion reached must be based on

very limited evidence, it seems best to conclude that the Pentateuch as a literary whole, which was linked to the books of Joshua to Kings, eventually took shape in the exilic period. While the traditions contained within the Pentateuch clearly existed prior to this time and were obviously viewed as both ancient and authoritative by the final editor of the Pentateuch, it is exceptionally difficult to demonstrate that the Pentateuch itself existed in its entirety as a literary unity prior to the sixth century B.C. As we have suggested, it may have been the dramatic events surrounding the fall of Jerusalem that prompted the bringing together of the traditions that are now embedded not just in the books of Genesis to Deuteronomy but in Genesis to Kings.

Whether substantial parts of the Pentateuch already existed as literary works prior to this final editing is open to debate. Evidence from Kings and the prophetic writings indicates that much of Deuteronomy already existed. Whether the same is true, for example, of Genesis is difficult to determine; Wenham (2000) has recently argued that the rhetorical features of Genesis point to a date of composition in the early monarchy. Certainly the editor of Genesis appears to have been aware of the establishment of the Davidic dynasty, associated with the line of Perez, and the rejection of the line of Ephraim (see Ps 78:59-72; Alexander 2002). However, the complex relationship between the royal lines descended from Joseph and Judah, anticipated in Genesis 37—50, would hardly have led to Joseph being given prominence at the very time when David and Solomon were seeking to establish their claim to the throne of Israel. A later date of editing, well beyond the division of the Solomonic empire, and possibly after the fall of the northern kingdom of Israel, would seem to offer the best time for composing a work that gives greater prominence to Joseph/Ephraim over against Judah/Perez. That this should happen at such a later period, when there was little to be gained by advancing the cause of Joseph/Ephraim, suggests that the editor of these traditions was committed to preserving them accurately.

To suggest, even tentatively, that the Pentateuch reached its present form long after the time of Moses may appear to some readers to undermine its authority and challenge the concept of divine inspiration. Such, however, is not the case. A late date of editing does not automat-

ically deny the authenticity of the traditions contained in the Pentateuch, especially when, as we have noted, earlier written documents have been used in its composition. Moreover, as with many biblical books (e.g., the Gospels) that provide a description of selected events, the Pentateuch offers a prophetic interpretation of a history that spans many centuries. Indeed, by linking together the books of Genesis to Kings, the final editor of this material produced an important metanarrative that provides a unique perspective on God's dealing with humanity. This ancient metanarrative not only recounts events that have taken place, but significantly offers an authoritative explanation of them. Furthermore, as M. Sternberg has noted, the narrator of these events comes across as omniscient, knowing, for example, not only what various characters in the story are thinking but more importantly what God is thinking. For Sternberg (23-25) such knowledge displayed by the narrator points towards divine inspiration.

BABEL

Babel is the name given to the city that, according to the story in Genesis 11:1-9, was constructed in a plain in the land of Shinar and whose construction led God to confuse the builders' language and to scatter them.

1. The Context
2. The Story: Structure and Meaning

1. The Context.

1.1. Textual. The Babel narrative in Genesis 11:1-9 is the last in a series of accounts that precede the Genesis 12 record of *Abraham's migration from *Haran and his *covenant with God. D. J. A. Clines has drawn attention to the way in which these accounts all conform to the same general pattern yet progress toward a climax in the Babel story. Elements of this pattern include a sin, mitigation and punishment, but the sin and punishment become more serious as the accounts proceed, and the grace involved in the mitigation, which, according to the pattern, precedes the punishment, becomes more expansive. Clines believes that this literary arrangement may explain why the spread of *Noah's offspring and the diversification of languages recorded in Genesis 10 appears before the dispersion of humans and the confusion of their language in the Babel account in Genesis 11. Babel already appears in Genesis 10:10 as an important city connected with the powerful Nimrod. The enormity of what happened at Babel in Genesis 11 leads God to initiate a new strategy in dealing with the human race: the choice of Abraham and God's *promises to him.

1.2. Historical. Precise chronological indicators are absent from the Babel account, and this has led to a range of proposals for connecting the incident with specific events or, more broadly, with certain eras in Mesopotamian history. In

formulating these proposals, the artifacts and written materials presently available from *archaeological excavations play an important part.

Some have suggested that Nebuchadnezzar I's failed attempts (1123-1101 B.C.) to realize his plans for massive building works or the hugely impressive city of Babylon built by the Neo-Babylonian king Nebuchadnezzar II (605-562 B.C.) may be the background to this story of outstanding building activity followed by a disastrous reversal of fortune. J. H. Walton sees the story about the "tower" (*migdāl*) as a reference to the ziggurat, a feature that, he argues, developed in association with the early period of urbanization in Mesopotamia during the latter part of the fourth millennium B.C. The narrative mentions "thoroughly burned bricks," but the use of such kiln-fired bricks was not at all common until about 3000 B.C. Walton also allows that the author's reference to Babylon in the Genesis 11 story may simply indicate the use of the city as a contemporary example of the initial process of urbanization and the theological distortion it could represent. P. H. Seely reaches a similar conclusion about the dating implied by the story but argues that we should not seek to harmonize the story with the archaeological data; instead, we should see it as an example of "gracious divine accommodation to limited scientific knowledge." The principle of divine accommodation Seely appeals to is important in interpreting Scripture, but his proposal for implementing it here seems almost like a counsel of despair. The intent of the narrative is, of course, primarily theological, but there is no reason to suppose that when the narrator crafted the story he did not have a specific incident or a phase in human history in mind. It is important, therefore, despite the obvious difficulties involved and the lack of consensus among scholars, to continue to

try to understand what the underlying historical tradition is and how the present narrative has been formulated to reflect its significance.

1.3. Cultural. The location for the story is the plain of Shinar. The OT use of this term does not indicate the exact extent of the area intended, but it clearly refers to the southern part of Mesopotamia. Since the narrative is given such a specific setting, it is not unreasonable to ask if the story provides allusions to the material culture, religion and historical traditions associated with that region.

The Sumerian epic of Enmerkar and the Lord of Aratta tells of a time when all human beings spoke Sumerian, but that story has quite a different setting from Genesis 11, and it offers no convincing parallels to the biblical account.

Many scholars are convinced that the biblical author intends the term “tower” (*migdāl*), used of the structure at Babel, to refer to a Mesopotamian “temple tower” (*ziggurat*). Enuma Elish, the Babylonian creation story, records a tradition about how the minor gods (Anunnaki) took a whole year to make the bricks for Esagila, Marduk’s temple in Babylon, a building of which it could be said: “They raised high the head of Esagila equaling Apsu [heaven]. / Having built a stage tower as high as Apsu, / They set up in it an abode for Marduk, Enlil, (and) Ea” (*ANET*, 69). The text stresses that building the structure involved stupendous effort, expense and the application of considerable technical expertise. Baby-lon was always justly proud of its achievements represented by the construction of the city and its major religious buildings (cf. Dan 4:30). Scholars are not entirely agreed on the precise religious function of the *ziggurat*, but it seems to have been a means by which the god whose temple stood atop the structure could descend to another temple situated at ground level and so be accessible to the people.

2. The Story: Structure and Meaning.

2.1. Rhetorical Structure. The story is carefully structured in the form of an introversion (Kikawada) or palistrophe (Wenham). According to Genesis 11:5, Yahweh “came down” to see the city and the tower that the builders had begun to construct. This is the point at which the preceding account of human motivation and action gives way to a description of divine response and action. The settlement of humans in one place and their vigorous efforts to maintain

that self-contained unity through impressive building projects led to divine intervention that brought about a disruption of their unity, cessation of their building activity and their dispersion over the earth. A complex use of a range of parallel terms and skillful paronomasias in each half of the narrative reinforces these ideas. Among the most important of these terms and wordplays is the final link between the name of the city (*bābel*) and God’s action in confusing (*bālal*) the language of the builders (Gen 11:9). This carries forward the contrast already established between the builders’ statements—“let us make bricks” (*niḇnēnā lēbēnīm*, Gen 11:3) and “let us build” (*niḇneh lānū*, Gen 11:4)—and God’s “let us confuse” (*nabēlā*, Gen 11:7). Wenham claims, with some justification, that this ultimately points to the narrator’s underlying claim that the massive human effort in building the city and the tower was simply “folly” (*nēbala*).

The use of the term *name* is another important element in the story, and it also represents an important link with earlier narratives in Genesis 1—11, an issue to which we shall return later.

2.2. The Offense and the Punishment. Traditionally the *sin that God punished in the Babel story has been seen as an act of hubris in which human beings attempted to build a tower that would, in their view, enable them to assault heaven itself. In this understanding the sin repeats *Adam and *Eve’s transgression: an attempt to be “like god.” Brown and Carroll refer to the Babel enterprise as “attempting to build the tree of life with brick and mortar” (Brown and Carroll, 5). It was, however, a more calculated and outrageous act than the *Eden transgression, which indicates the progressive, disintegrating effect of sin in human experience. Divine judgment intensified to match the spread of sin. Thus God’s dispersion of the builders led to the dreadful loss of human unity: the “one people” (*‘am*) became the “nations” (*gôyim*), so God chose, in Abraham, a new *‘am* through which to *bless the whole world.

God’s dispersion of the builders throughout the earth may, however, be seen as a means of realizing the original blessing given at creation: “Be fruitful and multiply, and fill the earth” (Gen 1:28). Some have therefore argued that the builders’ disobedience at Babel was simply their determination to resist the divine command to spread out and “fill the earth,” a stance that God had to overcome so that the intended blessing could proceed.

The language of Genesis 11:6 clearly indicates God's concern about the actions of the builders in terms that suggest an act of hubris: an attempt to challenge divine prerogatives. Wenham demonstrates that the Hebrew verbs used there of the builders' actions are used elsewhere in the OT of actions reserved for God. Divine intervention was designed to limit the devastating impact of human hubris on the ordered world and on humanity itself. The divine action was both an act of judgment and an act of grace. But this twofold facet of divine action was, as Clines and others have demonstrated, characteristic of the narratives of Genesis 1–11.

The nature of the sin involved needs also to be interpreted in the context of this series of narratives. It was *Cain who, after his expulsion east of Eden, built the first city as a place where his "name" (*šēm*) might be immortalized (he called the city after his son, Enoch [Gen 4:17]). Hidden from God's face (Gen 4:14), Cain would create a society that boasted of its power and its technological developments (Lamech [Gen 4:19-24] was the end product of this society). But this city and this society had no room for the God of *creation and the garden, who demanded that humans exercise their power as God's vice regents within the limitations of what it means to be human. The sons of God (Gen 6:1-4) were at one with Cain's society and its worldview; they also make a "name" (*šēm*) for themselves by setting aside divinely imposed limits. The Babel builders also set out to make a name (*šēm*, Gen 11:4) for themselves in that place (*šām*, Gen 11:2), but they were scattered from that place (*miššām*, Gen 11:8). Sin is closely related to this urge to make a "name" for oneself apart from God, but God demands that humans recognize their true nature and their need to be accountable to him. The builders' power and technology were not inherently evil, but their use of these assets to create a stronghold for a worthwhile life (one of *šēm*) apart from God inevitably posed a threat to the ordered world. It would, therefore, ultimately invite divine intervention, both in judgment and with offers of grace.

BALAAM

According to the narratives in Numbers 22–24, Balaam was a seer commissioned by Balak, king of Moab, to pronounce curses on the nation of Israel prior to their entry into Canaan. However, as an apparently obedient prophet of Yahweh, Balaam refused to comply. Balak then sent to Balaam more important emissaries with the promise of more money. Balaam inquired of Yahweh and was told to go with them but not to curse Israel. On the way, Yahweh became inexplicably angry with his prophet and blocked his way with an angel. Balaam, however, could not see the divine emissary and had to be verbally enlightened by his donkey about the angel's existence. Balaam then continued on his way and, contrary to Balak's orders, proceeded to bless Israel in four oracles before returning home. In their present state, the texts in Numbers explain Yahweh's ability to confound Balak's desires to curse Israel by means of a questionable source (i.e., Balaam).

1. Balaam Sources
2. Balaam's Origins
3. Balaam's Vocation

1. Balaam Sources.

1.1. Old Testament Sources. Because of apparent contradictions in the texts, scholars have long argued that the sources concerning Balaam

in Numbers show evidence of separate traditions that have been woven together, although there has been no scholarly consensus about the origin and character of these traditions (Gross, 13-64; Mowinckel; Coppens). It is difficult to conclude whether this is because of divergent late oral traditions or the combination of different streams of tradition stemming from the same source (i.e., the OT; Albright 1944, 207). Some have theorized that there were two different strands of tradition concerning the story (Hackett 1986, 218). In fact, scholars have postulated that the theoretical J and E sources (*see* Source Criticism) were responsible for the divergent traditions, even though the divine names found therein do not correspond with the normal pattern attributed to the sources. Because of this, there has been no consensus as to which portions of the story correspond to which source. Still others have argued for a northern and a southern tradition concerning Balaam. W. Gross has offered an alternative idea, believing that there were at least three independent stories woven together to create the Balaam tradition (a separate source concerning the donkey episode, one about Balaam the obedient prophet, and one concerning Balak, the foreign king). Moreover, the oracles in Numbers 23–24 appear independent of the narratives. The third and fourth oracles can be read without any reference to the Balaam stories and thus may have stemmed from a separate tradition.

There are at least two evaluations of Balaam in the OT. Not only is he described as a somewhat reluctant *prophet who is nonetheless obedient to God's commands (Num 22:8, 18, 35, 38; 23:12, 26; 24:2, 13, 15-16), he is also a somewhat incompetent prophet who is unable to see Yahweh's angel (Num 22:22-30). The latter is explained as a literary device that exhibits irony, satire and parody throughout the story, most likely in an attempt to downgrade the prophet (Marcus, 31-41). Furthermore, his function regarding Israel is varied in the sources (Deut 23:5-6; Josh 13:22; 24:9-10; Judg 11:25; Neh 13:2; Mic 6:5). He was also remembered as one who practiced *divination (Josh 13:22, based on the fact that the Moabite chiefs came with fees for divination) and was ultimately killed fighting against Israel (Num 31:8-16). In sum, Balaam is a very complex figure who exercises a plurality of roles. Albright unconvincingly tried to harmonize the situation by concluding that Balaam

was a convert to Yahwism and later abandoned it to join the Midianites against the Israelites (Albright 1944, 233).

1.2. Tell Deir 'Alla Sources. The texts from Tell Deir 'Alla in Jordan, equidistant between the Dead Sea and the Sea of Galilee near the Jabbok River, a tributary of the Jordan, were discovered in 1967 (Hoftizer and van der Kooij). The texts show that Balaam was well known outside of the biblical traditions. The context of the material is subject to question, as some have argued that the bits of plaster found on the text may have been on a stela or on some form of display area (Hackett 1986, 216). The texts are very fragmentary and have been pieced together in fifteen different groups or combinations, the first two of which contain most of the textual information. It is not even certain whether or not the fragments all came from the same text. The texts are not only fragmentary but linguistically confusing, as scholars have argued over the meaning as well as the date and even the language of the fragments (Hoftizer and van der Kooij; McCarter; Hackett 1986). The fragments have been widely dated between the eighth century B.C. and the Persian period (Hackett 1986; McCarter). The language of the texts shows evidence of syntax and vocabulary similar to biblical Hebrew and south Canaanite dialects, rather than Aramaic, which was originally supposed (Hackett 1984, 109-24). The script is considered to be a strange form of Old Aramaic with an influence from Ammonite sources (Hackett 1984, 9).

The first of these combinations describes Balaam (presumably the same as the biblical Balaam) as a seer of the gods who was visited at night by the gods and saw a disturbing vision concerning punishment, resulting in the loss of fertility and life on the earth (Sasson). In fact, the name Balaam is found only on lines 3-4 of the first combination and in one of the small fragments and nowhere else. The relationship of the second combination to the first is unclear. It contains a ritual meant to appease the gods, who are described with the epithet *šdy*, similar to Shaddai in the OT.

If one views the combinations in a composite manner, the Deir 'Alla texts describe Balaam as a person contracted to perform various roles as diviner/seer and exorcist. Since his client is under a curse from demonic powers, Balaam transfers the curse away from his client onto a homeopathic image, which is destroyed as part of the rit-

ual (Moore, 96). J. A. Hackett (1986, 220) argues that Balaam, son of Beor, was tied to Moab, worship of *śdy* gods and various ritual practices. She believes that he was recast as an obedient prophet to entertain the Israelites (Hackett 1986, 220) and to make known another account of the Balaam tradition (Hackett 1984, 72). P. K. McCarter argues from Combination 1 that Balaam was considered a foreigner by the Deir 'Alla people (McCarter, 57). The oneiromantic role of Balaam in the Deir 'Alla texts corresponds to ancient Near Eastern forms and to divine council messengers in the Bible (Job 15:8; Jer 23:18).

How do the Deir 'Alla texts compare with the biblical accounts? Although many readings in the former are still conjectural, they both appear to refer to the same character (Balaam). It also appears that Balaam has the same vocation in both traditions (seer), received communications at night and gave a prophecy that was contrary to what his readers expected. Moreover, some of the divine names in both sources are similar (*'lhn/'ēlōhīm* and *sadday*). In sum, the writer(s) of the Deir 'Alla combinations were no doubt well acquainted with the Numbers 22–24 tradition.

1.3. Late Traditions. Because the later traditions concerning Balaam are dependent upon the OT, they contain the same mixture of good and bad judgments about him, although most of it is in a more negative light. In postbiblical writings Balaam is described either as God's servant or as Balaam the wicked (see Moore, 1). In trying to harmonize the traditions, Josephus (*Ant.* 4.6.13 §158) saw Balaam as a diviner who desired to curse Israel but could not because of God's command. However, Josephus also argued that Balaam advised Balak to cause the women of Midian to lure the Israelites from the worship of Yahweh. Philo's description of Balaam as a diviner (*Vit. Mos.* 1.264) is supported by the Deir 'Alla texts. He also concluded that Balaam was a false prophet. Pseudo-Philo put Balaam in a somewhat more positive light, since the prophet knew it was wrong for Balak to desire to curse Israel. Balaam, however, also gave Balak counsel that led to the Baal Peor incident. Rabbinic writers for the most part also viewed Balaam in a bad light, as one who was greedy and a sorcerer.

Balaam is mentioned three times in the NT (2 Pet 2:15–16; Jude 11; Rev 2:14), each time with a negative judgment. Jude and 2 Peter chastise Balaam for taking money for wrong reasons (which is implied by Num 24:11, where Balaam

was presumably to be paid to curse Israel). The NT writers most likely interpreted this from Balaam asking God a second time for permission to travel back with Balak's messengers (in order to be paid). Furthermore, these passages and Revelation probably refer to the apostasy at Peor and sexual immorality (Num 25:6–8).

2. Balaam's Origins.

Balaam's homeland is described as Pethor, which is "near the river" (Num 22:5). Pethor has been identified with Pedru listed in the topographical lists of the Egyptian king Thutmose III (fifteenth century B.C.) and with Pitru, a city listed in the military itinerary of the Assyrian king Shalmaneser III (857 B.C.) (Albright 1915). The city has been traditionally identified with Tell el-Ahmar, located on the west bank of the Euphrates River, twelve miles south of Carchemish. However, based upon a textual emendation and the location of Tell Deir 'Alla in Ammonite territory, many commentators have argued for a location in Ammon. Nevertheless, since there is no Pethor in this area, it appears best to accept the traditional identification with the Euphrates Pithor.

3. Balaam's Vocation.

One of the more difficult issues concerning the Balaam tradition is the exact nature of his vocation. Although Balaam is commonly regarded as a prophet (though the Bible never calls him such), his prophecies (both in Numbers and in the Deir 'Alla texts) were opposite to what his hearers had expected (see the discussion in Kaiser, 98–99). However, he was clearly in the function of a seer in his second oracle, where he promised to tell Balak God's word (Num 23:3). Balaam credited his ability as a seer to Yahweh, even when his eyes were closed (Num 22:31). In fact, the account of Balaam's donkey and the angel confirms the idea that the seer was not inspired but was only able to speak that which Yahweh had commanded.

Balaam was also an oracle reciter, since he gave four major oracles and two directives. He may have also functioned as a priest, since altars were set up for him by Balak. Furthermore, Balaam had previously been an exorcist or sorcerer, as stated in Numbers 24:1: "He did not resort to sorcery as other times."

The Deir 'Alla texts imply that Balaam was either an ornithomantic (a diviner by bird extispicy) or a rhabdomantic (a diviner by means

of a rod or wand), and possibly an exorcist (Moore, 69-86, 93), although these practices are not explicit in the biblical texts.

When attempting to create a composite view of Balaam's vocation, comparisons with ancient Near East types become evident. In Joshua 13:22 Balaam is described as a soothsayer, possibly similar to traditions found at Mari and elsewhere in Mesopotamia (see Daiches; Largement). In fact, the delegation of Moabite and Midianite chiefs asked for Balaam's services with "fees for divination" (Num 22:7). Moreover, the Balaam traditions are remarkably consistent with Anatolian and Syro-Palestinian characters who had a series of complementary and overlapping roles as diviner/seer and exorcist (Moore, 111). This may explain why Balaam was described as both a seer/prophet and an exorcist and also why there was classic conflict in role expectations between the Moabite chieftain Balak and Balaam the magico-religious specialist. Balaam did not want to subordinate his "oracle-reciter" role to that of sorcerer, but this is precisely what Balak wanted him to do. Balaam set out to ascertain the nature of his client's problem and then set about to remedy it, similar to diviner/seers and exorcists. Furthermore, the biblical source may be attempting to explain a role change in Balaam as he moved from Moab to Midian (Kaiser, 101).

In regard to the ancient Near Eastern context for Balaam, S. Daiches concludes that Balaam was a *bārû* priest, based upon a comparative analysis between Neo-Assyrian ritual and incantation texts and Balaam's deeds in Numbers 22-24 (Daiches, 60-70). R. Largement (37-50) argues that Balaam was not only a sorcerer but had a plurality of roles. Moreover, the cosmic metaphors described by the diviner/seer in the Deir 'Alla texts (I:6-7) are similar to the ones in the Babylonian Maqlû texts (7:1-22).

BENJAMIN

The name *Benjamin* (literally "son of the right hand" or "son of the south") applies first to the son of *Jacob and secondly to the tribe that bore his name.

1. Benjamin, Son of Jacob
2. Benjamin, Tribe of Israel
3. Benjamin at Mari

1. Benjamin, Son of Jacob.

Benjamin was the twelfth son of Jacob, the youngest (second) son of Jacob and Rachel, and the full brother of *Joseph. Benjamin and Joseph were the two favorite sons of Jacob's favorite wife, a partiality learned from Jacob's father *Isaac (and, before him, his father *Abraham) that echoed throughout the history of Israel until the division of the kingdom after Solomon's death and beyond. Benjamin's mother died shortly after she bore him on the trip from Paddan-aram to the home of Isaac at Mamre in Canaan (Gen 35:18). She named him Ben-oni, "son of my pain" or "son of my sorrow," but Jacob immediately renamed him Benjamin, "son of the right" or "son of fortune," apparently wanting his son to be identified throughout his life with good fortune (the right side, as one faced east, hence the south side, was thought of as the fortunate side, cf. Deut 27:12-13, Mt 25:33) instead of a moment of pain and anguish.

Later, during a time of Middle Eastern famine, Jacob would not send Benjamin to Egypt with his other sons (Gen 42:2-4), lest, having already lost Joseph, he lose the remaining son of Rachel. Only the desperate situation of the family and the willingness of Judah to watch over Benjamin convinced Jacob to allow Benjamin to go on their second trip (Gen 43:1-14). The subsequent reunion of Joseph and Benjamin as well as all of the rest of the family is well known.

2. Benjamin, Tribe of Israel.

The tribe of Benjamin appears on the horizon as the book of Genesis ends (Gen 46:20-21) and blossoms into full bloom as the book of Exodus begins and the extended family of Jacob becomes the nation of Israel. During the wilderness wandering the tribe of Benjamin camped on the west side of the *tabernacle with Ephraim and Manasseh (Num 2:18-24). The tribe is mentioned briefly when leaders of the tribes are named (Num 2:22; 7:60), when Israel leaves Mount Sinai (Num 10:24) and when the spies explore Canaan (Num 13:9). Two key texts in the Pentateuch provide some additional information about the tribe (Gen 49:27; Deut 33:12), but scholars disagree about the nature of these references. These two passages come from the mouths of Jacob and *Moses, words of blessing from these two leaders just prior to their deaths.

2.1. Benjamin in the Last Testament of Jacob. In Genesis 49:27, where Benjamin is compared to a

"ravenous wolf," the wolf is spoken of positively. A short look at the various animal comparisons of Genesis 49 and Deuteronomy 33 will show that the great majority of animal comparisons are positive (see, e.g., the oracles on Judah, Issachar, Dan and Naphtali in Gen 49 as well as those on Joseph, Gad and Dan in Deut 33). C. Westermann writes, "Nowhere else in the OT is the wolf spoken of so positively. . . . The metaphor praises Benjamin's prowess in war and/or lust for booty" (Westermann, 241; so Davidson, 310; Zobel, 25 n. 132). Skinner writes, "Benjamin is praised for its predatory instincts, and its unflagging zest for war" (Skinner, 534). The praise, therefore, is for Benjamin's aggressiveness in defending himself against enemies. Later in the OT, the wolf is never spoken of in a positive manner. The wolf is a dangerous and feared animal in the OT. Greedy princes (Ezek 22:27), avaricious judges (Zeph 3:3) and Chaldean riders feared because of their swiftness (Hab 1:8) are all compared to the wolf in the prophetic announcements of judgments. A clearly negative tone is found in these comparisons, contrary to the tone of Genesis 49:27.

Since the verse is a word of praise, scholars have pointed in various directions in order to explain the negative view of the wolf everywhere else in the OT. H.-J. Zobel writes that in Arabic literature the wolf expressed the proud boldness and insatiable rapacity of a king waging a successful battle in war. It is simplest to invoke the analogy of antecedent Scripture, since this is the first of seven occurrences of the noun "wolf." The poetic nature of the verse and the distinctiveness of the chapter in the OT are additional reasons for taking the word in a positive sense.

The application of the verse to Benjamin is usually made in the context of the courage and fierce vitality of the tribe in battle. The verse conjures up a picture of constant aggressiveness from morning until evening. Benjamin will not need to fear his enemies, so skillful and aggressive will he be. The incessant and untiring efforts of Benjamin against his foes is depicted in the second and third clauses.

The "spoil" or "plunder" would refer to the spoils of war. H.-J. Zobel comments that "spoil" consistently indicates the booty won during a successful martial event. Genesis 49:27 is the only place in Scripture where the term is used in the sense of "prey."

2.2. Benjamin in the Last Testament of Moses. The

last reference to Benjamin in the Pentateuch (Deut 33:12) uses a picture for Benjamin's position with Yahweh like that of a shepherd carrying a lamb over his shoulders. This picture of security describes the protection that the tribal territory will enjoy as a result of God's favor. This security is important in view of the fact that the conquest lay only a short period of time in the future. A small tribe (especially according to Num 1:37 [35,400], though less so according to Num 26:41 [45,600]), it will need the protection of God during times of warfare and conquest.

The later prowess of the tribe of Benjamin, hinted at in the reference to a ravenous wolf in Genesis 49:27 and in Deuteronomy 33:12, is reflected during the period represented by the Pentateuch. Genesis 49:27 describes the ability of Benjamin to devour the prey and divide the plunder (a word usually used of the spoils of war in the OT), while Deuteronomy 33:12 describes the protection of Benjamin during that work and warfare. Benjamin became a tribe impressive for its athletic expertise and military skill (its ability with the sling, the bow and arrow, and its running ability). Numerous passages in later portions of the Old Testament reflect that skill (Judg 20:14-16; 2 Sam 2:18; 18:27; 1 Chron 8:40; 12:1-2; 2 Chron 14:8 [MT 14:7]).

3. Benjamin at Mari.

The name *Benjamin* appears in the Mari texts (eighteenth century B.C., North Syria), but it appears to refer there to a confederation of tribes (Bright, 77). There is no certain connection between the Benjamin of Mari and the Benjamin of the Pentateuch, but the Mari texts show the antiquity of the name. For this Benjaminitic confederation, the meaning "sons of the south" is most appropriate, since the Benjaminites of the Mari texts are known to have been nomadic people.

BLASPHEMY

Within the pentateuchal and OT world, blasphemy was one of the most serious sins a person could commit. Thus anyone who spoke contemptuously of the deity, especially by uttering God's name in a curse, was to bear the full responsibility for his or her sin and suffer the same fate as a murderer, namely, execution.

1. Terms for Blasphemy
2. Definition of Blasphemy
3. Blasphemy in Leviticus 24
4. Blasphemy in Later Judaism
5. The New Testament and Blasphemy

1. Terms for Blasphemy.

Four different Hebrew words carry the connotation of "blasphemy" in the OT. The verb most frequently associated with "blasphemy" is the Hebrew root *gdp* ("to revile, hurl insults, or slander"), used only in the Piel and occurring with the cognate noun *giddiṭp*. While the verb appears seven times in the Hebrew Scriptures (Num 15:30; 2 Kings 19:6, 22 = Is 37:6, 23; Ezek 20:27; Ps 44:16 [MT 44:17]), the noun appears only three times (Is 43:28; 51:7; Zeph 2:8). An-

other cognate noun, *gēdūpā*, occurs only once in the OT (Ezek 5:15) describing the negative effect of God's judgment on the people of Israel. Most often, however, it is God who is the object of such slander (Num 15:30; 2 Kings 19; Is 37; Ezek 20:27). In Ezekiel 20:27 the use of the root occurs in connection with Israel's idolatrous sacrifice on high places.

The next most common term is *n's*, "to despise, show disrespect toward." This word has a broader connotation than *gdp*, occurring twenty-six times as a verb and five times as a noun. Two substantival uses of the root occur in the parallel passages of 2 Kings 19 and Isaiah 37 regarding the insulting of Israel's God by the Assyrian messenger Rabshakeh. Sometimes it is Israel that is despised (e.g., Is 60:14), but in the majority of references, as with *gdp*, the action speaks of malicious acts against God (the nation's rebellion in the desert: Num 14:11, 23; Deut 31:20; the Korahite rebellion: Num 16:30; Eli's sons' sacrifices: 1 Sam 2:17; David killing Uriah: 2 Sam 12:14; Israel's unfaithfulness: Is 1:4; 5:24; the actions of God's enemies: Ps 10:3, 13; 74:10, 18).

The third key term that includes the idea of "blasphemy" in its semantic range is the term *qll*. In the Piel stem this root means "to make small, light of" and often with the extended meaning "to curse." This root occurs frequently in the OT and is often viewed as the antonym to the root *kbd*, "to make heavy, be of significance." The Piel of the verb is used forty times in the OT, while the noun appears thirty-three times. The object of the verb is often humanity (Gen 12:3; Josh 24:9; 2 Sam 16:5, 10), although the ground is the recipient of the curse in Genesis 8:21. In Leviticus 24:15 the term is used in a narrative context in one of the few cases where one is said to "curse God." The legal prohibition against cursing God that also employs this term occurs in Exodus 22:28 (MT 22:27).

The fourth major Hebrew verb that connotes the idea of blasphemy is the root *nqb*, which literally means to "pierce, bore" but has an extended meaning of "blaspheme." On seven occasions the verb occurs in the Qal when it refers to piercing or boring through material (2 Kings 12:9 [MT 12:10]; 18:21 = Is 36:6; Hab 3:14; Hag 1:6; Job 40:24; 41:2 [MT 40:26]). An illustration of this usage occurs when the priest Jehoiada bores a hole in the lid of a chest for contributions. On five occasions the term clearly

means curse or blaspheme (Job 3:8; Prov 11:26; Lev 24:11, 16 [2x]; BDB takes this verb from the root *qbb*, "to utter a curse against someone").

2. Definition of Blasphemy.

In the broadest (and least precise) sense, blasphemy could be defined as any act contrary to the will of God or derogatory to his power, though this is too generalized to be able to distinguish it from *sin. In the narrower and more precise sense, the word is used to refer to speaking contemptuously of the deity. The classic instance of the latter notion in the Bible occurs in Leviticus 24:10-23, where the pronouncement (*nqb*) of the name of God appears in conjunction with the verb *qll*, two of the four major Hebrew words indicating blasphemy. To curse the deity meant to repudiate him, to violate his norms. Blasphemy is one of the most serious of all spiritual iniquities in the OT because it denies and makes sport of the overwhelming concept of all the OT history and law, namely, the sovereignty of the Creator. According to Jewish tradition, Gentiles, too, were obliged to refrain from blasphemy, since the prohibition of blasphemy is one of the seven Noahic laws (*b. Sanh.* 56a; 60a).

3. Blasphemy in Leviticus 24.

3.1. The Context of Leviticus 24:10-23. The importance of Leviticus 24 in the discussion of blasphemy is evident from the fact that it contains two of the key verbal terms for blasphemy, *nqb* and *qll*, as well as the fact that it became the key text on the subject in later Judaism.

In the previous sections of Leviticus, concern for the name of the Lord is emphasized several times, particularly in Leviticus 18-22. This concern reaches its culmination in 24:10-23 (cf. 18:21; 19:12; 20:3; 21:6; 22:2, 32). The narrative of 24:10-23 drives home the point that the Lord was present not only in the *tabernacle but also in the community at large by virtue of the fact that the tabernacle was in their midst. The account of the blasphemer occurs here (Lev 24:10-23) because it took place soon after Moses had given instructions about the lampstand and bread of the Presence (Lev 24:2-9). This episode thus illustrates how some of the case laws in the Pentateuch may have originated out of specific situations that were brought to court for a legal judgment. The penalty in a given case is recorded as a guide for fu-

ture *judges should similar cases occur.

3.2. *Blaspheming the Name of God.* The narrative of Leviticus 24:10-23 describes how the son of an Egyptian father and Israelite woman engaged in a fight with another man, presumably of Israelite parents. In the midst of the struggle the individual of mixed parentage blasphemed (*nqb*) the name of God with a curse (*qll*; Lev 24:10-11). This single verse thus contains these two major terms for blasphemy (Lev 24:11). Verse 11 indicates that it was the Lord's name uttered in a curse that constituted blasphemy and merited the death penalty. Jewish tradition preserves an understanding of this verse that, first of all, instead of considering *nqb* and *qll* as describing two separate acts, implies that they are rather two aspects of one act (*m. Sanh.* 7:5). The text indicates how seriously speech against God was viewed and forms the basis of the mishnaic instruction in that blasphemy does not occur unless one specifically pronounces the Tetragrammaton (Yhwh; see God, Names of). This verbal aspect of naming the Name became so strong in some later traditions that blasphemy and naming the Name were equated or combined into a single act. *Targum Onqelos* on Leviticus 24:11 combines the two key verbs in this Leviticus text to render the key phrase as "pronounced the Name in provocation." To avoid the possibility of taking the Lord's name in vain, it became commonplace to get around pronouncing the name of God, the Tetragrammaton (YHWH), and to read in its place the generic name, Adonai. The Jews who took warning from the story presented in Leviticus 24:10-16 sought to render the transgression of the commandment in Exodus 20:7 impossible by avoiding the pronouncement of this name. Thus the Jewish avoidance of uttering God's name is based on this passage.

3.3. *Punishment for Blasphemy.* Blasphemy also brought guilt on those who heard the blasphemous statement as well as on the blasphemer himself. To rid themselves of this guilt the hearers had to lay their hands on the blasphemer's head (Lev 24:14). The contamination is literally transferred back to the blasphemer by the ritual of laying on the hands. The subsequent death of the blasphemer *atoned not only for his own sin but for the hearers' sin as well. At this point we find the recitation of the *lex talionis* formula, which states the principle that the punishment for an offense should be commensurate to the crime (Lev 24:17-21). Similar laws

involving precise retaliation for murder and bodily injury occur in Exodus 21:23-25 and Deuteronomy 19:21. While a consistent punishment for blasphemy does not clearly emerge from the study of ancient Near Eastern law, capital punishment was to be the punishment for one who cursed the god Ashur, according to one Middle Assyrian Law (Roth, 201-2).

Leviticus 24:10-23 is one of the four episodes in the Torah where Moses has to make a special inquiry of God about what to do prior to his rendering a legal decision. The other accounts are found in Numbers (see Num 9:6-14; 15:32-36; 27:1-11).

4. Blasphemy in Later Judaism.

4.1. *Jewish Interpretation of Leviticus 24.* *Targum Pseudo-Jonathan* is largely a paraphrase translation and thus valuable in the history of interpretation. At Leviticus 24:15-16 the targum makes a distinction in the offense of blasphemy: "Any young man or any old man who reviles and blasphemes a substitute name of his God shall incur his guilt. But any one who pronounces and blasphemes the name of the Lord shall be put to death; the whole congregation shall pelt him with stones." The targums focus on blasphemy involving the divine Name as worthy of death. It is the consistent and official rabbinical view of Leviticus 24 to distinguish the crime of verse 15 from verse 16. What "bearing the sin for blasphemy" in verse 15 requires is never specified in any of these translations. However, to misuse the Name means automatic death.

In later Judaism, grievous sin that was known as "high-handed sin" comprised three categories: (1) impudent speech against Torah and so against God, where Manasseh is the example in *Sipre* 112 on Numbers 15:30-31; (2) idolatry, especially the *golden calf incident, as noted in the same *Sipre* text or in Philo's *De vita Mosi* 2.159-166; or (3) the blaspheming of God's Name, which also leads to death by hanging (*m. Sanh.* 6:4).

4.2. *The Rending of Clothes.* The custom of tearing one's clothes upon hearing blasphemy is attested in 2 Kings 18:37, where it is told that Eliakim and his associates tore their garments upon hearing the blasphemous words of the Assyrian warlord Rabshakeh (*b. Sanh.* 60a). In Numbers 14:11, 23, the indication that blasphemy is present comes in the response by

*Joshua and *Caleb, who tear their clothes upon hearing the people's unbelief and complaint. This response indicates that God has been insulted and that they are grieving as a result (Num 14:6; cf. Gen 37:29; Judg 11:35; 2 Sam 1:11). It is codified in *Shulhian Aruk* (*Yoreh De'ah* 340:37) that whoever hears a blasphemy, whether with the Tetragrammaton or with attributes, in any language and from a Jew, even from the mouth of a witness, must rend his garment.

4.3. Summation of Blasphemy in Judaism. To use the divine Name in an inappropriate way is certainly blasphemy and is punishable by death (Lev 24:10-16; *m. Sanh.* 6:4; 7:5; Philo, *Vit. Mos.* 2.203-6). At the base of these ideas about blasphemy lies the command of Exodus 22:28 (MT 22:27) not to revile God nor the leaders he appointed for the nation.

5. The New Testament and Blasphemy.

In the NT it is not only possible for God to be blasphemed (Rev 16:11) but also the Messiah, Christ (Jas 2:7), the Spirit of God (Mk 3:29), the name of God (Rom 2:24) and the messengers of God (2 Pet 2:10). The redemptive acts and possessions that God bestows on his people may also be the object of blasphemy (Rom 14:16).

Jesus was accused of blasphemy because he presumed to forgive sins (Mt 9:3; Mk 2:7; Lk 5:21) and claimed to be Christ the Son of God (Mt 26:63-65; Mk 14:61-64; Jn 10:33, 36; *see DJG*, "Blasphemy"). On the other hand, the NT considers the reviling of Christ to be blasphemy (Mt 27:39; Mk 15:29; Lk 22:65; 23:39). Blasphemy against Christ is equivalent to blasphemy against God (Acts 13:45; 18:6; 2 Pet 2:10-12; Jude 8-10). In addition, those who oppose the gospel (1 Tim 1:13; cf. Acts 26:11) and bring discredit to Christianity (Rom 2:24; 1 Tim 6:1; Tit 2:5; Jas 2:7; 2 Pet 2:2) are guilty of blaspheming God by their actions. The "unforgivable sin," blasphemy against the Holy Spirit (Mt 12:31-32; Mk 3:28-30; Lk 12:10), must be understood as the deliberate and perverse repudiation of God's saving work, whereby an individual consciously hardens himself or herself against repentance and the possibility of forgiveness (cf. 1 Tim 1:20).

BLESSINGS AND CURSES

Hebrew concepts of blessing and cursing should not be confused with the modern English usage, where the terms may refer merely to wishing someone good or ill. Biblical benedictions and imprecations are powerful and effect real change in the circumstances of the recipients. The content and the end result of the blessing or cursing vary from one situation to another, but generally blessing was the power to succeed and cursing was a harmful power that prevented or hindered success.

1. Terminology and Meaning
2. The Context of Cursing and Blessing
3. The Effect of Blessing
4. Conclusions

1. Terminology and Meaning.

The Hebrew root related to the concept of blessing is *brk*. It occurs frequently in the Pentateuch (over 160 times), especially in Genesis and Deuteronomy, where it is found approximately 130 times, representing over 25 percent of the occurrences of the root in the OT. One of the reasons for this large number of occurrences is the idiomatic practice of repeating a root to highlight its importance. Thus in the call of *Abraham the root *brk* is repeated five times (Gen 12:1-3). Repetition also occurs in the use of the infinitive and a finite form of the verb together in the Piel to give emphasis (Gen 22:17; Num 23:11; 24:10; Deut 15:4). Frequently the verb appears as a Qal passive participle to acknowledge a person's sta-

tus as one who is “blessed” (Gen 9:26; 14:19-20; 24:27-31; Ex 18:10) or to declare that someone will be “blessed” (Gen 27:29; Deut 28:3; 33:20). Other forms of the verb are also found (Niphal and Hithpael), but they are infrequent.

The noun *bērākā* is found over thirty times in the Pentateuch. It may refer to what a person possesses when he or she has been blessed (Gen 27:12, 35-41; Deut 33:23), to what God promises those who obey (Lev 25:21; Deut 11:26-29; 28:8) and to what human beings long for (Gen 27:36).

The verbal form of the root *brk* also denotes the act of kneeling (Gen 24:11, Hiphil), and its nominal form (*berek*) refers to the “knee” of a person or animal (Gen 30:3; 48:12; 50:23; Deut 28:35). It is tempting to see a link between bestowing a blessing and kneeling to receive a blessing, but this etymological connection has never been proved, and it is possible that two distinct roots share the same consonants.

Three Hebrew roots are associated with cursing. The root *ʿrr* occurs over thirty times in the Pentateuch. It frequently occurs in a participial phrase (Qal passive) declaring something or someone as “cursed.” Thus, the *serpent, the ground and *Cain are all pronounced “cursed” (Gen 3:14, 17; 4:11).

A second root, *qll*, means “to be light or slight” and thus “to treat someone with disdain,” “to despise” or “to deprecate.” In the Pentateuch, the root *qll* occurs in the Qal, Piel and Hiphil. In the Qal it denotes the waters of the *flood abating (Gen 8:8) or one person despising another (Gen 16:4). In the Hiphil it refers to making a burden lighter (Ex 18:22). However, in the Piel, *qll* means to revile or curse and, for example, is used of *Balaam cursing Israel (Deut 23:4 [MT 23:5]). In most of its nominal occurrences in the Pentateuch, the noun *qēlālā* is used in juxtaposition with the concept of blessing (Gen 27:12; Deut 11:26; 23:5 [MT 23:6]; 30:1, 19).

The third root is found only as a noun in the Pentateuch—*ʿālā*—denoting an oath (Gen 24:41; 26:28; Deut 29:12 [MT 29:11]). However, it has the extended meaning of “curse” to refer to the seriousness of breaking oaths (Num 5:21; Deut 30:7).

2. The Context of Cursing and Blessing.

The precise meaning of blessing and cursing is often contingent on the context in which they

occur. They are bestowed and received in the context of the interrelationship between two people or parties, and the depth and quality of the benediction or of the imprecation reflect the nature of the relationship between those involved. Specifically, God bestows blessing on those who are in harmony with him. For example, *Noah’s obedience (Gen 6:22) and *sacrifice (Gen 8:20) provided the context in which the Creator blessed the postflood world (Gen 8:21—9:17). Relationships are also prominent when human beings bless someone. In *Isaac’s patriarchal blessing, *Esau was the firstborn, and in normal circumstances this would have placed him in a relationship with his father that provided the basis for blessing. To that end, Esau prepared the sort of meal that Isaac would appreciate as a prelude to the blessing so that the benediction would be bestowed in the context of approval (Gen 27:1-4).

In contrast to blessing, curses reflect a breakdown in relationships. The curses announced in the primeval narratives on the serpent (Gen 3:14-15) and on the ground (Gen 3:17-19) are symptomatic of the alienation that has occurred between God and his created order. Further alienation led to more cursing (Gen 4:11-12), culminating in the flood, which is portrayed as a curse on the earth by the Creator to destroy the rebellious created order (Gen 8:21). The first curse uttered by a human being was the cursing of Canaan by Noah, where the intention was clearly to show disapproval (Gen 9:25). Similarly, when *Jacob was encouraged to deceive Isaac, he was reluctant because the consequences of discovery would be strong disapproval leading to the pronouncement of a curse (Gen 27:11-12).

Relationships vary in depth and quality, and this is reflected in the makeup and intensity of the benediction or imprecation concerned. This is illustrated in the blessings bestowed by the Creator on the fish and birds and the blessing of the human beings (Gen 1:22, 28). These blessings are pronounced in a way that indicates two different levels of relationship. The blessing on the human beings was communicated “to them,” whereas the blessing on the fish and birds was simply pronounced and the words “to them” are missing. Although God blessed other creatures, it was the blessing on the humans that reflected the more intimate relations. Conversely, the fratricide committed by Cain represents a retrograde step in the relationship between human

beings and their Creator. Consequently, the imprecation was more personal and direct than the curses pronounced in *Eden: Cain's parents were not cursed themselves, but Cain was cursed personally (Gen 4:11).

The most profound and significant relationship in the Pentateuch is the one established between God and Abraham. Blessing provides both the context and the framework for this relationship. The programmatic passage in Genesis 12:1-3, in which the root *brk* occurs five times, is all the more salient and noteworthy because of the dark canvas of the primeval narratives against which the new divine-human relationship is portrayed (Gen 1—11). The blessing of Abraham is strategically positioned between the primeval narrative and the patriarchal narratives so that it marks a turning point in the book of Genesis, a turning point from an agenda dominated by cursing to one that is dominated by blessing. It represents a new phase in God's relationship with his world, since through Abraham all nations will be blessed. God initiated a *covenant relationship with Abraham, making him both the recipient of blessing and its channel to others (Gen 15:18-20; 17:1-14). The promises of blessing were contingent upon Abraham's obedience and were finally confirmed by an oath after the great test of loyalty, which showed that Abraham was willing even to sacrifice his son in order to obey God (Gen 22:15-18).

God's covenant relationship with the patriarchs is manifest not only in Abraham's life but also in the lives of Isaac (Gen 26:2-5) and Jacob (Gen 28:14-21). *Ishmael was also blessed, but a distinction was made between his blessing and the blessing of Isaac within the covenant relationship (Gen 17:20-21). A similar distinction existed with Jacob, who received blessing not because of his deception but as a result of his closer relationship with Yahweh (Gen 25:23; 28:13-15).

In Deuteronomy the implications of the covenant relationship are explicated and developed in more detail. God related to Israel through a covenant of love. That was completely unmerited by the nation (Deut 7:7-8). To continue to enjoy the blessings of this deep relationship, the people had to live in obedience to the covenant stipulations (Deut 7:11-15; 11:8-15; 28:1-14). Disobedience, on the other hand, caused the covenant relationship to break up, and the blessings were replaced by curses (Deut 28:15-68).

The importance of the concept of blessing and cursing was highlighted in the symbolism of the two mountains: Mount Ebal symbolized the curses and Mount Gerizim the blessings (Deut 11:26-32; 27:1-10). This area was probably chosen because of its traditional connection with the life of Abraham (Gen 12:6-7). The ceremony on the mountains demonstrated the imperative incumbent on the heirs of the covenant to emulate Abraham's obedience and, like him, to live in a close relationship with each other and with God (Deut 27:9-10; cf. Gen 12:1-3). Six tribes stood on each mountain as the *Levites pronounced twelve curses. The theme that runs through these curses is *relationships* (contra Craigie, 331, who tentatively suggests secrecy). The curses were directed against those who broke their relationships with others: with God through worshipping *idols (Deut 27:15); with their parents by dishonoring them (Deut 27:16); with their neighbors by encroaching on their land (Deut 27:17); with the vulnerable in society by deceiving and leading astray a blind person or by denying justice to the foreigner, the *orphan or the *widow (Deut 27:18-19); with others in society through *sexual impropriety or murder (Deut 27:20-26). Thus any act that disrupted relationships was incompatible with divine blessing and must attract cursing.

Through the cult Israel had the opportunity to live in harmony with God and to enjoy his blessing. One way that this was mediated to them was through the priestly blessing (Num 6:22-27). This pericope relates to blessing not in terms of particular benefits such as fertility or prosperity, but to a continuing harmonious relationship with the Lord in which he protected them, was gracious to them, endowed them with his presence and favor, and granted them peace. By pronouncing this blessing the *priests placed the Lord's name upon the Israelites with the assurance of continued divine blessing (Num 6:27).

3. The Effect of Blessing.

Pronouncements of blessing and cursing in the Pentateuch were powerful and efficacious. Such pronouncements were actions rather than simply speeches. They had the power to change situations and to alter circumstances. Their meaning and their effect varied from one situation to another, though generally blessing led to success and cursing brought disaster. The

effects of blessing included fertility, prosperity, authority and security. A second and less frequent use of blessing occurred in which one person acknowledged the status of another. This could include an expression of gratitude or praise. Greetings belong to the same category.

3.1. Fertility. In the creation narrative the bestowal of fertility is prominent in the three commands addressed to the fish and birds and also to the human beings: be fruitful (*prh*), multiply (*rbh*) and fill (*ml'*) the earth (Gen 1:22, 28). Each of these verbs may be used on its own to express fertility and numerical increase. In this context they are used together to give maximum prominence to the concept that the Creator's blessing leads to a world teeming with life. Blessing in terms of fertility is prominent throughout the Pentateuch: Abraham's descendants would be as numerous as the stars or grains of sand (Gen 15:5; 22:16-18); *Sarah would be the mother of nations (Gen 17:16); Ishmael would be the father of twelve rulers (Gen 17:20); Jacob's descendants would be "a community of peoples" (Gen 48:4); *Joseph was described as "a fruitful vine" and received blessings of "the breast and womb" (Gen 49:22-26); and Israel's children, animals and crops would be fertile and numerous (Deut 7:13-14).

When land was blessed, it was fertile and productive (Gen 26:12; *see* Land, Fertility, Famine). Cursing, on the other hand, led to infertility. When the ground was cursed (Gen 3:17-19), thorns and thistles made it more difficult to cultivate and less productive (cf. Gen 5:29). Humans still had to work the soil, but the benefits they received were greatly reduced (Gen 3:19, 23). Famines in the Pentateuch are not explicitly described as punishment from God, but they clearly imply the absence of blessing and suggest that the lands so afflicted were not blessed with divine favor (Gen 12:10; 26:1). Fertile soil and secure boundaries, however, were evidence of divine favor and blessing (Gen 26:12-33). The loss of fertility brought about by cursing affected not just the crops but also the people themselves and their animals (Deut 28:16-18).

3.2. Authority and Dominance. The *creation blessing bestowed on the human beings also gave them authority over the rest of creation. They were commanded to subdue (*kbš*) the earth and to rule (*rdh*) over its creatures. The word translated "subdue" usually refers to hostile action and may connote "rape" (Esther 7:8)

or the conquest of enemies (Num 32:22). The majority of the OT occurrences of *rdh* ("to rule") are in the context of ruling over reluctant subjects. For example, it is used in the sense of being ruled by one's enemies (Lev 26:17); Ezekiel used the same verb when he reprimanded those who ruled over Israel harshly and brutally (Ezek 34:4). B. Vawter argues that the combined force of these two words is "absolute subjugation" (Vawter, 60). According to Lohfink, however, these words (*rdh* and *kbš*) may be understood without the connotation of harshness and brutality. He argues that *kbš* connotes "to place one's feet on something" in the sense of "take possession of" (Lohfink, 177). In a similar vein, he argues that *rdh* indicates "a shepherding and guiding function of man in respect of animals" (Lohfink, 179). Whichever view we take concerning the terminology used, creation is clearly subservient to those whom God has blessed, but there is no suggestion that they should feel free to abuse and mistreat creation, which would be clearly inappropriate in light of their creation in the *image of God.

A relationship in which the dominant person exploited others was always associated with cursing rather than with blessing. As a result of the curse, the man was to "rule over" the woman, which probably meant that their previous harmonious relationship had been lost, leaving the woman vulnerable to exploitation (Gen 3:16). On a national level, if Israel's relationship with God broke down, the curses resulted in subjugation by their enemies (Deut 28:36-37, 43). This was symbolized by the saying that they would be the tail and not the head in their relationships with others (Deut 28:44). If, on the other hand, Israel was given dominance over other nations, this was evidence of blessing, and Israel could be described as the "head and not the tail" (Deut 28:7, 13).

Authority was also present in the blessing of Jacob, where the struggle between the brothers was a struggle for dominance. Through the intervention of Yahweh it was Jacob who emerged dominant. His encounter with the angel taught Jacob that the ultimate struggle for blessing must be with God and not humans (Gen 32:22-32). Dominance is also an important theme in the patriarchal blessings bestowed by Jacob on his sons (Gen 49:1-28). *Reuben lost the usual prominence given to the firstborn, and *Judah was given dominance so that his "hand [would]

be on the neck” of his enemies while his brothers would bow down to him. This authority had royal implications, since “the scepter shall not depart from Judah, nor the ruler’s staff from between his feet” (Gen 49:8-9 NRSV).

Blessing and cursing are also prominent in international relations. Before Israel’s entrance into Canaan, the king of Moab, in an attempt to subdue Israel, summoned a prophet to curse them (Num 22:5-6). Yahweh, because of his covenant relationship with Israel, thwarted all attempts to curse them and turned the cursing into blessing (Num 24:10). This reflects the promise to Abraham: “I will bless those who bless you, and the one who curses you I will curse” (Gen 12:3 NRSV).

3.3. Peace and Rest. Blessing is also associated with *rest (Ex 33:14; Deut 3:20; 12:9-10; 25:19). *Eden represented a place of blessing where the inhabitants had work to do, but it was meaningful work and Eden was a place of rest and protection. The expulsion from Eden exposed the human beings to hard labor and to work without fulfillment (Gen 3:17-19). This theme is reflected in the naming of *Noah; although the etymology of the name is uncertain, it may be linked to a word meaning “to rest” (Gen 5:29). As the narrative direction in the Pentateuch moves toward the Promised Land, there are several indications that this is a return to the ideal conditions of the garden of Eden. While possession of the Promised Land is not explicitly described as a return to Eden, the most significant aspects of Eden were to be replicated in the blessings promised to those entering Canaan. It was to be a place of fertility, where God’s laws were respected and his presence was manifest. The priestly blessing promised “peace” (Num 6:26). Expulsion from the land, on the other hand, would lead to “no ease, no resting place for the sole of your foot . . . a trembling heart, failing eyes, and a languishing spirit” (Deut 28:65 NRSV).

3.4. Blessings That Acknowledge Merit in Others. The second category of blessing is an acknowledgement of one party’s blessedness by another. Usually this appears in the context of human beings blessing God (Gen 14:20) or showing respect for each other (Gen 14:19). In these contexts blessing was not being bestowed, but the person addressed was honored and praised as one characterized by blessing. Thus the common phrase “blessed be God” means that he is worthy of praise.

This raises the question about the relationship between God and the seventh day (*sabbath). To say that God blessed the day is confusing, because it is not clear how a day can be blessed (Gen 2:3). However, if we classify the blessing as belonging to this second category, the meaning becomes clear. God acknowledged the benefits received from the seventh day and honored it. He then sanctified it and set it apart so that others might receive benefits from it.

4. Conclusions.

Blessings and curses are usually powerful pronouncements in the Pentateuch. Primarily they should be understood in terms of the relationships involved. The contents are secondary and may vary depending on the context. The concepts of fertility and prosperity are often uppermost. However, another category of blessing occurs where someone or something is acknowledged as “blessed.” Blessing characterized the covenant relationship established with Abraham. However, any breakdown in this relationship led to cursing instead of blessing.

BLOOD

The concept of blood is central both to the sacrificial practice of the priesthood and to the *theology of the OT at large. The word *dām* itself, linguistically connected with the color red (*ʿādōm*), occurs approximately 360 times, with its

most frequent occurrences in the books of Leviticus (88 times), Ezekiel (55 times), Exodus (29 times), Deuteronomy (23 times), and Psalms (21 times). This article will attempt to categorize some of the uses of blood in the Hebrew Bible, focusing primarily on the pentateuchal books.

1. Life Blood
2. Leviticus
3. Exodus
4. Deuteronomy

1. Life Blood.

The OT clearly asserts that the *life of an organism exists within its blood. Blood is used synonymously with life in Leviticus 19:16, where a prohibition against doing anything that might endanger the life of one's neighbor is to be read literally: "the blood of your neighbor." It is the blood of the slain *Abel that cried out to Yahweh from the ground in the Hebrew Bible's first use of this noun (Gen 4:10), and blood and life are equated clearly in the postflood prescription, "You shall not eat flesh with its life, that is, its blood" (Gen 9:4; cf. Lev 3:17; 7:26-27; 19:26). This proscription applied not only to native *Israelites but also to any sojourner who lived in their midst (Lev 17:10-12). It also constitutes one of the key levitical requirements for NT Christians as decided by the Jerusalem Council (Acts 15:20, 29; 21:25). Those who ended someone's life by spilling that person's blood had to pay by losing their own blood in the vendetta killing described in Genesis 9:5-6, because humans are made in God's *image and their lives are not to be taken lightly or taken *away* lightly. This judicial outlook is formalized in the retributive principle of the *lex talionis*, found in the legal sections of the Pentateuch (Ex 21:23-25; Lev 24:19-20; Deut 19:21). It is interesting also to note that the phrase "spilling" or "pouring out" one's blood, used ubiquitously in the Hebrew Bible, became an expression for killing.

2. Leviticus.

Blood is also used in the OT as a divinely prescribed means of atonement through animal *sacrifice. The book of Leviticus, particularly in its first seven chapters, outlines meticulous steps toward individual and collective reconciliation with God and neighbor via blood sacrifice. In the burnt offering (Lev 1:3-17; 6:8-13), the blood of an animal either from the herd or the flock or some type of fowl was to be shed by the offerer and then sprin-

kled on the *altar by the *priest, after which the sacrifice was entirely consumed upon the altar as a sacred offering to God. The fellowship offering was similar in its ritualistic use of blood (Lev 3:1-17; 7:11-21), although it did not involve a complete consumption of the sacrificed animal and usually was accompanied by a shared meal, intended to foster friendship and peaceful relations with God. The sin or guilt offering (Lev 4:1—5:13; 6:24-30) involved the shedding of animal blood as a provision for unintentional *sin—either on the part of the priest (Lev 4:3-12), the entire Israelite community (Lev 4:13-21), a leader in the community (Lev 4:22-26) or a member of the community (Lev 4:27-35)—and involved the most elaborate use of blood in all of the levitical sacrifices (although note the unique role of blood in the ritual accompanying the ordination of *Aaron and his sons to the priestly office in 8:22-30). Not only did the priest smear the blood of the sacrificed animal onto the horns of the altar, as with the burnt and fellowship offerings, but he also was to pour out the remainder of the bull's, goat's or lamb's blood at the base of the altar (Lev 4:7, 18, 30, 34). In the case of the unintentional sin of the anointed priest or whole Israelite community, the entire procedure was preceded by the anointed priest dipping his finger into the blood and sprinkling it seven times before Yahweh in front of the curtain of the sanctuary (Lev 4:6, 17). Furthermore, if any of the blood from this sacrifice became spattered onto a *priestly garment, the garment was then to be washed in a *holy place (Lev 6:27).

One of the rare situations in the OT where blood is said to have a contaminating function is with blood lost through childbirth or a woman's monthly menstruation. Leviticus outlines stipulations for purifying a woman after giving birth (Lev 12:1-8), addresses uncleanness due to menstrual blood (Lev 15:19-23) and deals with sanguineous discharge other than that flowing from a woman's monthly period (Lev 15:25-30). Leviticus clearly pronounces as unclean the act of sexual intercourse during menstruation (Lev 15:24; 20:18).

The second most frequent occurrences of blood are found in the book of Ezekiel, which is understandable considering the priestly nature of this prophetic book and commonly observed parallels between Ezekiel and Leviticus.

3. Exodus.

Of the OT books, Exodus contains the third

most uses of the word *blood*. From a narrative-critical perspective, these uses are more stylized and serve much more complexly developed literary-theological purposes within the rhetoric of this central OT book. For example, the unusual episode that describes Yahweh meeting *Moses on his way back down to *Egypt from Midian and seeking to kill him, although enigmatic, employs the literary feature of foreshadowing with the motif of blood (Ex 4:24-26). However the particulars of this episode are understood, the “bridegroom of blood” became fully and ritually prepared for Passover through *circumcision (per the prescriptions in Ex 12:43-49; cf. Josh 5:2-10) and was now prepared to bring about the deliverance from Egypt that Yahweh had ordained. The blood of the circumcision also connects with the protective blood of the lamb that was to be placed on the sides and tops of the doorframes of the houses when the actual Passover took place after the deliverance out of the land (Ex 12:7, 22-23). So the blood of the circumcision that prepared Moses the deliverer for Passover also anticipated the blood of the Passover lamb that would save the Israelites from the destroyer, thus functioning for them as a sign of life rather than of death (Ex 12:13, 23). Not just foreshadowing but the literary feature of irony is present as well in the interweaving of characterization within the plot of the *exodus story: *Pharaoh was bloodthirsty and intent on killing Yahweh’s firstborn (Ex 4:21-23) but eventually lost his own firstborn, whose blood was shed by the destroyer (Ex 11:1-10).

This is not the only time in Exodus where blood functions as a *sign. After Moses’ encounter with Yahweh at the burning bush (Ex 3) and the various objections that he raised in order to get out of his prophetic commission of leading the Israelites out of Egypt, Moses suggested that the people would not believe him when he described the *theophany that he had encountered. In response, Yahweh gave him three signs for the people, the third of which was to scoop up some water from the Nile and pour it onto the dry ground, which would then turn to blood (Ex 4:9). When Moses and Aaron performed this sign before the people and the elders of Israel, they became convinced that Yahweh had met with Moses and responded with humble worship (Ex 4:29-31).

Blood also functioned as a sign in the plagues cycle (Ex 7—11). The account of the

first plague depicts Moses and Aaron striking the waters of the Nile River, which is changed into blood (Ex 7:14-24; cf. Ps 78:44; 105:29), much like the sign given for the elders (Ex 4). This begins the *creation-theological theme in Exodus of nature gone berserk: the unethical conduct of Pharaoh and the Egyptians toward the Israelites results in the spiralling vortex of the undoing of creation and the eventual return to a precreation state of darkness (Ex 10:21-23). The plague cycle thus develops the larger theme of Yahweh the Creator becoming known (i.e., recognized) in his great power and majesty both in Egypt and throughout the earth (Ex 5:2; 6:7; 7:5, 17; 8:10, 22; 9:14, 29; 10:2; 11:7; 14:4, 18; 16:6, 12).

Blood is also referenced in Exodus in legal contexts, particularly in the *book of the covenant. The blood of sacrifices to Yahweh was not to contain any yeast (Ex 23:18; 34:25). In addition, if a thief broke into a house and the inhabitant of the house struck and killed the thief, the defender was not to be found guilty of bloodshed—unless it occurred after the sun had risen, because the defender, it is assumed, would have had enough light to merely incapacitate the thief without actually killing him (Ex 22:2-3 [MT 22:1-2]). The *covenant ceremony itself was sealed with a ritual sprinkling of the blood of the covenant upon the people (Ex 24:6, 8).

4. Deuteronomy.

Deuteronomy, the OT book that contains the fourth most frequent references to blood, introduces the idea of the *gō’el haddām*, the avenger of blood (Deut 19:6, 12; cf. Num 35:19-28; Josh 20:2-9; 2 Sam 14:11). Deuteronomy 19, reiterating Numbers 35, describes the *cities of refuge that were set apart to provide sanctuary to those who had killed another person unintentionally. These cities were to be accessible from anywhere in the land (which is why there were three of them at central locations), so that a person seeking to avenge the blood of the person killed unintentionally would not be successful (Deut 19:4-6). If, however, the murder was not unintentional but premeditated and the murderer fled to one of the cities of refuge, provisions for justice were enacted: the elders of his town were to send for him, then hand him over for the avenger of blood to kill so that the guilt of shedding innocent blood in Israel was purged (Deut 19:11-13).

Similar concerns for justice and the removal of all bloodguilt can be seen in the ceremonial ritual regarding the shed blood of an innocent person (Deut 21). If someone was found lying dead in a field and no one knew who had killed him, the elders and judges were to measure the distance from the body to the closest neighboring town, and then the elders of that town were to engage in the following ritual: a heifer that had never been worked nor worn a yoke was to be led down to a valley that had not been plowed or planted and that had a flowing stream in it; the heifer's neck was to be broken; the priests were to step forward; and the elders of the town were to wash their hands over the heifer, declaring, "Our hands did not shed this blood, nor were we witnesses to it. Absolve, O LORD, your people Israel, whom you redeemed; do not let the guilt of innocent blood remain in the midst of your people Israel" (Deut 21:7b-8b). This procedure ensured that innocent bloodshed was atoned for.

Metaphorical uses of blood are also found in Deuteronomy. For example, wine is referred to as the foaming blood of the grape (Deut 32:14; similar to Gen 49:11 and found in Ugaritic poetry as well), and personification is evident in the reference to God the warrior's arrows becoming drunk with blood (Deut 32:42).

BLOOD KINSHIP. *See* FAMILY RELATIONSHIPS.

BODILY INJURIES, MURDER, MANSLAUGHTER

The biblical prohibition of killing is rooted in the *laws of the Pentateuch and the theology of *Genesis. Humans are created in the *image of God, and this has repercussions that resound throughout the Bible. This article begins with

the most serious situation: the murder of another human being. The Pentateuch recognizes that all killing is not morally equivalent and distinguishes murder from manslaughter. The characteristics of each will be described, along with their differing consequences. The particular cases of war and the killings of Cain and Moses will then be examined.

The Pentateuch also delineates various consequences for inflicting bodily injuries. *Slaves are singled out for particular attention, representing an important development in preventing cruelty toward slaves. The *lex talionis* is a means of ensuring that everyone obtained compensation appropriate to the injury. The application of these laws to abortion is then discussed. Through its laws on bodily injuries, murder and manslaughter, the Pentateuch calls for the protection of all humans, recognizing that all are made in the image of God.

1. Murder
2. Manslaughter
3. Bodily Injuries
4. Conclusion

1. Murder.

The sixth commandment is clear in its prohibition of killing (Ex 20:13; 21:12; Lev 24:17; Deut 27:24). Taking the life of another person is more than an affront against that person, his or her family, or society. Murder is an affront to God in whose image the victim was created. Murderers paid the highest penalty by forfeiting their lives. While people sentenced to death for some crimes could ransom their lives by substituting an appropriate payment, no ransom was acceptable for the life of those convicted of murder (Num 35:31). So serious was this crime that a murderer was to be taken even from the altar of God for execution (Ex 21:14).

The seriousness of murder, and why it was viewed so negatively, can be traced back to Genesis 9:6. Controversy surrounds exactly what is meant by describing humans as being made in the image (*selem*) and likeness (*demût*) of God (Gen 1:26-27; 5:3). What is clear is that God has left his images on earth as his representatives. Ancient Near Eastern kings left statues in conquered lands to remind the people of the king's sovereignty and presence. Just as killing the king's representative was a crime against the king, murdering God's image is a crime against God. The shedding of blood pollutes the land

and can be atoned for only by the blood of the murderer (Num 35:33).

While murder is proscribed, it is distinguished from other ways of killing humans. Those carrying out the death penalty are not regarded as murderers. The Hebrew term used in the sixth commandment is *ršh* (Ex 20:13; Deut 5:17), but six other Hebrew words are used in reference to killing. Our term, *ršh*, is less commonly used in the OT, with *hrg* or *hmwt* being used four to five times more frequently. However, the term *ršh* can refer to morally different types of killing, even within the same passage. In Numbers 35 *ršh* refers to manslaughter (Num 35:6, 11, 12, 25, 26, 27, 28; cf. Deut 4:32; 19:3, 4, 6), murder (Num 35:16, 17, 18, 19, 21, 30, 31; cf. Deut 22:26) and the act of execution (Num 35:27, 30).

Murder and manslaughter cannot be distinguished by the particular Hebrew word used, requiring further examination of a passage's context. Murder's distinguishing feature is the perpetrator's intention, captured by the term *šēdiyyā* (Num 35:20, 22; cf. Ex 21:13). This word can be translated as "lying in wait," referring to an action, or as "hatred" or "enmity," referring to the actor's state of mind (Ex 21:12-14). The root of the word refers to hunting and is compatible with either the idea of lying in wait intending to do destruction or of having malicious intent. In contrast, manslaughter is characterized as without design, inadvertent, unwitting or an act of God. So long as the victim was not viewed as an enemy and not approached with malicious intent to cause injury, the death was judged as manslaughter, not murder, and was not punished by death (Num 35:22-24; Deut 19:11-13).

Practically, the community made the determination between murder and manslaughter (Num 35:24-25). The death penalty was not to be enforced on the testimony of one witness, but only when a number of witnesses were available (Num 35:30). So precious is the life of every human being, even killing a thief caught breaking in during daylight was viewed as murder (Ex 22:3 [MT 22:2]; see Theft and Deprivation of Property). The value of each person as an image of God is not restricted to external action and restraint of violence. Foreshadowing the message of Jesus, the Pentateuch calls on the people of God not to hate their fellow citizens in their hearts but to love their neighbors as themselves (Lev 19:16-18).

2. Manslaughter.

If the attack was not premeditated and the death accidental, the death penalty was not applied (Ex 21:13; Num 35:11). Six cities of refuge provided safe havens for those who committed manslaughter (Num 35:11-34; Deut 19:4-10). The blood avenger, the victim's nearest male relative designated to avenge his dead relative, could not enter a city of refuge. Someone who had committed manslaughter was required to remain within that city until the death of the high priest (Num 35:25). Only then could the manslayer return home. If he left the city before the high priest's death, the blood avenger could kill the manslayer with impunity (Num 35:26-28).

Cases related to an ox killing someone reveal a third level of seriousness in causing death (Ex 21:28-29). This and similar passages make no specific distinction between the death of a man or woman, boy or girl, demonstrating the inherent equality of each. The owner of the ox would go unpunished unless the ox was known to have gored others. If the owner knew of previous incidences and did nothing to restrain the ox, he was guilty of the person's death and sentenced to death. However, this crime was less serious than murder, since the ox's owner could ransom himself from execution, although he had to pay whatever was demanded of him (Ex 21:30). The value of human life places a responsibility on people to protect the lives of their neighbors, not just to avoid injuring them.

The Pentateuch describes another situation where killing was not accidental, but neither was it viewed as murder, namely, war. God himself is called a man of war (Ex 15:3), and an early Hebrew history is called the "Book of the Wars of the LORD" (Num 21:14). The wars commissioned by God were, in part, a way of bringing divine judgment upon sinful nations (Gen 15:16) and the unrighteous within Israel (Deut 13:12-18 [MT 13:13-19]). After a period of unrighteous behavior, God told Moses to send some Hebrews into their own camp to kill the unrighteous (Ex 32:25-29). This text has been central to debates over what constitutes a "just" war. However, this incident involved a direct command from God for a specific situation, making its application to modern situations questionable.

God also used war to fulfill his covenant with the patriarchs to give the Israelites their promised *land (Deut 20:16-18). War was never given

blanket approval, and often the conquered people and their possessions were put under a “ban,” meaning they should be used as God willed (Deut 20:10-14; *see Hērem*). Killing in war was thus similar to capital punishment. War was a way God used humans to cleanse the land of its defilement by people’s sins. War was not to be arbitrarily undertaken to further human goals or avarice.

Two other killings in the Pentateuch are of particular interest. *Cain committed the first murder (Gen 4:8). The killing occurred once Cain got his brother *Abel out in a field, suggesting premeditation. Cain was angry, possibly jealous of God for accepting Abel’s sacrifice, and he remained unrepentant immediately afterward. Yet God did not take his life as punishment. In fact, God took steps to ensure that Cain would not be killed (Gen 4:15). Commentators have wondered why Cain’s blood was not required of him. The answer may be that Cain had no other relatives at the time to avenge Abel’s death. Yet we also see progression in the consequences of sin. *Adam and *Eve were expelled from the garden, and Cain was driven further away. To be driven from the land (Gen 4:14) often included being expelled from one’s family. Cain was also hidden from the presence of God. The phrase where Cain states that his punishment was too great to bear can also be translated as his sin was too grave to forgive. Some take this to mean that Cain sincerely repented, which led to God’s response of mercy and protection. With Cain’s act of murder, the alienation between God and humanity sank to a deeper level, and the burdens of sin became even greater.

*Moses also killed a man, but these circumstances were different. Moses came across an Egyptian hitting a Hebrew man (Ex 2:11). Moses looked around, then killed the Egyptian. However, the same verb (*nākā*) is used for how the Egyptian and Moses struck their adversaries as well as of two Hebrews Moses found fighting the next day. As Durham concludes, “there is in the text no suggestion that Moses meant to kill the Egyptian” (Durham, 19). Neither is Moses portrayed as completely innocent, since he looked around before striking the Egyptian and later buried the body. Moses then fled to seek refuge in Midian, foreshadowing how the law would later set up *cities of refuge for those who killed others without premeditation. The manslayer stayed in the city of refuge until the high priest

died; similarly, God told Moses that he could leave Midian when his enemies were dead (Ex 4:19).

3. Bodily Injuries.

3.1. General. Laws concerning bodily injuries reflect the same concern for the inherent value of all human life. However, the intentions of the one inflicting bodily injury are not considered when determining punishment. The focus here becomes appropriate restitution for damages caused. If men are fighting and one injures the other with a stone or tool, the more aggressive one is not to be punished (*nāqam*) but must take responsibility for the injured man’s recovery and his loss of time (Ex 21:18-19). Presumably, the aggressor took an unfair advantage by using the stone or tool in the fight and must compensate the injured man for his resulting inability to work.

A case addressing injuries to a slave follows and has caused much controversy. If a master strikes and kills his slave (male or female) with a rod, he is to be punished (*nāqam*). Earlier, killing another person called for the death penalty, unless the blow was not premeditated (Ex 21:12-14). Some have used this passage to support slavery by interpreting it to mean that slaves are less valuable than free persons; otherwise, killing a slave would have been included among the earlier provisions for murder and manslaughter. However, it is just as feasible that slaves are singled out because of their societal role, not personal value. The controversy is further fueled by verse 21, which spares a master from punishment for injuring a slave because the slave “is his property” or, literally, money.

Another interpretation fits the context better and shows that the Bible affirms the personhood of slaves. In this view, slaves were singled out because of the importance of addressing their treatment. In Exodus 21, if the slave dies, the master is punished (*nāqam*). This verb could take a human subject, but it most usually described God avenging people’s sin. As such, it frequently included the death penalty (Lev 26:25; cf. Num 31:2). Hence, the death penalty is included as a possible punishment for the master. After the incident, investigation would reveal whether the slave’s death was murder or manslaughter, since the rod may have been used as an instrument of discipline (Prov 13:24; 23:14; *see Rod, Staff* §1). If the rod was used to

cause premeditated death, the slave's personhood was affirmed by avenging his death by the death of the master.

On the other hand, if the blow resulted in injury to the slave, no punishment was enacted, just as none was called for between the two men in Exodus 21:18-19. Instead, as before, monetary compensation was required. In this case the price was the slave's freedom, which came even if the injury was to the slave's eye or just knocking out a tooth (Ex 21:26-27). The "property" phrase of verse 21 was to remind the master that aggressive behavior could be costly; the slave's freedom was like an investment. Rather than allowing masters to treat their slaves as property, this passage would remind the master of the high cost of mistreating slaves. Other ANE cultures placed less value on their slaves. The Babylonian Code of Hammurabi (c. 1868-1728 B.C.) punished people differently depending on whether slaves and free-born people were injured. If a poorly constructed building fell and killed the owner or his son, the builder was punished by his own death or that of his son, respectively. If the building killed a slave, the builder was fined the value of the slave (Code of Hammurabi §§ 229-31). If an ox gored a Babylonian free-person, the owner was fined one-half mina, but only one-third mina if the victim was a slave (Code of Hammurabi §§ 251-52). Slaves were often treated cruelly in the ANE, but in contrast the Pentateuch calls on masters to treat their slaves with respect and upholds the value of all human life.

3.2. Lex Talionis. The appropriate consequences for injuring another person were based upon what has become known as the *lex talionis* (law of retaliation): "But if there is serious injury, you are to take life for life, eye for eye, tooth for tooth, hand for hand, foot for foot, burn for burn, wound for wound, bruise for bruise" (Ex 21:23-25 NIV; cf. Lev 24:17-22; Deut 19:16-21). Some have looked upon biblical justice with disdain, assuming that this law was applied literally. However, the case immediately following the law in Exodus 21 does not apply it literally, and no biblical narratives describe its literal application. The Talmud views it as requiring appropriate monetary compensation for injuries (*b. B. Qam.* 83b-84a). The immediate context is the declaration that bodily injuries should be compensated for, not avenged (Ex 21:19). As such, the *lex talionis* would restrain

those seeking vengeance upon others and ensure that the punishment fit the crime. As B. Childs comments, "Thus the principle of *lex talionis* marked an important advance in the history of law and was far from being a vestige from a primitive age" (Childs, 472).

Although Exodus provides the most complete *lex talionis* passage, two others provide important clarifications. In Leviticus 24, the death penalty for murder is reaffirmed, and "life for life" is applied to the compensation due for the death of an animal. This compensation was financial (Ex 21:33-36), supporting the monetary interpretation of the law. In Deuteronomy 19:16-21, the *lex talionis* is applied to a man found guilty of bearing false witness. Since the lying witness did not literally injure the eye or tooth of the victim, his punishment cannot be seen as literal. Instead, the phrase is best interpreted as a call for appropriate monetary compensation.

The *lex talionis* was applied as a single standard for all people, whether stranger or native (Lev 24:22). Unlike other cultures, the rich in Israel were not to have one standard of justice and the poor or less fortunate another.

3.3. Abortion. Application of the bodily injury laws to abortion has been controversial, even among ancient Jewish scholars. The most relevant passage states that if two men struggle and hit a pregnant woman resulting in *yāšā'* *yeled*, the man who struck her is fined if there is no injury. If there is injury, punishment is to be according to the *lex talionis* (Ex 21:22-25).

Many translations render *yāšā'* *yeled* as "miscarriage." Some conclude that since the death of the unborn is punished by only a fine and is even described as "no injury," the unborn do not have the same value or rights as those born. This interpretation is used to support modern liberal positions on abortion, something that ancient Jewish authors did not uphold. Even though certain scholars throughout the centuries have accepted this translation, Cottrell concludes, "'the weight of scholarly opinion' . . . is outweighed by the text itself" (Cottrell, 9).

The verb *yāšā'* means "to go out" or "come out" and refers to the ordinary birth of children coming forth from their mother's womb (Gen 25:25-26; 38:27-30) or from their father's loins (Gen 15:4; 46:26). Only in Numbers 12:12 does it describe a stillbirth, and there the subject is not *yeled*, but *mwt*, something dead. The only biblical passage translating *yeled* as anything other

than children (or non-human offspring in a few instances) is the Exodus 21 passage. When the Pentateuch elsewhere describes a miscarriage, *šākal* is used (Gen 31:38; Ex 23:26). Thus, the literal reading “her children came out” or “were born” is preferable, with the topic therefore being premature expulsion of the unborn, resulting in different possible injuries depending on the age of the fetus and impact of the blow.

The term for injury (*ʾāsôn*) is seldom used and always refers to an unforeseen disaster (Gen 42:4, 38; 44:29). Modern translations add the English word “further,” having assumed the miscarriage warrants being described as some sort of injury. If this term is not added, it becomes clear why the author chose a word other than *mwt*, used throughout the rest of this passage where a death occurs. The passage then literally reads: “And if men struggle with each other and strike a woman with child so that her children come out, but there is no injury, he shall surely be fined. . . . But if there is injury, then you shall appoint life for life, eye for eye.”

The passage contrasts two situations. In the first, a blow causes the premature birth of a viable child, but no one is injured. In the second, the pregnant woman goes into labor resulting in some injury. The term *ʾāsôn* is used because of the unforeseen harm to the fetus, which has a profound impact on another party, namely, the parents. In the first case, the man is fined, presumably because of his reckless endangerment of mother and child and the distress caused the parents. In the second case, punishment for injuries, either to mother or child, are to be determined by the *lex talionis*, as would occur with any other accidental injury. These injuries could include the death of the fetus, whether viable or not, thus invoking the call for a life to be paid for by a life. Kline holds that therefore this passage is “perhaps the most decisive positive evidence in Scripture that the fetus is to be re-garded as a living person” (Kline, 193). Even if one does not go this far, this passage describes an accidental injury to the fetus and cannot be used to imply support for the intentional destruction of human life in elective abortion.

4. Conclusion.

The Pentateuch holds the lives of men and women, slave and free, Israelite and foreigner, born and unborn, to be of utmost value. Each is

an image of God, to be respected, protected and actively loved. But when someone is injured or killed, punishment is to be meted out regardless of the transgressor’s status. The punishment should fit the crime and take the transgressor’s intention into account. As such, these laws point to important features in the nature of the Law-giver’s justice.

BOOK OF THE COVENANT

The titles “book of the covenant” and “covenant code” are frequently used of Exodus 20:22—23:33, although with some variation. Whereas the former is derived from the text of Exodus itself (Ex 24:7) and is generally understood to refer to all the material in Exodus 20:22—23:33, the latter is a modern designation based on the idea that some of Exodus 20:22—23:33 originally formed an independent *law code that was incorporated into the biblical narrative.

1. Extent of the Unit
2. Structure
3. Form-Critical Approaches
4. Contents
5. Relationship to the Sinai Narrative
6. Date of Composition

1. Extent of the Unit.

From Exodus 24 alone it is difficult to determine the precise contents of the “book of the covenant” mentioned in verse 3. Based on the reference to “words and judgments” (NRSV “ordinances”), some scholars suggest that the book of the *covenant consisted of the “ten words,” or *Decalogue (Ex 20:1-17), and the divine speech in Exodus 20:22—23:33 that focuses on “judgments” (cf. Ex 21:1; e.g., Sprinkle, 28-29; cf. Cassuto [312], who also includes Ex 19:5-6). Others, however, exclude the Decalogue, viewing the book of the covenant as extending from Exodus 20:22—23:33 (e.g., Childs, 451). The issue is further complicated by the fact that the majority of scholars envisage Exodus 19—24 as having undergone a long and complex process of composition, with the contents of the book of the covenant changing over time. While absolute certainty is impossible, for reasons that will be developed below, the designation “book of the covenant” is taken to denote the material in Exodus 20:22—23:33. (Unless otherwise indicated, verse references are to English translations rather than to the Masoretic Text [MT].)

2. Structure.

According to J. Halbe (413-23; cf. Sprinkle, 199 n. 1), the book of the covenant is a carefully constructed literary unit, having an elaborate concentric structure:

A cultic laws (Ex 20:22-26)

B law of release (seventh year) (Ex 21:1-11)

C slaves, property (Ex 21:12—22:19)

D the LORD alone (Ex 22:20)

C aliens, social justice (Ex 22:21—23:9)

B sabbath (seventh day) (Ex 23:10-12)

A cultic laws (Ex 23:13-19)

While this proposal highlights some of the main units within the book of the covenant, it fails to incorporate Exodus 23:20-33 and requires that 23:10-19 be unnecessarily divided into two sections. A more straightforward analysis of Exodus 20:22—23:33 is possible (cf. Patrick, 63-96):

20:22-26 instructions concerning the making of cultic objects

21:1—22:20 regulatory principles (or *mišpāṭim*)

22:21—23:9 exhortations

23:10-19 instructions concerning the sabbath and religious festivals

23:20-33 promises and warning concerning the land of Canaan

3. Form-Critical Approaches.

Apart from Exodus 23:20-33, which due to its paraenetic nature is considered to be a distinctive part of the book of the covenant, the remaining material is often viewed as consisting of detailed legislation. Numerous studies have drawn attention to the different forms of “laws” in Exodus 20:22—23:19, offering slightly different perspectives on the nature of these laws. J. Morgenstern (1930, 20-34, 56-63; 1931-1932, 1-150, esp. 140-50; cf. Johnstone, 53-59) proposed four types: *dibrê* (words), *mišpāṭim* (judgments), *ḥuqqim* (statutes) and *mišwôt* (commandments). A. Alt (91-103, 125-32) uncovered two main kinds of law: casuistic and apodictic. E. Gerstenberger (23-30, 42-54) classifies his two main types as casuistic and prohibitive. D. Patrick (24) distinguishes between primary (those that establish the rights of certain groups of people) and remedial (those that provide compensation when the primary rights are violated) casuistic law. H. W. Gilmer (25-26, 113-15) has commands, prohibitions and “if-you formulations,” whereas R. Sonsino favors the designations *conditional* and *nonconditional*.

While there has been much discussion of the classification of the legislation in the book of the covenant, the general trend, following Alt, has been to isolate two main blocks of legislation: (1) casuistic laws (Ex 21:1—22:20) and (b) apodictic laws (Ex 20:22-26; 22:21—23:19). Whereas the casuistic laws are constructed using an “If . . . , then . . .” formula, the apodictic laws generally employ a second-person imperative form: “You shall/shall not . . .” After isolating and identifying two distinctive types of material within the book of the covenant, the next stage in the form-critical approach is to determine the separate origins of these two forms and the process by which they came to be incorporated into the Sinai narrative. Not surprisingly, various scenarios have been suggested.

B. S. Childs (455-58), finding in Exodus 20:22-26; 22:18—23:19 evidence of cultic use relating to a covenant context and going back possibly to the period of the settlement, suggests that from the outset this material was probably part of the earliest version of the Sinai narrative. On the other hand, the casuistic laws, or *mišpāṭim*, while also dating from the early settlement period,

originally had no covenant connection. Only at a later stage, sometime before the composition of Deuteronomy, were the *mišpāṭim* incorporated into the book of the covenant.

An altogether different process of composition is suggested by F. Crüsemann, who takes over the proposal of J. Halbe (450-82) that the book of the covenant is based on two sources: Exodus 34:11-26 and Exodus 21:1—22:17. The former of these was composed in the northern kingdom by a religious movement opposed to Baal worship. Evidence for this “Yahweh-alone” movement comes in the story of Elijah (1 Kings 17) and the prophecy of Hosea. The latter source, Exodus 21:1—22:17 with modifications, was a law code of the Judean upper class, probably composed in the eighth century B.C., which in its original form contained legislation that offered little protection to *slaves but favored their wealthy owners. Following the downfall of the northern kingdom in 721 B.C., refugees brought to Jerusalem a copy of Exodus 34:11-26. This in turn was combined, along with other material (in particular the laws concerning the treatment of *aliens), with a modified version of Exodus 21:1—22:17 to form the book of the covenant, a document expressing the outlook of the Yahweh-alone movement and the moral concerns of the eighth-century prophets. While this is a detailed reconstruction of how the book of the covenant may have been composed, it fails to explain why the *mišpāṭim*, if they were created by the upper class in Judea, do not address more issues relating specifically to merchants. As we shall observe below, the absence of such materials points to a much earlier date of composition.

Although they present very different descriptions of the process by which the book of the covenant was composed, Childs and Crüsemann share the same basic assumption regarding the application of the form-critical method: different forms of material must have different origins (see Form Criticism). While this may sometimes be the case, the possibility of very different types of material being placed side by side in a single document should also be acknowledged. For example, in ancient Near Eastern treaties we find various kinds of material in adjacent sections, all of which have their own distinctive form (e.g., historical prologue, stipulations, a list of witnesses, blessings and curses). In light of this we should consider the possibility that the juxtaposition of different forms of mate-

rial within the book of the covenant is not necessarily inconsistent with a single origin for the whole document.

4. Contents.

As we have noted above, the book of the covenant falls into a number of distinct sections. In terms of content and form, the boundaries between these sections are generally clearly marked. Exodus 21:1 introduces the material in Exodus 21:2—22:20 [MT 22:19], setting Exodus 20:22-26 apart as the very first unit in the divine speech. A distinctive section of material occurs in Exodus 22:21 [MT 22:20]—23:9, framed by Exodus 22:21 and 23:9, which together form an *inclusio*. The cultic and paraenetic materials in Exodus 23:10-19 and 23:20-33 respectively suggest the presence of two more units. Unfortunately, the existence of these distinctive sections is rarely recognized, with most of the material in Exodus 20:22—23:19 being categorized and discussed as either casuistic or apodictic laws (an exception is D. Patrick). In reality, the material commonly designated “apodictic” is neither homogeneous nor strictly speaking “law.” Moreover, in spite of frequent claims that the book of the covenant lacks unity of construction (cf., e.g., Boecker, 137; Durham, 315) it displays signs of careful organization.

4.1. Exodus 20:22-26. One feature often cited as an indication of the disorganized nature of the book of the covenant is the manner in which the so-called “altar laws” (Ex 20:22-26) have been separated from Exodus 22:18 [MT 22:17]—23:19 by the later insertion of the casuistic laws, or *mišpāṭim* (Ex 21:1—22:17, excluding Ex 21:12-17, which is itself usually taken to be a short series of participial apodictic laws inserted into the *mišpāṭim*). However, Exodus 20:22-26 is best understood as a series of divine instructions; the absence of penalties strongly suggests that they are not laws. These instructions were given at the start of the divine speech for three important reasons.

First, the prohibition against making *idols and the instructions for building *altars together focus on the important subject of how the divine presence is to be experienced by the people in the future. God’s blessing will come to the Israelites when they worship him through the offering of *sacrifices on altars, but not through the construction of golden or silver images. Since the whole thrust of the Sinai covenant is

the establishment of a special relationship between God and the Israelites, through which the people will continue to know and experience the divine presence, these instructions form an appropriate introduction to the covenant document.

Second, the directions concerning the building of altars relate in a very immediate way to the ratification of the covenant in Exodus 24:4-5. The narrative in Exodus 24 describes the construction of an altar and the making of burnt offerings and fellowship offerings, the two types of sacrifices specifically mentioned in Exodus 20:24.

Third, the prohibition against having gods of either gold or silver takes on a special significance in the light of the *golden calf incident recorded later in Exodus 32:1-6. Remarkable parallels exist between the account of the ratification of the covenant in Exodus 24 and the undoing of this very covenant in Exodus 32: both passages describe the making of an altar, the sacrificing of burnt and fellowship offerings, and the people eating and drinking in God's presence. Moreover, in Exodus gods of gold are mentioned only in 20:23; 32:4, 31. All these factors suggest that the opening section of the divine speech in Exodus 20:22—24:2 is an important and essential element in the received Sinai narrative.

4.2. Exodus 21:1—22:20 [MT 22:19]. A new section in Yahweh's speech is introduced by the instruction in 21:1 that *Moses is to set before the people "these regulatory principles" (Heb *mišpāṭim*; the singular is *mišpāṭ*). While Exodus 21:1 clearly marks the start of a new section, scholars disagree regarding its conclusion. The general trend is to view Exodus 22:18 [MT 22:17] as the start of the next section. However, although the form of the material in Exodus 22:18-20 [MT 22:17-19] does not conform to the "if-then" style that dominates most of Exodus 21:2—22:17 [MT 22:16], the inclusion of specific penalties suggests that these verses should be viewed as *mišpāṭim*; this is supported by the occurrence of similar material (i.e., Ex 21:12-17) in the middle of Exodus 21.

Exodus 21:1—22:20 consists mainly of material that in its most basic form has two elements: a description of a situation or event (the protasis) followed by an authoritative pronouncement concerning what action should be taken next (the apodosis). This basic pattern is used to

construct two levels of regulatory principles: primary and secondary. In Exodus 21:2—22:20 primary regulatory principles, containing both protasis and apodosis, are introduced by the Hebrew particle *kī*. Occasionally, but not always, the primary regulation is followed by one or more secondary regulation introduced by the Hebrew particle *'im* (in Ex 21:36 a secondary *mišpāṭ* is introduced not by *'im* but by *'ô*). Thus, the typical structure is as follows:

primary regulation = *kī* + protasis + apodosis
secondary regulation = *'im* + protasis
+ apodosis

The secondary *mišpāṭim* address situations closely related to the primary regulation, qualifying the course of action to be taken. Thus, for example, Exodus 21:2 is a primary regulation, with Exodus 21:3-6 containing three secondary regulations that build upon what is said in verse 2. Two exceptions to this form come in Exodus 21:18 and 22:7 [MT 22:6]. In these cases, the protasis begins with *kī*, and the apodosis comes in a clause introduced by *'im*.

Apart from the material that comprises the primary and secondary regulatory principles, introduced by *kī* and *'im* respectively, there are some verses that do not conform to this pattern. Exodus 21:12-17 forms a separate unit consisting largely of four main regulatory principles, each beginning with a protasis and concluding with an apodosis pronouncing that the offender should be put to death. In the light of this, these verses resemble more closely casuistic laws than apodictic (contra Alt, 140-46; cf. Sprinkle, 74). As well as having identical endings, these regulatory principles all begin with the same grammatical construction, a participial verb. A somewhat similar set of *mišpāṭim* occurs in Exodus 22:18-20 [MT 22:17-19], although it lacks the uniformity of style found in Exodus 21:12-17. Another passage not introduced by *kī* or *'im* is Exodus 22:9 [MT 22:8], which provides an explanatory note relating to the immediately surrounding regulatory principles.

While form-critical considerations might suggest that Exodus 21:12-17 and 22:18-20 ought to be viewed as having an origin different from the rest of the material in Exodus 21:2—22:20, D. Patrick is correct in stating that Exodus 21:2—22:20 is "an internally homogenous, self-contained corpus." Moreover, it should be noted

that collections of legal material from the ancient Near East also display considerable variation in presentation (cf. Wenham, 101; Sprinkle, 74-75).

Taken as a whole, Exodus 21:2–22:20 displays a relatively clear structure. This is most apparent in Exodus 21:12–22:17 [MT 22:16], where there is a “logical progression . . . from offenses of humans against humans, to offenses of property against humans, to offenses of property against property, to offenses of humans against property” (Sprinkle, 105; cf. Paul, 106-11). Exodus 22:18-20 closes this section by forming a frame with Exodus 21:12-17.

Although the location of the regulatory principles concerning the release of slaves in Exodus 21:2-11 is at odds with the logical progression from more serious offenses to lesser, the emphasis given to them is very much in keeping with the wider context, for the whole book of Exodus focuses on the freeing of Hebrew slaves from Egyptian control and their subsequent decision to commit themselves permanently through the covenant at Sinai to a new master, Yahweh.

Source- and form-critical studies have generally concluded that the material in Exodus 21:2–22:17 [MT 22:16], in total or in part, first existed as a collection of case laws used in Canaanite (Noth, 173; Beyerlin, 4-6; Paul, 43; cf. Alt, 79-132) or Israelite (cf. Schwienhorst-Schönberger, 254-56; Otto, 3-22) law courts. This material was then taken over and incorporated into one of the sources used to compose the book of *Exodus. From the contents of the regulatory principles and their structure, it is hardly surprising that scholars have viewed this material as “law”; it certainly has the appearance of legislation that was formulated in a technical way. However, the *mišpāṭim* preserved in Exodus 21–22 do not represent a comprehensive list of laws. Apart from the fact that various areas are not touched upon, the reference to the “regulatory principle [*mišpāt*] of a daughter” in Exodus 21:9 suggests that other regulatory principles existed.

Although many scholars have tended to view Exodus 21:2–22:20 as a short law code, tracing its origins back to the legal system of ancient Israel, with each regulation deriving from a specific case (e.g., Durham, 320), others have questioned this belief. S. Paul (31) has suggested on the basis of their prologues and epilogues

that the ancient Near Eastern law codes were literary texts composed to impress the gods or enhance the king’s standing; consequently, they were not collections of case laws or precedent decisions. Furthermore, there is no evidence to show that ancient Near Eastern law codes were used in a mechanical way to settle legal disputes. As R. Westbrook (77; cf. Greengus 1962, 532-36) observes concerning ancient Babylonian legal practice, the court “looked to the code, not for an exact, mechanical precedent, but for the principle that the code indirectly laid down through its examples.”

As regards the regulatory principles in Exodus 21:2–22:20, Patrick views them as “exercises in legal thinking,” and this possibility is supported by S. Greengus (1992, 4.247): “The repeated use of these specialized (some scholars say unusual and unlikely) life situations as the setting for illustrating what moderns might call principles of negligence and liability suggest that these laws might in fact be part of a literary or scholastic tradition, created for the purpose of teaching these principles.” The possibility that the *mišpāṭim* do not derive from the law courts is also argued at length by Sprinkle. Rejecting the view of B. Jackson (30-34) that the biblical material deals with actual cases, J. M. Sprinkle concludes, “The unsophisticated nature of the biblical regulatory principles ought rather to be interpreted as evidence that this was not intended as positive law to be inflexibly applied, but as paradigmatic illustrations of the kinds of resolution of grievances that should take place in Israelite society” (Sprinkle, 122).

If, in the light of these observations, we dismiss the idea that Exodus 21:2–22:20 originated in the law court and, alternatively, consider the material to have been created for a didactic purpose, this leaves open the possibility that it was specifically composed as part of a covenant document intended to regulate the behavior of the Israelites.

4.3. Exodus 22:21 [MT 22:20]–23:9. The next main section in the book of the covenant is Exodus 22:21–23:9. A number of features set this material apart from the rest of the book of the covenant: (1) Exodus 22:21 and 23:9 frame this block of material by repeating the instruction not to oppress aliens because the Israelites themselves were aliens in *Egypt; (2) Exodus 22:21–23:9 is dominated by God’s concern that compassion should be shown to the more vul-

nerable members of society; (3) penalties are not specified, but various motivation clauses are included; and (4) the issues addressed lie either outside the jurisdiction of the law court or seek to ensure the impartiality of the judicial process. These considerations strongly suggest that Exodus 22:21—23:9 is best understood as a series of moral imperatives that challenges the Israelites to reflect in their behavior the *holy character of God.

4.4. Exodus 23:10-19. Although these verses have a well-defined structure, scholars have not always recognized this. Driver (e.g., 241; cf. Hyatt, 247) suggests that the section may have originally concluded with verse 13, with either verses 14-19 being a later addition or verse 13 having previously come after verse 19. This approach, however, is rightly rejected by Childs (483) and Sprinkle (189). The authenticity of verses 18-19 has also been challenged by some scholars (e.g., Driver, 245; Hyatt, 249; Childs, 483) on the assumption that these cultic regulations are unrelated to the *festivals.

The first two paragraphs in this section (Ex 23:10-11, 12) are both introduced by the number six and deal with the *sabbath year and sabbath day respectively. The fourth and fifth paragraphs (Ex 23:14-16, 17-19) each begin with the number three, and their contents parallel each other, focusing on the three pilgrimage festivals that the Israelites were expected to observe annually. At the center of the symmetrical pattern created by these four paragraphs comes verse 13, which emphasizes the importance of obeying Yahweh and him alone. Throughout this whole section of instructions a unifying theme is the expectation that the Israelites will come to possess *land that will be fruitful.

4.5. Exodus 23:20-33. In terms of both its content and form, Exodus 23:20-33 stands apart from the rest of the book of the covenant. With its emphasis on the future occupation of the land of Canaan by the Israelites, it differs markedly from the regulatory principles (Ex 21:1—22:20 [MT 22:19]), exhortations (Ex 22:21 [MT 22:20]—23:9) and instructions (Ex 23:10-19) that make up the preceding sections. In contrast to what has gone before, Exodus 23:20-33 is not only strongly oriented toward the future but also exhibits the highest concentration of first-person singular verbs (reflected in translation by the pronoun “I”) within Exodus 21—23. While these features distinguish this section from the

other parts of the book of the covenant, Exodus 23:20-33 functions well as the epilogue to the book of the covenant, highlighting the special relationship that is being established between God and the Israelites.

5. Relationship to the Sinai Narrative.

The preceding brief survey of Exodus 20:22—23:33 reveals that when form and content are carefully analyzed there is no reason to accept the commonly held opinion that the *mišpāṭim* are a later addition to a collection of homogeneous apodictic laws. Furthermore, the different sections of the book of the covenant complement each other, creating a document that sets out clearly the covenant obligations placed upon the Israelites in order for them to be a holy nation. Although various writers draw attention to the lack of any specific reference to a *covenant in Exodus 21:1—22:20 [MT 22:19], Childs (455) sees evidence of a covenant connection for the whole of the book of the covenant, apart from the *mišpāṭim*. Yet, even with the *mišpāṭim*, which undoubtedly were shaped by the norms of contemporary legislation, it is noteworthy that several (i.e., Ex 21:2, 13-14, 23) are formulated in the second person. Moreover, the entire document is remarkable for the variety of ways in which it links into the book of Exodus as a whole.

While scholars have long debated the nature of the relationship of the book of the covenant to the Sinai narrative in Exodus 19—24, as the account now stands there are various indications that the divine speech, which extends from Exodus 20:22—24:2, must be viewed as an integral part of the Sinai narrative. (For a recent discussion of the literary unity of Exodus 19—24, see Alexander; see Exodus, Book of §3)

Although the divine speech in Exodus 20:22—24:2 consists of various blocks of material, these may be viewed as reflecting three distinctive phases: (1) instructions concerning the construction of an altar for the sacrificing of burnt and fellowship offerings (Ex 20:24-26); (2) the substantive text of the book of the covenant (Ex 21:1—23:33); (3) God’s invitation to Moses, *Aaron, *Nadab, Abihu and seventy of the elders (see Leadership, Elders) of Israel to come up the mountain (Ex 24:1-2). Significantly, this threefold pattern is reflected in the description of the ratification of the covenant: an altar is constructed and sacrifices offered (Ex 24:4-5);

Moses reads to the people the book of the covenant (Ex 24:7); Moses and the elders ascend Mount Sinai (Ex 24:9-11). These features suggest that the author of Exodus 24:3-11 presupposes a knowledge of Exodus 20:22—24:2.

A further indication that the book of the covenant is an integral part of the Sinai narrative concerns its relationship to the Decalogue. While there is no reason to believe that the book of the covenant was composed on the basis of the Decalogue (contra Rothstein), J. M. Sprinkle highlights well the parallels in content or subject matter that exist between the two passages:

“No other gods” (20.3) finds echo in 22.19; 23.13, 24, 32. The prohibition against images (20.4) is repeated in 20.23. Not taking the name of YHWH in vain (20.7) is backdrop to the YHWH-oath of 22.7, 10. The sabbath command (20.8) is repeated and expanded in 23.10-12. The duty to honor parents (20.12) is assumed in two crimes of children against parents (21.15, 17), the wording of the one (v. 17a) being the exact antithesis of it; this duty is also assumed in giving the father right of approval in his daughter’s marriage (22.15-16). The prohibition of homicide (20.13) is implicit in 21.12-14, 20, 23, 29 and 22.2. Although the prohibition against adultery (20.14) is not repeated, the case of the seduction of a maiden (22.15-16) is another aspect of marriage law. Laws concerning theft of animals (21.37; 22.2b-3), attempted theft (22.1-2a), accusation of theft (22.6-8), rustling of an animal (22.9), and stealing a man (21.16) all expand on the command “Do not steal” (20.15). The prohibition of false testimony (20.16) is repeated and expanded (23.1-3, 7). The prohibition of coveting (20.17) is implicit in the regulation concerning the safekeeping of a neighbor’s money, goods or livestock (22.6-12). (Sprinkle, 25-26)

Support for the idea that the Decalogue and the book of the covenant are both integral components of the Sinai narrative comes from a consideration of Exodus 20:22. This verse, which parallels closely Exodus 19:3-4, refers to Yahweh speaking “from heaven,” an event that is placed on a par with the Israelites’ deliverance from Egypt. From the context, this obviously refers to the giving of the Decalogue. Furthermore, given that God has spoken to the Israelites “from heaven” (Ex 20:22b), some explanation is re-

quired to explain why he now instructs Moses to convey his words to the people. Exodus 20:18-21 provides an explanation by drawing attention to the fear of the people. We may deduce, therefore, that Exodus 20:22 was penned as a sequel to Exodus 20:1-21.

It is sometimes argued that the book of the covenant cannot be an original part of the Sinai narrative because its contents reflect a settled life in Canaan. W. Johnstone (53) writes, “The legislation concerns, indeed presupposes, a settled community living in houses (22.2, 7f. [Heb. 1, 6f.]), frequenting fixed sanctuaries (23.17, 19), possessing cattle as well as sheep (21.28ff.), fields with their crops, vineyards and olive orchards and the necessary installations for pressing the grapes and olives (22.29 Heb. 28]; 23.10f.).” This argument, however, fails to recognize that the entire account is concerned with the creation of a holy nation en route from Egypt to Canaan. Moreover, Exodus 23:20-33, which focuses on how God will enable the Israelites to gain possession of the land of Canaan, only makes sense prior to the taking of the land.

Taken together these arguments provide substantial grounds for viewing the book of the covenant as an integral part of the Sinai narrative.

6. Date of Composition.

While previous studies have generally offered different dates for the various sections of the book of the covenant, there has been a strong tendency to date much of the material, if not all, to the premonarchical period. Several general reasons for doing so are commonly cited: (1) the legal material reflects actual practices and presupposes a settled lifestyle; (2) there is no mention of the monarchy (Patrick, 65; cf. Neufeld, 367-68); and (3) the material predates the composition of the book of Deuteronomy, possibly by several centuries.

J. A. Marshall has provided a detailed investigation of this issue based on anthropological research into the relationship between a society’s substantive laws and other factors such as social structures, economic system and environment. Although his approach is partially flawed by a failure to recognize that the material in Exodus 22:20 [MT 22:19]—23:9 is not “substantive law,” he demonstrates clearly that the *mišpāṭim* reflect a dimorphic pastoral and agrarian society of the early Iron I period (1200-1000 B.C.). While the *mišpāṭim* address issues relating to the period of

Israel's initial settlement in the land of Canaan (cf. Cazelles; Childs, 457), Sprinkle has shown that they do not derive from a law-court setting. In the light of these two factors, it is possible that the *mšpātīm* were composed immediately prior to the arrival of the Israelites in the land of Canaan. While this does not constitute proof that the "book of the covenant" was divinely given at Mount Sinai, it supports the essential trustworthiness of the biblical tradition.

T. D. Alexander

BORDERS

The ancient Israelites were concerned with boundaries. The beginning of Genesis recounts how light was separated from darkness (Gen 1:3-4), land from sea (Gen 1:9-10), upper waters from lower waters (Gen 1:6, 7) and so on. The Israelites also sought to establish cultural and religious boundaries to maintain their uniqueness. *Circumcision, for instance, early on became the distinguishing mark between the covenanted and the noncovenanted (Gen 17:9-11). Likewise, dietary laws, *sabbath laws and the like all worked to build boundaries and borders of various types.

As part of this effort to create borders, the Bible established specific geographical boundaries for different groups: first for all the postdiluvian peoples and later for the Israelites themselves. For example, Genesis 10 records how Noah's sons occupied specific geographic areas of the known world. The Japhethites occupied Asia Minor, Greece and other northern regions (Gen 10:2-5). The Hamites inhabited primarily the area of modern Africa, Arabia and the eastern Mediterranean littoral, including Palestine (Gen 10:6-21), while the Semites (children of *Shem) occupied the region of the Near East (Gen 10:21-31), excluding the coast.

Central to the Pentateuch is the promise of *land to the children of Israel. Surprisingly, the Pentateuch does not contain an account of the

actual possession and distribution of this land, despite the numerous promises and expectations of its eventual occupation. Nor does the Pentateuch describe the region allotted to each tribe. Both tasks have been left to the book of Joshua.

The allocated land is at first only loosely defined. As the biblical story progresses, however, it becomes more delimited, culminating in the border descriptions in the book of Joshua. The descriptions of the borders of the Promised Land fall into three categories: loose geographical definitions, definitions based on ethnic groups occupying it and definitions using the term *Canaan*, both general and specific (see Nations of Canaan).

1. Loose Geographical Definitions
2. Definitions Based on Ethnic Groups
3. Definitions of Canaan

1. Loose Geographical Definitions.

Two passages serve as examples of this type of definition. First, Genesis 13:14-15 defines the Promised Land as the territory that *Abraham was able to view with his naked eye while standing at an uncertain location in Palestine. Second, Genesis 15:18, while giving some definition, is somewhat vague about the borders of the Promised Land. Only two boundaries are listed: the “River of Egypt” and the “Great River, the Euphrates.” The latter boundary offers no difficulties. The former, however, is somewhat ambiguous, and scholars have suggested two interpretations of the phrase “River of Egypt.” First, a few scholars have postulated that the River of Egypt refers to either the Nile or one of its eastern branches, since the Bible here uses the word *nāhār*, “river” (Speiser, 114; Aharoni, 65). Others, arguing that the usual designation for Canaan’s southern border is the “Brook/Wadi of Egypt,” using *nahal* rather than *nāhār* (see, e.g., Num 34:5; Josh 15:4), have concluded that the Wadi el-Arish is in view. Recently a few scholars have challenged this conclusion and argued that the Wadi Besor, just north of Gaza, was the Brook of Egypt (e.g., Na’aman 1979). P. K. Hooker has further refined this view by arguing, on the basis of Neo-Assyrian texts, that the Wadi Besor was the Brook of Egypt prior to approximately 700 B.C. (Hooker, 214). After this, the Brook of Egypt referred to the Wadi el-Arish. In any case, the borders of the Promised Land delineated in this passage do not correspond to

the known borders of Israel in any historical period. Although the biblical account of Solomon’s reign suggests that he held suzerainty over this region, more realistic appraisals of his kingdom suggest that the account is idealized and that his kingdom never really stretched to cover a territory this expansive (Miller and Hayes, 214). Possibly the borders given in Genesis 15 depict those of the satrapy of Abar Nahara during the Persian period. These borders extended from Egypt to the Euphrates (Ahlström, 821).

2. Definitions Based on Ethnic Groups.

Several times the Promised Land is described, not in geographical terms per se, but in ethnic terms, that is, as the land of various groups of peoples all loosely labeled as either Canaanites or Amorites. Genesis 15:19-21, for instance, after giving the boundaries mentioned above, notes that the land was occupied by certain ethnic groups, including the Canaanites, Amorites and Jebusites. According to Genesis 10:15-19, these groups occupied a territory extending from Sidon in the north to roughly Gerar or Gaza in the south, and from the Mediterranean Sea in the west to the region of Sodom and Gomorrah in the east, roughly the Dead Sea. Although the land is not specifically called *Canaan* here, it is called the land of the Canaanites. This area does not describe quite the same region, then, as Genesis 15. The extension to the north is considerably shortened.

3. Definitions of Canaan.

In other places the Promised Land is defined more concretely as the land of Canaan (Gen 17:8; Ex 6:4; Lev 25:38; Num 34:2 [see below]), although only Numbers 34:1-12 provides any specific boundaries. It is repeated to a great degree in Ezekiel 47:15-20. The relationship between the passages is unclear. Numerous similarities in description and terminology (especially the natural features; see Hutchens, 222) obtain, but notable variants exist as well. For example, Ezekiel’s description of the northern border has only Lebo-hamath, his east side is more abbreviated, and the only common feature of the southern border is the mention of the Wadi of Egypt. Overall, the differences are more marked. Ezekiel’s list also attempts to clarify the borders. For instance, he notes that the northern boundary runs north of Damascus but south of Hamath (Ezek 47:17). Therefore, neither pas-

sage appears to be dependent on the other, although they probably have a common origin (Auld, 76; Hutchens, 222-24).

Numbers 34:2 explicitly states that the territory to be included in the inheritance was equivalent to the territory of Canaan. In Numbers 34:3-12 the boundaries of Canaan are given in clockwise order beginning with the south. The western (Num 34:6) and southeastern (Num 34:12) boundaries offer no difficulty. They are the Mediterranean Sea and Jordan River respectively. The southern (Num 34:3-5), northern and northeastern (Num 34:7-11) borders are problematic, however, because the locations of several of the toponyms are wholly unknown. These are Mount Hor (Num 34:7, not the mountain where *Aaron died), the "ascent of Akkrabbim" (Num 34:4, perhaps Naqb es-Safa; see Budd, 366), Ain (Num 34:11), Shepham (Num 34:10), Ziphron (Num 34:9), Hazar-enan (Num 34:9) and Hazar-addar (Num 34:4, Hezron and Addar in Joshua 15:3). Mount Hor most likely is a mountain in the South Lebanon range. Ain may be Ijon (Tell ed-Dibbin) at the sources of the Jordan. Riblah (Num 34:11) may be Arbela (as it is translated in the Septuagint). These identifications are largely conjectural, however. Lebo-hamath is similarly problematic. Some take it as a geographical term (the entrance to Hamath), which would place it at the southern end of the Bika Valley. Others take it as a city and translate it Lebweh, a city in this region (cf. Aharoni, 72). Because of these uncertainties, it is virtually impossible to determine the exact border as envisioned by the writers of the Pentateuch.

The southern border given in Numbers 34 is less problematic, although by no means without difficulty. It follows the southern border of the tribe of Judah as given in Joshua 15:1-4, and many scholars believe that the Numbers text is dependent on the Joshua text. This is not certain. This southern border begins at the southern end of the Dead Sea, proceeds south of the ascent of Akkrabbim, crosses to Zin (here a place name of uncertain location), passes to the south of Kadesh-barnea (most likely modern 'Ain el-Qudeirat), then to Hazar-addar, Azmon and the Wadi of Egypt. This area includes most of the Negev but does not extend as far south as the Gulf of Aqabah.

The northern/northeastern boundary is so difficult to determine that scholarly opinion on

it can be divided into two camps (Hutchens, 216-22): a minimalist position that sees it as describing a boundary line somewhat just north of *Dan (Tel Dan) and proceeding westward to the Mediterranean (Noth, 248-51); and a maximalist position that holds that it begins with a line somewhat north of Byblos and passes west and just south of ancient Hamath, through the entrance to Hamath (or Lebo-hamath) (Aharoni, 72-73). It continues west past Zedad (probably modern Sadad, about fifty miles north of Damascus and near the modern Damascus-Homs highway). Its northeastern terminus is Hazar-enan. Then it curves south, with several terminal points of unknown location, before finally ending at the southeast corner of the Sea of Galilee. If this is the case, then the land allocated to Israel included not only Damascus but the entire territory within about a forty to fifty mile radius of Damascus. The more defensible position is the maximalist, since the text clearly states that Lebo-hamath was part of the border. Moreover, it is in agreement with Ezekiel's delineation of the borders. Hence, the borders of the Promised Land as given in Numbers 34 match more closely the general boundaries given in Genesis 10:15 than those given in Genesis 15:18.

Interestingly, the land allocated to Israel as described in Numbers 34 does *not* include any of the territory east of the Jordan River or Dead Sea, territory well known to have been inhabited by Israelites and traditionally conquered during the conquest. Indeed, Numbers 21 describes the conquest of Sihon of Heshbon and Og of Bashan, and Numbers 32 reports the subsequent occupation of this land by the tribes of *Reuben, *Gad and Manasseh. This area included the area of the Transjordan north of the Arnon River (present-day Wadi el-Mojib), south of the Yarmuk, the territory of ancient Gilead, and west of the Jabbok. According to the Bible, the territories of Israel's "relatives" Edom, Moab and Ammon were off limits, but the conquered territories were occupied by Canaanites and Amorites and therefore were part of the inheritance.

According to Numbers 32:33-42, Gad occupied the southernmost territory just north of the Arnon, an area surrounding the town of Dibon. Reuben occupied the territory north of this, a region surrounding Heshbon, Sihon's old capital. The Manassehites, specifically the Machirites, a subdivision of Manasseh, occupied the region to the north, ancient Gilead. Joshua 13:15-32 gives

a somewhat different picture. Reuben occupied the territory as far south as the Arnon. Gad's territory is north of this and comprised Gilead as far north as the lower end of the Sea of Galilee. Finally, Manasseh took the area north of this, the region of Bashan.

The origin of the boundaries of Canaan as defined in Numbers 34 is uncertain, since the description of Canaan does not match the known political boundaries of Palestine in any period. Some scholars have argued that these borders were those of the Egyptian province of Canaan during the Eighteenth and Nineteenth Egyptian Dynasties (Mazar, 91-102; Aharoni, 67-69; Na'aman 1986, 244; Milgrom, 501-2). This is by no means certain, because those boundaries are never clearly articulated in extant Egyptian literature (Hutchens, 217-22). Moreover, it is uncertain that there ever was a "province of Canaan" with any clearly defined boundaries (Lemche; Redford, 34-35). In another view, S. S. Tuell has argued that the origin of the territory belongs to the Persian period: it was the territory of the satrapy of Abar Nahara (Tuell, 153-73). However, as noted earlier, Abar Nahara extended well beyond the territory defined in Numbers 34 and Ezekiel 47, making this theory untenable. Finally, the origin of the territory could be founded on a cultic/religious ideal, based on the wish of the writers (who were from priestly circles, including Ezekiel) to establish a clear cultic boundary, separating the pure from the impure (Hutchens, 228-29). Thus, just as the writers sought to establish religious and cultural boundaries between Israelites and non-Israelites via circumcision, dietary laws and so forth, so also via an arbitrary border system they sought to draw a boundary between Israelites and non-Israelites.

BURIAL AND MOURNING

Burial and mourning were part of the cycle of life recorded in the Pentateuch, but they were not aspects of great historical, religious or theological interest. The dead apparently joined their kin in the afterlife, but this was not considered a matter of great consequence, either for them or for the living. Some mourning customs were commonly practiced while others were ex-

pressly forbidden, probably because of their non-Yahwistic associations.

1. Accounts of Burial
2. Mourning and Burial Customs
3. Burial, Ancestors and Veneration

1. Accounts of Burial.

The best-known pentateuchal account of burial is Genesis 23, in which *Abraham bought a field with its “cave of Machpelah.” Here were buried *Sarah, Abraham, *Isaac, Rebekah, Leah and *Jacob (Gen 49:31; 50:13). This was either a natural cave or a subterranean burial chamber cut from the soft rock, with a vertical shaft entrance and ledges on which to lay corpses. Successive multiple burials in such tombs were typical in the hill country of Palestine throughout the Bronze and Iron Ages (see Gonen; Cooley; Bloch-Smith). However, Genesis 23 focuses primarily on the legal transaction, with the burial itself only briefly mentioned. Abraham’s purchase probably reflects respect for the dead rather than his claiming a stake in the Promised Land, since he did not use his considerable wealth to buy other property.

Rebekah’s nurse Deborah was buried “under the oak” near Bethel (Gen 35:8), either because trees were associated both with immortality and religious practice generally (Gen 2:9; 21:33), or simply because it was a recognizable landmark. Rachel was buried somewhere between Bethel and Ephrath (i.e., Bethlehem, Gen 35:19), with a pillar erected to mark the spot. Her tomb was later located near Zelzah (1 Sam 10:2, otherwise unknown) and near Ramah (Jer 31:15).

Burial in *Egypt is only mentioned in passing (Ex 14:11; Num 33:4). The Egyptians normally buried the dead singly in the ground. The *wilderness accounts note burials after one plague (Num 11:34) but not others, and the burial of *Miriam and *Moses (Num 20:1; Deut 34:6) but not of *Aaron (Num 20:28). This incomplete attention to burial is typical of the Hebrew Bible generally (cf. the relevant texts for judges, kings, David’s sons, etc.).

2. Mourning and Burial Customs.

According to Genesis, Abraham “went in” to where his dead wife lay “to bewail and weep for her” (Gen 23:2-3). No further details are given here, but ancient mourning customs included weeping (Gen 35:8; 37:35; 50:1, 10-11, mentioned regularly), tearing clothes, wearing sack-

cloth, disheveling hair, covering with dust and fasting (Gen 37:34-35; cf. 2 Sam 1:11-12, etc.). Some burial accounts do not mention mourning (e.g., those of Abraham and Isaac), while other texts indicate long-lasting grief (Gen 24:67; 37:35). Official mourning lasted seventy days for Jacob in Egypt (Gen 50:3) and thirty for Aaron and Moses in Israel (Num 20:29; Deut 34:8; cf. a month of mourning allowed to a female captive before enforced marriage, Deut 21:13).

Embalming was common in Egypt and was undertaken for Jacob and *Joseph (Gen 50:2, 26). Elsewhere in the ancient Near East burial normally occurred within twenty-four hours of death, due to the rapid decomposition of corpses. This even prevailed for executed criminals (Deut 21:23). Cremation was not normally practiced in Israel but was reserved for serious *sexual misconduct and other heinous offenses (Gen 38:24; Lev 20:14; 21:9; cf. Josh 7:25). For corpses to be unburied and eaten by animals was a sign of particular opprobrium (Deut 28:26).

Perhaps surprisingly to the modern reader, the pentateuchal burial accounts contain no reference to religious ceremony, except for the Egyptianized mourning for Jacob (Gen 50:11). Similarly, there is no legislation dealing directly with burial, except for the immediate burial of criminals. Burial was not seen as an act of obvious religious significance. The only relevant legislation (1) prohibits trimming one’s hair and mutilating one’s body in mourning, probably because of their non-Yahwistic associations (Lev 19:27-28; 21:5); (2) prohibits eating part of the tithe in mourning (Deut 26:14, see below); and (3) concerns defilement from contact with corpses and graves. Such contact necessitated exclusion and purification (Num 5:2; 19:11-22) or postponement of Passover celebration (Num 9:6) and was forbidden altogether to the high *priest and to Nazirites (Lev 21:10-11; Num 6:9).

3. Burial, Ancestors and Veneration.

The phrase “gathered to his peoples” (lit. trans.) occurs in the OT only in connection with the deaths of Abraham, Ishmael, Isaac, Jacob, Moses and Aaron (Gen 25:8, 17; 35:29; 49:29, 33; Num 20:24; 27:13). The fuller patriarchal accounts have the sequence: “breathed his last,” “died,” “was gathered to his peoples” and “was buried.” Hence this “gathering” was distinct from death and burial and is usually interpreted

as joining one's ancestors in the afterlife. This location is never defined—as Sheol or otherwise—and no veneration of the ancestors is recorded.

The plural “peoples” for one's kinship group is confined mostly to the Pentateuch (as in “cut off from his peoples”; cf. Alfrink) and may indicate the antiquity of the material. Variant phrases were used later of *Joshua's generation and of Josiah (Judg 2:10; 2 Kings 22:20), and the verb “be gathered” later became a synonym of “die” (e.g., Hos 4:3), possibly without its earlier connotation.

Israelites bringing a tithe had to vow that they had eaten none of it while in mourning and had offered none “to/for a dead person” (Deut 26:14). According to many scholars, this food would have been offered to the dead so that they would bless the living, a practice that the Deuteronomists tried to limit but could not prohibit. Biblical and archaeological evidence attests the existence of such “cults of the dead” elsewhere, such as among the Moabites (Num 25:2; cf. Ps 106:28: lit. “sacrifices of the dead”).

However, the arguments are unconvincing. Deuteronomy roundly prohibits necromancy and other perennial temptations for Israel (e.g., Deut 18:10-11), so it could equally have condemned the veneration of ancestors if necessary. Also there is no evidence that such a practice was acceptable in Israel. T. J. Lewis finds it in certain biblical texts, but his interpretation is often tenuous. E. Bloch-Smith argues for the existence of the practice from the remains of food found in graves, but these have been found mostly in areas of non-Israelite or mixed population; and in the one undoubtedly Judean site she mentions (Aitun), the evidence

is interpreted differently by the original excavator. More likely, the food “to/for the dead” refers to part of a funerary meal or food left to accompany the dead on their onward journey. This practice was deemed inappropriate for the tithe (probably because of its priestly association) but otherwise thought harmless (see Johnston, chap. 8).

In the Pentateuch, as much as in the rest of the OT, Yahweh is the God of life (Deut 30:19). As a direct consequence, and despite all their faults, the Israelites were far more concerned with the living than with the dead.

BURNT OFFERING. See SACRIFICES AND OFFERINGS.

C

CAIN

Cain was the firstborn son of *Adam and *Eve (Gen 4:1), brother and murderer of *Abel (Gen 4:2, 8), protected by God with a “mark” (Gen 4:15) and the father of Enoch (Gen 4:17). Cain, though at home east of *Eden, in harmony with the first family and fruitful as a farmer, was exiled ever farther from the reaches of Eden, banned from the joy of family, and the land he was to work was cursed even more. We gain a glimpse of life from the eighth day onward, and it is full of pitfalls and danger, even if the *image of God remains and humans are called to worship the Lord for their own good. Cain, as the first murderer, represents in biblical imagery the fallen line of Adam and the prototypical *sinner. Further, we find in the Cain narrative the first example of corrupt religion leading to bloodshed of humans.

Murder is here given its definition: destruction of one made in the image of God as well as others who are in God’s original plan, the family. It is a barbaric act by a human who has broken fellowship with God and an attempt to undo the plan of God for humans. That the murder was originally fratricide exacerbates the act of Cain. Cain destroyed a special kinship: brotherhood. In addition, Cain demonstrated the biblical pattern of divine *election based on *grace instead of heritage. The line that will crush the *serpent’s head is not from Cain, but from the younger brother *Seth, as will be seen in *Isaac, *Jacob, Ephraim and David.

The narrative itself is full of gaps that cannot be explained satisfactorily: What kind of offerings or *sacrifices did the two brothers bring? When did they offer them? Where did they do such? How did they know to do this? Why Cain’s offering was unacceptable to God is only partly visible (von Rad). In addition, one wonders how

Cain was able to find a wife, of whom Cain was afraid, and how he was able to find another populated place to live. One recognizes that not all the story is told; instead, the biblical narrative focuses on the sin and curse of Cain, as well as the replacement of Abel by *Seth.

1. Cain as Adam’s Sinful Descendant
2. The Naming of Cain
3. Cain and the Murder of Abel
4. The Curse and Mark of Cain
5. The Descendants of Cain

1. Cain as Adam’s Sinful Descendant.

The narrative of Cain reveals fundamental parallels to the fall narrative of Genesis 3: (1) sin is graphically described (Gen 3:5-7; 4:6-7); (2) the sinner undergoes divine interrogation (Gen 3:3-13; 4:9-12); (3) the ultimate divine question is one of personal location (“Where are you?”) and social location (“Where is your brother?”; Gen 3:9; 4:9); (4) the sinner is cursed (Gen 3:14, 17; 4:11-12); and (5) the clothing of Adam and Eve and the marking of Cain are similar, as is their banishment to the east (Gen 3:21, 24; 4:15-16). Cain, therefore, is a graphic instance of Adam’s sin as well as a demonstration of the impact of the *Fall. Inasmuch as Eve has to be talked into sin and Cain initiates the intent on his own, one can argue that sin has taken deep roots in humanity.

2. The Naming of Cain.

In literary assonance, or a pun, “Cain” (*qayin*) is “acquired” (*qānîti*) from the Lord for Eve (Gen 4:1). The term *acquired* has given rise to two major interpretations, one indicating a boast on the part of Eve and the other a statement of gratitude to God for a son (the term here is “man”; lit., “I have acquired a man”). In the first case, Eve boasts that she, too, has “created” (*qānîti*), as did the Lord (Gibson). One could argue that the

variation of expression between Genesis 4:1 (“I have acquired”) and 4:25 (“God has provided me with” [NJPS]) indicates a different sense in 4:1 (triumph versus gratitude). In this view, Eve’s arrogance emerges from her anger at the Lord for exiling her from the Eden. According to the second interpretation, Eve expresses gratitude that she has gained a “little man” with the Lord’s help (*’et-yhwh*). Since the narrator regularly plays word games with the names of significant persons (cf. Gen 4:8; “Abel” [*hbl*] probably means “breath” and suggests brevity]), and since *’et* (“with”) evokes the regular presence of the Lord with the patriarchs (cf. Gen 21:20; 26:24; 39:2), it is most likely that the narrator intends to depict Eve as expressing gratitude rather than making a triumphal boast that she is on a par with the Lord himself (cf. the jubilant statement of Adam in Gen 2:23).

3. Cain and the Murder of Abel.

3.1. Two Offerings. The Cain-Abel narrative provides us with the first instance of worship, spoiled as it is by Cain’s misbehavior. Seth, the replacement of Abel, will be the father of Enosh, and it will be during that time that the line of Adam and Seth will begin to invoke God in true worship (Gen 4:26). Offerings occur only after the Fall, implying that a fallen condition requires renewed fellowship with the Lord.

Scholarship is persuaded that Cain’s offering from the land and Abel’s from the fold, probably a firstling, represent an “offering” (*minḥā*) rather than a sacrifice (of whatever sort). It is not prescribed that offerings be a sacrifice of blood, and, therefore, Cain’s offering is not disapproved for not being blood. Nor are we to see here a conflict between farmers and nomads. Their offerings are the natural product of their callings and at the normal time. Abel’s sacrifice is therefore an animal, Cain’s some grain (cf. Lev 2:1). It is more likely that Cain’s sin is like that of Eli’s sons; that is, he offers or treats his offering with impiety (cf. 1 Sam 2:17). Later rabbinic midrashim speculated that Cain offered what was left over after a meal, while some observed that Cain was mistaken in thinking grain from the ground already cursed by God would somehow be an acceptable sacrifice (see Ginzberg, 1.107-8). Thus, the narrative suggests that the rite itself and the intent of the worshiper are to be distinguished, with the latter carrying the load of what God considers acceptable. There are sufficient indications of Cain’s

nature and motives to impugn his heart; we should impugn Cain rather than God’s arbitrariness (so von Rad, 101; Brueggemann, 56-57). Gibson, on the other hand, understands Cain’s response to be a reaction to God’s sovereign choice of Abel’s sacrifice, an instance of God’s unpredictable grace (Gibson, 145-46).

Therefore, the Lord accepts Abel’s and rejects Cain’s offerings, though it is unclear how each perceives a uniform perspective of God’s response. (Some, especially the later rabbinic midrashim, suggested that the Lord consumed the acceptable offering with fire; they often appealed to Lev 9:24; Judg 6:21. Others argue that it was after inspection of the offering that one could discern its acceptability to God [Gunkel].) Unlike the divine response to Abel (“had regard for” [*wayyis’a*] or “a lifting up of the divine countenance”), Cain’s countenance is a “fall” (*wayyipēlū* Gen 4:5).

Instead of seeking the reason for God’s rejection in nontextual factors (e.g., shepherds are superior to farmers, animal sacrifices are superior to grain offerings or God arbitrarily elects certain persons and certain actions over others), we should seek for clarity in the text. Such is probably provided in the exchange between the Lord and Cain.

3.2. Divine Interrogation. Cain’s distress (Gen 4:5, 6) and behavior (Gen 4:6-7) are held up to inspection by the Lord and found wanting. Since the former derives from God’s response to the latter, our focus should be given to Genesis 4:7. Here we learn that Cain (1) has not done right; (2) has succumbed to the lure of temptation; and (3) has lost the opportunity to master his “urge” to sin. Since we are aware that heart, motive and disposition are fundamental to ancient Hebrew worship (cf. Heb 11:4 [faith of Abel versus the lack of faith for Cain] and 1 Jn 3:12 [evil actions]), we are to seek Cain’s problem in his failing to do right. Cain’s heart is full of anger (Gen 4:5, 6), and he is not concerned with God’s glory (hence, the fallen countenance). Therefore he strikes back—not at God—but at his brother. The heart of Cain is seen throughout: from the offering to the murder. Cain’s offering reflects his heart, and so does Abel’s; the latter’s offering is acceptable because of the motive of its supplicant.

The Lord’s interrogation probes for Cain’s motives: “Why?” (Gen 4:6). The assumption is that if Cain had done what was right, he would

have found “uplift” (NJPS) or “forgiveness” (Wenham; Gen 4:7). There is a history of scholarly debate on this question, with suggested emendations and variant interpretations for Genesis 4:7 (Wenham, 104-6). Since the primary focus of the term behind Wenham’s “forgiveness” (*nśʿ*) is general and its core meaning is “to lift up,” one should probably find here an allusion to the divine acceptance (Gen 4:4b), the countenance of Cain (Gen 4:5b) and the possibility of his restoration. The personification of sin and how it develops in order to master the human, as well as the insight into human nature, reminds the reader of the serpent and sin of the Fall (Gen 3:1, 4-6). Others note that the “urge” of Genesis 4:7 is similar to the woman’s urge for Adam (Gen 3:16). The responsibility remains Cain’s, for it was in his power to “master” temptation (Gen 4:7).

3.3. The First Murder. As the serpent’s desire was to snap at the seed of Adam to prevent the will of God being done in Eden (Gen 3:15), so now Cain follows in the serpent’s line by murdering his brother and so preventing the one favored by God from bringing the divine plan to fruition. But just as God was ready to provide for Abraham a replacement for Isaac (Gen 22), so God will soon replace Abel with Seth (Gen 4:25-26), who will become the official line of Adam (Gen 5:3).

The incompleteness of Genesis 4:8a (“Cain said to his brother Abel . . .”—what he said is not recorded) has led to numerous suggestions or emendations, including that of the Samaritan Pentateuch (“Let us go into the field”). Cain commits a premeditated murder (cf. Deut 22:25-27) because the Lord prefers Abel over himself. The action itself is described with the term *hrg*, which is used for “ruthless, private violence” (Gen 12:12; 20:11; 27:41; 34:25; 49:6). The anger of Cain expressed unacceptably in worship erupts into anger against his very own brother.

4. The Curse and Mark of Cain.

4.1. The Divine Accusation and Curse. Before the Lord provides a replacement for Abel, the Lord must first deal with the serpent’s tool who has attacked the image of God (cf. Gen 9:5-6). Cain has somehow learned to lie by evasion (“Am I my brother’s keeper?”; Gen 4:9), but the Lord doesn’t fall for Cain’s politics. Instead, he probes deeper and accuses Cain of murder because his brother’s blood (cf. Lev 17:11; or “bloods”; *so m. Sanh.* 4:5, which indicates Abel and his would-

have-been descendants) cries out (cf. Gen 41:55; Deut 22:24, 27) and is heard by the Lord (cf. Ps 34:17). Cain remains truculent as fratricide is abominable (Lev 25:48; Num 35:12-28).

Cain’s curse, an enlivening of the curse on Adam (Gen 3:17-19), is that he will encounter soil as truculent as is he and experience a wandering even further from Eden (Gen 4:12; cf. 3:23-24). He is banned from fertile places. God’s presence, as well as God’s favored line from Adam, and Cain cannot occupy the same location (cf. Num 35:9-34; Deut 19:1-13). The later curse of Deuteronomy 28:16-19 finds its precursor here, and Isaiah 26:21 intimates that Abel’s blood will find its vindication and paradise will be restored.

4.2. Cain’s Complaint. The traditional interpretation of Genesis 4:13 is a complaint: “you have punished me too much!” Some (e.g., later rabbis; Sailhamer) contend that we see here Cain’s repentance: “my iniquity is more than I can carry.” Consequently, the protection of Cain by the Lord (Gen 4:14-15) becomes an instance of divine forgiveness through a glimpse of the later cities of refuge (Sailhamer, 113-14). However, the expression “to bear sin” (*nśʿ ʿwn*) normally means to carry the responsibility for and punishment due to sinful behavior (Lev 5:1, 17; Num 5:31; cf. Mt 27:25). Further, the continuation of the thought of punishment leads to Cain’s second complaint: that he will be a hunted man (Gen 4:14). The later rabbis thought he was hunted by the beasts (Ginzberg, 1.111). Whether the text implies the existence of others or of the avenging actions of other children of Adam and Eve is unclear.

4.3. The Mark of Cain. Either as a form of “forgiveness” or as a continuation of carrying his own punishment, the Lord promises a seven-fold revenge (cf. Ex 22:18 MT for case law form; Ps 12:6) against any who slays Cain (Gen 4:15). That the expression is in terms of a promise (Gen 4:15, *lākēn*) renders the act of God the law of the land. To prevent anyone from slipping into such a danger, the Lord gives Cain a “mark” (*ʾôṭ*; cf. Gen 9:13; 17:11) to provide instant recognition. A fundamental insight is here given: though a murderer, Cain remains under God’s protective, permanent care. Quick, violent, arbitrary revenge is contrary to God’s will.

The nature of such a mark has been contested for two millennia, resulting in “endless inconclusive speculation” (Wenham, 109). It could be something on his person (a birthmark; some

thought it was one letter of the divine name inscribed on his forehead), his name, a dog to accompany him (cf. *Gen. Rab.* 22:12), leprosy, the city to which he goes (Nod, which means “wandering”) or the city that he founds (cf. *Gen* 4:16, 17; as an anticipation of cities of refuge?). The expression, however, does not appear to indicate something “on” Cain as much as something “for” him (*lēbilti*; cf. *Gen* 21:12). Most important, it is a mark of *protection* (so Gunkel; von Rad), not infamy and degradation. The punishment renders justice; ongoing humiliation is out of the picture. Cain is not fit for society, but, once Cain is punished, God grants him the opportunity to begin anew.

5. The Descendants of Cain.

The narrator provides us with Cain’s son, Enoch, and mentions the city he founds, also Enoch (*Gen* 4:17). Following Enoch are Irad, Mehujael, Methushael and Lamech (*Gen* 4:18). Lamech, notably, has two wives, and he is the father of three boys with similar names who are also blessed with inventiveness: Jabal, the founder of tent-dwellers and herders; Jubal, the father of those who play the lyre and pipe; and Tubal-cain, who is the father of metal tools (*Gen* 4:19-22). Lamech tragically follows the line of Cain with another murder and expresses a curse of massive proportions (“seventy-sevenfold”; *Gen* 4:24). Some scholars connect Cain to the Kenites (e.g., *Gen* 15:19; *Num* 10:29-32; *Judg* 1:16; 1 *Chron* 2:55) and see here an etiological tale of their origins.

As Solomon was the child of an illicit union and brought forth many good things for Israel, so also Cain’s line bears some good fruit. The line of Cain is, however, not the entire story: Adam and Eve have another son, Seth, who replaces Abel and carries on the line of the one who was to stomp on the serpent’s head (*Gen* 4:25-26).

CALEB

The name Caleb derives from Hebrew *keleb* (“dog”), thought to designate courage or tenacity. A common name in Ugaritic, Old South Arabic and Akkadian, this name in the Bible designates two or perhaps three individuals. The first was son of Jephunneh the Kenizzite (1 *Chron* 4:15). A second was son of Hezron and brother of Jerahmeel (1 *Chron* 2:9, 18-19). The third likewise was brother to Jerahmeel and may therefore be the same as the second. However, the third’s list of wife, concubines and sons does not match the second’s (1 *Chron* 2:42, 46, 48-49). To confuse matters further, both the first and third Calebs had daughters named Acsah. Comments below will concentrate on the first Caleb, son of Jephunneh, contemporary of Joshua.

1. Biblical Evidence
2. Development in Interpretation
3. Implications

1. Biblical Evidence.

Caleb is known for his conduct on three occasions. The first occurred during Israel’s initial attempt to enter Canaan. The second took place forty-five years later as *Joshua apportioned land in the hill country of Judah. A third incident speaks to his relationship with his children. Ben Sira recalls each of these three as he lauds this courageous member of the *exodus community (*Sir* 46:7-10).

1.1. Reconnaissance of Canaan (Numbers 13—14). Upon departing from Sinai, Israel completed an eleven-day journey to reach Kadesh-barnea in the region south of Canaan (*Deut* 1:2). At God’s direction *Moses dispatched a reconnaissance team (*Num* 13). The twelve-member group comprised one individual from each tribe (excepting Levi). As J. A. Beck observes, they were described in terms of their level of influence in the community (*ʿānāšim roʿšē*, “leading men” of the children of Israel) rather than their prowess as military scouts (*mēraggēlīm*, “scouts”; Beck, 272). Caleb, son of Jephunneh, represented *Judah. He was forty years old at that time (*Josh* 14:7). After a survey lasting forty

days, they reported to Moses regarding Canaan's military and *agricultural assets.

The report was divided. Ten advised aborting the mission. Evidently a groundswell of dismay arose at this point, and Caleb is recorded as taking the lead, "hushing" the people before presenting a minority report. He urged Israel to press the attack (Num 13:30). The majority voice swayed the people, fomenting another in the series of rebellions assailing Moses (Num 14:4, 10). As the scene unfolds Joshua is named with Caleb, donning garments of mourning and pleading with the people not to lose sight of their decisive asset, God's presence and power to overwhelm their adversaries and lead them into the land.

The people refused still and would have perished at once, but for Moses' intercession (Num 14:13-19). As it was, the ten disparaging spies perished promptly. The balance of the reluctant population (age twenty and above) died gradually during the ensuing forty years. Of that generation, Caleb and Joshua alone survived to enter Canaan (Num 14:30).

1.2. Allocation of Canaan (Joshua 14). A second Caleb episode unfolded forty-five years later (Josh 14:10). At age eighty-five, Caleb now held a position of undisputed honor. He was the first to obtain land-allocation among Israelites west of the Jordan River (Josh 14:6-15). Recalling the rejected reconnaissance report, he affirmed that he was as eager at age eighty-five as before to confront the dreaded Anakites who had so intimidated his spy comrades. Joshua accordingly awarded to Caleb the hill country of Hebron (southwest of future Jerusalem).

1.3. Father's Response to Daughter's Request (Joshua 15:13-19; Judges 1:11-15). As incentive for conquest of Kiriath-sepher in the hill country, Caleb promised the hand of his daughter Acsah to any victorious suitor. Othniel was successful and became Caleb's son-in-law. Thereupon Acsah requested from her father an additional allotment of springs to accompany the Negev land grant. Caleb generously assigned the new couple both upper and lower springs.

2. Development in Interpretation.

J. W. Flanagan studies the references to Caleb in Numbers, Joshua, Judges and 1 Chronicles, and concludes that different biblical authors employed the story of Caleb for varying ends. He infers that what was initially a spy story was later

utilized to validate Judah's prominence and David's choice of Hebron as a center of operations. Since Judah, led by descendants of the Davidic monarchy, eventually eclipsed Ephraim and the northern kingdom, such stories may have had the effect of strengthening the southern kingdom's sense of prominence (similarly North, 171).

3. Implications.

Worthy of note is a particular commendation used to describe Caleb's spiritual integrity: "He went after God fully." Of the eight times this expression appears in the Hebrew Bible, six refer to Caleb. Three times none other than God himself is the spokesperson commending Caleb (Num 14:24; 32:12; Deut 1:36). Once Joshua shares the honor with Caleb (Num 32:12). It is this trait that set him apart from faithless compatriots (Num 32:11).

CHERUBIM

Cherubim are creatures associated with the presence of God. They guard the way to the tree of life in the garden of *Eden and are part of God's throne when God's presence is stationary, as in the *tabernacle. In the tabernacle cherubim figures were fashioned as part of the lid of the ark of the covenant and woven into the curtains forming the tabernacle's outer walls. While cherubim were most likely depicted as composite creatures having human faces, bodies of quadrupeds and wings, we cannot be certain that this is how cherubim were represented on the ark or in the tabernacle's curtains.

1. Etymology
2. Cherubim in the Pentateuch
3. Cherubim and the Presence of God
4. The Representation of the Cherubim

1. Etymology.

Cherub (plural, *cherubim*) is usually said to derive from the Akkadian *karābu* meaning "bless, praise." It is suggested that the word *cherub* signifies angelic creatures who praise God. However, the cherubim are never depicted as praising God (nor are they explicitly identified as angels), so this proposed etymology is extremely doubtful.

2. Cherubim in the Pentateuch.

Cherubim are mentioned in two contexts in the Pentateuch: as guardians to the entrance to the garden of Eden after *Adam and *Eve are expelled and as figures incorporated into the lid of the ark of the covenant. Both have parallels in passages outside the Pentateuch.

2.1. Cherubim in the Garden of Eden. Cherubim are first mentioned in the garden of Eden when God expelled Adam and Eve (Gen 3:23-24). The cherubim and a "flame of a sword that turned in every direction" are placed east of the garden to guard the way of the tree of life. Little is said of the cherubim here. D. N. Freedman and M. P. O'Connor (311) believe the cherubim were among the garden's original inhabitants, but Genesis does not contain any information that would support this conclusion. However, it appears that two cherubim guarded the way to the tree of life. Genesis 3:24 specifically states that *the* cherubim guard the way. The definite article probably refers to a specific pair of cherubim, as on the ark of the covenant (Ex 25:18-20; 37:7-9) or in the temple's holy

place (1 Kings 6:23-38; 8:6-7; note that Ex 26:1, 31; 36:8, 35 mention multiple cherubim figures that were woven into the curtains of the tabernacle but does not use the article).

Ezekiel 28:11-16 also associates a cherub with Eden. Here the king of Tyre is pictured as a cherub who had access to God's presence in the garden. However, because of his sin, the king is banished from God's presence, just as Adam and Eve were. The irony of the guardian to the garden being banished can be seen only by comparison to Genesis.

2.2. Cherubim on the Lid of the Ark of the Covenant. The golden lid of the ark of the covenant was fashioned with two cherubim facing one another as part of the lid on both of its ends (Ex 25:18-20). Their wings were to be stretched out toward the center of the ark, overshadowing it. Their faces turned downward toward the lid itself, probably to avoid facing God, who was present above them (Ex 25:22). In this worshipful pose the cherubim provided a place above which God would be present to speak with Moses (Ex 25:22).

2.2.1. The Ark and Its Lid Distinguished. Critical scholars have often attempted to make a distinction between the ark and its lid, which they attribute to different compositional sources (Haran, 32-33; Clements, 30-31). The ark, they note, is never called God's throne and is depicted as a box in which a sacred object is stored. However, the lid serves as God's throne (as in the phrase "the God who is enthroned above the cherubim," 1 Sam 4:4; 2 Sam 6:2; Ps 80:1; 99:1; Is 37:16). In addition, they note that Deuteronomy never mentions the ark's lid or the cherubim, asserting that D knew nothing about the ark as God's throne. Instead, they point to the two cherubim that Solomon made for the temple, which also overshadowed the ark, as a parallel but separate tradition (1 Kings 6:23-28; 8:6-7; 2 Chron 3:10-13; 5:7-8).

2.2.2. The Ark and Its Lid as God's Throne and Footstool. Nevertheless, the ark and its lid should not be separated. Just as the lid is God's throne, the ark is his footstool (1 Chron 28:2; Ps 99:5-6; 132:7-9; Cassuto, 330-31). In the ancient Near East it was customary to place the copy of a god's covenant in the footstool of the throne of his idol (Cassuto, 331). The ark and its lid parallel this in Israel, although there was no image for Israel's God. Moreover, Deuteronomy had no need to mention the lid of the ark. Most of its references

to the ark are to the ark as a whole (including its lid) as it was carried by the Levites (Deut 10:8; 31:9, 25). Twice we are told that Moses placed the tablets of the law in the ark (Deut 10:3, 5). Once we are told that Moses put the scroll of the law beside the ark. In none of these cases was it necessary to mention or describe the ark's lid.

2.3. Cherubim on the Curtains of the Tabernacle.

In addition to the cherubim on the lid of the ark, Exodus tells us that figures of cherubim were woven into the design of the curtains made out of (white) linen and blue, purple and scarlet threads (Ex 26:1, 31; 36:8, 35). These curtains would form the outer walls of the tabernacle, making cherubim visible to the priests no matter where in the tabernacle they would be. In a similar way, cherubim were later carved into the walls, doors to the holy place and doors of the temple built by Solomon and the stands used in the temple (1 Kings 6:29, 32, 35; 7:29, 36), and they also adorn the walls and doors of the temple in Ezekiel's vision of a new temple in Jerusalem (Ezek 41:18, 20, 25).

3. Cherubim and the Presence of God.

It would appear that the cherubim were associated with God's presence. They not only formed his throne above the ark but also adorned the tabernacle and temple where he dwelt among the Israelites. This is true also of the presence of God outside the Pentateuch. They are described in detail in Ezekiel's visions of God (Ezek 1) and are mentioned in his vision of the Jerusalem temple (Ezek 9—11). When God traveled, the cherubim formed his chariot (Ps 18:10). Even the cherubim in Solomon's temple are said to be God's chariot (1 Chron 28:18). It would appear, then, that the cherubim indicated the presence of God, especially God as king on his throne or traveling in his chariot. This explains why they were appointed guardians to the tree of life. If humans ate of that tree, they would live forever (Gen 3:22). The cherubim were stationed to prevent sinful humans from eating from the tree and living forever in God's holy presence. Even the entrance to the garden (and God's presence) was on the east side, just as the entrance to God's presence in the tabernacle (and later the temple) was on the east side.

4. The Representation of the Cherubim.

What was the form of the cherubim on the lid of the ark or in the curtains of the temple? It is often

assumed that the cherubim were pictured as composite creatures having human faces, bodies of quadrupeds and wings. E. Borowski even argues that a cherub must have had the forepart of the body of a cat and the hindquarters of the body of an ox (Borowski, 38), though he offers no biblical evidence for this. Given the widespread use of composite creatures with wings in the ancient Near East, the most likely form they took on the ark and in the curtains of the tabernacle was some type of composite creature. However, the biblical descriptions are not specific. Exodus only describes them as having faces (presumably human) and wings. (The visions of Ezekiel, with their enigmatic description of cherubim, can hardly be used to reconstruct how cherubim in the tabernacle were depicted.) Whether these were winged humans or winged composite creatures of some sort cannot be determined with certainty.

CHRONOLOGY

Chronology, in its most fundamental sense, is the science that deals with the measurement of time and that assigns to events their proper

dates. The term *chronology* may refer also to a table or list of events and their dates in the order of their occurrence. The implications of chronology for the study and accurate understanding of history are self-evident, for history moves along a continuum of time that must be measured by and properly interpreted according to the order of events determined by chronological calculations. The Bible, whose narrative is patently historical, not surprisingly addresses the matter of chronology throughout. The Pentateuch in particular, as the fountainhead of that historical flow, is replete with chronological information necessary to the dating of events within its historical setting and to their connections with the larger ancient Near Eastern world. The task of reconstructing the chronology of the OT and thus the order and dates of events dependent upon it is a complicated one, however, because of conflicting internal traditions, imprecise external benchmarks and the various tradition-historical approaches taken to such basic issues as the very reliability of the biblical data.

4. Chronology and the Genealogies
5. The Interpretation of Old Testament Chronological Data
6. A Reconstruction of the Chronology of the Pentateuch
7. Conclusion

1. Chronology and History.

Chronology is to history what the skeleton is to the human body. This common analogy—even with its deficiencies—is adequate to clarify the connection between the structure, dates and sequence of past occurrences (chronology) and the narrative that interprets and “fleshes” them out (history). Without chronological benchmarks history would be reduced to a collection of incoherent episodes, the cause-and-effect and true significance of which would, at worst, be irrecoverable and, at best, be in danger of serious misunderstanding. “Facts” of history without proper integration to one another are like archaeological artifacts collected randomly in museum showcases with no attention to provenience or cultural sequence. They may be interesting in themselves, even in isolation from context, but their value in reconstructing the

past is minimal at best. Unless one can know, for example, the chronological priority of Abraham to Moses and the temporal distance between them, one can never hope to appreciate fully such matters as the dependence of the Sinaitic covenant on the patriarchal promises and the impact of the hundreds of years of history between them, a span of time that resulted in circumstances and conditions vastly different from those of the patriarchal era. Until a chronological road map is in place, the historical journey will be uncertain, leading perhaps to a quite unforeseen and undesired destination.

2. Old Testament Chronological Traditions.

2.1. *The Masoretic Text.* The Masoretic tradition provides an unbroken chronological structure from at least the birth date of Abraham to the end of the OT period. Those who maintain that the genealogies of Genesis are, in effect, chronological tables are able also to assert dates for pre-Abrahamic persons and events, even the creation itself (see 4 below). Apart from this possible exception, neither the Masoretic Text (MT) nor any other witnesses contain chronological tables or even lists, so the events of history must be dated according to incidental chronological notations. Fortunately, these are numerous enough and so strategically located as to make possible an unbroken line of datable events that secure a coherent and internally consistent chronological framework. The Masoretic data result in such fixed points in the Pentateuch as the birth of Abraham in 2166 B.C. and the death of Moses in 1406. (The rationale for these dates and others is forthcoming; see 3 below.)

2.2. *The Septuagint (LXX) and Samaritan Pentateuch (SP).* The Old Greek and Samaritan versions of the OT differ considerably from the MT in the genealogical lists of Genesis 5:3-32 and 11:10-32 (see table 1). Otherwise, the LXX (and SP) is generally in line with the MT, the most notable exception perhaps being the statement as to the length of Israel’s Egyptian sojourn (Ex 12:40-41). Both traditions agree that the exodus occurred after a period of 430 years, but the LXX and SP include within this time frame the Egyptian period and the preceding years of the patriarchs in Canaan (“in the land of Canaan and in the land of Egypt”). The apostle Paul appears to support this understanding (Gal 3:16-17), though it is also possible to read Paul more in line with MT tradition. The reason for this differ-

Name	Age at the Birth of the First Son			Age at Death		
	MT	LXX	SP	MT	LXX	SP

Table 1: The Genesis Genealogies: Comparisons of the Versions

ence is quite clear: the LXX translators felt the need to explain how the genealogy of Moses (only three members inclusive) could occupy 430 years. They therefore modified the reading of MT to make this less problematic.

This example provides *prima facie* evidence for the priority of the MT and the tendency of the LXX (and SP as well) to resolve real or imagined chronological difficulties in the MT. Other instances where such changes occur in the Pentateuch bear out this contention. Genesis 2:2 suggests in the MT that God finished his work of *creation on the seventh day, whereas the LXX,

SP and Peshitta read “sixth.” This is to avoid the apparent contradiction with the latter half of the verse, which says that “he rested on the seventh day” from his labors. The *flood narrative also attests “adjustment” designed to resolve chronological difficulties. The MT seems to describe a period of about fifty-four days between the time the tops of the mountains were visible (Gen 8:5; cf. 8:6, 10, 12) and the dry land appeared (Gen 8:13), when, in fact, three months had elapsed (Gen 8:5; cf. 8:13). Some early Greek traditions alleviate the problem by having the mountains appear on the first day of the eleventh month

(Gen 8:5). A similar resort occurs with reference to the age of *Shem when his son Arpachshad was born. Genesis 5:32 states that *Noah was five hundred years old when his three sons were born, meaning, of course, when his eldest was born. The flood came exactly one hundred years later (Gen 7:6), and two years after that Shem fathered Arpachshad (Gen 11:10), making Shem 102 years old at the time. Having concluded (erroneously, it seems) that MT intended to denote Shem as Noah's firstborn son, the LXX altered the text of Genesis 10:21 to make it clear that Japheth was the eldest ("Japheth the elder brother" for the MT "the elder brother of Japheth"). This permitted a resolution of the problem of Shem's age at the time of the flood. Once these versional tendencies are understood to be efforts at reconciling perceived chronological difficulties in the MT, their status as independent witnesses to chronological data is greatly diminished if not altogether eliminated.

These comparatively minor deviations aside, one is left with the question as to why the LXX adds hundreds of years to the span of time from creation to Abraham, frequently by lengthening the ages of the patriarchs by exactly one hundred years each. The most satisfying solution is the perceived need by the Hellenistic Jewish community to make a case for its own longevity, one in fact antedating Egypt and the other great nations that boasted of their magnificent and ancient history. By stretching back five thousand years or so the Jews could lay claim to a civilization far in advance of even mighty Egypt!

3. The Old Testament and Ancient Near Eastern Chronologies.

Attempts to establish direct and specific historical linkages between prequest Israel and its surrounding world have proved so far to be most elusive. The term *Hebrew* has yet to be identified outside the Bible, and a people called *Israel* are not attested to earlier than the time of King Merneptah of Egypt's Nineteenth Dynasty (c. 1220 B.C.), well after the era covered by the pentateuchal narratives. A chronology of Israel for this early period must be based, then, on internal evidence, which itself is derived from later, extrabiblical sources.

3.1. Mesopotamia. The starting point from the Mesopotamian side is the information gleaned from such texts as Assyrian and Babylonian king lists, eponym and other lists of years, chronicles

and related royal inscriptions. The most famous and important because of its bearing on OT chronology is the so-called Assyrian Eponym Canon, a collection covering the period 910-612 B.C. It contains the name of the *limu* (public official) or king after whom each year is named and at least one significant event that occurred that year. As a whole entity the canon can be anchored to a fixed point in time because of the phenomenon of an eclipse of the sun that occurred "in the eponymate of Bur-sagale, of Guzan," specifically in the month Siwan. Astronomical calculation has determined that this took place on June 15/16, 763 B.C. Comparison with events from Babylonian and Greek historical accounts bears out the accuracy of this computation (Thiele, 43-46).

All that remains to be done is to count the years before and after 763 to learn the remaining dates of the canon. Those years, with their brief notes of historical import, can then be compared with Assyrian royal inscriptions that provide full narrative accounts of the events only hinted at in the eponym lists. Two of these years are particularly relevant to OT chronology: the ninetieth year before Bur-sagale (853) and the seventy-eighth (841). In the former, named after a certain Dayan-Assur, King Shalmaneser III undertook a campaign to the west, details of which are recounted in the Monolith Inscription. Among enemies he encountered and claimed to have conquered at a place called Qarqar was King Ahab of Israel. In the year of Adad-rimani, the eighteenth of his regency, Shalmaneser made another foray to the west, this time bringing King Jehu of Israel under his control. This campaign is spelled out in a monumental text called the Black Obelisk (III R 5, 6). The chronological significance of this set of circumstances is that the OT record separates the death of Ahab from the accession of Jehu by exactly twelve years according to the so-called non-accession year system (1 Kings 22:51; 2 Kings 3:1), exactly the number of years indicated in the Assyrian year list. (By *nonaccession year* it is meant any portion of a year when a king began his reign, calling it his first year. The term *accession year* considers the first full year as the king's inaugural year. The accession year system would always reduce the king's rule by one year compared to the nonaccession year system.) These fixed points in Israel's chronology having been established and other principles such as ante-

dating, postdating and coregency being properly employed, it is possible to fix dates back to the division of the monarchy (931) and even beyond (see 6 below).

3.2. Egypt. The Egyptian priest and historian Manetho searched the ancient records of his nation at the behest of King Ptolemy II (c. 250 B.C.) and on their basis reconstructed the chronology and history of Egypt from about 3000 B.C. to his own time. He most likely made use of such texts as the Palermo Stone; the various tables of rulers found at Karnak, Abydos and Saqqara; and the Turin Papyrus. He would surely have been aware of the works of foreign historians such as Herodotus, Thucydides and Berossus as well, the latter being his Babylonian contemporary. Josephus and Eusebius both show not only an awareness of Manetho but heavy dependence on his work.

The Egyptian chronology alone does little to inform that of early Israel, however, because of the lack of any reference to Israel in pre-conquest texts. It is only when Egyptian historical events intersect with those of Mesopotamia or other areas that in turn have a bearing on Israel that an Egypt-Israel chronological connection can be made.

4. Chronology and the Genealogies.

Students of the OT have long attempted to construct chronologies on the basis of the genealogies of Genesis (paralleled for the most part in 1 Chron 1:1-33 as well). This began as long ago as pre-Christian times with the work of such Jewish scholars as Demetrius and Eupolemus (see *DNTB*, Jewish Literature: Historians and Poets). Jewish literary works especially devoted to the matter include *Jubilees*, the *Genesis Apocryphon* and, of course, the writings of Josephus, who lived in the first Christian century. Among early Christians who studied the matter of the genealogies as chronology were Julius Africanus, Eusebius and Jerome; much later and better known is Archbishop James Ussher (1581-1656).

4.1. Jewish Chronologists. Demetrius (c. 200 B.C.), an Alexandrian historian, was familiar with the LXX and used it as the basis of his biblical chronology. As a result, he placed *Abraham's birth 3,334 years from *Adam's creation. Translated into the modern calendar, his date for the flood was 3043 B.C., Abraham's birth 1973, and the exodus 1468. Eupolemus (c. 160 B.C.), a Palestinian Jew, utilized the Hebrew text

as well as the LXX and came to the conclusion that creation occurred in 5307 B.C. (in modern terms again), the flood in 4037, Abraham's birth in 3243, and the exodus in 2738. Demetrius and Eupolemus agree on a creation date, but their later chronologies differ not only because they use different biblical texts but because Demetrius worked from his own time back and not just from creation forward. His conclusions are obviously more in line with modern reconstructions.

The book of *Jubilees* (c. 150 B.C.; see *DNTB*, *Jubilees*) traces Israel's history from creation to the conquest, dividing this expanse into fifty Jubilee periods of forty-nine years each. According to this scheme Abraham was born in A.M. (*anno mundi*, "in the year of the world [creation]") 1876, descended to Egypt in 1956 and died in 2051. Such a system artificially imposed upon the biblical data was bound to be at variance with the usual ways of interpreting the genealogical tables. The *Genesis Apocryphon* (c. B.C.-A.D. transition; see *DNTB*, *Genesis Apocryphon* [1QapGen]), a Qumran text, shows dependence on *Jubilees* and like it focuses on the life and years of Abraham. Apart from some incidental references to events of that period, the book has little to add to an overall chronological reconstruction of the history of OT times.

Josephus (A.D. 37/38-c. 100) attempted to date creation by the use of the OT genealogical tables as well as by information gained from Berossus's *Babylonica* and the histories of Egypt by Hecataeus and Manetho. His extant writings yield no more precision than the declaration that "those antiquities contain the history of five thousand years, and are taken out of our sacred books" (*Ag. Ap.* 1.1 §1, referring to his history titled *Jewish Antiquities*).

The final Jewish source is the *Seder 'Olam Rabbah* (c. A.D. 150), which to the present day provides the basis (along with the later *Seder 'Olam Zutta*) for the modern Jewish calendar. Taking Adam's creation as year zero, it adds up the years of succeeding patriarchs from that point. Seth, for example, was born in Adam's 130th year and thus 130 years from creation. Noah's date of birth by this method was A.M. 1056. Using data other than genealogical tables, *Seder 'Olam Rabbah* reaches such dates as 2448 for the exodus, 2928 for the founding of Solomon's temple and 3338 for the destruction of that temple by the Babylonians. The begin-

ning of the Christian era is 3759-3760 by this system. In terms of the modern (Gregorian) calendar, the date of creation is 3761 B.C., the flood 2104, the exodus 1312, the foundation of Solomon's temple 832, the destruction of that temple 422 and the dedication of the Second Temple 352. It is well known, of course, that the dates from the First Temple on down are actually much earlier than those suggested by *Seder 'Olam Rabbah*.

4.2. Christian Chronologists. The two most important early Christian chronologists were Julius Africanus (A.D. 170-240) and Eusebius (c. 263-339). Africanus followed the model of the *Seder 'Olam Rabbah* but used the LXX as the basis for the patriarchal era. He therefore dated the flood at A.A. 2262 (*anno Adami*), Abraham's arrival in Canaan at 3277 and Joseph's death at 3563. His exodus date was 3707. For the rest of the OT Africanus depended on dates associated with the Greek Olympiad, which commenced in 776 B.C. Of particular importance was the determination of the year of the accession of Cyrus as king of Persia (560 B.C.). Africanus could then work backward and forward from that date with internal OT data.

Eusebius acknowledged his indebtedness to Africanus in reconstructing a chronology from the first Olympiad back to the time of Abraham. He was aware of the conflicting textual traditions for the early periods, particularly in the Genesis genealogies, so he opted for the LXX as his principal authority. This yielded for him a date of 2016 B.C. for Abraham's birth, 1511 for the exodus and 1032 for the foundation of Solomon's temple. The period between the exodus and the temple construction was 479 years, very close to the 480 years mentioned in 1 Kings 6:1. In fact, Eusebius reaches a total of 480 in various other parts of his chronographies.

James Ussher, the archbishop of Armagh (Ireland), was an erudite classicist and OT scholar who devoted a great deal of effort to the establishment of a biblical chronology. Thoroughly familiar with the major textual versions, Ussher opted almost always for the MT as his standard. At the same time, he was aware of various Jewish and Christian traditions that periodized biblical history in one-thousand year spans and to some extent was influenced by them. He was especially struck by the studies that dated creation four thousand years before Christ, a conclusion he reached independent of

these others. His famous date of exactly 4004 B.C. for creation resulted from the fact well known in his day that Jesus was actually born four years prior to the beginning of the Christian era. Though lampooned by many modern scholars for his naiveté in simply "adding up" the figures of the Genesis genealogies, Ussher's work was based on data far broader than that. In many ways his insights have never been improved upon, especially for the divided monarchy period and later.

This brief account of the history of chronography, relative especially to the genealogical tables, makes clear that most of the ancients took the genealogies *prima facie* as chronological records by intent and function. The variation in their computations came about not so much because they differed in their view of these tables as historical records but because of the particular text they used as a standard, namely, the MT or LXX. Post-Enlightenment scholarship, on the other hand, has largely abandoned any notion that the genealogies (or other pentateuchal chronological data for that matter) bear any authentic witness to real time and dates. This is informed first of all by evolutionary theories requiring millions of years from the initial emergence of *Homo sapiens*. Archaeological research also has reached a virtual consensus that urban life existed in the world of West Asia as early as nine thousand years ago, long before the date of creation itself according to the Genesis genealogy tables. Finally, studies of genealogical texts and traditions from ancient as well as modern cultures have led some scholars to propose that, whatever significance such accounts might have, they have little or no chronological purpose. It is suggested, rather, that they served political and religious purposes. While this may be somewhat overstated in terms of the Genesis genealogies, these biblical records do indeed appear to reflect something other than a strict or "closed" chronological account.

5. The Interpretation of Old Testament Chronological Data.

5.1. The Genealogies: Open or Closed? The apparently stylized form of biblical genealogical tables suggests the possibility of their being somewhat artificial in terms of chronological precision. For example, there are ten generations from Adam through Noah (Gen 5:3-29)

	Born	Died	Notes of Interest
Abraham	2166	1991	
Terah	2296	2091	
Nahor	2325	2177	
Serug	2355	2125	contemporary of Abraham
Reu	2387	2148	contemporary of Abraham
Peleg	2417	2178	
Eber	2451	1987	outlived Abraham
Shelah	2481	2048	contemporary of Abraham
Arpachshad	2516	2078	contemporary of Abraham
Shem	2616	2016	contemporary of Abraham
Noah	3116	2166	died in year of Abraham's birth FLOOD (2516)
Lamech	3298	2521	
Methuselah	3485	2516	died in year of flood
Enoch	3550	3185	translated to heaven
Jared	3712	2750	
Mahalalel	3777	2882	
Kenan	3847	2937	
Enosh	3939	3034	
Seth	4044	3132	
Adam	4174	3244	

Table 2: The Dates of the Patriarchs: Gregorian Calendar

and ten more from Shem through Abraham (Gen 11:10-26). This is reminiscent of the three segments of fourteen generations each that make up the genealogy of Jesus as recorded by Matthew (Mt 1:1-17). The fact that the latter omits names known from the OT proves that Matthew's intention is not to provide a full ancestry (Mt 1:8, 11; see commentaries) but only enough names to achieve the symmetry.

The probability is that there are gaps of indeterminate length between some of the names in the Genesis *genealogies. This appears likely for several reasons: (1) The antiquity of humankind—unless one discounts scientific anthropology altogether, even most conservative Bible students are persuaded that humans appeared on the scene thousands of years before the earliest date allowed by a “closed” chronology (c. 5000 B.C.). (2) Archaeological evidence—the emer-

gence of urban civilization as early as 7000 B.C., a view held across nearly the whole spectrum of biblical scholarship, also necessitates something other than a closed chronology. (3) Internal difficulties—even if the two previous views are rejected on ideological, theological or scientific bases, there remain difficulties in the traditional interpretation of the genealogies (see table 2). For example, strict adherence to the data of the postflood genealogy (Gen 11) reveals that Shem was 450 years old at the time of Abraham's birth and 525 when Abraham moved to Canaan and that he died (at 600 years of age) only twenty-five years before Abraham did. Eber, the patronym of the Hebrew people, lived 464 years and would actually have survived Abraham by four years! Why God would have called Abram from paganism when Shem, a survivor of the flood, was living and available is puzzling, as is the fact that

Abraham is considered to be an exceptionally old man at 175 (Gen 25:7-8) when two of his contemporaries died in those days at 600 and 464 years of age respectively! The impression clearly is that both Shem and Eber long antedated Abraham.

5.2. The Genealogies: Strict or Formulaic? Akin to the previous issue but in a much shorter form are examples of genealogies that appear at first blush to pose serious chronological difficulties but that must be understood as reflecting some kind of literary and genealogical convention. This is most apparent in the brief ancestry of *Moses (Ex 6:16-20), which includes only four generations (counting Moses) and spans the period of the Egyptian sojourn, a period of 430 years (or 215 at least, LXX). The figures provided in the passage (Levi, 137 years; Kohath, 133; Amram, 137) add up to 407 years. When the age of Moses at the exodus is added (80) and the age of *Levi when he entered Egypt is subtracted (54), the result is 433 years, very close to the 430 noted in Exodus 12:40. The figures of the genealogy appear, then, to be selective and to comport with the 430-year sojourn time span. Support for something of the kind may be found in the apparently full genealogy of *Joshua, which embraces the same period (1 Chron 7:22-27). While there are difficulties in the text, there appear to be at least ten generations between Ephraim and Joshua, as opposed to only four in the Moses genealogy of Exodus 6. The case for the latter being highly selective (tribe, clan, family, individual?) seems strong.

6. A Reconstruction of the Chronology of the Pentateuch.

The effort to provide dates for OT events requires one to go from the known to the unknown, from those dates that are “fixed” to those that are related to and dependent upon them. While some attention has been paid to such benchmark starting points (see 3 above), the focus of this section must be on pentateuchal dates derivative from that information. Moreover, attention will be limited to the text’s own data and not to historical-critical challenges to the tradition.

The key datum is the statement in 1 Kings 6:1 that Solomon laid the temple foundation in the 480th year after the exodus. This points to 1447/1446 B.C. as the date of that central event, a date

that finds incidental support in Jephthah’s reminder to the king of Ammon that Israel had lived in the Transjordan for three hundred years before that present time (c. 1100 B.C.; Judg 11:26). The preceding era—that of Israel’s sojourn in Egypt—is also clearly demarcated chronologically. The record takes pains, in fact, to underscore that it lasted exactly 430 years (Ex 12:40-41). The *terminus a quo* was, of course, Jacob’s descent to Egypt, to be dated, then, in 1876 B.C. This is in line with the more general promise to Abraham that his descendants would endure suffering in a foreign land for four hundred years (Gen 15:13; cf. Gal 3:17) and then, in the fourth generation, be delivered and returned to Canaan (Gen 15:16). The “four generations” is reminiscent of the four associated with Moses’ lineage in Exodus 6.

The same scrupulous attention to detail makes it possible to reconstruct the chronology associated with the patriarchs to at least the birth date of Abraham. In what appears to be merely an off-the-cuff response, Jacob informed Pharaoh upon his arrival in Egypt that he was “only” 130 years old (Gen 47:9). This places his birth date at 2006 B.C. Isaac was sixty when he fathered Jacob (Gen 25:26) and, of course, Abraham was one hundred when Isaac was born (Gen 21:5). Abraham, then, was born in 2166 B.C.

One can, of course, pursue this approach at least one generation earlier—to the birth date of Abraham’s father Terah—who, it seems, was 130 years old when Abraham was born (Gen 11:26, 32; 12:4; cf. Acts 7:4). Terah thus goes back to 2296 B.C. However, in light of issues raised above with regard to the pre-Abrahamic genealogical lists, it seems unproductive to cover the ground already thoroughly covered by both ancient and modern chronographers (see table 1). What remains is a reconstruction of the dates of events based on those that are clear in the text but that require a close reading of more subtle chronological hints in the narratives. For convenience and brevity, these appear in table 3.

7. Conclusion.

The lack of clear and unambiguous connections between pre-conquest Israel and the surrounding ancient Near Eastern world makes it necessary for the chronology of the Pentateuch to rest exclusively on internal evidence, that is, on the data of the OT alone. These data, to be sure, originate in the period of the divided monar-

Date	Event	Reference
2296	Birth of Terah	Gen 11:24
2166	Birth of Abram	Gen 11:27, 32; 12:4
2091	Abram's departure from Haran	Gen 12:4
2081	Abram's marriage to Hagar	Gen 16:3
2080	Birth of Ishmael	Gen 16:16
2067	Reaffirmation of covenant	Gen 17:1
2067-2066	Destruction of Sodom and Gomorrah	Gen 19:24
2066	Birth of Isaac	Gen 21:2; cf. 21:5
2029	Death of Sarah	Gen 23:2; cf. 17:17
2026	Marriage of Isaac	Gen 25:20
2006	Birth of Jacob and Esau	Gen 25:26
1991	Death of Abraham	Gen 25:7
1966	Marriage of Esau	Gen 26:34
1943	Death of Ishmael	Gen 25:17
1930	Jacob's journey to Haran	Gen 28:2
1923	Jacob's marriages	Gen 29:23, 28
1918	Birth of Judah	Gen 29:35
1916	End of Jacob's fourteen-year labor for his wives	Gen 29:30
1916	Birth of Joseph	Gen 30:23
1910	End of Jacob's stay with Laban	Gen 31:41
1910	Jacob's arrival at Shechem	Gen 33:18
1902	Rape of Dinah	Gen 34:1-2
1900	Marriage of Judah	Gen 38:1-2
1899	Selling of Joseph	Gen 37:2, 27
1888	Joseph imprisoned	Gen 39:20; cf. 41:1
1886	Joseph released	Gen 41:1, 46
1886	Death of Isaac	Gen 35:28
1879	Beginning of famine	Gen 41:54
1878	Brothers' first visit to Egypt	Gen 42:1-2
1877	Judah's incest with Tamar	Gen 38:18
1877	Brothers' second visit to Egypt	Gen 43:1; 45:6, 11
1876	Jacob's descent to Egypt	Gen 46:6; cf. 47:9
1859	Death of Jacob	Gen 47:28
1806	Death of Joseph	Gen 50:22

Table 3: Patriarchal Chronological Data

chy—and in association with extrabiblical information—but for the early period they depend on incidental or deliberate (genealogical) interconnections in the pentateuchal narratives themselves. One is free, of course, to reject the witness of the narratives, but to do so is to elimi-

nate the only basis upon which a chronology of that distant era can be reconstructed. However the matter is viewed by moderns, the ancient Israelite historians and tradents were concerned to show that their history was factual and could be traced step by step back to creation itself.

CIRCUMCISION

Male circumcision, the surgical removal of the prepuce (i.e., foreskin), is a rite of great antiquity, still practiced by several people-groups in the world today. Its function within the Abrahamic and Sinaitic covenants made it of particular religious significance for ancient Israel as the badge of *covenant identity, since circumcision linked future generations to the *promises Yahweh had made to the patriarchs.

Even in the ancient world, circumcision was not an exclusively Israelite practice. Rather, the rite was common among most of those with whom Israel had direct contact (the Shechemites, Philistines, Babylonians and Greeks are notable exceptions), practiced in one form or another from at least the third millennium B.C. (cf. Sasson, 473-76). In these other ancient Near Eastern cultures, circumcision seems to have been chiefly a marriage or fertility rite, carried out either at puberty or as part of the prenuptial ceremony. To what extent such ideas are reflected in ancient Israelite practice is debatable. While some texts (e.g. Gen 34; Ex 4:25) indicate that such connotations were not altogether foreign, these texts may be explained otherwise (see below).

Within the Pentateuch, the origins, practice and significance of this rite in ancient Israel are delineated. Tracing circumcision's origins back to *Abraham, the nation's progenitor, the compiler links the practice of circumcision from the outset to covenant promises made to the patriarchs and gives it a social and religious significance that distinguishes the Israelite practice from the wider ancient Near Eastern custom.

1. Origins
2. Practice
3. Significance

1. Origins.

According to the final form of the Pentateuch, the Israelite rite of circumcision was established as a covenant "sign" between God and the patriarchs (Gen 17:10-14). This key text (i.e., Gen 17) is assumed by most scholars to be late, reflecting exilic reinterpretation of an ancient custom. It is significant, however, that the existence of the tradition reflected in Genesis 17 is tacitly assumed in the three other texts (Gen 34:13-24; Ex 4:24-26; Josh 5:2-8) to which scholars have looked for the origins of this practice in Israel. Moreover, the use of flint knives in the opera-

tion (Ex 4:25; cf. Josh 5:2-3) suggests that the Israelite custom was very ancient. Since there is no indisputable alternative account of the introduction of the rite in Israel, Genesis 17 is the only passage that plainly presents itself as such. This chapter, while not accounting for the ultimate origins of circumcision, traces the origin of the practice in Israel to Abraham, defining it as the “sign of the covenant” that God made with him and his descendants. Such an explanation commends itself as being entirely plausible and should certainly not be ruled out solely on the basis of its alleged lateness. Therefore, while such a rite was not unknown earlier, its connection with the covenant promises made to Abraham give it a significance entirely distinct from anything reflected among other practitioners of circumcision in either the ancient or the modern world.

2. Practice.

One of the primary features that distinguished Israelite practice from surrounding cultures was the application of the rite to eight-day-old male infants. While circumcision was also applied to adult males (Gen 17:23-27; 34:15-24; cf. Josh 5:3-7), it is clear from Genesis 17:12; 21:4 and Leviticus 12:3 that infant circumcision was intended to be the usual and normative practice in Israelite society.

One of the most striking features is its application to foreigners and resident *aliens (cf. Gen 34:15-24; Ex 12:48). While the motives of *Jacob’s sons in relation to the Shechemites were clearly deceptive, the extension of the rite to non-Israelites had been a feature from its inception. Abraham had circumcised not only himself, *Ishmael and subsequently *Isaac but also his entire household, including those “purchased from foreigners” (Gen 17:27). Therefore, the rite of circumcision in Israel was never applied exclusively to Abraham’s biological descendants (i.e., it was not a sign of racial purity). Rather, it was a means through which non-Israelites could align themselves with Abraham and his “seed” and obligate themselves to the related covenant (Gen 17:9-14; cf. 18:19).

3. Significance.

Within the Pentateuch, circumcision seems to have had a threefold significance: ritual, ethical and metaphorical. While the first receives the most emphasis (both in the Pentateuch and

throughout the OT), this—and the assumption of Deuteronomistic dating for the relevant texts—has unfortunately resulted in viewing the ethical dimension of this OT rite as of secondary importance. However, both aspects are inextricably linked, and the ethical is simply an extension of the metaphorical, as the following discussion will show.

3.1. Ritual. Circumcision, as is clear from Genesis 17, was mandatory for inclusion within the covenant (Gen 17:10, 14) of which this chapter speaks. Its function was apparently threefold: it was the “sign” (*’ôṭ*) of this particular covenant between God and the family of Abraham (Gen 17:11); it was the instrument through which the covenant was maintained from generation to generation (Gen 17:10-12); and it was the means of assimilating within the covenant those who were not related to Abraham biologically (Gen 17:12-13).

As the “sign of the covenant,” circumcision seems to have served a mnemonic function, primarily, although not exclusively, for the human partners of the covenant (contra Fox, whose over-emphasis on the Godward aspect leaves unexplained the humanward ultimatum in Gen 17:14). Circumcision thus served to remind Abraham and his descendants of the covenant promises—especially the promise of “seed”—and the intrinsic obligations (i.e., the ethical requirement of Gen 17:1; cf. 18:19). However, as well as being a mnemonic for the human partners, the covenant sign may also have reminded God of his promise of an Abrahamic “seed” through whom blessing would come to all nations.

Circumcision also served to extend the covenant to future generations. By means of this rite the divine promises and human obligations were transferred to succeeding generations. Although the latter is nowhere stated explicitly in Genesis 17, it is clear from the next chapter (Gen 18:18-19) that the ethical obligations of this covenant were likewise transferred to all who accepted the sign of circumcision. Thus, circumcision was the medium through which covenant privileges and responsibilities were passed on from one generation to the next.

Thirdly, circumcision was the mechanism by which those who were not biological descendants of the patriarchs could be incorporated into the covenant community. It is clear from Genesis 17 that the covenant described there is

not to be understood in an exclusively nationalistic sense. Rather, the multitudinous expansion envisaged in Genesis 17:2 included the “nations” of which the promise spoke (Gen 17:4-6), nations that cannot be explained simply in terms of the Ishmaelites and the sons of Keturah (cf. Gen 17:16). The phenomenal growth promised to Abraham would be realized not simply by the numerical expansion of his biological descendants but, and more significantly, by other nations submitting themselves to the terms of the covenant. It is quite in keeping with this, therefore, that foreigners and resident aliens who wished to keep the Passover were first to be circumcised (Ex 12:44, 48). In other words, they had to identify themselves with the covenant community, with all that this entailed. Thus understood, the deceitful ploy of Jacob’s sons in Genesis 34 is all the more repugnant. However the Shechemites understood the rite, Jacob’s sons were clearly exploiting the fact that it was a prerequisite for inclusion within the covenant community.

The most extraordinary and enigmatic passage focusing on the ritual aspect of circumcision is Exodus 4:24-26. Here circumcision appears almost to have a magical connotation, akin to its apotropaic significance in some cultures, ancient and modern. The exegetical difficulty arises from the ambiguous use of Hebrew pronouns, making it unclear who does what to whom and why (the only indisputable fact is that Zipporah circumcised her son to avert the implementation of Yahweh’s death threat). While some interpretations assume an originally different life-setting, whatever that may have been (and any suggestions are purely speculative), these verses must now be interpreted in their present context. The latter suggests that *Moses was the subject of the death threat and that it was his “feet” (probably a euphemism for genitals) that Zipporah touched with Gershom’s foreskin. This action had a vicarious effect, compensating for Moses’ deficiency (presumably, either he himself had not been circumcised at all, or else his circumcision was done in the Egyptian manner, in which the prepuce was not totally removed; cf. Josh 5:9). The insertion of this incident at this point in the narrative serves to make the theological point that only the covenant community—identified by the prescribed covenant sign of circumcision—would escape the divine judgment that had just been antici-

pated for the Egyptians (Ex 4:23). Moses’ vicarious circumcision may have been a temporary measure, ensuring that his fulfillment of Yahweh’s commission might not be unduly delayed (so Durham). In any case, as the result of Zipporah’s action demonstrates (Ex 4:26), the main emphasis of the passage is that submitting to the covenant sign of circumcision (i.e., joining the covenant community) was a prerequisite for escaping divine judgment. (In view of this, it is not surprising that circumcision is also presented as a prerequisite for participating in the Passover celebration of Yahweh’s deliverance; cf. Ex 12:44-49.)

The one enigmatic aspect of the Zipporah incident that remains, however, is her verbal response in which she described Moses (?) as a “blood-bridegroom,” an archaic phrase (cf. Mitchell, 94-105, 111-12) explicitly linked by the editor to the rite of circumcision. It is this that has prompted some scholars to find vestiges of a prenuptial ritual here. However, while Zipporah may indeed have used the term (*ḥātān*) in the sense of its Arabic cognate (as argued by Propp and others), this may simply reflect her perception of the rite—a misconception drawn from her own non-Israelite culture. This would certainly account for the fact that the editor is strangely compelled to insert a comment linking the expression to the act of circumcision. In any case, however the details are understood, one thing is clear: this incident graphically illustrates the tremendous ritual importance of circumcision.

3.2. Metaphorical. As well as the ritual significance outlined above, circumcision also takes on metaphorical connotations in the Pentateuch and beyond. The term is thus applied to other parts of the human anatomy, such as the heart (Lev 26:41; Deut 10:16; 30:6; cf. Jer 4:4; 9:25-26) and the lips (Ex 6:12, 30; cf. Jer 6:10, where it is applied to the ears), and also to the initial harvests from fruit trees (Lev 19:23). In all these texts the connotation seems to be of something that is unsuitable to fulfill the function for which it is intended. Thus an uncircumcised heart (i.e., mind) is one that is incapable of understanding (and thus fulfilling) God’s requirements. Likewise, uncircumcised lips (or ears) are unsuitable channels for divine communication. Similarly, uncircumcised fruit is that which is unsuitable for use (whether by way of divine sacrifice or human consumption). This metaphorical

concept of suitability presumably lay at the heart of physical circumcision also; circumcision connoted the idea of suitability for participation in God's plan and purpose for his covenant people (for a similar conclusion, though reached on different grounds, see Goldingay, 14-15). That purpose began to find fulfillment in Abraham's lifetime only after he had submitted himself to the rite of circumcision. Significantly, it was only after Abraham's circumcision that Isaac, the first in the promised line of special descendants, was born, thus emphasizing that circumcision was a necessity in order to experience Yahweh's blessings.

3.3. Ethical. As suggested above, the ethical significance of circumcision was in some measure an extension of the metaphorical usage. What made Israelites uncircumcised in their hearts was an unwillingness to love and obey God (Deut 10:16-17; Deut 30:6-7) and to submit to his ethical requirements (Lev 26:40-41). Indeed, as underlined later by Jeremiah, to have an uncircumcised heart was in reality to be no different from surrounding peoples who merely practiced physical circumcision (Jer 9:24-26).

In addition to this ethical extension of the metaphorical usage within the Pentateuch, there may well have been a more direct connection between the ritual and ethical connotations. Given the cultic associations of the moral imperative in Genesis 17:1 ("Walk before me and be perfect"), the physical rite of circumcision may well have served not only as an expression of the submission required but also as a symbol of this covenant obligation. Understood thus, there was a direct link between physical and "spiritual" circumcision from its inception, a link that, rather than being a Deuteronomic innovation, was established in Genesis and simply spelled out and applied by later prophets such as Jeremiah and Ezekiel (Ezek 44:7-9).

It is clear, therefore, that although circumcision was a widespread custom in the ancient world, the richness of its theological meaning in the Pentateuch (and beyond) invested the Israelite practice with a significance that distinguished it entirely from contemporary rites in the ancient world.

CITIES OF REFUGE

The cities of refuge were six cities set aside by *Moses to which those accused of killing someone unintentionally could flee and await trial without fear of being killed by the avenger of blood. If the accused was found to have killed unintentionally, that person had to remain in the city of refuge until the death of the high *priest in office at the time of the offense (Num 35:28). Four passages within the Pentateuch discuss the issue of asylum and the associated case law (Ex 21:12-14; Num 35:6-34; Deut 4:41-43; 19:1-13).

1. Locations of the Places of Refuge
2. Purposes of the Cities
3. Rules of Evidence in the Trial of the Accused
4. The Death of the High Priest
5. The Grace of God in the Cities of Refuge

1. Locations of the Places of Refuge.

In the earliest text dealing with the issue of asylum, the accused person could flee to the *altar located at the place designated by Yahweh (Ex 21:12-14). This indicates to P. J. Budd that the place of asylum in the earliest time was one of many local sanctuaries (Budd, 382). The assumption is that altars would be located at each of the various sanctuaries and the accused could

flee to any of these places. Budd's view is not convincing in light of the terminology, "I will designate a place for you to which the killer may flee" (Ex 21:13b). This statement, along with the additional fact that it is Yahweh's altar (Ex 21:14), indicates that not just any altar at any sanctuary would suffice. The indication is that a central altar is intended. In the context of the book of Exodus, this would be the altar at the *tabernacle.

Cities of refuge were mentioned for the first time near the end of Israel's forty years in the *wilderness when Yahweh commanded, through Moses, that six cities be set aside out of the forty-eight levitical cities as places of asylum (Num 35:6-8). Then in Deuteronomy 4:41-43 Moses designated three cities of refuge to be established on the east side of the Jordan. He failed to designate the three cities inside the Promised Land, presumably because he did not go into the land. The three Transjordanian cities of refugee were Bezer, Ramoth and Golan. Bezer was located in the tribal area of *Reuben. Its present-day location is thought to be Tell Umm el-Amad, which is about eight miles northeast of Medeba (Mattingly, 719). Ramoth was a city in Gad's tribal area. The suggestion that Tell Ramith is Ramoth has been widely accepted (Arnold, 621), but this city cannot be located with any certainty due to the absence of specific details in Scripture. Golan was in the tribal area of Manasseh and is identified with Saham el-Joulán on the east side of the river el-Allan (Arav, 1057).

2. Purposes of the Cities.

2.1. Protection of the Accused. A person who accidentally killed another person was allowed to flee to the altar and take hold of the horns of the altar as a means of seeking asylum (Ex 21:12-14). As Israel moved from the wilderness toward Canaan, the majority of the people would no longer be in close proximity to one central sanctuary. Therefore, there was a need to allocate various cities carefully spaced throughout the land so that the person accused of manslaughter might seek protection from the *gō'el*, the avenger of blood (Num 35:12, 25). The avenger of blood was a family member who would seek vengeance on behalf of the victim (Hubbard, 1:791). The avenger of blood should not be considered to be an officer of the court (contra Phillips, 105). This is evident from the

fact that the assembly had to protect the accused from the avenger of blood (Num 35:25). Deuteronomy 19:6 also speaks of the avenger of blood as someone who would pursue the accused "because of the anger in his heart," which is not the picture of someone who is merely doing a job as an officer of the court. Israel's laws relating to the cities of refuge are thus an advancement over the ancient Near Eastern practice of allowing family members to take the law into their own hands (Greenberg 1959, 125).

2.2. Punishment of the Accused. Since the city of refuge was for the protection of the accused, it has been suggested that such a person was "innocent of any crime" (Vasholz, 116). This is not convincing, since the accused could be put to death by the avenger of blood without becoming guilty of bloodshed (Num 35:27; also see Deut 19:10), if the accused was caught outside of the city of refuge prior to the death of the high priest (Milgrom, 510). Moreover, the accused could not buy his or her way out of confinement (Num 35:32). Even if the family of the victim were appeased, the individual had to stay in the city until the death of the high priest. Therefore, one must conclude that those who sought asylum in the city of refuge had some guilt attached to them even if they were not guilty of premeditated murder. Therefore, the cities of refuge functioned as punishment for the person guilty of unintentional homicide and as protection from the avenger of blood.

3. Rules of Evidence in the Trial of the Accused.

The assembly was charged with determining if one who sought asylum in the city of refuge was guilty of premeditated murder or unintentional homicide or was innocent of any crime at all (Num 35:24). Two types of evidence were permissible in this trial: (1) the type of object used to inflict the wound (Num 35:16-18) and (2) the intent of the accused (Num 35:20-21). In the first case, the object had to be something that would cause death. For instance, an iron object, a large stone or a wooden object large enough to injure a person would be *prima facie* evidence of the intent to do bodily harm. On that basis, the accused could be convicted of murder and put to death (Num 35:19). The second type of admissible evidence was prior ill will toward the deceased (Num 35:20-21). This is seen in the use of the verb *šādā* (to act with malicious intent) in Exodus 21:13 and the noun *šēdiyyā* (ambush or

malice) in Numbers 35:20, 22. In no case was the accused to be found guilty upon the testimony of only one witness (Num 35:30).

4. The Death of the High Priest.

Once the accused was found guilty of *inadvertently* killing someone, the accused was not allowed to leave the city of refuge until after the death of the high priest (Num 35:25). The significance of the death of the high priest, in this context, has given rise to two different interpretations. First, the death of the high priest is considered to be the occasion for a general amnesty for fugitives in a manner analogous to the amnesty granted on the accession to the throne of a new king (Budd, 382; Vasholz, 117). This position is not convincing because it is based on a comparison of the priest and the king that Scripture does not make. The fact that amnesty was proclaimed upon the accession of a new ruler to the throne (Ashley, 654) with the purpose of “ingratiating themselves with the populace” (Greenberg 1959, 127) also makes it unlikely that the death of the high priest occasioned amnesty for all fugitives.

The second and more popular view is that the death of the high priest made atonement for the sin of unintentional (*šēgāgā*) homicide. Support for this comes from the fact that even unintentional (*šēgāgā*) sin required atonement (cf. Lev 4:27-31). In addition, there was no payment that would atone for the death of a human being other than the death of another human being (Gen 9:6; see also Num 35:33). On this basis it is argued that the death of the high priest may have provided expiation or atonement for the death of the innocent person (Greenberg 1962, 1:639; Budd, 384). Nonetheless, this view should be held tentatively, since there is no place in Scripture where the death of the high priest is said to provide atonement or expiation (Vasholz, 116). Thus, within the Pentateuch it is a possible but not necessary inference from the data that the death of a high priest made atonement.

5. The Grace of God in the Cities of Refuge.

5.1. Numbers 35:6-34. This passage is sometimes viewed as part of a collection of miscellaneous laws appended to the end of Numbers (Harrison, 417). A closer analysis of the conclusion of Numbers shows that Numbers 35 is contained within a section that is framed by two pericopes dealing with the request of *Zelophe-

had's daughters for their inheritance in the land (Num 27:1-11; 36:1-13). D. R. Ulrich argues that these two pericopes demonstrate that Zelophehad's daughters trusted the Lord to keep his promise to give Israel the land (Ulrich, 537). He also correctly notes that the material within the inclusion “pertains in one way or another to the future success of the newly counted tribes” (Ulrich, 537). If Israel failed to keep the land from being polluted, the implication of Numbers 35:34 is that Yahweh would no longer be with his people in the land and that Israel would no longer be successful in the land. The cities of refuge were, therefore, a provision that enabled Israel to keep the land. Without such a place, the avenger of blood would hunt the person down and kill the accused without any determination of guilt or innocence. If the accused was innocent and killed by the avenger of blood, this would pollute the land and lead to the loss of the land. This system was thus part of the Lord's gracious provision that enabled a sinful people to live with a holy God.

5.2. Deuteronomy 4:41-43. This passage seems to many commentators to be out of place in its current context because it does not have the same autobiographical style as the surrounding material (Weinfeld, 232). If it fits anywhere in the context, it is thought to belong after Deuteronomy 3:20 (Weinfeld, 232), which deals with the division of the land east of the Jordan. A look at the flow of the argument in Deuteronomy 1—4 suggests otherwise. Moses begins his summary of Israel's past at Horeb and quickly moves to the failure of Israel to take the land because of their fear of the people in the cities of Canaan who were stronger and taller than they were (Deut 1:26-28). Moses then tells the people how the Lord took land from strong and powerful people and gave it to other people (Deut 2:10-12), and in the same way the Lord took the land of Sihon and Og and gave it to Israel (Deut 2:24—3:20). The point is that Israel had failed, but the Lord had been faithful. After the historical survey, Moses begins to exhort the people to obey the Lord by drawing upon the theological implications of Yahweh's actions at Horeb (Deut 4:15-31) and his power displayed against the Egyptians (Deut 4:32-38). In other words, the Lord is strong enough to give the land to Israel (Thompson, 109) and Israel must obey the Lord (Deut 4:39-40). The cities mentioned in Deuteronomy 4:41-43 then serve as a concrete example

of the faithfulness of God to take the land east of the Jordan and give it to Israel. The cities also assume that Israel will fail, but the cities are a gracious provision for Israel's anticipated failure. The cities of refuge are thus part of the pattern of proof laid out in Deuteronomy 1—4 that the Lord is worthy of trust and obedience, and they are an acknowledgment of Israel's need for grace.

5.3. Deuteronomy 19:1-13. Moses once more picks up on the theme of God's grace by reminding the people that the Lord was giving them the land originally promised to Abram (Gen 12:1-3). As a result of that grace, Israel must obey the Lord and set up cities of refuge in the land so that the people will not be guilty of bloodshed (Deut 19:10). The promise of more cities and land is also held out as an inducement to further obedience (Deut 19:8-10). In other words, the cities of refuge are evidence of God's grace to the nation of Israel, and if Israel will acknowledge the grace of God and obey him, the nation will have even more land and additional cities of refuge.

CITY, TOWN, CAMP

Cities, towns, villages and camps were essential parts of a common settlement hierarchy shared

by the ancient Near East and the OT.

1. Terminology
2. Archaeological Evidence
3. Theological Significance

1. Terminology.

A wide variety of terms are used broadly and interchangeably to describe settlement patterns and socio-urban structures in the OT. Those occurring in the Pentateuch are as follows.

1.1. City. The primary Hebrew word for "city" (*ʿir*, pl. *ʿarim*) occurs approximately eleven hundred times in the OT. The Pentateuch contains 172 of these occurrences, or just under 16 percent. The etymology of *ʿir* is uncertain (Frick, 27-30), but it may be related to the Sumerian word for "city," *uru*.

In the OT *ʿir* appears to contain the idea of some type of protection or fortification. However, it can be applied to a wide range of settlements, including villages, towns and capital cities, regardless of size or location. For example, Deuteronomy 3:5 speaks of cities (*ʿarim*) fortified with high walls, gates and bars as well as *ʿarê happērāzî* ("rural towns" or "country settlements"; see also 1 Sam 6:18). This expression may parallel the Amarna phrase (EA 137) *ālāni pu-ru-zi* (Na'aman). Leviticus 25:29, 31 make a distinction between an *ʿir hōmâ* ("walled city") and a *hāšēr* ("village"). In Numbers 13:19 *Moses charges the spies with the task of determining whether the Canaanite cities are fortified (*mibšār*) or more like camps (*maḥāneh*). Cities given to the *Levites in Numbers 35:1-8 also included the surrounding pasturelands (*migrās*) connected with them.

Cities were also given special designations or names. *Cities of refuge (*ʿarê miqlāt*) are so designated as to provide protection for individuals who have committed accidental manslaughter (Num 35:11). Jericho is called the city of palms (*ʿir hattēmārîm*) in Deuteronomy 34:3. Synecdoche, the use of a part to describe the whole, is also found in the case of *šaʿar* ("gate"), which is used often in Deuteronomy (e.g., Deut 5:14; 12:12, 15; 14:21, 27-28; 15:7, 22) to designate a city.

1.2. Town. The noun *qiryâ* ("town, city") occurs less frequently in the OT. Its etymology is uncertain, but it may be derived from *qîr*, "wall." In the Pentateuch *qiryâ* refers to towns or cities in general. In Deuteronomy 2:36 and 3:4 *qiryâ* refers to the towns taken by the Israelites in

Transjordan. In both of these verses *qiryâ* is given as a synonym of *ʿir*. Heshbon is identified in Numbers 21:28 as the *qiryâ* (“town”) of Sihon.

In the construct case, *qiryâ* is found in the names of several towns. Hebron is originally called Kiriath-arba (Gen 23:2; 35:27), and Balaam rides to Kiriath-huzoth (Num 22:39). Shaveh-kiriathaim (Gen 14:5) and Kiriathaim (Num 32:37) contain a dual form of *qiryâ*.

1.3. Village. The plural *ḥāṣērîm* of *ḥāṣēr* (“enclosure, court”; Frick, 55-57) is employed to designate a smaller settlement, often translated “village” (Gen 25:16; Lev 25:31; Deut 2:23). This term is also retained in such place names as Hazar-addar (Num 34:4), Hazar-enan (Num 34:9-10) and Hazeroth (Num 11:35; 12:16; 33:17; Deut 1:1).

In addition, the construct *bēnôt* (lit. “daughters of”) is used figuratively to identify smaller villages situated in the jurisdiction of a larger city and dependent upon it (Num 21:25, 32; 32:42). The general word for place, *māqôm*, is also used to refer to the town or village of Shechem (Gen 12:6; 18:24).

1.4. Camp. A *ḥirâ* was a camp protected by a stone barrier or wall (Gen 25:16; Num 31:10). The most frequent term for camp, however, is *maḥāneh*. It occurs over two hundred times in the OT and is derived from the verbal root *ḥnh*, which means “to set up a camp or encampment.”

After leaving Laban, *Jacob meets the angels of God (Gen 32:1 [MT 32:2]). Here he declares the place to be God’s camp and names it Mahanaim, “Two Camps” (Gen 32:2 [MT 32:3]). In Genesis 32:21 (MT 32:22) Jacob’s camp is probably a traveling entourage composed of tents.

In most cases *maḥāneh* refers to a war camp. After the *exodus and during the *wilderness journeys, the Israelites resided in this type of settlement (Ex 14:19-20, 24; Num 2:9, 16, 24, 31; Deut 2:14-15). Because of the presence of God in their midst, Israel’s camp was to be *holy. Any unclean person or thing was to be put outside the encampment (Num 5:1-4; Deut 23:14 [MT 23:15]).

2. Archaeological Evidence.

Since evidence of smaller settlements such as unwallled towns, villages and camps is much more difficult to acquire, archaeological excavations have tended to focus on the structure and plan of the large urban centers of the ancient

Near East. Archaeological evidence suggests that two major periods of urbanization in Palestine occurred prior to the beginning of the Iron Age (Fritz, 18-49).

2.1. Early Bronze Age II. Cities in this period include Megiddo, Ai, Gezer, Arad, Jericho and others. These were characterized by fairly large sites protected by a ring of walls with gates and fortifications. Monumental buildings and residential houses are found arranged along streets and thoroughfares inside the city. Such planning presupposes a social hierarchy in the differentiation of work. Farmers, artisans and traders, as well as priests and rulers, lived side by side in the city.

2.2. Middle Bronze Age II. In the second wave of urbanization, the Canaanites refortified older settlements such as Dan, Hazor, Megiddo and Shechem. New settlements such as Bethel and Beth-shemesh were also established. Distinctive walls, fortifications, gates and cultic architecture also characterize this period. City-states ruling numerous villages and settlements within their immediate vicinity arose. A few documents from Egypt, Taanach and Hazor provide a brief glimpse of the social, cultural and political life in the cities of this period (Fritz, 40-42). This wave of urbanization began to decline by the Late Bronze Age.

3. Theological Significance.

The OT is often understood to reject city life and to promote an antiurban bias in favor of a desert or nomadic idealism (*see* Wilderness, Desert). In this view, the city’s pursuit of security and power are seen as rebellion against God (Gen 11:1-9), and the sins and decadence of the city are denounced by the prophets (Mic 6:9-16; Hab 2:12). The prophets are seen as seeking to preserve Israel’s nomadic traditions by calling Israel to reject the Canaanite cities and embrace the purity of the tribal faith in the desert God, Yahweh (Wilson, 4). While some antiurban bias did exist, this view that the OT rejected urban civilization in favor of a desert idealism cannot be substantiated from a careful reading of the text, either of the Pentateuch (Andreasen) or the prophets (Wilson).

3.1. The Foundation of the City (Genesis 4:17).

The first biblical reference to city building is associated with *Cain. Cain’s offense is not that he built a city but that he committed fratricide. Cain may have built the city to escape the avenger by

retreating behind protective walls. The judgment of the text is not on the city itself but on its lack of social responsibility and justice (Andreasen, 261-64).

3.2 The Tower of Babel (Genesis 11:1-9). In this complex account, the builders of *Babel offended God by setting themselves and their skills against God's will. God punished their arrogance by scattering them abroad over the face of the earth. But no mention is made in the text that this scattering is intended to foster a return to the ideal of a pastoral, nomadic lifestyle.

3.3 The Cities in the Plain (Genesis 13-14; 18-19). The strife between *Abraham and *Lot arose over grazing rights and not between urban and rural settlements (see Agriculture). The land Lot chose was fertile, but it was near the wicked people of Sodom. The sinful social values found in the city enticed Lot, and he moved progressively closer to Sodom until he was found sitting in its gate (Gen 19:1). The cities themselves were not rejected. The sins of the people of Sodom brought about the city's destruction. For the sake of ten righteous citizens God would have spared the city (Gen 18:23-32).

COSMOLOGY

Cosmology refers to the understanding of the whole universe as an organized, structured entity. Strictly speaking, it can be distinguished from cosmogony, which is an account of how the structured universe came into being. However, it is difficult to separate these two, since cosmologies are often rooted in cosmogonies. The way a universe *is* is seen to be dependent on the way *it came into being*. For this reason our study of cosmology in the Pentateuch will give considerable attention to what is said about the *creation of the world. Also, since Hebrew culture interacted with the wider culture of the ancient Near East, we will outline briefly some of the ancient Near Eastern cosmogonies and cosmologies. These provide a helpful context within which to understand the biblical material. In particular it highlights the distinctive aspects of the Hebrew understandings of God, humanity, creation and the cosmos, and the relationships between them.

1. Definitions and General Considerations
2. Ancient Near Eastern Cosmologies
3. Cosmology in the Pentateuch

1. Definitions and General Considerations.

1.1. Cosmology and Worldview. Everyone has a worldview, an understanding of the world that guides the way one lives in the world. It shapes one's answers—consciously or subconsciously—to the "big" questions such as "Who am I?" and "Why am I here?" For most people, their worldview is something that they have never fully artic-

ulated and made coherent. It is something that is shared with the community to which they belong. In fact, it is one of the things that binds a community together. Cosmology and worldview are clearly related to one another. A worldview is rather broader and vaguer than a cosmology, but it is shaped to some degree by the cosmology held by the person or the community. Very often what is articulated in the Bible is a worldview rather than a cosmology. Failure to recognize this may lead us astray as we fail to do the work necessary to discover the cosmology that lies behind the biblical worldview.

1.2. Cosmologies, Ancient and Modern. In the modern natural sciences, cosmology is the scientific study of the universe considered as a whole. It is one of the aspects of science that receives most media attention. What the media concentrate on are the modern scientific cosmogonies, theories about the origin of the universe. This is because of the age-old belief that cosmogony and cosmology are closely linked. In science the two are very closely linked. In the various versions of the big-bang theory, the physical nature and subsequent history of the universe are determined to a considerable degree in the first few moments of its existence.

The age-old link between cosmology and worldview leads people to expect modern scientific cosmologies to provide answers to the big questions of life. However, they ignore the fact that this is bound to be problematic, because science has a built-in bias. Scientific investigation deliberately restricts itself to the study of matter and energy (which the theory of relativity shows are interchangeable) and the impersonal laws that govern them. Its aim is to obtain factual information about the physical universe. It has no room for personal categories and moral values, the very things that are needed to inform a “livable” worldview. Religious cosmogonies normally involve personal entities—the God or gods—who have aims and purposes and values. Their primary purpose is not to provide factual information about the past history of the physical universe but to ground or explain particular aspects of present reality.

Some people claim that the relative success of scientific cosmogony in explaining the physical structure of the universe as we know it supports an atheistic worldview. However, this claims too much. The universe as we know it contains persons who have self-consciousness,

moral values and a religious sense. Faced with this we can either conclude that these aspects of our experience as persons are illusory or that scientific cosmogonies are incomplete accounts of the origin of the universe. Given the built-in bias of science, the latter conclusion seems the far more likely. From a Judeo-Christian perspective, a scientific cosmogony can be seen as describing only the physical aspect of the Creator’s activity, the “mechanisms” used. It ignores questions of purpose and meaning. Consequently, religious and scientific cosmogonies are not necessarily opposed to one another. They may be complementary, working at different levels of reality to answer different kinds of questions. The questions asked and answered by science and religion are interrelated (so they are not to be kept totally separate from one another) but they are different (so they are not to be used to replace one another). In particular, the old religious cosmogonies are not to be written off as outmoded scientific explanations, nor are they to be expected to answer modern scientific questions. Either approach fails to take them seriously in their own terms and will miss the insights they do have to give to us.

2. Ancient Near Eastern Cosmologies.

As we have noted above, outside the biblical *creation stories, cosmological ideas are usually expressed only indirectly, as part of the worldview of the biblical writers. Moreover, both within the creation stories and outside of them, they are often expressed using imagery and ideas that were shared with other cultures with which the biblical writers were in contact. As a result, knowing something about the cosmogonies and cosmologies of these cultures can illuminate our understanding of the biblical material, both by providing parallels and contrasts.

2.1. Mesopotamian Cosmogonies and Cosmologies. As part of their training, ancient Mesopotamian scribes had to copy out a prescribed body of texts, which came to form a “canonical” collection. Works from this collection became known well beyond Mesopotamia. Texts have been found at Boghazköy (ancient Hattusas of the Hittites) in Turkey, Meskene (ancient Emar) in eastern Syria, Ugarit on the Syrian coast, and even at Megiddo in Palestine. Although the Sumerians, who established a literate culture in southern Mesopotamia in the third millennium

B.C., were swamped by successive waves of Semitic peoples, the newcomers adopted a good deal of Sumerian culture. As a result, a mixture of continuity and change is evidenced in the texts that survive from the middle of the third millennium to the end of the first millennium B.C. Thus, it is helpful to make a distinction between the third and early-second millennium Sumerian cosmogonies and the mid-second and first millennium Akkadian cosmogonies.

2.1.1. Sumerian Cosmogonies. There is no known Sumerian creation story text, but there are descriptions of creation in a number of Sumerian texts of various genres. These do not provide evidence of one standard account of creation. Instead, they witness to at least two different cosmogonic traditions. One of these stems from Nippur. In it creation takes place through the union of heaven (the god An) and earth (the goddess Antum or Ki). This union fertilizes the earth to produce vegetable, animal and human life. They all sprout from the ground like plants. The other tradition comes from Eridu. In this, Enki (the god of fertility and wisdom) produces the spring water that fertilizes the earth by means of rivers and canals. Life, including human life and cities, arises along their banks. In some texts there is a separate account of the creation of individual humans by Enki, using clay and water, sometimes with the aid of the mother goddesses. In both traditions humans are seen as existing to serve the gods, to save them from having to work. Also in both, a thing or a person is assigned a “destiny” by the gods at the time of creation. Thus the cosmogonies are usually told as a way of explaining the nature or role of something.

Some Sumerian texts refer to a time when heaven and earth were joined before they were separated and “married” to (pro)create living things. In *Praise of the Pickaxe*, Enlil uses the pickaxe to separate heaven from the earth.

2.1.2. Akkadian Cosmogonies. The best-known Akkadian cosmogonies are contained within two lengthy narratives: the *Atrahasis Epic* and *Enuma Elish*. Both narratives seem to incorporate earlier material that has been combined, and to some degree transformed, to form the extant story.

The most complete copy of *Atrahasis* comes from the early seventeenth century B.C. The story begins at a time when only the gods exist. The lesser gods (the Igigi) perform the menial

labor for the senior gods (the Anunnaki), but after many years of labor the Igigi rebel. Enki and the mother goddess’s creation of humans from clay and the blood and the “spirit” of an Igigi god resolves the ensuing crisis. In the story there seems to be a word play between the words for “spirit” (*etemmu*) and “mind/reason” (*tēmu*). Humans receive their body from the earth and the immaterial aspect of their being from the gods. They are created “to bear the toil of the gods.” However, their numbers increase, and their noise keeps Enlil and the other gods from their sleep. Thus the gods plot to destroy the human race by a series of plagues and finally by a *flood. Only Atrahasis and his family survive the flood, thanks to a warning from Enki and his advice that they build a boat. When deprived of their human servants, the gods realize how much they relied on them. They therefore allow repopulation, though introducing safeguards against over-population. Unfortunately the text is broken at this point, but these measures seem to have included infertility and certain social arrangements.

Enuma Elish is now usually dated to between the fourteenth and eleventh centuries B.C. It became a much-copied text and was recited on the fourth day of the New Year festival in Babylon. At the beginning of the story, nothing exists but the primeval waters, Apsu and Tiamat, who give birth to the older gods. However, the activity of the gods disturbs Apsu, who plans to destroy them. Learning of this, Ea puts Apsu to sleep with a spell and kills him. He then builds a palace on Apsu’s corpse, in which he and Damkina give birth to Marduk. Marduk turns out to be greater than any of his predecessors, but his play disturbs Tiamat. As a result, some gods, seemingly provoked by jealousy of Marduk, join her in a plan to destroy the other gods. When they hear of this, the other gods are filled with fear and at a loss what to do, until Marduk appears and offers to do battle on their behalf—provided they agree to give him the power of fixing destinies and make him king. This is agreed to, and Marduk goes out to do battle with Tiamat, the dissident gods and a horde of monsters created by Tiamat. Marduk then kills Tiamat in single combat and splits her body in two. With one half he makes the sky, and with the other the earth. He puts the stars in their places and establishes the movements of the sun and moon. Seeing this, the gods acclaim him and make him their king. Marduk

then orders Ea to make humans out of the blood of Kingu, the leader of the dissident gods, so that they might do the work of the gods. The gods themselves, however, build Babylon and its temple as Marduk's abode and glorify him with fifty names.

2.1.3. Mesopotamian Cosmology. In the opening tablet of Atrahasis, the great gods divide the universe between them, with Anu going up to heaven, Enlil (apparently) residing on earth, and Enki (later called Ea) going down to the Apsu, the lower waters. A threefold division of the universe between the same three gods is found in *Enuma Elish* 4.137-146. Here, after forming the heaven and earth out of Tiamat's body, Marduk settles Anu in heaven with three hundred of the Anunnaki, Enlil in Esharra and Ea in Eshgalla, with another three hundred Anunnaki. The context indicates that Eshgalla is a synonym for the Apsu, on which Ea originally built his abode. The location of Esharra is not obvious. In 5.119-122 Marduk says that he will build his abode "opposite" Esharra, while 6.65-66 seems to say that when Babylon was built and the temple Esagila was complete, Marduk sat in his new home and saw the "horns" (pinnacles?) of Esagila as he looked toward Esharra. Since Babylon is on the earth, this suggests that Esharra was located above the earth but below Anu's heaven. According to 5.11-12 Marduk placed the sun, moon and stars in the *elātu* ("heights"). This was located in the half of Tiamat's body that formed the sky. It was presumably below the Esharra, giving three levels of the heavens above the earth, with the Apsu below the earth.

When Marduk fashioned the heavens out of part of the body of Tiamat (depicted as both primeval waters and a monster), he placed guards to keep the waters of heaven from escaping. He also fashioned a skin to keep the waters in. With the waters of the Apsu under the earth, the inhabited world was like a bubble in the cosmic waters.

There is no mention of the underworld in *Enuma Elish*. Detail is added in a first-millennium religious-mystical text (KAR 307, see discussion in Horowitz, 3-19). This text divides the heavens into three levels: the upper (where Anu dwells with three hundred Igigi), the middle (where Bel has his cella and there are more Igigi) and the lower (where the stars are located). The earth is also divided into three lev-

els: the upper (where humans dwell), the middle (the Apsu, where Ea dwells) and the lower (the underworld, where Bel/Marduk locks six hundred Anunnaki).

A Late Babylonian tablet BM 92687, the Babylonian Map of the World, gives a unique Babylonian bird's-eye view of the earth's surface (for a copy and discussion of the tablet, see Horowitz, 20-42). The known world is depicted as a circle with various places and topographical features marked in a schematic way. The circle is more or less bisected by what seems to be the River Euphrates, with Babylon marked on it somewhat above the center of the circle. A mountain is marked to the north of Babylon, and there is a swamp in the south. Assyria, Urartu and Susa are among the places marked. A ring of ocean surrounds the "continent," beyond which are several triangular (probably originally eight, the tablet is broken) *nagû*, "regions." The nature of these is unclear, as is the nature of the space between them.

2.2. Canaanite Cosmology. Our main source for Canaanite cosmology is the collection of texts excavated at Ras Shamra, ancient Ugarit. They date from about the fourteenth century B.C. Among them is the Baal cycle of texts, stories about the god Baal, but there is no undisputed cosmogony. In these texts the chief of the pantheon, El, is called *bny bnwt*, "creator of creation/creatures," and *'b 'dm*, "father of humanity." His wife Asherah is given the epithet *qnyt 'lm*, "creator/begetter of the gods." These epithets suggest that for the Canaanites creation was thought of in terms of procreation. There is one ritual text (*KTU* 1.23) that tells of the birth of the gods Shagar and Shalim as a result of El's sexual activities.

The Baal cycle has three sections. In the first, Prince Yam (Sea) sends a demand to the assembly of the gods that they surrender Baal to him. The gods, other than Baal, are terrified and, in the person of El, agree to the demand. However, Baal goes out armed with two clubs fashioned by the artisan-god Kothar-wa-Hasis and fights with Yam, defeating him. In the second section there is an appeal to El that Baal be allowed to build himself a house. When El gives permission, Kothar-wa-Hasis builds Baal a palace. Baal then gives a dedicatory banquet for all the gods. There are some similarities here with battle between Marduk and Tiamat and its outcome in *Enuma Elish*. This has led some scholars to as-

sume that Baal's battle with Yam is somehow associated with the creation of the world. However, there is nothing in the text to suggest that it is anything other than an explanation of how the young storm-god Baal came to dominate the Canaanite pantheon.

The third episode begins with the god Mot (Death) demanding that Baal be surrendered to him. Baal is intimidated and goes down to the underworld, taking the clouds, wind, lightning and rain with him. When El is told of Baal's death, he mourns, as does Baal's sister Anat. Anat meets Mot, who boasts about devouring Baal and the consequent drought. Anat then seizes Mot, splits him with a sword, winnows him, burns him, grinds him and sows him in the fields. This leads to Baal's revival. Having returned to life, he reasserts his power and reclaims his throne from the sons of Asherah. After seven years Mot returns, and he and Baal fight in single combat until Shapshu (Sun) intervenes on Baal's behalf and threatens Mot, who breaks off the combat and leaves Baal to remount his throne. This story is not a cosmogony but has something to do with the seasonal and agricultural cycle.

2.3. Egyptian Cosmogonies and Cosmology. Several cosmogonies are known from ancient *Egypt. Each is connected with a local deity—for example, Re, Atum and Ptah—and supports the claim to the importance of that deity and the city that is the home of his principal temple. There are some themes in common as well as differences in presenting the process of creation.

2.3.1. Common Elements. The state before creation is described in both a negative and a positive way. Negatively it is referred to as "before X existed." Especially significant is the phrase "before there were two things." In contrast to this the creator-god is often called "one who made himself into millions." Creation is the move from undifferentiated "nothingness" to the diversity of the known world. Positively, the pre-creation state is described as one of limitless waters (personified as Nun) and total darkness. Probably as a result of their experience of new life arising as the annual Nile flood receded, the Egyptians developed the idea of the primordial mound from which all life arose. The mound is related to the creator-god in different ways, but it becomes the site of his temple. Different gods play the role of creator in the various cosmogonies,

but each cosmogony has only one creator-god. This is the primeval god, who is self-generated.

2.3.2. The Process of Creation. This is envisaged in three main ways. In the Cosmogony of Heliopolis the god Atum appears as the primordial mound. He generates the divine couple Shu (atmosphere) and Tefnut by expelling fluid from himself, either by masturbation or by spitting. Shu and Tefnut then give birth to Geb (earth) and Nut (sky), who are then separated by Shu.

In the Memphite Theology the creator-god is Ptah. At least in later times he is identified with the primordial mound. He creates nine gods (the Ennead), beginning with Shu and Tefnut, through his "heart" ("thought, plan") and "tongue" ("word, command").

Most of the Egyptian cosmogonies are in reality theogonies, concerned with the origin of the gods. These are identified with basic elements of the cosmos: earth, sky, the sun and so forth. However, it is rare to have any account of the creation of plants, animals and humans. An exception is the description of the potter-god, Khnum, fashioning humans and other living creatures on his potter's wheel.

2.3.3. Egyptian Cosmology. The Egyptians visualized the universe as consisting of three "plates" with two spaces between them. In the middle was the plate of the earth (Geb). This was thought to be shaped like a dish with a raised, corrugated rim. The central, flat part of the dish was the Nile Valley, and the raised rim represented the mountains of the countries around Egypt. Above the earth was the plate of the sky (Nut), which was held up by the atmosphere (Shu). Below the earth was the primeval waters (Nun), and below that the plate of the underworld (Naunet).

For the Egyptians, the most important element in their cosmological scheme was the sun (the god Re). They believed that each night the sun journeyed into the underworld, to be reborn each morning out of the waters of Nun, the source of life. The heat and light of the sun were themselves the source of life to the creatures on the earth.

The daily motion of the sun, the annual variation in the path it traced through the sky, which is related to the annual seasons, and the annual flooding of the Nile, were all evidence of a cosmic order. The Egyptians believed that this order, Ma'at, had been established at creation

by the primordial god. However, it needed to be renewed daily by the pharaoh, and this was an important function of the rituals in the temple built on the site of the primordial mound.

3. Cosmology in the Pentateuch.

The early chapters of Genesis are bound to have a prominent place in any discussion of cosmology in the Hebrew Bible, let alone the Pentateuch, both because they contain the only detailed Hebrew account of creation and because of their position at the start of the Pentateuch.

3.1 Genesis 1:1—2:4a. Strictly speaking, this is a cosmogony. Various aspects of it are thrown into particular relief when it is read in the light of other ancient Near Eastern cosmogonies.

3.1.1. The Creator. The Genesis account differs markedly from the other cosmogonies in its assumption of monotheism. There is a single Creator, and no other gods are involved in the creative acts, either as helpers or as opponents. There is no primeval goddess, so the model of procreation for the creative process has no place in the account. It is also notable that there is no theogony as a preface to cosmology. The existence of the Creator is assumed, and there is no attempt to explain it. There are no lesser gods whose coming into being needs explaining. Some scholars think that the plural in Genesis 1:26 (“Let us make . . .”) is a remnant of an earlier polytheistic account. However, they agree that this is not the significance of the plural in the account as it stands. Most take it as either an address to the heavenly council (Wenham) or as a plural of self-deliberation (Westermann).

3.1.2. Creation by Word. Eight times in this account God speaks and things come into being. The nearest parallel to this is Ptah’s creation through thought and word in the Memphite Theology, but this is limited to the creation of the Ennead. The use of speech as a metaphor indicates that the divine creative activity is voluntary, rational and effortless. There is no struggle or conflict, as in some of the other cosmogonies. Ever since the publication of the Babylonian epic of creation some scholars have suggested a link between “the deep” (*tēhôm*) of Genesis 1:2 and Tiamat. However, it seems that philologically the Hebrew word and the Babylonian name both go back to a common Semitic root rather than the Hebrew being derived from

the Babylonian. Also, in the other thirty-four uses of *tēhôm* in the OT there is no hint of personification (see Westermann, 104-6).

Many commentators take Genesis 1:2 as depicting a dark, storm-tossed sea. This depends on translating *rûah* *’ēlōhim* as “a mighty wind” and also on assuming a similarity to other cosmogonies that begin with a state of “active chaos.” However, it seems unlikely in this chapter, where *’ēlōhim* is used so often to denote God, that it is used simply as a superlative. It is more likely that the reference is to some positive manifestation of divine activity, the “wind/breath of God.” This fits with the now generally accepted meaning of the following participle, “hovering, fluttering.” We may then argue that Genesis 1:2 depicts, in contrast to the other cosmogonies, a state of “quiescent chaos” (a dark, empty formlessness) with God poised for action.

3.1.3. Creation from Nothing? In the other cosmogonies the physical universe is fashioned out of preexisting material. Whether or not this is the case in Genesis 1 is a much-debated issue. There are basically two ways in which Genesis 1:1-2 has been understood. According to one view, verse 1 describes the creation of matter, the state of which is then described in verse 2. A major objection to this view has been the implication that God created chaos. The force of this, however, is removed if the “chaos” is understood as suggested above. According to the other view, verse 2 describes the state of things at the time when the work of creation began. Against this view it has been objected that when God is the subject of the verb “to create” (*bārā’*) in its active form elsewhere in the OT, there is never any mention of material out of which the products of creation are made. However, in a few cases a preexisting entity is implied (Num 16:30; Is 43:1; 54:16; Amos 4:13). Perhaps the most that can be said is that the idea of creation out of nothing is a possible reading of Genesis 1:1-2. C. Westermann (109-10) makes the point that to press the issue on these verses may be inappropriate, since it was not in mind when they were written. Both the idea of “formless matter” (Wis 11:17) and that of “creation out of nothing” (2 Macc 7:28) entered Jewish thought at a late period as a result of interaction with Greek thought.

3.1.4. An Ordered Creation. It has often been noted (e.g., Wenham, 6-7) that the creative acts of the first three days correspond to those of the

second three (see table 1). In the first three days empty “structures” are created by acts of “separation.” These are then *filled* with creatures in the second three days.

This structuring emphasizes that the creation is planned and ordered. In this context a brief discussion of the phrase *tōhū wābōhū* (Gen 1:2) is needed. Translations of this phrase in English versions of the Bible are usually similar to the KJV’s “without form and void.” This can be seen to fit well with what follows, namely, acts of *forming* and *filling*. On the basis of lexical and discourse analysis of the twenty occurrences of *tōhū* in the Hebrew Bible, Tsumura (17-43) has proposed a somewhat different rendering, “unproductive and uninhabited.” Although the render-

(Gen 1:2; Is 34:11; Jer 4:23), and is usually translated as “empty.”

3.1.5. The Status of Humans. There are five indicators in the account that the creation of humans is the climax of God’s acts of creation. These include the fact that they are the last creatures to be created, the divine deliberation before the act in verse 26a, the threefold use of *bārā’* in verse 27, their unique creation in God’s “image” and “likeness” and the fact that they are given dominion over the other creatures. It is clear that in the Hebrew understanding humans have a much higher status than they do in the Mesopotamian creation stories, in which they are created to be the slaves of the gods.

3.1.6. A Polemical Account. The contrasts that we have already noted between the Hebrew creation story and other ancient Near Eastern creation stories suggest that there is a conscious polemical intent in the former. At two other points in the story this becomes particularly clear. The first is in the use of the special verb *bārā’*. It is used in three places in the story. It is understandable that it is used in verse 1 to introduce the whole account of creation. As we have seen, the threefold use of it in verse 27 helps to establish the different status given to humans in the Hebrew story as compared with others. But why is it used in verse 21 of the creation of the “great sea monsters” (*tanninim*)? Sometimes in the Hebrew Bible the singular *tannin* can refer to an ordinary animal such as a serpent or crocodile. Elsewhere it has a mythological background in the idea of the Creator’s struggle with chaos (Job 7:12; Ps 74:13; Is 27:1; 51:9). In the Ugaritic texts the *tnn* appear among the primeval enemies of Baal (e.g., *KTU* 1.3.3.37-44). All this suggests that the explicit statement that God created the *tanninim* is meant as a polemical point against the idea that God had to subdue any primeval foes before creating the world. Whatever “monsters” that exist were created by God and so, by implication, are under God’s control.

At first sight there are considerable similarities between Genesis 1:14-19 and *Enuma Elish* 6.1-22, which tells of Marduk establishing the sun, moon and stars and the calendar. However, there are notable differences. Marduk does not create the heavenly lights (they already exist as divine beings); he simply establishes their places in the heavens. It is significant that in Genesis they are created and are described in purely functional terms. They are simply “calendar

Day 1: light and dark separated; day and night result.	Day 4: lights created to rule the day and the night.
Day 2: the waters separated; sky and sea result.	Day 5: birds and sea creatures created to live in the sky and sea.
Day 3: the waters gathered; land appears; plants created.	Day 6: living creatures created to live on the land and eat the plants; humans created.
Day 7: the sabbath	

Table 1: Ordered Creation

ing of *tōhū* as “unproductive” fits well with some of its uses elsewhere, it does not give due weight to the context in the Genesis account, with its particular structure. A different aspect of the word’s meaning seems more appropriate here. Westermann (102-3) classifies uses of the word into three groups of meanings: “desert,” “a desert or devastation that is threatened” and “nothingness.” Tsumura argues that the meaning in the third group is a *lack* of something rather than absolute nothingness. He then proposes that what is lacking before God’s creative acts is the productivity of the earth. However, on at least some of the occasions when *tōhū* is used to mean “desert,” the emphasis is on the desert as a “trackless waste” (e.g., Job 6:18; 12:24; Ps 107:40), which is closer to the idea of “formless” than to that of “unproductive.” The meaning “formless” fits the context of Genesis 1 well. The word *bōhū* occurs only three times in the Hebrew Bible, always in conjunction with *tōhū*

markers” functioning for the benefit of other creatures. Even the sun and moon are not given their proper Hebrew names, probably because in the cognate languages these are also the names of gods, but are just called “lights.” Here there seems to be a polemic against the worship of the heavenly lights. Deuteronomy 4:19 explicitly forbids the worship of “the sun, the moon, the stars and all the host of heaven” (cf. Deut. 17:3).

3.2 Genesis 2:4b—3:24. This passage is also a cosmogony. Although, as most OT scholars hold, it may in origin be a separate cosmogony derived from a separate source, it functions canonically as an expansion of the account of the creation of humans as “male and female.” Its focus on human origins means that there is even less here about cosmology, narrowly understood, than is the case in Genesis 1:1—2:4a. It is worth noting that the cursing of the ground (Gen 3:17b-19) implies that human dominion over the other creatures is not now what it ought to be.

This passage’s description of the Lord God’s creative activity is strongly anthropomorphic. The verb used of God “forming” the man and the animals, *yāsar*, is one that is used of the activity of artisans such as potters and metal workers. There is some similarity here to the Egyptian potter-god Khnum fashioning humans and other living creatures.

3.3. Cosmology in the Rest of the Pentateuch. Apart from the relatively systematic account of creation in Genesis 1:1—2:4a, what is said about cosmology in the rest of the Pentateuch appears as part of the worldview that is implicit in the narratives, laws, poems and other forms of literature that it contains.

3.3.1. God’s Relationship to the Cosmos. That God is the Creator is affirmed occasionally in the Pentateuch outside of the creation story. In support of keeping the *sabbath, Exodus 20:11 refers back to Genesis 1:1—2:4a. When it says that “the LORD made heaven and earth, the sea, and all that is in them,” it uses the verb *‘āsâ*, which is used a number of times in Genesis 1. It is a very general term for making or doing, and its exact meaning has to be determined by its context. In Deuteronomy 32:6b it is used in parallel with the verb *qānâ*, which is used in Genesis 14:19, 22 to describe *’ēl ‘elyôn* (God Most High, identified with Yahweh in verse 22) as “maker of heaven and earth.” The exact sense of the Hebrew verb

in these contexts is disputed. It is generally used of “acquiring” things, especially by purchase. As noted above, the Ugaritic texts describe Asherah as “creator/begetter of the gods” using the cognate verb *qny*. Similarly, an inscription from Karamiye has the phrase *’l qn ’rṣ* (“EL, creator of the earth”; see Stadelmann, 6). These parallels, plus the contexts of Genesis 14:19, 22 and Deuteronomy 32:6b suggest the meaning “to create.” The link between the wider and narrower meaning may be the idea of acquiring by procreation, which is suggested in Genesis 4:1 (on *qānâ* in this verse, see Westermann; Wenham). As Creator, Yahweh owns the whole cosmos and all its creatures (Deut 10:14).

The Israelites did not think of God leaving the world to its own devices once it had been created. God’s bringing of the *flood and the *covenant after the flood “with every living creature” (Gen 9:9-16) shows God’s interest in, and concern for, the creation and the living creatures. Likewise, God is the guarantor of the stability of the cycle of the seasons (Gen 8:22). Similarly, *blessings and curses such as those found in Deuteronomy 11:13-17 and the covenant blessings and curses (Lev 26; Deut 28) assume God’s continuing ability to act through the forces of nature. Yet the appeal to “the heaven and the earth” as witnesses to God against humankind (Deut 4:26; 30:19; 31:28) assumes that the created order has a measure of independence from God.

3.3.2. The Structure of the Cosmos. The usual Hebrew way of expressing the idea of “the cosmos” is the expression “the heavens and the earth” or its reverse (Gen 2:4). Occasionally a fuller phrase is used, such as “the heavens and the earth . . . and all their multitude” (Gen 2:1), or “heaven and the heaven of heavens . . . the earth with all that is in it” (Deut 10:14). These phrases suggest a structured reality with parts that are separated from, but related to, each other. This would be in accord with the wider ancient Near Eastern worldview that envisaged the cosmos as a series of “layers,” the basic ones being the heavens, the earth and the lower waters. Such a threefold “layering” of the cosmos is found in the commandment against idolatry: “You shall not make for yourself an idol, whether in the form of anything that is in heaven above, or that is on the earth beneath, or that is in the water under the earth” (Ex 20:4 NRSV; cf. Deut 5:8). In Deuteronomy 33:13 there

is the unique reference to “his [Yahweh’s] land” with the heaven above it and the deep (*tēhôm*) beneath it (cf. Gen 49:25). This picture of a three-level structure no doubt has its roots in common human observation and experience of the world. In Akkadian and Egyptian cosmologies the origin of this structure is explained in obviously mythological terms involving the relationships between gods (see above). The account in Genesis 1:6-8 is more “technological.” God makes a *rāqī’a* to produce a separation within the waters, so creating upper and lower waters with the atmosphere between them. Both the etymology and use of the noun and its associated verb suggest a metal plate or dome. The verb is used in Job 37:18 when God inquires whether Job, like God, can “spread out [*tarqia*] the skies, hard as a molten mirror” (the mirror envisaged would have been made of polished metal). No doubt this way of describing the origin of the sky is related to the idiomatic expressions that describe the sky in a time of drought being “like iron” (Lev 26:19) or “like bronze” (Deut 28:23).

In Mesopotamian cosmology, as we have seen, heaven itself is structured into three layers. Deuteronomy 10:14 may hint at something like this in the Hebrew worldview, but nothing else in the Pentateuch provides further detail of this. What is clear is that heaven is thought of in two different contexts. First, it is where God dwells. This is stated explicitly in Deuteronomy 26:15, where the word used for “dwelling place,” *mē’ôn*, emphasizes its remoteness. The phrase “The LORD, the God of heaven” (Gen 24:7) implies that heaven is God’s abode. The “ladder/staircase” of Jacob’s dream stretches from earth to heaven so that God’s angels can move between the two (Gen 28:12). In Genesis 21:17 and 22:11 the angel of God/the Lord calls to Hagar/Abraham from heaven. In the vision in Exodus 24:10, God seems to appear seated or standing above the solid dome of the sky (cf. Ezek 1:26). Second, heaven contains the waters above the *rāqī’a*, which descend as rain when “the windows of heaven” are opened (Gen 7:11; 8:2). This is why the absence of rain is said to be due to God having “shut up the heavens” (Deut 11:17), which are God’s “rich storehouse” of the rain (Deut 28:12). Scholars differ over whether the word *mabbûl*, which occurs only of the flood in Genesis 6–11 and in Psalm 29:10, is a Hebrew term for the “heavenly ocean” or simply

refers to waters on earth (see Grisanti).

Outside of the phrase “the heavens and the earth,” the word *’ereš* has a wide range of meanings, from the whole earth (e.g., Gen 1:2) to a particular country or territory (e.g., Gen. 10:10; 19:28) to simply “the ground” (e.g., Ex 4:3). Although it most often refers to the cultivable ground, *’ādāmā* also has a wide range of meanings. When it refers to the whole earth, it usually refers to it as an inhabited place (e.g., Gen 12:3).

Under the earth are the waters of “the deep” (*tēhôm*, Gen 49:25; Deut 8:7; 33:13). Normally these are thought of as feeding the springs and wells (Deut 8:7), but in the flood story they “burst forth” to add to the rain (Gen 7:11; 8:2). Also under the earth is Sheol (*šē’ôl*). People “go down” to Sheol when they die (Gen 37:35; 42:38; 44:29, 31). This is expressed graphically in the story of Korah’s rebellion when the ground “opens its mouth and swallows” the rebels so that they “go down alive to Sheol” (Num: 16:30-33). In Deuteronomy 32:22 Sheol is mentioned in parallel with “the foundations of the mountains.” Although some scholars have argued that Sheol denotes no more than “the grave,” the place where the body is buried, the fact that it never takes the article in its sixty-five occurrences in the Hebrew Bible does suggest that it is a proper name for the underworld, as does the context of some of its uses, such as Deuteronomy 32:22 (see the discussion by Merrill; see Life, Disease and Death).

3.3.3. Conclusion. The cosmology implicit in the worldview expressed in the pentateuchal narratives has a great deal in common with that found in the literature of other ancient Near Eastern cultures. However, in the canonical form of these books these narratives are to be read in the light of the monotheistic and demythologized account of creation in Genesis 1:1–2:4a that introduces them.

COVENANT

Covenant is undeniably a major theological motif in the Pentateuch as a whole. The term itself (*bērit*) is found some eighty-two times in the Pentateuch alone and is used to describe both interpersonal (Gen 14:13; 21:27, 32; 26:28; 31:44; Ex 23:32; 34:12; Deut 7:2) and divine-human "covenants." The former obviously throw considerable light on the meaning of the term, namely, that it is a solemn commitment guaranteeing promises or obligations undertaken by one or both covenanting parties (for a detailed discussion of its definition, see Hugenberger, 168-215). However, the predominant usage—describing divinely established covenants or the stipulations incorporated within them—is more significant theologically. These divine-human covenants not only occupy a pivotal place within the Pentateuch itself but are also clearly foundational for the revelation that unfolds in the rest of the Bible.

1. The Universal Covenant
2. The Ancestral Covenants
3. The National Covenants

1. The Universal Covenant.

Whereas historical-critical reconstructions generally view the idea of a divine-human covenant as a relatively late innovation that has been retrojected into Israel's earlier traditions (McKenzie, 11-39; for a comprehensive survey see Nicholson, 3-117), the canonical text clearly suggests that the concept extended back into the prepatriarchal era. It is first explicitly introduced in Genesis 6:18, where it anticipates the solemn oath God made to *Noah (as the representative

of creation) in the immediate aftermath of the *flood (Gen 9:1-17; cf. Is 54:9). Although some have distinguished between the covenant mentioned in Genesis 6:18 and the postdiluvian covenant established between God and all living creatures (Gen 9), a close reading confirms that the mention of "covenant" at Genesis 6:18 is proleptic. God's initial speech to Noah (Gen 6:13-21) lacks even the most basic covenantal element (i.e., a promissory oath). The mention of covenant at this point simply anticipates the covenant that is ratified in Genesis 9 and discloses God's purpose in the selection and preservation of Noah and his family.

1.1. Covenant and Creation. It is important to understand the Noahic covenant against its literary and theological setting, that is, the catastrophic judgment of the flood. The latter, in turn, must be read against the backdrop of *creation and the *Fall, for as D. J. A. Clines has underlined, "the Flood is represented not just as a punishment for the *sin of the generation of the Flood, but as a reversal of creation" (Clines, 80). Whereas Genesis 1 depicts creation in terms of separation and distinction, in Genesis 6—7 such distinctions are eradicated. In Genesis 1:6-8 God establishes a firmament to keep the heavenly waters at bay, but the opening of the "windows of heaven" in Genesis 7:11 tears this protective canopy apart (see Cosmology). Likewise, the distinction between subterranean waters and the earth established in Genesis 1:9 is obliterated by the "fountains of the deep" bursting out in Genesis 7:11. In the flood, the creative process (bringing order out of a watery chaos) is reversed. As Clines aptly concludes, "The flood is only the final stage in a process of cosmic disintegration that began in Eden" (Clines, 81).

It logically follows from this that the climax of the flood narrative is best understood in terms of a re-creation—a restoration of the divine order that had been established at creation. As a comparison with the Genesis creation narratives again illustrates, such is indeed the case. The earth is made inhabitable by the separation of the land from the water (Gen 8:1-3; cf. Gen 1:9-10). Living creatures are brought out to repopulate the earth (Gen 8:17-19; cf. Gen 1:20-22, 24-25). Days and seasons are reestablished (Gen 8:22; cf. Gen 1:14-18). Humanity is blessed by God (Gen 9:1; cf. Gen 1:28a), commanded to "be fruitful, multiply and fill the earth" (Gen 9:1b, 7; cf. Gen 1:28b) and given dominion over the ani-

mal kingdom (Gen 9:2; cf. Gen 1:28c). Finally, God provides humans—made in his *image (Gen 9:6; cf. Gen 1:26-27)—with food (Gen 9:3; cf. Gen 1:29-30).

For all this parallelism, however, there is one very significant difference between the re-created world of the postflood era and the original creation. As noted in Genesis 8:21, the world has not been restored to its pristine, pre-Fall condition. Rather, it is still marred by human sinfulness, significantly described in the same terms that previously provided the rationale for the deluge (Gen 6:5); what earlier explained the necessity of the flood now highlights the necessity of the covenant that God is about to establish. Thus understood, this postdiluvian covenant (Gen 8:20—9:17) reaffirms God's original creational intent, which the flood had placed in abeyance and which humanity's inherent sinfulness would otherwise continue to place in jeopardy.

While the formal declaration of the covenant oath (cf. Is 54:9) is admittedly restricted to Genesis 9:8-17, the actual ratification of the Noahic covenant begins with the offering of *sacrifices in the previous chapter (Gen 8:20). The immediate context connects this sacrificial ritual with God's deliberation to preserve the creative order without future disruption by flood (Gen 8:20-22); consequently, these sacrifices serve to explain the basis of the covenant promises that follow. Moreover, such a sacrificial ritual was apparently anticipated by God himself (cf. Gen 7:2-3). Thus Noah's action here is more than a spontaneous expression of thanksgiving; it is apparently something that God himself had intended. Furthermore, the Noahic covenant is not alone in mentioning sacrificial ritual in the context of covenant ratification (cf. Gen 15:9-10; Ex 24:5-6), which may indicate that such a sacrificial ritual was a common precursor to a covenantal oath. The sacrifices of Genesis 8 are thus best understood as an intrinsic element in the establishment of the Noahic covenant. In any case, it is difficult to deny that it was these sacrifices that prompted the subsequent divine *promise (Gen 8:21-22)—a divine self-deliberation that forms the basis of the oath reflected in Genesis 9:9-11: never again will God's plans be interrupted by a suspension of the natural order. Hence humanity's creational mandate (cf. Gen 1:26-30) is renewed (Gen 9:1-7) and a solemn guarantee of the preservation, without further divine inter-

ruption, of life on earth is given (Gen 9:8-17).

The juxtaposition of Genesis 9:1-7 and 9:8-17 highlights the fact that the Noahic covenant incorporates bilateral obligations. Admittedly, this covenant is unconditional in the sense that God's promises here are not contingent upon human response or behavior. Even so, the introduction of divine commands indicates that the obligations enshrined in this covenant are not unilateral.

The opening pericope in Genesis 9 clearly focuses on the human obligations, as is underlined by the bracketing of these verses with divine imperatives (Gen 9:1, 7) that echo the creation mandate in Genesis 1. Thus, the primary obligation imposed on humanity is that of fulfilling the role appointed by God in the beginning (Gen 1:28). Once again, however, attention is drawn to the fact that the circumstances (possibly since the time of the Fall) have undergone significant change (Gen 9:2-3). A degree of enmity now exists between humans and animals, humanity's nonvegetarian diet—now divinely sanctioned (cf. Gen 1:29)—undoubtedly contributing no small part. With these new circumstances in view, further responsibilities are imposed (Gen 9:4-6). Animal life in general, and human life in particular, must be treated with the dignity it deserves. As a token of such respect, the consumption of *blood (representative of the animal's life force; cf. Lev 17:11) is strictly prohibited. Moreover, while animal slaughter is permissible, the killing of humans (whether by other people or by animals) is a capital offense (Gen 9:5). Significantly, the reason given for such severe punishment is the fact that humans, even in the post-Fall, postflood world, retain their unique status as divine image-bearers (Gen 9:6). Thus, in this new, postdiluvian era, Noah and his sons are commanded to carry out humanity's creation mandate, while at the same time treating animal life generally and human life especially with due respect.

The formal declaration of the divine covenant in Genesis 9:8-17 is made up of two distinct parts: the first (Gen 9:8-11) articulates the divine oath, whereas the second (Gen 9:12-17) announces the covenant sign (*see* Rainbow). As L. A. Turner plausibly suggests, the latter element, God's "bow in the clouds" (Gen 9:12-17), probably signifies the domelike barrier (*rāqī'a*, "firmament") restraining the "waters above" (Gen 1:6-8). While this visible symbol in the sky would un-

doubtedly reassure humankind, its express intent is to remind God himself to keep his covenantal promise. Thus, unlike subsequent examples (i.e., *circumcision and *sabbath), this first covenant sign chiefly serves to remind God of his covenant obligation.

In keeping with the divine deliberation of Genesis 8:21-22, the covenant is universal in scope—encompassing Noah, his sons, their descendants and “every living creature” (Gen 9:9-10, 12, 15-17)—and “everlasting” in endurance (Gen 9:16). In the present context the latter appears to signify “as long as the earth endures” (Gen 8:22). In any case, the covenant emphatically guarantees that a cataclysmic flood will never again be repeated (Gen 9:11-12, 15; cf. Gen 8:21).

Given that the Noahic covenant provides the biblical-theological framework within which all subsequent divine-human covenants operate, its universal scope is undoubtedly significant. As suggested by the allusions to Genesis 1 noted above, the universal scope of this covenant implies that the *blessing for which humanity was created and the creation that had been preserved through the flood will ultimately encompass not just one people or nation, but rather the whole earth. Accordingly, this universal emphasis of Genesis 1—11 is not lost entirely in the subsequent chapters of Genesis and beyond, despite their narrowing focus.

1.2. *Covenant with Creation?* While the above analysis acknowledges clear links between the Noahic covenant and creation, some scholars go further, suggesting that the Noahic covenant is in fact a renewal of an already-existing covenant—one that God had previously made in the context of creation itself. Traditionally, such scholars have posited a pre-Fall “covenant of works” and a post-Fall “covenant of *grace,” but several recent advocates of an antediluvian covenant prefer to speak in terms of an all-embracing covenant established between God and his creation. An exegetical case for such a “covenant with creation,” allegedly implicit in Genesis 1—3, is mounted by W. J. Dumbrell (1984, 11-43), for whom this hypothetical covenant was established with creation generally rather than with humans in particular. Dumbrell’s argument leans heavily on his exegesis of Genesis 6:18, from which he infers that the covenant there announced is simply the confirmation of the covenant God had previously “brought into ex-

istence by the act of creation itself” (Dumbrell 1984, 43). This conclusion is based on how the Noahic covenant is introduced and its ratification described. Genesis 6:18 (cf. Gen 9:8-17) introduces the Noahic covenant using a possessive pronoun, “my covenant” (*bēriti*). For Dumbrell, “the most natural interpretation . . . is that an existing arrangement to be preserved is referred to, to which no more specific appeal is required than the denomination of it as ‘my covenant’ ” (Dumbrell 1984, 24).

However, prior to this there is not even a hint of any covenant being established—at least between God and humans. (Hugenberger [216-79] presents a compelling case for identifying a marriage covenant in Gen 2:23-24.) Explicit covenant terminology is conspicuously absent in the creation narrative. Admittedly, the absence of such covenant language does not preclude the possibility that God established a covenant in the context of creation (cf. the absence of explicit covenantal terminology in 2 Sam 7). However, unlike the Davidic covenant—for which there is ample explicit support elsewhere (e.g., 2 Sam 23:5; Ps 89:3, 28, 34; 132:12)—the corroborative evidence for an antediluvian covenant between God and creation is rather tenuous.

While some scholars have pointed to Jeremiah 33:20-26, the references here to a covenant with inanimate created things seem to allude more to dimensions of the Noahic covenant reflected in Genesis 8:22—9:13 (esp. Gen 8:22) than to an implicit “covenant with creation” in Genesis 1—3. A somewhat similar analogy in Jeremiah 31:35-37 may indeed allude to the fixed order established at creation. Significantly, however, nothing is said in this context of a divine covenant with creation. Neither here nor elsewhere is it suggested that the cycle of day and night and the other cosmic ordinances established at creation were ratified by divine covenant prior to that established with Noah.

The only explicit textual support for the existence of an antediluvian covenant is a text whose interpretation is notoriously difficult. While some Reformed theologians have pointed to Hosea 6:7 as corroborating an “Adamic covenant” of some sort, the translation (and hence, the interpretation) of the key phrase, *wēhemmā kē’ādām ‘ābērū bērit* (lit. “and they like *Adam have transgressed a covenant”), is hotly disputed. Although several translations and commentators interpret *kē’ādām* in a personal sense,

meaning “like Adam,” most interpreters emend the key word to read, *bē’ādām* (“in/at Adam”), taking the proper noun in its geographical sense—referring to the first town Israel reached after crossing into the Promised Land (Josh 3:16). Further support for this geographical understanding is found in the reference to Gilead and Shechem (Hos 6:8-9) in the same context and in the deployment of the locative *šām* (“there”) immediately after *bērīt* in Hosea 6:7. Indeed, even with no adjustments to the Masoretic Text (MT), the text may be translated in several ways that clearly militate against using it as a proof text for a hypothetical Adamic covenant, still less the “covenant with creation” postulated by Dumbrell. The significance of this must not be overlooked, for without Hosea 6:7 there is no explicit textual support for a covenant established between God and humanity prior to the flood.

Undaunted by this fact, several scholars have sought to find exegetical support for such a covenant in the Genesis creation texts themselves. J. J. Niehaus (143-59) attempts to shore up Dumbrell’s case by recourse to *form criticism. His case is undermined, however, by the rather forced and tenuous nature of some of his suggested analogies between Genesis 1:1—2:3 and a typical second-millennium suzerain-vassal treaty pattern. A better case is offered by C. G. Bartholomew (28-30), who clearly recognizes the deficiencies in the traditional defense of a covenant within the context of creation. Nevertheless, while the allusions to Genesis 1—2 that he detects in subsequent covenant texts validate the claim that these covenants are “anchored in” and “involve the fulfilling of God’s creative purposes,” this does not necessarily indicate “a covenantal understanding of creation in Genesis 1 and 2” (Bartholomew, 29). Moreover, Bartholomew’s attempt to explain the absence of key covenantal elements (e.g., an oath or covenant rite) in Genesis 1 and 2 is unconvincing; he maintains that “the normal assurance and legalizing element of covenant” is unnecessary prior to the fall (Bartholomew, 30), but this surely begs the question whether *covenant* is a necessary constitutive element at this stage either (cf. Stek).

As well as the glaring absence of corroborative evidence for his postulated creation covenant, Dumbrell’s exegesis of Genesis 6:18 may itself be challenged. Exodus 19:5 analogously

heralds the formal inauguration of the Sinaitic covenant (cf. Ex 24:8), referring to the latter (as yet, unestablished) as “my covenant.” In keeping with his earlier suggestion, Dumbrell again suggests that an element of continuity is reflected here by the pronominal suffix: “The phrase ‘my covenant’ contains the same unilateral implications as are suggested by references such as Gen. 6:18; 9:9ff, hinting thus that the Sinai revelation may in fact be further specification only of an already existing relationship” (Dumbrell 1984, 80-81). This, however, is clearly a circular argument; Dumbrell assumes that the Noahic covenant *must* be understood as an expansion of his postulated covenant with creation. Without the latter premise, Dumbrell’s conclusion with respect to the Sinaitic covenant is not immediately obvious. Indeed, it is seriously undermined by the fact that the Sinai covenant is presented as a new development in the pentateuchal narrative. Moreover, this is supported by the use of the verb *kārat* (“cut”) in Exodus 24:8, which according to Dumbrell is deployed only in the context of the initiation of a new covenant (see below).

A major factor affecting the force of this latter argument is the precise connotation of the verb *hēqīm* (“establish”) used in Genesis 6:18 and 9:9. As in Genesis 17 (in which the covenant concept reappears in the *Abraham narrative after its initial introduction in Gen 15:18), the verbs *nātan* (“give”) and *hēqīm* are used with reference to the Noahic covenant rather than the more idiomatic *kārat* (“cut”)—the verb most commonly associated with the initiation of a divine-human covenant in the OT (cf. the Abrahamic covenant, Gen 15:18; the Sinaitic covenant, Ex 24:8; the Davidic covenant, Ps 89:3; the new covenant, Jer 31:31). Dumbrell maintains that the ratification of secular covenants in the OT is likewise described using this same verb and that none of the analogous verbs used in association with a *bērīt* is strictly synonymous with *kārat*. Such verbs, he avers, are not deployed with reference to a covenant’s actual initiation (i.e., the point of entry) but are consistently used in relation to covenants that have been established formerly. From this Dumbrell concludes that it is “more than likely that in contexts where *hēqīm* *bērīt* stands (Gen. 6:18; 9:9, 11, 17; 17:7, 19, 21; Ex. 6:4; Lev. 26:9; Deut. 8:18; 2 Kgs. 23:3) the institution of a covenant is not being referred to but rather its perpetuation” (Dumbrell 1984, 26).

If, as Dumbrell insists, this verb is used exclusively for perpetuating a preexisting relationship, one must concede that Genesis 6:18 refers to an already-existing covenant.

However, a careful reading of the relevant texts amply demonstrates the fallacy of Dumbrell's premise. M. Weinfeld (260) offers a more comprehensive list of such texts and therefore provides a better basis on which to evaluate Dumbrell's assertion. In several of the texts cited by Weinfeld, the key verbs do indeed refer back to established covenants rather than to the initiation of new covenants (e.g., 2 Sam 23:5). Nevertheless, this is difficult to maintain for some texts (e.g., Num 25:12; Deut 29:12 [MT 11]; 2 Chron 15:12; Ezek 16:8; 17:13), arguably including the relevant covenantal texts in Genesis also (i.e., Gen 6:18; 9:9, 11; 17:2, 7, 19). Moreover, while the causative verb *hēqīm* may be understood as "to confirm" or "to maintain" (e.g., Lev 26:9; Deut 8:18), it has a wide range of nuances in the OT (see Williamson, 197-98). A close examination of the relevant texts demonstrates that Dumbrell's conclusion is seriously flawed. For example, as R. T. Beckwith (99 n. 23) observes, the deployment of *hēqīm* in Exodus 6:4 illustrates that this verb does not necessarily suggest the confirmation or perpetuation of a previously existing covenant. Similarly, in Jeremiah 34:18 a strong case can be made in support of a covenant being instituted and not just renewed (cf. Jer 34:10). Since the context alone must determine the meaning attached to *hēqīm* in any given text, Dumbrell is mistaken simply to infer from the use of this verb that an already existing covenant is being maintained. Rather, as Weinfeld (260) acknowledges, several verbs may be used to reflect the institution or ratification of a *bērit*, one of which is *hēqīm*. This being so, there is no compelling argument for interpreting Genesis 6:18 as alluding to the reiteration of a previously existing covenant. As a straightforward reading suggests, here the covenant concept is being introduced for the first time.

Rather than indicating that this is an already-existing covenant, the description of the Noahic covenant (like the subsequent Mosaic covenant, Ex 19:5) as "my covenant" simply underlines its *unilateral* character. God describes the covenant as "my covenant" because he initiates it and he alone determines its constituent elements. Even Dumbrell recognizes such a connotation for the pronominal suffix in both texts (i.e., Gen 6:18;

Ex 19:5), and it is quite unnecessary to extrapolate further. Thus the use of *bērit* ("my covenant") in Genesis 6 cannot be said to prove per se that the covenant spoken of in this chapter is simply a reiteration or an expansion of a covenant already recounted (implicitly) in the opening chapters of Genesis. Rather, the pronoun may simply emphasize the divine prerogative in every aspect of the covenant in view. Thus understood, Genesis 6:18 heralds the formal inauguration of the Noahic covenant set out in Genesis 8:20—9:17.

While Dumbrell's conclusion—that Genesis 1—3 must portray an antediluvian covenantal relationship—is a *non sequitur*, he is obviously correct to recognize several clear echoes of the creation narrative in the Noahic covenant. But these echoes suggest merely that God intended, through Noah, to fulfill his original creative intent; they do not necessarily presuppose the existence of a covenant between God and inanimate creation or indicate that the material in Genesis 1—2 must be understood covenantally. As R. Rendtorff concludes, "Creation can only be called a *bērit* from the point of view of its restoration after the flood" (Rendtorff, 392).

2. The Ancestral Covenants.

Since the Noahic covenant has never been abrogated (attested to by the ongoing validity of its sign—the rainbow), subsequent divine-human covenants must be viewed within the context of its all-encompassing framework. Thus, rather than superseding the covenant established between God and Noah, the ancestral covenants, despite their narrower primary focus, have the same ultimate objectives in view, as is clear from the programmatic agenda announced to Abraham in Genesis 12:1-3.

2.1. The Programmatic Agenda. Genesis 12:1-3 is clearly a pivotal text insofar as the book of Genesis is concerned. Heraldizing yet another new stage in God's dealings with humanity, it is set against the backdrop of the primeval prologue (the *Babel incident in particular) and fixes the agenda not only for the patriarchal narratives, but also for the rest of the Pentateuch and beyond. Bracketed by the narrator's comments (Gen 12:1, 4a), this divine speech announces a series of promises that are linked to Abraham's willingness to obey Yahweh's instructions. The first part of the divine speech is reasonably straightforward: God gives Abraham the

command to “Go!” and promises nationhood (“a great nation, blessing and a great name”). However, the interpretation of the latter part of the speech is complicated by the imperative form of *hyh* (“to be”) at the end of verse 2 and the use of the Niphal form of *brk* (“to bless”) at the end of verse 3.

2.1.1. The Imperative Form of the Verb hyh. While some have suggested emending vowels of the MT to read “and it [i.e., “your name,” v. 2b] shall be a blessing,” this is unnecessary; the MT may be taken either as an emphatic consequence clause—“so that you will effect blessing” (so most English versions) or as a second command, namely, “Be a blessing!” (so many recent studies). In support of the latter interpretation, a similar construction (an imperative verb string involving *hyh* + a noun) is repeated in Genesis 17:1b, where the verb undoubtedly retains its imperative force (“*be* blameless”). Further support for retaining the imperative reading can be adduced from the fact that both imperatives in Genesis 12:1-3 are directly followed by cohortatives, a construction normally expressing purpose or result. Since the first of these imperative-cohortative clauses expresses a conditional promise, it is reasonable to conclude that an identical construction in the same pericope should be similarly understood (i.e., as a second conditional promise). Thus understood, Abraham’s divine commission was twofold: “Go . . . be a blessing!”

2.1.2. The Significance of the Niphal Form of brk. Here also there are two main lines of interpretation: *nibrëkû* has generally been understood either in a passive sense (i.e., “all the families of the earth shall *be blessed* through you”) or in a reflexive sense (i.e., “by you all the families of the earth shall *bless themselves*”). This interpretative crux is compounded by the fact that two different verb forms are used in relation to this particular promise within the patriarchal narratives: the Niphal (generally passive) in Genesis 12:3; 18:18; 28:14; and the Hithpael (generally reflexive) in Genesis 22:18 and 26:4.

The antiquity of the passive interpretation in Genesis 12:3 is reflected by both the Septuagint and the NT (cf. Acts 3:25; Gal 3:8). Moreover, it can plausibly be argued that were a reflexive voice intended, this could have been communicated unambiguously through a consistent use of the primarily reflexive Hithpael. Advocates of a reflexive translation, on the other hand, con-

tend that a passive connotation could have been conveyed unambiguously by the Qal passive participle or the Pual and that the meaning of the reflexive expression (to evoke blessing upon oneself using Abraham’s name) is illustrated by several instances of this type of formula elsewhere (cf. Gen 48:20; Ruth 4:11; Zech 8:13).

However, the fact that the promises are explicitly related to the person of Abraham rather than to his name constitutes a serious problem for those who wish to interpret the verb reflexively. A further difficulty is that the context anticipates that the nations will participate in Israel’s blessing (in Gen 12:3a, what is expected to be the norm is expressed by the plural); thus merely *wishing* for such blessing would be “decidedly anti-climactic” (Dumbrell 1984, 70). Moreover, an exclusively reflexive interpretation of this text would appear to be ruled out also by the related texts in which the Niphal is employed. This is most transparent in Genesis 18:18, where a statement concerning a mere wish expressed by other nations would hardly explain Abraham’s significance. It seems unlikely, therefore, that these occurrences of the Niphal form of *brk* should be interpreted reflexively, despite the presence of the Hithpael in Genesis 22:18 and 26:4.

One plausible way to account for the latter is by giving the Niphal a “middle” sense (i.e., “win or find blessing”). This translation has the advantage of incorporating both a passive and reflexive meaning, thus explaining why the compiler of Genesis allowed both forms of the verb to stand unaltered in the final text. If a middle rather than a passive sense were intended, this would also explain why the more common Qal passive participle or Pual of *brk* was not employed. Moreover, as Dumbrell correctly points out, “Such a sense would also be more congruent with the general Old Testament position on mission, whereby the nations are consistently presented as seekers, coming in to a reconstituted Israel” (Dumbrell 1984, 71).

However, this still leaves unexplained the distribution of the two forms of *brk* in the relevant texts. Why is the Niphal used in Genesis 12:3; 18:18; and 28:14 but the Hithpael in Genesis 22:18 and 26:4? A close comparison of these texts suggests that, rather than being used synonymously, each verb form has a distinct nuance (Williamson, 227-28). Where the Niphal is deployed, a less direct situation is implied: the

one through whom the nations will acquire blessing is Abraham (or, in the case of Gen 28:14, primarily Jacob). In contrast, in contexts where the Hithpael is found, the channel of blessing is the promised “seed” through whom the anticipated blessing will be communicated directly (cf. Ps 72:17; Jer 4:2). Thus the Hithpael form of the promise may be understood as a “benefactive reflexive” (Waltke and O’Connor, §26.2e) and translated as: “in your seed all the nations of the earth will acquire blessing for themselves.” The Niphal, on the other hand, may be understood as a middle: “through you all the families of the earth may/will experience blessing.”

2.1.3. *The Twofold Agenda of Genesis 12:1-3.* As noted above, the narrator’s comments provide a structural framework for these verses. Between his comments are two sets of conditional promises related by the theme of blessing. The demarcation of these conditional promises is indicated not only by the Hebrew syntax (the repeated imperative-cohortative structure) but also by their respective emphases. In the first segment (Gen 12:1-2a) Abraham is to be the recipient of blessing, whereas in the second (Gen 12:2b-3) he is to be the mediator of blessing. Whereas the first part of the divine speech focuses exclusively on the relationship between Yahweh and Abraham, the second half introduces the relationship between Abraham and others (those whom Yahweh will bless or curse accordingly). The promissory focus in these two sections of Genesis 12:1-3 is therefore not identical, and it is important that each is clearly defined and carefully distinguished. Unfortunately, D. J. A. Clines fails to distinguish carefully between the promises relating to nationhood and those relating to international blessing. Consequently, he misleadingly collapses both dimensions into his promissory category of “divine-human relationship” (Clines, 30). While divine-human relationship is certainly the glue that binds the national and international dimensions of the promise together, it is important not to blur the distinction between the promise of a “great nation” and the promise of international blessing.

Related to the first imperative (“Go!”) is the prospect of national status, conveyed in the threefold promise of “a great nation, blessing and a great name” (Gen 12:2)—the “great nation” and the “great name” defining more pre-

cisely the nature of the anticipated “blessing.” The use of the noun *gôy* (“nation”) signifies that a geopolitical entity is in view, as is further supported by the fact that the existence of Abraham’s descendants as a *gôy* is intrinsically related to the territorial aspect of the divine promise (Gen 12:7; 17:8; 18:18). Abraham’s landless descendants constitute a people (*‘am*), but in order to be a nation (*gôy*), they must have territory of their own.

The prospect of a “great name” likewise relates to the overarching promise of nationhood. This is suggested not only by the implicit contrast with the failed aspirations of the tower-builders of Babel (Gen 11:4), whose attempts at civil organization (nationhood) had been thwarted by divine judgment, but also by the fact that this same language is used in relation to David (2 Sam 7:9) in the context of national security and international prestige.

Thus the first half of Genesis 12:1-3 relates primarily to Abraham, holding out to him the prospect of nationhood. There is, however, a subtle shift in promissory focus in the second part of this divine speech. No longer is the emphasis on a national entity that will stem from Abraham but on an international community to whom Abraham will mediate blessing. Indeed, the fact that God no longer speaks in terms of a “nation” (or “nations”), but rather of “all the families of the ground” is perhaps significant. While the term *mîšpāhâ* (“clan, extended family”) can parallel *gôy* (cf. Jer 10:25; Ezek 20:32; Nahum 3:4), its deployment in the present context may hint at the nonpolitical nature of the blessing enshrined in this universal promise. This may also be alluded to by the use of the term *’ādāmâ* (“ground”), which Yahweh had earlier cursed (Gen 3:17-19).

In any case, it is clear from Genesis 12:3a that such blessing will not come automatically to “all the families of the ground.” Rather, it is contingent upon their attitude to Abraham. As C. W. Mitchell underlines, “The promise of blessing is conditional. Only those on good terms with Abraham will acquire blessing, while those hostile to him will be the object of God’s devastating curse” (Mitchell, 30). Potential recipients of such blessing must “bless” Abraham, which, like its antonym in Genesis 12:3 (i.e., “disdain”) denotes deeds rather than mere words (see Mitchell, 126-31). How such blessing or disdain translates into action is not specified, only that one’s rela-

tionship with Abraham is what determines whether blessing or curse is experienced.

On the basis of the preceding discussion, we may conclude that Yahweh's speech in Genesis 12:1-3 anticipates two quite distinct prospects linked by a logical progression: the first section focuses on national blessing promised to Abraham; the second section focuses on international blessing promised through Abraham. While clearly distinct, these two promissory goals are nevertheless related by the fact that the blessing promised in the second part of the divine speech is in some way dependent upon the promise related in the first; that is, Abraham's role as a mediator of blessing is contingent upon his being a recipient of blessing. Moreover, its climactic position at the end of the speech indicates that "the primary motive behind the call of Abraham is God's desire to bring blessing, rather than cursing, upon the families of the earth. The promise that Abraham will become a great nation . . . must be understood as being subservient to God's principal desire to bless all the families of the earth" (Alexander 1997a, 51). Thus, while Yahweh's purposes primarily interest Abraham and the nation that will derive from him, ultimately they have a much wider concern: "all the families of the earth" who, through Abraham, will also experience blessing. This twofold agenda of Genesis 12:1-3 is clearly significant, as it prepares the reader for an otherwise anomalous feature of the ensuing narrative: the inclusion of two starkly different reports of covenants being made between God and Abraham.

2.2. The Abrahamic Covenants. Most exegetes take it as axiomatic that God's covenant with Abraham is a single entity instituted in several stages (between two and four). Scholars operating from a diachronic perspective generally consider these "stages" to be a literary construct, arising from the amalgamation of different sources or traditions allegedly underlying the final form of the Abraham narrative. Thus understood, Genesis 15 and 17 are simply variant accounts, from different periods, of what is essentially a single event. The idea of distinct stages in the establishment of the Abrahamic covenant has been introduced artificially by the subsequent redaction that took place during the compilation of the Abraham cycle. However, as well as involving several unwarranted presuppositions with respect to the literary and theologi-

cal differences between Genesis 15 and 17 (see Williamson, 81-95), such diachronic analyses fail to explain the inclusion of these two covenant pericopes in the final form of the Abraham narrative. The latter must be addressed, for—unless one uncritically assumes a somewhat piecemeal and incoherent process of final redaction—each of these chapters makes its own distinct theological contribution to the narrative as a whole.

From a synchronic perspective, those who hold to a single Abrahamic covenant typically understand its staged revelation in terms of Abraham's developing relationship with Yahweh. Opinion is divided over when the covenant is initially established (i.e., whether in Gen 12 or Gen 15), but it is agreed that subsequent chapters focusing on God's promises to Abraham simply confirm and amplify the same covenant. Thus understood, Genesis 17 is not an alternative account of the establishment of the Abrahamic covenant, but is either a renewal of the previously established covenant or the next phase of its development, in which its promissory aspects are supplemented with important, but previously undisclosed, obligatory dimensions. However, the problem with these suggestions is that they fail to explain the long time lapse between these two "stages" of covenant making or to account adequately for the significant differences between Genesis 15 and 17—both in terms of their covenantal framework and their promissory emphases.

2.2.1. The Covenant of Genesis 15. Like the Noahic covenant (cf. Gen 8:20), the establishment of the covenant in Genesis 15 is introduced by a sacrificial ritual (Gen 15:9). This strange ritual has generally been interpreted as a self-maledictory curse akin to Jeremiah 34:18, although such an interpretation has not gone unchallenged (cf. Wenham). But whatever the precise symbolism, the important point to note is that God alone (represented by the theophanic imagery of fire and smoke) passes between the dissected animals, indicating the unilateral nature of this particular covenant. The fact that there is no "sign" associated with this particular covenant is probably explained by the complete absence of human obligations. Thus, the covenant established in Genesis 15 is unilateral, more akin to the royal grant (so Weinfeld, 2.270; however, cf. Haran, 207 n. 8) than to the suzerain-vassal treaty, with obliga-

tions being undertaken by God alone.

These obligations—the promises solemnly guaranteed in Genesis 15—relate to Abraham's posterity and territory (i.e., nationhood). Significantly, there is no mention in Genesis 15 of any international dimensions or indeed of royal descendants or a perpetual divine-human relationship (cf. Gen 17). Rather, the promises relate solely to the establishment of a "great nation" (cf. Gen 12:2) in a carefully defined geographical region (Gen 15:18-21). Moreover, the chronology for the fulfillment of this covenant is stated quite explicitly (Gen 15:13-16). Nothing is revealed (at least in Gen 15) in relation to events subsequent to the establishment of nationhood. The covenant in Genesis 15 is not described as "everlasting" (cf. Gen 17:7, 13, 19), nor is the land said to be an "everlasting possession" (Gen 17:8).

2.2.2. The Covenant of Genesis 17. In contrast to the unilateral framework of Genesis 15, the "eternal" covenant of Genesis 17 is plainly bilateral. Such is clear not only from how it is introduced ("Walk before me and be blameless so that I may establish my covenant with both you and your descendants"), but also from the way it is more fully set out in the following verses ("As for me . . . As for you . . ." [Gen 17:4, 9]). The human obligations are twofold, ethical and ritual. Irreproachable behavior (Gen 17:1) is a prerequisite for the establishment of this covenant (the verbal inflections in Gen 17:2, 7 imply that this covenant had not yet been established with Abraham), and the rite of male circumcision is necessary in order "keep" the covenant and enjoy its benefits (Gen 17:9-14). Circumcision also functions as the "sign of the covenant" (Gen 17:11), a feature that seems to be in keeping with a covenant that is not just promissory in nature. Thus, unlike the earlier "covenant between the pieces," the covenant of Genesis 17 incorporates human obligations as well as those undertaken by Yahweh.

The promissory emphasis in Genesis 17 is also markedly different. Although the promises of Genesis 15 are not altogether absent (cf. Gen 17:8), the stress in Genesis 17 is on Abraham's international significance. His numerical proliferation (Gen 17:2) is elaborated chiefly in terms of his becoming "the father of multitudinous nations" (Gen 17:4-6; cf. 17:16), a prospect further encapsulated in the new name he receives at this point in the narrative. While most interpret-

ers have understood this promise of multinational fatherhood in a physical sense (i.e., Abraham will be the progenitor of nations), the fact that only the *Israelites and Edomites can actually trace their lineage to Abraham and Sarah suggests that the focus is wider than mere biological ancestry. This is further suggested by the fact that the covenant community is extended in Genesis 17 to include nonbiological members of Abraham's household. Moreover, in every other place where the inseparable preposition *lê* ("to, for") is joined to the noun *'ab* ("father") in a resultative sense (GKC §119), a nonphysical concept of fatherhood is undeniably in view (Williamson, 158-59). Hence this promise of multinational fatherhood is best interpreted in a metaphorical sense (i.e., Abraham will be their benefactor; cf. Gen 45:8). Thus understood, Abraham will be "the father of multitudinous nations" not in terms of biological ancestry but in terms of mediating divine blessing to them.

How the latter will materialize is elucidated in Genesis 17:6b-8. This covenant will be established (i.e., perpetuated) through a particular line of Abraham's descendants, who alone will inherit the blessings promised to Abraham (the promise of becoming "a great nation" through which blessing will be mediated to the nations). This special line of Abrahamic descent will begin with *Isaac (cf. Gen 17:19-21), and from it will come a royal line of "seed" (the "kings" of Gen 17:6, 16; cf. 35:11). Admittedly, it is not explicitly stated in Genesis that God will perpetuate this covenant through these royal descendants of Abraham. Nevertheless, such an inference may be drawn from the fact that the context of each of the three texts in Genesis that mention these kings is the transfer of covenant promises from one generation to the next (cf. Gen 17:7-8, 17-21; 35:12). Moreover, the association of international blessing with the ideal Davidic king in Psalm 72:17 further suggests that the patriarchal promise will ultimately be fulfilled through a royal descendant of Abraham, arguably (see Alexander 1997b) the subject in Genesis 22:17b-18 also. It would appear, therefore, that Abraham will become the "father [i.e., the spiritual benefactor] of multitudinous nations" through this royal "seed."

2.2.3. One Covenant or Two? It is clear from the above analysis that the covenants mentioned in Genesis 15 and 17 are manifestly dif-

ferent in both nature (temporal/eternal; unilateral/bilateral) and primary emphases (national/international). The suggestion that they are simply two stages of the one covenant is seriously undermined by the inexplicable gap of some thirteen years between them and by the consistent projection of the covenant in Genesis 17 into the future (lit. "I will give my covenant" [Gen 17:2]; "I will establish my covenant" [Gen 17:7]). Both these anomalies, as well as the significant differences between the two covenant chapters, suggest a more plausible synchronic explanation: these chapters focus on two distinct but related covenants (Williamson, 212-14).

Such a conclusion is further suggested by the fact that the different emphases in Genesis 15 and 17 mirror the two separate strands set out in the programmatic agenda of Genesis 12:1-3. Genesis 15 concentrates on the divine promise to make Abraham a "great nation" (Gen 12:2), whereas Genesis 17 focuses more on the divine promise that through Abraham "all the families of the ground will experience blessing" (Gen 12:3). Thus understood, two distinct covenants were established between God and Abraham. The first (established in Gen 15) solemnly guaranteed God's promise to make Abraham into a "great nation." The second covenant (anticipated in Gen 17, but not yet established) similarly guaranteed God's promise to bless the nations through Abraham and his "seed."

The fact that Genesis 17 anticipates a further covenant ratification in the Abraham narrative also explains several anomalous aspects of its climactic chapter (Gen 22), not least the rationale behind this extraordinary test of Abraham's faith. If, as suggested above, Abraham's compliance with the divine command in Genesis 17:1 was a prerequisite for the establishment of the second covenant, his submissive obedience in Genesis 22 clearly fulfills such a requirement. The covenantal significance of this incident would also account for the necessity of a sacrifice (even after Isaac's life had been spared), the timing of the second divine speech (Gen 22:15-18) and the emphasis on Abraham's obedience (Gen 22:16b, 18b; cf. 26:5). Most important, it would explain why the international aspect of the divine promise—the aspect of the programmatic agenda that had not yet been ratified by divine covenant—was reiterated at this point (Gen 22:18). Admittedly, the term *covenant* is not expressly used in the immediate context.

Nevertheless, the sacrificing of the ram and God's swearing of an oath (cf. Gen 21:22-31) indicate that this is indeed a covenant-making occasion.

Therefore, through his obedience to God's most difficult command (Gen 22:2), Abraham supremely demonstrates his irreproachable behavior and so fulfills the stated prerequisite for the establishment of this particular covenant (Gen 17:1). In so doing, Abraham typifies the kind of righteous behavior expected of his covenant heirs (Gen 18:18-19) and later demanded of his national descendants (Gen 26:5; cf. Neh 9:13).

2.3. *The Covenant Heirs.* Within the rest of the book of Genesis, as in the Abraham narrative itself, attention focuses primarily on the promise relating to Abraham's "seed." This does not lessen the significance of the other promissory aspects, but simply highlights that the promise of seed was in some sense foundational. Such an inference is clearly a logical one to draw, given that without descendants there would be no one to inherit the land, nor would there be anyone through whom blessing could be mediated to other people(s).

As noted above, Genesis 17 suggests that the patriarchal covenant(s) will be perpetuated, not with Abraham's descendants generally, but with a particular line of descendants that will commence with Isaac (Gen 17:16-21). Confirmation of this is found in Genesis 21:12 ("it is through Isaac that offspring shall be named for you"). This verse is especially interesting because of the contrast implied in the context (cf. Gen 21:13) between Abraham's biological descendants generally and a special line of descendants traced exclusively through Isaac. While both, because of their Abrahamic ancestry, will expand to national proportions, only Isaac's descendants will perpetuate the line of descent in and through which all God's covenant promises will eventually be realized.

Given Isaac's special promissory status, the introduction of *Nahor's family tree in Genesis 22:20-24 is not nearly so abrupt or unexpected as it might otherwise appear. The only obvious literary function of this short genealogy is to introduce the reader to Rebecca, through whom the special line of "seed" will be continued. It is unsurprising, therefore, that the remainder of the Abraham narrative should focus primarily on the coming together of Isaac and Rebecca as

well as Isaac's unique position as Abraham's covenant heir (Gen 25:1-11).

In the patriarchal stories that follow, the special line of Abrahamic descent is further refined. The fulfillment of the promises concerning *Ishmael is dealt with first (Gen 25:12-18), after which attention shifts to Isaac, to whom the covenant promises are confirmed (Gen 26:2-5). The nation descended from *Esau is gradually ruled out of the reckoning, and the reader's attention is skillfully directed to the family line of *Jacob. (See the words of the blessing conferred on Jacob in Gen 27:28-29; 28:3-4; in both texts, especially the latter, there are strong allusions to the promises made to Abraham. By contrast, the blessing conferred on Esau is analogous to the promises made to Ishmael; compare Gen 27:39-40 with Gen 16:12.) Jacob's role as covenant heir is confirmed in Genesis 28:13-16, in which divine promises (land, seed and international blessing) are reiterated. In the subsequent revelation at Bethel (Gen 35:9-15) the promise of royal progeny is added, further verifying that the special line of Abrahamic descent will be traced exclusively through Jacob. While the promise of international blessing is not stated explicitly in Genesis 35, a distinction is drawn between a "nation" and a "company of nations" that will come from Jacob (Gen 35:11). Admittedly, several commentators interpret the second clause as qualifying the first (i.e., "a nation, that is, a company of tribes"). Even so, it is still acknowledged that there is some allusion here to the multitudinous nations of Genesis 17. This may suggest, therefore, that like the multitudinous nations of Abraham, this company of nations will not be related to Jacob in a biological sense (see Williamson, 156-62). Thus understood, two different prospects are again anticipated: a national entity and an international community.

Before presenting the family history of Jacob (Gen 37:2—50:26), the narrative deals with the elder son to whom the covenant promises did not apply (Gen 36). The purpose of this genealogy seems to be similar to that relating to Ishmael in Genesis 25:12-18. Just as the latter alludes to the fulfillment of God's promises made in relation to (nonelect) Ishmael, so Genesis 36 alludes to the fulfillment of God's promises made in relation to (nonelect) Esau (cf. Gen 27:39-40).

The remainder of the patriarchal narrative

focuses exclusively on the family history of Jacob's sons, four of whom are singled out for special attention: *Joseph, *Reuben, *Judah and *Benjamin. Of these four, Judah is possibly the most significant, in that the Joseph story is abruptly interrupted by an episode in which Judah's "seed" occupies center stage. While the full significance of the brief liaison between Judah and his daughter-in-law *Tamar is only later disclosed (cf. Ruth 4:18-22; Mt 1:3), the striking similarities with the birth story of Jacob and Esau (Gen 25:24-26), together with the emphasis on Judah's "seed," strongly suggests a special role in the promissory agenda for Judah. Genesis 38 thus provides yet another illustration of God's providence operating in the establishment of the special line of Abrahamic descent.

While the subsequent Joseph narrative is concerned primarily with how Jacob's extended family came to settle in *Egypt, at least some attention is focused on their numerical growth (Gen 47:27; 48:4, 16), thus continuing the major focus of the patriarchal narratives on Abraham's "seed" through whom the covenant promises will eventually be realized.

3. The National Covenants.

While the Pentateuch devotes a disproportionate amount of space to the covenant(s) established between Yahweh and Abraham's national progeny, the *Israelites, it is important to realize that these national covenants do not supersede the ancestral covenants. Rather, the latter are the theological backbone supporting the national covenants and against which they must be understood.

3.1. The Sinaitic Covenant and the Patriarchal Promises. The hermeneutical key to the *exodus event and its sequel (the Sinaitic covenant) is found in Exodus 2:23-25. From this text it is clear that God's intervention on behalf of the Israelites in Egypt was prompted by the covenant promises he had made to the patriarchs. Thus the deliverance from Egypt and God's revelation at Sinai must be interpreted in the light of the programmatic agenda set out in Genesis (cf. the allusions to the patriarchal promises in Ex 3:7-8, 16-22; 6:4-6; 13:5, 11).

The book of Exodus begins by emphasizing the initial fulfillment of the promise relating to phenomenal expansion of Abraham's biological descendants (cf. Gen 15:5). The extended family that went down to Egypt (Gen 46:27) has grown

into a multitude in the interim period (Ex 1:6-10) and continues to do so despite the genocidal policy of ethnic cleansing instituted by a new regime in Egypt (cf. Ex 1:11-12, 20; 5:5). Evidently the divine promise concerning the proliferation of Abraham's physical descendants has begun to materialize.

Moreover, by the end of Genesis the first prerequisite for the inheritance of the Promised Land has been met: Abraham's descendants have become "migrants in someone else's land" (Gen 15:13a). The opening chapters of Exodus recount how the second requirement (the slavery and oppression of Abraham's descendants; cf. Gen 15:13b) unfolded when a new dynasty established itself over Egypt (cf. Ex 1:11-14; 2:23-25; 3:7-10). Moreover, as the story progresses the stage is further set for the promised deliverance of Genesis 15:14 (Ex 3:16-22; 6:2-8; 7:1-5; 11:1-3). Thus the exodus event constitutes the fulfillment of the preliminary stage of the prospect held out in the covenant of Genesis 15, the prospect of nationhood. The "great nation" promised by God to Abraham (Gen 12:2) is about to emerge onto the world stage. Indeed, this is the very purpose of the exodus event: to bring to birth the nation with whom God will establish a special relationship (Ex 6:7; cf. Gen 17:7-8).

Therefore, as B. A. Anderson correctly concludes, "In the final form of the Pentateuch (Torah), the Mosaic covenant is subordinate to the Abrahamic. In this canonical context the Abrahamic covenant, which guarantees the promise of land and posterity, is the overarching theme within which the Mosaic covenant of law is embraced" (Anderson, 137).

3.2. The Revelatory Purpose of the Covenant at Sinai. In essence, the Sinaitic covenant spells out the type of nation that Yahweh intends Israel to be. It is clear from the obligations imposed upon Israel that being in special relationship with Yahweh involves more than privilege; it entails responsibility. Israel, the patriarch's promised descendants, could continue to enjoy the divine-human relationship anticipated in Genesis 17:7-8 only by maintaining the ethical distinctiveness enshrined in God's instructions to Abraham ("Walk before me and be blameless," Gen 17:1). Like their ancestor, Israel must "keep the way of Yahweh by doing what is right and just" (Gen 18:19). Like Abraham, Israel must "obey [Yahweh's] voice and keep his requirements, commandments, statutes and laws" (Gen 26:5; cf. Ex

19:8; 24:3, 7). Having Yahweh as their God entails conformity to his *holy character (cf. Lev 19:2). Thus the primary concern of the Sinaitic covenant is on how the promised divine-human relationship between Yahweh and the "great nation" descended from Abraham (Gen 17:7-8) should be expressed and maintained.

The bilateral nature of the covenant is reflected in the conditional framework (i.e., "If you obey . . . then . . ."; NIV) of Exodus 19:5-6. For his part, God will make Israel unique among the nations: they will be his "special treasure" (*sĕgullā* implies a special value as well as a special relationship), a "priestly kingdom" and a "holy nation." As Dumbrell (1984, 87) suggests, the use of the term "nation" (*gōy*) rather than the more customary "people" (*'am*) may well indicate an allusion here to the promise of nationhood in Genesis 12:2. In any case, this text clearly indicates what kind of nation God intends Israel to be: a holy nation, set apart to God from all others. As such, Israel is clearly to function as "a light to the nations." While ultimately this is the mission of Abraham's individual "seed" (cf. Is 42:6; 49:6; 60:3), such a role is at least implicit in Israel's description here as a "priestly kingdom." The latter phrase (found only here in the OT, but cf. Is 61:6 for a similar idea) has given rise to various interpretations, but its most straightforward sense (i.e., "kingdom of priests") suggests that it is a statement of Israel's distinct status as "a servant nation." The whole nation thus inherits the responsibility, formerly conferred on Abraham, of mediating God's blessing to the nations of the earth. Such a mission is also suggested by the causal statement, "because [*kī*] all the earth is mine" (Ex 19:5). As Dumbrell maintains, "the *kī* clause functions not as the assertion of the right to choose but as the *reasons* or *goal* for choice" (Dumbrell 1988, 146). Israel's election as Yahweh's "special treasure" is not an end in itself, but a means to a much greater end. Thus understood, the goal of the Sinaitic covenant is the establishment of a special nation through whom Yahweh can make himself known to all the families of the earth.

To be such a nation, however, Israel must "keep God's covenant" (Ex 19:5) by fulfilling her obligations. The principal obligations ("words") are set out in the *Decalogue (Ex 20:1-17); the more detailed obligations are contained in the *book of the covenant (Ex 20:22-23:33). While

various attempts have been made to discern structural parallels with ancient treaty patterns, there is little consensus as to the extent and significance of the suggested parallels. It would seem, however, that these laws and instructions—like the rest of the Sinaitic obligations (i.e., as disclosed in Leviticus)—have a revelatory purpose. Just as ancient *law codes generally made a statement about the king who promulgated them, so the covenant obligations revealed at Sinai disclose something of the nature and character of Yahweh. Therefore the law makes a statement not only about Israel (as a “great nation”) but also—and more importantly—about Israel’s God. J. H. Walton (24-46) rather overstates the case by actually defining “covenant” as “God’s program of revelation.” Nevertheless, this revelatory function is a crucial element in the Sinaitic covenant and constitutes the thematic link between the two main parts of the book of Exodus: the deliverance of Israel from Egypt and the revelation of Yahweh at Sinai. Just as Yahweh revealed himself to Pharaoh and the Egyptians (as well as to Israel and the surrounding nations) through the deliverance of the exodus, so he will further reveal himself to Israel and the nations through the covenant relationship established at Sinai. Therefore, by fulfilling these covenant obligations, Israel will “reveal” Yahweh to the surrounding nations.

3.3. The Ratification of the Covenant at Sinai. The formal ratification of the Sinaitic covenant takes place in Exodus 24. Like earlier divine covenants (cf. Gen 8:20-21; 15:9-10; 22:13-14), a sacrificial ritual is involved (Ex 24:3-8). No explanation is offered with regard to the ritual described here. While there is some correspondence with later sacrificial rites (cf. Ex 29:16, 20; Lev 1:5, 11, in which blood is sprinkled upon the *altar), the rite described in Exodus 24:6 is nowhere repeated in the OT, making its precise meaning difficult to ascertain. One plausible suggestion is that the symbolism is analogous with the more primitive covenant-making ritual reflected in Genesis 15 (apparently revived in the early sixth century; cf. Jer 34:18-20). Thus understood, the splattered blood (Ex 24:6, 8) chillingly symbolizes the fate of the covenant breaker. Alternatively, the blood ritual may serve to consecrate the human agent, as in the case of priesthood (so Nicholson, 172-74), whose consecration (cf. Ex 29; Lev 8) may also be understood as part of a covenantal arrangement (so Dum-

brell 1984, 94). In any case, while the precise significance of the symbolism remains unclear, the twofold application of the blood to the altar and the people appears to underline the bilateral nature of the covenant so ratified.

Following the sacrificial ritual, the inauguration of the Sinaitic covenant apparently continues (contra Nicholson, 121-33) with another ceremony associated with the ratification of covenants elsewhere: a covenant meal (Ex 24:9-11; cf. Gen 26:26-31; 31:43-54). Admittedly, the consumption of food in the presence of God “cannot be understood as *ipso facto* the making of a covenant with God” (Nicholson, 126; cf. Ex 18:1-12). However, as Nicholson (127) acknowledges, here in Exodus 24 the context is clearly covenantal, and his *prima facie* case for rejecting the covenantal significance of this rite is not as obvious as he suggests. Although Nicholson views the meal as an alternative to the ritual described in Exodus 24:5-8, it should be understood as supplementary (cf. Gen 31:54).

The Sinaitic covenant conforms to the biblical pattern for covenants involving bilateral obligations; namely, it has a “sign”: sabbath rests (Ex 31:13-17; cf. Is 56:4; Ezek 20:12, 20). More surprising, however, is the fact that the stipulated covenant sign is only identified as such after Moses receives the instructions concerning the *tabernacle and the priesthood (Ex 25:1—31:11). This strongly suggests that the latter elements are also intrinsically related to the Mosaic covenant (cf. Ex 24:12; 31:18). The latter inference is further suggested by the fact that the primary concern of the Mosaic covenant is to maintain the unique divine-human relationship between Yahweh and Israel, and thus some means of sustaining communion between a holy God and a sinful people is essential.

3.4. The Covenantal Significance of the Tabernacle. Located in the middle of this section (Ex 19—34) dealing with the inauguration of the Mosaic covenant, the instructions to erect the tabernacle must clearly be understood in terms of the covenant itself. As Dumbrell observes, this is further indicated by the fact that both here (Ex 31) and subsequently (Ex 35) the erection of the tabernacle and the covenant sign (sabbath) are juxtaposed, lending support to his conclusion that “in some sense the building of the tabernacle and the observance of the sabbath are simply two sides of the same reality” (Dumbrell 1984, 104). Thus interpreted, the tabernacle (sig-

nifying Yahweh's kingly presence in the midst of his people; cf. Alexander 1997a, 98-109) vouchsafes Israel's enjoyment of "rest" in the Promised Land—itself a foretaste of the ultimate restoration of God's creation intention for humankind. Therefore the tabernacle not only gives expression to (and facilitates the maintenance of) the divine-human relationship that is at the center of the Mosaic covenant but also anticipates its ultimate goal.

3.5. *The Covenantal Status of the Levitical Priesthood.* Although the consecration of *Aaron and his sons as *priests (Ex 28—29; Lev 8) is not expressly related in covenantal terminology, a number of passages elsewhere apply covenantal language to the levitical priesthood (Neh 13:29; Jer 33:21-22; Mal 2:1-9). Admittedly, it is difficult to determine whether the latter passages allude to the "covenant of peace" (Num 25:12)—further defined as a "covenant of perpetual priesthood" (Num 25:13)—awarded to Phinehas for his loyalty to Yahweh or to a covenant made with the levitical priests more generally. Certainly some kind of covenantal relationship had been established with the latter prior to the incident recorded in Numbers 25, as illustrated by the description of the priestly gratuities as "a covenant of salt forever" (Num 18:19)—apparently suggesting the permanence of this arrangement (cf. 2 Chron 13:5). It is thus possible that a covenant between Yahweh and the priests had been in operation from the inception of the levitical priesthood.

In any case, these priestly covenants serve the same general purpose as the Mosaic covenant with which they are so closely related. That is, the priests are to facilitate the maintenance of the divine-human relationship between Yahweh and Abraham's descendants. Significantly, when they fail to do their part in this latter respect, they are accused by Malachi of having "corrupted the covenant of *Levi" (Mal 2:8). Thus the priestly and Mosaic covenants, while remaining distinct, run in parallel with one another and are closely related in purpose, namely, maintaining the relationship between God and Israel.

3.6. *The Breaking of the Covenant and Its "Reestablishment."* The fragility of the divine-human relationship between Yahweh and Israel (at least on Israel's part) is illustrated by the crisis of the *golden calf episode (Ex 32—33). Even as Moses is receiving the covenant stipulations, the

Israelites are breaking them—graphically depicted by Moses shattering the inscribed tablets when confronted with the people's apostasy (Ex 32:19). The seriousness of this breach of the covenant is highlighted in a number of ways: (1) the suggestion that Moses could supersede Israel as covenant heir (Ex 32:9-10); (2) the inadequacy of the executions carried out immediately by the Levites to make atonement for the people's "great sin" (Ex 32:27-32); (3) the prospect of further divine judgment (Ex 32:33-34), which materializes (at least in part) when the people are struck with plague (Ex 32:35); and (4) Yahweh's refusal to accompany the Israelites any longer (Ex 33:3). It is thus clear that Israel deserves to forfeit their privileged status as the people of God.

God, however, desists from annihilating the Israelites when Moses appeals to the promise of nationhood, that which was unconditionally guaranteed in Genesis 15 (Ex 32:7-14). Moreover, an allusion to the wider purposes of God elicits Yahweh's promise to accompany his people after all (Ex 33:12-17). It is clear, however, that this change of heart is due solely to Yahweh's own gracious character (Ex 33:19; cf. 33:3, 5; 34:9), and it is on this basis that the covenant is "reestablished" or brought to completion with the reinscription of the Decalogue (Ex 34).

3.7. *The Covenant at Moab.* If covenant is a key theological concept in the Pentateuch as a whole, this is especially so in the book of Deuteronomy. To some extent this is reflected in the book's formal structure, as suggested by the structural parallels (however inexact) drawn by various scholars between Deuteronomy and ancient Near Eastern suzerain-vassal treaties. However, this is equally clear from the book's content and vocabulary. The Hebrew term *bērīt* occurs some twenty-seven times in Deuteronomy—more than any other book in the OT except Genesis (twenty-seven times) and Chronicles (thirty times). Moreover, the book is essentially an invitation to the next generation to renew the covenant that Yahweh formerly established at Sinai: the new generation has to obligate themselves to the Mosaic covenant before taking possession of the Promised Land.

3.7.1. *The Relationship Between the Covenants at Sinai and Moab.* Although in one sense Deuteronomy records a remaking of the Mosaic covenant with a new generation, there are some significant differences in emphasis, which may

suggest that this covenant qualifies the conditional nature of Israel's unique relationship with Yahweh—especially in relation to its future tenure in the Promised Land. Yahweh earlier guaranteed the staged removal of the Canaanites (Ex 23:30; 34:11). He also indicated that Israel would likewise be expelled if the people failed to meet their covenant obligations (Lev 18:24-30). This is reiterated even more emphatically in Deuteronomy (cf. Deut 4:25-26; 8:18-20; 28:21-24, 63; 29:21-28; 30:17-18).

Given the book's negative prognosis, it is clear that such *exile from the land is anticipated in Deuteronomy as inevitable. As J. G. McConville (133-35) observes, Israel's inability to be a faithful covenant partner is highlighted in various ways. (1) The prominent position of Israel's failure in the past (Deut 1:26-46) at least hints at such a recurring phenomenon. (2) Calling attention to Israel's unimpressive track record (Deut 9—10) before the long series of laws that they are required to keep further hints at the likelihood of future failure. (3) Finally, the inevitability of such future failure is reflected in the way that both Moses' third address (Deut 29:22-28) and song (Deut 32:15-25; cf. 31:16-22) assume that the people will indeed fail to fulfill the covenant requirements and so will experience the covenant curses. Indeed, rather than alternative possibilities, in Deuteronomy 30:1 the blessings and curses are presented as successive realities in Israel's life. Thus "the alternatives placed before the people both at 11:26-32 and in ch. 28 seem to be mocked by a theology that claims Israel is constitutionally incapable of choosing the way of life" (McConville, 134).

Fortunately, however, the book does not end on such a negative note. While Israel's incorrigibility makes exile inevitable, even exile to the most remote parts of the earth (Deut 30:4) will not thwart God's ultimate purpose; rather, the promises made to Abraham will find further fulfillment (Deut 30:5); the divine-human relationship will be sustained by an inner change (Deut 30:6).

Thus the covenant in Deuteronomy is not simply a remaking of the Sinaitic covenant with a new generation. It is a reaffirmation of obligations laid out in the covenant of circumcision (Gen 17; cf. Deut 30:6-10) for all future generations (Deut 29:14-15) and an anticipation of the "new covenant" that will guarantee that a divine-human relationship between Yahweh and Abra-

ham's "seed" will be maintained forever (cf. Jer 31:31-34) by facilitating the important ethical obligations.

3.7.2. *The Terms of the Covenant in Deuteronomy.* The terms of the national covenant ratified at Moab are stated most succinctly in Deuteronomy 26:16-19. While this passage does not use the term *covenant*, the concept is clearly implicit. Indeed, the unusual causative form of the verb (these are the sole OT occurrences [two times] of the Hiphil of *'amar*) possibly reflects covenant or treaty vocabulary.

There is some uncertainty over the best way to translate the opening clauses in both verse 17 and verse 18 (cf. NRSV and NIV). While the Hiphil (causative) form of the verb would suggest, "you have caused the Lord to say that . . .," it may be better to understand it here in the sense of accepting or consenting to what someone says; thus, "you have agreed to Yahweh's declaration that . . ." Whatever translation is adopted, it is clear that each declaration incorporates obligations undertaken by both parties to the covenant. There may even be some symmetry in the twin declarations (so Mayes, 339). Thus understood, Deuteronomy 26:17 refers to one obligation undertaken by Yahweh (that he will be Israel's God) and three obligations undertaken by Israel (that they will walk in Yahweh's ways; keep his statutes, commandments and ordinances; and obey his voice). Deuteronomy 26:18-19, on the other hand, refers to one obligation undertaken by Israel (that they will keep Yahweh's commandments) and three obligations undertaken by Yahweh (that Israel will be his special possession, that he will set her above the nations and that she will be his holy people).

When, precisely, this reciprocal commitment was formally ratified between Yahweh and the Israelites addressed at Moab is not spelled out in Deuteronomy. There are several allusions to the fact (cf. Deut 27:9; 29:1, 10-15), but the ratification ceremony is nowhere actually described. Thus the reference to "this day" in Deuteronomy 26:16 (also "today" in Deut 26:17, 18) is somewhat enigmatic. The most straightforward explanation is that, by the very act of assembling and listening to the covenant stipulations through Moses—the mediator of the covenant—the present generation of Israelites was identifying itself with the commitment that had formerly been made at Sinai and thus was tacitly giving its consent to the terms of the covenant. It

is possible, however, that the record in Deuteronomy is quite selective; that is, an actual ceremony took place at the conclusion of Moses' speech, something that the compiler or the final editor has simply taken as read. In any case, however we understand the allusion to covenant ratification here, it is clear that by means of the reciprocal agreement drawn up between Yahweh and the Israelites on the plains of Moab, the special status of Israel in the purpose of God was confirmed (cf. Deut 29:13).

Again, it is important to remember that Israel's special status as the people of God is not an end in itself but rather a means to an end, namely, the fulfillment of God's universal purpose. By shaping her national life by the laws and institutions of the Mosaic covenant, Israel bears eloquent testimony to the nations surrounding her (cf. Deut 4:6-8; 28:9-10). Thus the "fame, praise and glory" (Deut 26:19), whether heaped upon Israel in the first instance or not (cf. the REB translation: "to bring him praise and fame and glory"), ultimately belong to Yahweh himself (cf. Jer 13:11; 33:9).

The essential obligation to which Yahweh commits himself is to be Israel's God. Such an obligation was not new. Rather, this was something promised as far back as the patriarchal era (cf. Gen 17:8). Indeed, it is this prospect, and all that it entails (Deut 26:18-19; cf. Ex 19:5-6), that serves to tie the Abrahamic and Mosaic covenants together (Deut 29:12-13).

Yahweh's commitment to be Israel's God evidently assumes the fulfillment of the promise of nationhood (i.e., the fulfillment of the promises concerning both descendants and land). While the former has seen at least a preliminary fulfillment (Deut 1:10-11; 10:22; 26:5; cf. 6:3; 13:17), the promise of land remains unfulfilled. Accordingly, Yahweh's fulfillment of the territorial promise is one of the major emphases in Deuteronomy. In fact, with some justification J. G. Millar claims that "in Deuteronomy, to speak of the fulfillment of promise is, in essence, to speak of the land" (Millar, 55). While this is something of an overstatement, one should note the number of references linking the occupation of the land to the fulfillment of the patriarchal promise (cf. Deut 1:20-21, 25, 35; 3:18, 20; 4:1, 40; 6:1, 10, 18; 7:1, 8, 12; 8:1, 18; 9:5; 10:11; 11:9, 21; 12:1; 19:8; 26:3, 15; 27:3; 30:20; 31:7, 21, 23; 34:4). Significantly, the boundaries delimited in Deuteronomy 1:7-8 are substantially those of Genesis

15:18-21. Thus Deuteronomy anticipates the imminent fulfillment of the covenant that God established with Abraham in Genesis 15, a covenant guaranteeing the first aspect of God's programmatic agenda: nationhood (Gen 12:2).

Israel, for its part, commits itself to do everything that Yahweh desires: essentially, by keeping Yahweh's commandments (i.e., the statutes and the ordinances as delineated in Deut 5—26). As T. D. Alexander underlines, the obligations to which Israel commits itself are essentially an expression of love and loyalty (1997a, 162-73). Love is never mere sentiment or feeling in Deuteronomy; rather, love expresses itself in obedience (cf. Deut 5:10; 7:9; 10:12-13; 11:1, 13, 22; 19:9; 30:16.). By contrast, disobedience is indicative of a lack of love (Deut 13:3). Not surprisingly, therefore, "the central core of Deuteronomy consists of a long list of obligations which the Israelites were expected to keep" (Alexander 1997a, 167).

As Yahweh demands exclusive allegiance, this love must be expressed also in absolute loyalty. The Israelites must love only Yahweh, which explains the strong emphasis in Deuteronomy against any idolatrous behavior (cf. Deut 4:15-16; 5:7; 6:14; 7:4, 16; 8:19; 11:16, 28; 13:2, 6, 13; 17:3; 28:14, 36, 64; 29:18; 30:17-18). Complete loyalty is essential for the covenant relationship between Yahweh and Israel to be maintained. Israel's continued tenure in the Promised Land depends on it, for this is Israel's *raison d'être* as the people of God.

The ensuing biblical narrative (Joshua—Kings) traces the fulfillment of God's covenant promises in the establishment of the Israelite nation and the royal line through whom God's universal purpose would be realized, as well as the abject failure of both the people and their kings to fulfill their covenant obligations. Despite repeated warnings from the prophets, both kings and people persisted in their suicidal behavior, eventually bringing down upon themselves the covenant curses so graphically depicted in Deuteronomy. Thus an important chapter of covenant history was concluded with Israel's exile into Babylon. However, as is emphasized in the prophetic oracles of hope, this history was "to be continued." The ancient covenant promises would yet be fulfilled, for God would establish a "new covenant" with his people through which his universal purpose would ultimately be realized. For the establishment of

this new covenant, we must look to the NT, where it finds its fulfillment in Jesus Christ, the royal “seed” of Abraham through whom all the families of the earth are blessed.

CREATION

Comparisons between the biblical and ancient Near Eastern views of creation can be made on several different levels. First, one could compare individual features such as creation by spoken word or the materials used to create people. Second, one might examine the conceptual worldview concerning the cosmos and its origins. Third, comparisons could be made regarding the nature of the literary preservation of creation traditions and the relationships between those traditions. After summarizing the source material available, the following article will attempt comparison on each of these three levels between the cultures of Egypt, Mesopotamia and Israel. While it must be recognized that none of these three cultures is represented by a monolithic creation tradition, one can attempt to identify elements that were or were not present in

the traditions available from each culture without implying that such elements were acknowledged or affirmed throughout the culture. The importance for students of the Bible of engaging in such comparative study is that it provides the basis for understanding the cultural background of the Israelites. The theological message of the Bible was communicated to people who lived in the ancient Near Eastern world. If we desire to understand the theological message of the text, we will benefit by positioning it within the worldview of the ancient world rather than simply applying our own cultural perspectives.

1. Sources
2. Individual Features
3. Conceptual Worldview of the Cosmos
4. Literary Features

1. Sources.

1.1. Creation Reports. A number of documents from the ancient Near East contain extensive treatments of creation. It is questionable whether any of them can be labeled as creation accounts, since the ancient thinkers did not typically think of creation as an end in itself. Instead, these reports are often embedded in other types of literature.

1.1.1. Egypt. Principal cosmogonic texts relate to three important cult centers and their gods: at Memphis (Ptah), Heliopolis (Atum) and Hermopolis (Amun). The latter two are preserved in texts such as the Papyrus Leiden I 350 (Hermopolis, thirteenth century, *COS* 1.16:23-26) and in a number of places in the Pyramid Texts (mid-third millennium, cf. *COS* 1.4:7-8), the Coffin Texts (late third millennium, cf. Heliopolis version in spells 75-81, *COS* 1.5:8-14) and the Book of the Dead (second millennium). The first is represented in the Memphite Theology. The single known copy (on the Shabaka stone, *COS* 1.15:21-23) dates to about 700 B.C., though the original is usually dated to the thirteenth century (with some still favoring an Old Kingdom date).

1.1.2. Mesopotamia. Though the Atrahasis Epic (seventeenth century) contains an account of the creation of humanity (*COS* 1.30:451), *Enuma Elish*, sometimes referred to as the Babylonian Epic of Creation (twelfth century at the latest, *COS* 1.111:390-402), remains the principal text from Mesopotamia regarding the cosmological aspects of creation.

1.1.3. Other. Creation traditions are preserved in the Hittite Kumarbi Cycle and perhaps even in the Ugaritic Baal Cycle, but space limitations will not allow inclusion of these in the discussion.

1.2. Allusions to Creation. Old Testament passages from Job, Psalms and Proverbs refer to in passing, or even take as a theme, the subject of creation. Such allusions also occur throughout the literatures of Egypt, Mesopotamia and Canaan. Whether dealing with cosmology or cosmogony, they can at times offer small bits of data that can contribute to the larger picture.

1.2.1. Egypt. Allusions to cosmology and thus, at least indirectly, to creation are frequent in Egypt in the many inscriptions and paintings that are found on the walls of pyramids, coffins and temples. Allusions also occur in wisdom pieces such as the Instruction of Merikare (*COS* 1.35:65-66). Cosmological depictions such as that found on the Cenotaph of Seti I (thirteenth century, *COS* 1.1:5-6) can also be instructive.

1.2.2. Mesopotamia. Numerous Sumerian texts contain cosmogonic or cosmological statements. Myths make statements in passing, and rituals at times contain mythological sections that are cosmogonic. Even genealogical lists of the gods are thought to give hints to the extent that cosmogony can be inferred from theogony. Narrative texts from Nippur place Enlil in a prominent role, while texts from Eridu favor Enki. Prominent also are the disputation texts (e.g., Tree and Reed), which often have cosmogonic introductions. Akkadian cosmological information is also found in incantation texts as well as in introductions to dedicatory inscriptions.

2. Individual Features.

2.1. Chaotic Beginning. Ancient traditions do not typically begin with nothing. Instead, they start with a condition devoid of order, function or purpose. Creation then takes place by giving things order, function and purpose, which is synonymous with giving them existence. In Egypt, "on the first occasion" the god Amun is by himself, the first of the gods (Hermopolis, Papyrus Leiden I 350 80.13; 100.2). Despite the fact that Amun is said to exist before everything, he emerged from the waters. Egypt starts with the "nonexistent," which describes a state where everything is still a unified whole. Creation takes place through diversification. "Nonexistence" is made up of water and darkness, and in it nothing

ing is named or distinct (Hornung, 176-77). In *Enuma Elish* the emphasis is on the absence of names and gods and the lack of differentiation. In neither of these cases is the chaos element virulent, aggressive, combative or evil. In Genesis 1:2 the description used is *tōhū wābōhū* ("formless and empty"). With a moment of thought it becomes obvious that this expression does not concern matter. No one suggests that this verse indicates that matter had not been shaped or that the cosmos described here is empty of matter. By logic alone the words can be seen to concern functionality, and analysis of the Hebrew confirms the conclusion that these terms indicate that the cosmos was empty of purpose, meaning and function, a place that had no order or intelligibility. Tsumura concludes that *tōhū* "seems to refer to a situation which lacks something abstract that should be there, such as worth, purpose, truth, profit and integrity" (Tsumura, 31).

2.2. Primal condition. Ancient sources are unanimous that the primal chaotic condition included two characteristics: water and darkness. Egyptian creation texts feature the first hillock emerging from the primeval waters (Allen 10, 14) and generally portray Nun as representing unbounded primeval waters in every direction: "On the day that Atum developed out of the Flood, out of the Waters, out of the Darkness, out of the Chaos" (Coffin Texts 76.27-29; Allen, 18). "In the Egyptian view, all that now exists began as a unity, a primordial Monad—Atum—floating in the dark, lifeless infinity of pre-creation. Atum describes this pre-creation state as 'when I was alone with the waters'" (Coffin Texts 80.47; Allen, 24). "In this primordial universe, the Monad exists in a lifeless state, 'in inertness,' with the life-forms that are to develop from it in a similar state of inertness. . . . Creation is the enlivening of this inert potentiality" (Allen, 24). Sumerian texts describe lack of functions, undifferentiated heaven and earth, darkness and water (Clifford, 28). *Enuma Elish* begins with Apsu and Tiamat, together representing the primeval waters.

In Israel, the precreation condition also is characterized by darkness on the face of the deep. In addition, the text describes the "spirit of God hovering over the waters." There has long been discussion concerning whether the text speaks of a supernatural wind or the spirit of God. To some extent, it could be said that this

problem exists because Hebrew uses the same word (*rûah*) for the meteorological phenomena (wind) and for the metaphysical entity (spirit). Technically, however, it is not that Hebrew uses the same word for both a spirit and a wind but rather that *rûah* is sufficiently broad to cover the whole category from spirit to wind. We cannot ask whether the author intended "spirit" or "wind"—the author intended *rûah*. Westermann, representing those who translate "wind," has pointed out that the three phrases of Genesis 1:2 should all be considered descriptions of the chaotic state. This would be supported by the close parallelism of the second and third clauses.

On the other hand, it is rightly pointed out that all of the other OT uses of *rûah* *ʾēlōhīm* are most naturally translated "spirit of God" rather than "supernatural wind." The motif of the wind in chaos scenes is well-recognized both in the ancient Near East and in the Bible. In *Enuma Elish*, the sky god Anu creates the four winds that stir up the deep and its goddess, Tiamat (1.105-110). There it is a disruptive wind bringing unrest (*COS* 1.111.392). The same phenomena can be seen in Daniel's vision of the four beasts, where "the four winds of heaven were churning up the great sea" (Dan 7:2), a situation that disturbs the beasts there. The motif of the wind used as an instrument of God to master the waters can be found in the exodus narrative (Ex 14:21; 15:8). In these cases the wind is closely connected with deity and can be seen as something that is disturbing the pattern by creating chaos in the realm of chaos. Thus *rûah* *ʾēlōhīm* can retain a provocative ambivalence in meaning. It can at the same time be a wind of supernatural proportion and character that contributes to the chaotic landscape as well as a representative of the power of God that embodies the potential that is about to be realized.

This would share some similarity with the Egyptian concept of "nonexistence" (not yet differentiated or assigned function), which carries with it the idea of potentiality and a quality of being absolute. The difference is that in Egyptian thought the potentiality was inherent in the primal waters, whereas in Genesis the potentiality is provided by God from outside. Here the *rûah* may be seen as disrupting the power of chaos by bringing chaos into the realm of chaos. No citizen of the ancient Near East would miss the reference to the chaos motif, and no Israelite would fail to understand the potential for ac-

tion inherent in the divine spirit. An additional close study of the Israelite conception of the Spirit of the Lord and the meaning of the word translated “hover” leads us to summarize the Genesis description of the primal condition in the following paraphrase: “The earth was non-functional; chaos reigned in primordial, watery darkness, and a supernatural wind that was endowed with the power of God circulated about the surface of the waters.”

2.3. Sea. In Babylonian, Canaanite and Egyptian literature, the sea represents an element of chaos. The Mesopotamian sea is personified in the Akkadian deity Tiamat (though the god determinative is not used with her name in the theogony of *Enuma Elish*). The Egyptian chaos-ocean is personified in Nun, who has neither cult nor temple, and the Canaanite sea is personified in Yam, the enemy of Baal. In the creation account in Genesis, the sea (*tēhôm*) is a primordial element but is neither deified nor personified. The *tēhôm* represents chaos only as disorder, not as a threatening, combative enemy (as Tiamat becomes in *Enuma Elish*), nor as the source from which creation emerges, as in Egypt.

2.4. Light. Light as providing a remedy to the darkness occurs in Papyrus Leiden I 350 90.16: “Light was his development on the first occasion” (Allen, 51). In the Sumerian Praise of the Pickaxe, the separation of heaven and earth is followed by making light shine in the cosmos (Clifford, 31). In Genesis, the light also relieves the darkness, but it serves its purpose in the context of time, which is seen as the alternation between periods of light and periods of darkness.

2.5. Creation by Speech. This element is missing altogether from Mesopotamian traditions but has often been identified as an important factor in Egyptian understanding. It is particularly evident in the Memphite Theology. More recent studies have observed that while the Memphite Theology gives close attention to divine speech in creation, it goes well beyond the concept of fiat to something more like the *logos* idea of John 1 (Allen, 46). The divine word is almost magical in Egyptian thinking as it activates something that is already inherent in the precreation unity-of-all. In contrast, the creative spoken word of God in Genesis is not just activating a potentiality. It is an act of “making into” rather than of “bringing out of.”

2.6. Naming. Generally in the ancient world

the assignment of functions is connected to the giving of names. Egyptian literature identified the creator god as the one who pronounced the name of everything (Memphite Theology, line 55). In this way of thinking, things did not exist unless they were named. “It was believed that the name of a living being or an object was not just a simple or practical designation to facilitate the exchange of ideas between persons but that it was the very essence of what was defined, and that the actual pronouncing of a name was to create what was spoken” (Plumley, 38). Likewise, *Enuma Elish* begins with the heavens and the earth not yet named and when the gods had not yet been given names. Then Lahmu and Lahamu emerge, and their names are pronounced (*COS* 1.111:391). In Genesis, God initiates the creative act with a spoken word and finalizes the act with the giving of a name. In this way the members of creation are brought into functional existence.

2.7. Separation of Waters. Egyptians thought of the universe as a limitless ocean (Nun) above the sky paralleled by waters under the earth (Allen, 4). These had been separated when the god of the air, Shu, came into being as the space between them. In one of the most familiar scenes of *Enuma Elish*, the victorious Marduk splits the corpse of the vanquished Tiamat, dividing her waters in half (above and below; 4.135-138). Israel had no need to divide a god or to interject a god but saw the waters as simply divided by an act of God. Nonetheless, it should be noticed that even as Genesis distances itself from the theology, it confirms the ancient perspective of the cosmology by retaining the view of waters above and below.

2.8. Firmament. Egyptian texts have the concept of a vault that prevents the waters from flooding the earth. This vault is less solid than in the Mesopotamian view (Allen, 4-5). If it is not the sky god Shu who is portrayed as holding up the sky, staves that resemble tent poles are depicted (Hoffmeier, 7). In Mesopotamia, *Enuma Elish* 4.139 reports a “skin/hide” (Akk. *masku*) that is established to hold back the waters of Tiamat, who has just been divided to be set up as the waters above and below. We also learn from Babylonian texts that they believed in three levels of heaven. Each one had a different type of stone for its pavement (Horowitz, 4-11), though these pavements were not understood as holding back the primal waters. In the Bible this

pavement concept is represented in Exodus 24:10, where the elders have a vision of God in which he is walking on a sapphire (= lapis lazuli) pavement. The Babylonian texts say the middle heavens are paved with *saggilmud*-stone, which has the appearance of lapis lazuli. This was believed to give the sky its blue color. The lower heavens are said to have a platform of jasper, usually associated with a glassy, translucent or opaque appearance. This is paralleled in Ezekiel's vision in which the platform of the mobile chariot-throne is identified as being of the same quality (Ezek 1:22).

The platform in Ezekiel is called a *rāqia'*, the same word used in Genesis 1:6-8 (NIV: "expanse"). Despite the NIV's attempt to mitigate the meaning of this word in Genesis 1 through an ambiguous translation such as "expanse" and the attempt of others to make it scientifically precise through the translation "atmosphere," Seely has amply demonstrated that, structurally speaking, the *rāqia'* was perceived by the Israelite audience, as by nearly everyone else until modern times, as a solid dome (Seely 1991, 1992). This conclusion is not based on false etymologizing that extrapolates the meaning of the noun from its verbal forms (which have to do with beating something out) but on the comparison of the lexical data from OT usage of the noun with the cultural context of the ancient Near East. In Genesis 1:17 the heavenly bodies are set in the *rāqia'*. In Mesopotamian understanding, the stars were engraved on the jasper surface of the heavens, and the entire surface moved. In astronomical texts (Mul-Apin series) the thirty-six principal stars were divided into three segments known as the paths of Anu, Enlil and Ea. These fixed stellar paths occupied the northern, southern and equatorial bands of the sky (Horowitz, 170). In the omen series known as *Enuma Anu Enlil*, the gods Anu, Enlil and Ea established the positions, locations and paths of the stars (Horowitz, 146-47). In *Enuma Elish* Marduk sets up the stations of the stars (Horowitz, 114-15). Thus the idea of setting the heavenly bodies in a solid background is the common perception. Additionally, it must be observed that since the Israelites located the realm of both the birds and the stars in relation to the *rāqia'*, there is no scientifically identifiable structure with which the *rāqia'* can be identified. The text is using ancient conventional thinking about structure to communicate other, more im-

portant issues. Nevertheless, it is not accurate to say there is no such thing as a *rāqia'*—there is a *rāqia'*, and it is blue. But it is an observed reality with a function connected to it, not a structural reality.

2.9. Seasons/Calendar. A Sumerian-Akkadian bilingual astrological treatise provides the most detailed description of the creation of the heavenly bodies and their functions. The decrees are set up for the heavens, and the celestial bodies are brought forth for determination of days, months, omens and calendar (Clifford, 67-68). The Hebrew word used for "sign" has a cognate in Akkadian that is used for omens. The Hebrew word, however, has a more neutral sense, and again the author has emptied the elements of the cosmos of their more personal traits. Signs function theologically in the OT as indicators used by God to convey knowledge and through which he reveals himself. They can be used for warning, motivation and authentication. Eclipses would be one of the examples of the heavenly bodies being used for signs. This is not a mechanical function, but a theological one.

The second function in Genesis indicates that the celestial bodies serve for identifying *mō'ādīm*, which NIV, along with many others, translates "seasons." Vogels has demonstrated, however, that throughout the Pentateuch as well as in most other contexts, the *mō'ādīm* are not seasons such as summer and winter but the festivals and religious feast days of the liturgical calendar (Vogels, 163-66). Again, this is not a mechanical function but a socioreligious one. The third and last function in the list indicates that the celestial bodies are "for days and years." This is one function, not two, because the preposition is not repeated. The positions of the sun, moon and stars served as the foundation for calendrical calculations in the ancient world. The idea is not that they simply marked the passage of time but that the calendar was established through celestial observations. The cycle of the moon was used to establish when months began and ended. The stars were used to help calculate the solar year and make periodic adjustments to the calendar to synchronize the lunar calendar with the solar calendar. This was essential because a strictly lunar calendar would eventually skew the agricultural seasons. The functional approach to the celestial bodies is therefore mirrored both in biblical and in Mesopotamian literature.

2.10. Sea Creatures. In the Instruction of Merikare 134-135, monsters of the waters are subdued prior to making heavens and earth. In *Enuma Elish*, Tiamat fashions eleven monsters to wreak havoc among the gods (1.133-146). Besides these ominous foes, Marduk must take on the ultimate sea monster, Tiamat. A cylinder seal that is thought to represent a scene from the Babylonian Epic of Creation may depict Tiamat in sea-serpent form (Collon, 180, no. 850). In the Bible the word translated “sea creatures” in Genesis 1:21 (*tannin*) is used in parallel to names of chaos monsters such as Rahab and Leviathan (Ps 74:13; Is 27:1; 51:9). Even if it is taken in Genesis 1 as having mythological overtones, there is no hint of aggression or combat that would associate the Genesis account with its mythological cousins. In fact, the *tannin* is simply another of the creatures that God created (note the use of *bārāʾ*). Hasel saw this as an inescapable indication that the author of Genesis was devising a conscious polemic against the mythological background of the day.

2.11. Animals. In an Akkadian disputation text Two Insects, the classes of animals are created by the gods. They are categorized by size (large and small) and as wild or domesticated (Clifford, 65). Otherwise animals do not figure prominently in the extant creation narratives.

2.12. Dust/Clay. Khnum forms people out of clay on the potter’s wheel (Pyramid Texts 445, 522). In the Sumerian Enki and Ninmah (*COS* 1.159:516-19), people are formed out of clay. In the Atrahasis Epic clay is mixed with the blood of the slain leader of the rebel gods. This concoction is believed to approximate the appearance of the placenta, which Babylonians would have considered the leftover raw materials after a baby was made in the womb (Kilmer, 211-13). The Hebrew word *ʾāpār* is most frequently used to refer to that which is of a loose, granular consistency, thus “dust” or “soil.” Hebrew has other words for clay or mud, and *ʾāpār* occasionally overlaps with them (Job 10:9). Even when it refers to plaster or mortar, it is most likely referring to the dry, powdery form that it takes on after it sets (Lev 14:41-45). In Genesis 2 the significance of dust is not that it represents the raw materials found in the womb or because of any usefulness it has for sculpting but because it is what people return to when they die. This connection with the soil is even represented lexically in that humankind (*ʾādām*) returns to the

ground (*ʾādāmā*, Gen 3:19).

2.13. Breath of Life. The most extensive statement regarding the nature of humankind is found in the Akkadian Atrahasis Epic. Deities Enki and Nintu mix pure clay with the blood and flesh of the slain deity but also include the spirit of the slain god in the final product. Egyptian texts, however, come much closer to the mark. The Coffin Texts’ deity claims, “My life is in their nostrils, I guide their breath into their throats” (Coffin Texts 2.43). In the Instruction of Merikare, the god Re “made the breath of life for their nostrils.” The next line in Merikare associates this with humans being in the divine image. As a result, the breathing into Adam of the breath of life may be the text’s description of the mechanism by which people were created in God’s image, though animals also have the breath of life. The term translated “breath” is used in the OT a total of twenty-four times, though the combination with life is not found elsewhere. Usually the term refers to all those who breathe. The usage makes it clear that all people have the breath of life, so God breathes it into every person who is born. It was not just a one-time thing with Adam. The point that people have been animated by the divine breath finds some parallel in the way that images of the deity in the ancient world were believed to be animated by the deity. This concept is represented in the “opening of the mouth” ritual that was performed on the newly carved idol to give it vitality (Dick).

2.14. Image of God. In the Memphite Theology all of creation is in the image of the creator (Allen, 45). In the ancient world an image was believed in some ways to carry the essence of that which it represented. An idol image of deity would be used in the worship of that deity because it contained the essence of the deity. This would not suggest that the image could do what the deity could do nor that it looked the same as the deity (even though the idol was a physical object). Rather, the deity’s work was thought to be accomplished through the idol. Generally, Egyptian usage refers to the king as being in the image of deity, not as a physical likeness but related to power and prerogative. In Mesopotamia one significance of the image can be seen in the practice of kings setting up images of themselves in places where they wanted to establish their authority. Other than that, it is only other gods who were made in the image of gods. So Meso-

potamian traditions speak of sons being in the image of their fathers (*Enuma Elish* 1.15-16) but not of humans created in the *image of God. The Hebrew word *selem* is a representative in physical form, not a representation of the physical appearance. The image is a physical manifestation of divine (or royal) essence that bears the function of that which it represents; this gives the image-bearer the capacity to reflect the attributes and act on behalf of the one represented.

2.15. Rest. In the ancient Near East one of the major objectives of the gods as they become involved in creative activity is to create a resting place for themselves. Whether this is a rest achieved when the monstrous forces of chaos are defeated or when a sanctuary is completed, the gods constantly seek the repose that comes from achieving equilibrium in the world. In *Enuma Elish* the absence of rest leads to the confrontation between the gods. So Apsu complains to Tiamat concerning the disruptive behavior of the lower gods (1:35-40). Having successfully defeated Tiamat, Marduk reorganizes the gods and the cosmos under his control and concludes by building Babylon, the sacred city. He names the shrine "Chamber That Shall Be Our Stopping Place" and anticipates finding rest there (6:51-58). In the ancient Near East, as in the Bible, temples are for divine "rest," and divine rest is found in sanctuaries or sacred space. Just as Baal is portrayed as building a palace for himself to find rest in, so God is creating a resting place for himself both in the cosmos in Genesis as well as in the temple (Ps 132:13-14; cf. Levenson, 288). Consequently, the functional cosmos in Genesis is not set up with only people in mind. The cosmos is also intended to carry out a function related to God. On the seventh day we finally discover that God has been working to achieve a rest. This seventh day is not a theological appendix to the creation account, just to bring closure now that the main event of creating people has been reported. Rather, it intimates the purpose of creation and of the cosmos. God does not set up the cosmos so that only people will have a place. He also sets up the cosmos to serve as his temple in which he will find rest in the order and equilibrium that he has established.

3. Conceptual Worldview of the Cosmos.

The preceding survey of individual characteris-

tics demonstrates that the creation account in Genesis parallels the framework of creation accounts in the ancient world, even while differing from them literarily. At the same time, Israel's account often distances itself theologically even while using similar constructs. Hasel, seeking to reveal the polemical nature of the Genesis account, speaks of the biblical narrative not as reflecting the contemporary worldview but of overcoming it (Hasel, 88). There are admittedly many points in the narrative where such an anti-mythical, polemical perspective can be plausibly supported. In the process, however, the numerous points of worldview continuity should not be ignored or neglected. The following analysis of worldview elements will demonstrate that even given a degree of polemic, the Israelites still thought about creation in terms much more similar to the ancient world than to our own post-Enlightenment perspective. Their departure from the traditional ancient worldview was theological, not cosmological.

3.1. Order out of Chaos. Nowhere in the ancient Near East did people think of creation primarily in terms of *making* things. It is only our post-Enlightenment, Western way of thinking that focuses so steadfastly and exclusively on physical structure and formational history. As can be seen from the analysis of individual elements above, creation in the ancient world constituted bringing order to the cosmos from an originally chaotic or nonfunctional condition. Israel shared this view. The Hebrew verb *bārā'* ("created") makes precisely that point, though it has not generally been recognized. The verb occurs fifty times in the OT and has some curious features worth noting. First, it takes only God as its subject or implied actor and therefore must be identified as a characteristically divine activity. Second, its objects are widely varied. Objects of the verb include people groups (Ps 102:18 [MT 102:19]; Ezek 21:30 [MT 21:35]); Jerusalem (Is 65:18); nonmaterial phenomena such as wind, fire, cloud, destruction, calamity or darkness (Ex 34:10; Num 16:30; Is 45:7; Amos 4:13); and abstractions such as righteousness, purity or praise (Ps 51:10 [MT 51:12]; Is 57:19). Even when the object is something more tangible (sea creatures in Gen 1:21), the point is not necessarily physical manufacturing as much as assigning roles. This direction is picked up nicely in Genesis 5:2, where God creates people male and female, that is, with established roles.

In all of these cases, something is brought into existence functionally, not materially; rarely would the statement concern the issue of matter. Indeed, the text never uses *bārā'* in a context in which materials are mentioned. Instead of suggesting manufacture of matter out of nothing (as many have inferred in the past), this suggests that manufacture is not the issue. The lexical analysis suggests, instead, that the essence of the word that the text has chosen, *bārā'*, concerns bringing heaven and earth into existence by focusing on operation through organization and assignment of roles and functions.

Even in English we use the verb *create* within a broad range of contexts but rarely apply it to material things (i.e., parallel in concept to "manufacture"). One can create a piece of art, but that expression does not suggest manufacture of the canvas or paint. Even more abstractly, one can create a situation (e.g., havoc) or a condition (an atmosphere). In these cases, the verb indicates a role or function. When someone creates a department, a committee, a curriculum or an advertising campaign, it is an organizational task. A person puts it together and makes it work. In this category, Hebrew use of *bārā'* is very similar. Perhaps an English verb that captures this idea less ambiguously is "to design" (though *bārā'* would include both planning and implementing the design). The interpretation that the above analysis suggests is that the text asserts that in the seven-day initial period God brought the cosmos into operation (a condition that defines existence) by assigning roles and functions. Though theological belief based on all of Scripture would appropriately affirm that God made all of the matter of which the cosmos is composed (and that he made it out of nothing), lexical analysis does not lead to the conclusion that Genesis 1 is making such a statement by the use of *bārā'*. The origin of matter is what our society has taught us is important (indeed that matter is all there is), but we cannot afford to be so distracted by our cultural ideas. Matter was not the concern of the author of Genesis.

The author's concerns were much like those in the rest of the ancient Near East. There the greatest exercise of the power of the gods was not demonstrated in the manufacture of matter but in the fixing of destinies. In *Enuma Elish*, when Tiamat and Kingu rebelled against the gods, Tiamat procured the tablet of destinies and turned them over to Kingu. This element

takes on even more significance in the older Myth of Anzu (Dalley, 203-27), from which *Enuma Elish* derived some of its material. In this tale the monster Anzu, impressed with the power wielded by Enlil using the tablet of destinies, steals it so that he can lord it over the gods. Each year at the all-important *akitu*, Babylon's New Year's enthronement festival, the gods fixed the destinies for the coming year, thus reasserting their power. Here in Genesis, Israel's God also demonstrates his power by the assigning of roles and functions. Genesis distances itself from the ancient Near East in portraying God's power as so much greater than the gods of Mesopotamia. But it conforms by evaluating his power in the categories typically addressed in the ancient Near Eastern worldview. This would be comparable to theologians today interpreting Genesis in light of something like the big-bang theory. The scientific framework would conform to views of today, but the theology would be distinct by virtue of its biblical foundations.

3.2. Theogony/Cosmogony. "Egyptians lived in a universe composed not of *things*, but of *beings*" (Allen, 8). In the beginning of the process, the creator god created by means of his own bodily emissions (sperm, saliva or mucous; Allen 13-14). Then procreation proceeded to fill in the first rank of deities that represented the principal elements of the universe. This concept is represented not just in creation, but also in daily reenactment (e.g., the sky goddess Nut giving birth to the sun each day; Allen, 5). In Akkadian literature, the first twenty lines of the first tablet of *Enuma Elish* contain a theogony that brings the gods connected to the primal elements into existence. In the Late Babylonian manuscript known as the Dunnu Theogony (COS 1.112:402-3), a very different approach is found. Rather than featuring primal elements of nature in the theogony, individuals such as Plough, Furrows, Pasture, Poplar, Flocks and Cattle god are main characters. This is one area of worldview where the biblical text stands firmly against the common ancient worldview. Israelites had no other gods to bring into existence, and they did not identify deity with the primal elements or the natural phenomena. Their God was not self-developing, nor did he emerge from a primal element. There was therefore no place for a theogony and no theogonic element in Israelite cosmogony.

3.3. Theomachy. While the primal elements

were generally brought into being through theogony, it was often a battle between the gods (theomachy) that eventuated in the full organization and setting of destinies for the cosmos. In Akkadian literature *Enuma Elish* provides the most familiar account of this in the battle between Marduk and Tiamat in tablets 4-6. These battles are often seen as driving back the forces of chaos in order to impose order on the cosmos. This combat myth motif is not always associated with creation. It can be observed in Ugaritic literature in Baal's conflict with Yam (though some continue to suggest that the Baal cycle does have cosmogonic elements) and in the Babylonian Myth of Anzu, one of the precursors to *Enuma Elish*. Egyptian literature features the battle of Re against the serpent Apophis (*COS* 1.21:32). In the Genesis creation narrative, the serenity and effortlessness of the creation process stand in stark contrast to the uproar and confusion that often characterizes the ancient Near Eastern myths. One has only to read the Psalms (e.g., Ps 65; 74; 89; 93), however, to discover a combat motif in the Israelite worldview—both in the original creation and in sustaining creation. Even so, these scenarios pose no threat to Yahweh but only suggest that he has been and continues to be the force that holds chaos at bay. Unlike the other gods, he never had his authority taken from him, nor did he have to gain or regain a particular status.

3.4. Role and Status of the Gods. Egyptian creator gods are most often portrayed as self-developing and preexistent (Allen, 48). Most texts consider the creator as immanent in the forces of nature and initially as having all of creation inherent in him. Exceptions occur on both counts. Amun is portrayed in the Pyramid Texts in more transcendent terms, and Ptah is portrayed not so much as having all creation inherent in him but as having all the plans for creation in his thoughts (Allen, 48). Amun is said to have “created himself by himself” (Hermopolis tradition, Papyrus Leiden I 350 40.4; Allen, 49). In the history of Akkadian theology, the kingship of the gods is passed from one deity to another. Anu, then his son Enlil, then Marduk or Ashur, serve as king of the gods. Kingship is evidenced by reorganizing and by decreeing the destinies. All of the available mythological material illuminates the concept of deity that existed across the ancient Near East, and it differs considerably from the view attested

in the Bible. Clifford synthesizes several important elements as he observes, “The sovereign freedom of the gods is limited by their need for the human race. Creation of humankind was necessary for peace in the divine world, and its restoration was necessary for the gods to live in the idleness that befits them” (Clifford, 81). In contrast, the creation narratives in Genesis are quite clear about God's autonomy. He has no need of humans, nor is he under any compulsion to create them. In avoiding both theogony and theomachy, the text offers a view of God that enhances the concept of purposeful, sovereign control of the process of creation. Like its contemporary counterparts, however, the Bible insists (against some modern views) that there was no cause and effect process independent of deity.

3.5. Function and Structure. Egyptians were more interested in that which was metaphysical than in that which was physical. “They are concerned primarily with what lies beyond physical reality” (Allen, 56). As the sky goddess, Nut is portrayed arching her body over the disk-shaped earth. She is often supported by the hands of the god of the air while the earth god, Geb, lies prone at her feet. This is not a structural representation. The Egyptians did not believe that one could step on Nut's toes or throw a rock and hit her knees. Instead, the portrayal communicates important truths concerning what the Egyptians believed about authority and jurisdiction in the cosmos. These are functional truths, not structural truths. And though they may not represent structural truths, they represent what to them was reality. The cosmos functioned by means of the gods playing out their roles. Whatever the physical structure of the heavens, it was of little concern to them. To describe creation was to describe the establishment of the functioning cosmos, not the origins of the material structure of the cosmos. Structure was irrelevant.

In Akkadian literature the assigning of functions (fixing of destinies) was of central importance in the original creation as well as in the continual renewal of creation. In Genesis 1:3-5 it becomes clear that for the Israelites also, function, not structure, was the focus of creation. In Genesis 1:5a, the NIV translates, “God called the light [*ôr*] ‘day’ [*yôm*], and the darkness he called ‘night.’” If God called the light *yôm*, why does the text continue throughout the OT to call light *ôr*? It is a question anyone could answer

with a little thought: It was not the element of light itself that God called *yôm* but the *period* of light. There is a term for the semantic phenomenon that is observed here, namely, metonymy. In metonymy the meaning of a word is extended to include things closely related to it. When the White House makes a statement, it is understood that the building is not talking. And so it is not the physicist's light that is being named *yôm* but rather the period of light—obvious enough because that is what *yôm* is often used to refer to in the rest of Scripture. But if the word *'ôr* refers to a period of light in Genesis 1:5, what about in 1:4? There God separates the light from the darkness. Again I find “period of light” much more plausible here. The physicist's light cannot be separated from darkness, but alternating periods of light and darkness can be set up. Still, we cannot stop there. If the text means for us to understand “period of light” in both Genesis 1:4 and 5, what about 1:3? Hermeneutical consistency, I think, would lead us to believe that when God said “Let there be *'ôr*,” we must then understand it as, “Let there be a period of light.” We could only conclude, then, that day one does not concern itself with the creation of the physicist's light, that is, light as a physical element with physical properties. Day one concerns something much more significant, something much more elemental to the functioning of the cosmos and to our experience of the cosmos. On day one, God created *time*. This is the first of the functions that God is going to use to bring order to the chaos of the cosmos: the orderly and regular sequence of time.

As the functional approach continues, day two in Genesis demonstrates God's setting up of weather. The *rāqia'* is what regulates the weather. The third day, in its two parts, sets up agriculture. This is accomplished by providing for water sources, soil and the biological principle that seeds will continue to propagate each species. *Enuma Elish*, in a fragmentary section of tablet 5, contains a similar sequence of functions. Lines 39-40 make reference to the day and the year and are followed up in line 46 by a reference to the watches of the night. In lines 47-52 Marduk creates precipitation accompanied by clouds, winds and fog. Then in lines 53-58 water sources on earth are set up and dirt is piled up (Horowitz, 117-18). Thus we could see time, weather and agriculture addressed in order and in functional terms. This demonstrates the radi-

cal contrast between the terms in which the Israelites thought about cosmic origins and the terms in which we think about them. When *we* ask the question, “How does the cosmos work?” we seek an answer that discusses physical laws and structures. In our worldview, function is a consequence of structure, and a discussion of creation therefore must, *of course*, direct itself to the making of things. In contrast, when Israelites asked, “How does the cosmos work?” they were on a totally different wavelength, because in the ancient worldview *function was a consequence of purpose*. Thus the Israelites can be seen to have had the same functional approach to creation as is evident in the ancient Near East.

3.6. Cosmos as Temple. The visualizing of the cosmos as a temple can be seen across the ancient Near East. Egyptian temple texts often portray the temple as related to the cosmic mountain or the first primeval hillock to emerge from the waters of chaos. The temple is portrayed as being in the center of the cosmos, with waters flowing forth from its midst (Lundquist, 208). In Ugaritic mythology the house Baal seeks for himself is a cosmic temple. A prayer to dedicate the foundation brick of a temple shows the close connection between cosmos and temple in Akkadian thinking:

When Anu, Enlil and Ea had a (first) idea of heaven and earth, they found a wise means of providing for the support of the gods: They prepared, in the land, a pleasant dwelling, and the gods were installed in this dwelling: their principal temple. Then they entrusted to the king the responsibility of assuring them regular choice offerings. And for the feast of the gods, they established the required food offering! The gods loved this dwelling! Thus did they institute their hold over what became the principal land of humans. (Clifford, 61-62)

Mesopotamian cosmological texts such as *Enuma Elish* (where Marduk organizes the universe and then has a shrine constructed), Mesopotamian temple building texts (Hurowitz) and especially the account of Gudea's temple project all contribute to this association.

In the extensive Sumerian texts recounting Gudea's construction of a temple for Ningirsu (COS 2.155:417-33), there are several items worthy of note. First is the statement that the sanctuary is being constructed in order to provide a resting place for Ningirsu and his consort, Bau.

Second, the dedication ceremonies last seven days. A third item of significance is that the text touches on many of the pertinent elements that we recognize from Genesis 1, including the proclamation of functions and the installation of functionaries (cyl. B.6-12). Additionally, Hurowitz has noticed that the description of the temple construction is not architectural in nature. Despite the detail, the accounts “do not enable the reader to visualize the shape of the temple, even partially or schematically” (40 n. 5). This is in accord with what was discussed above about the Genesis creation account being functional rather than structural. Just as Gudea’s account established functions for the temple and then supplied functionaries to operate in it, the Genesis account set up functions (days one to three) and functionaries (days four to six) for the cosmic temple. Genesis 2:1 indicates this as it refers to the creation of heaven and earth (the cosmos with its functions) and *all their hosts* (the functionaries in the various realms of the cosmos). In a temple-construction project, the structure would be built, and the furniture and trappings would be made in preparation for the moment when all was ready for the dedication of the temple. On this occasion, normally a seven-day celebration, the functions of the temple would be declared, the furniture and hangings would be put in place, the priests would be installed, and the appropriate sacrifices would be made to initiate the temple’s operation. Somewhere in the process the image of the deity would be brought into the temple to take up his repose in his new residence.

Isaiah 66:1 expresses clearly the temple-cosmos function in biblical theology as it identifies heaven as God’s throne and earth as his footstool, providing a resting place for him. God likewise achieves rest on the seventh day of creation, just as he takes up rest in his temple. The sabbath element helps us to recognize the temple-cosmos equation in Genesis and to realize the contextual significance of the functions and functionaries in the creation narrative. As noted earlier, “rest” does not imply relaxation but more like achieving equilibrium and stability. The environment God creates is not intended to provide rest for the people he has created (though that becomes a significant piece of theology as time goes on). Rather, God is making a rest for himself, a rest provided for by the completed cosmos. Inhabiting his resting place is

the equivalent to being enthroned; it is connected to taking control in his role as sovereign ruler of the cosmos. The temple in turn simply provides a symbolic reality for this concept. Psalm 104:2-4 captures this as the elements of the cosmos serve as functionaries for Yahweh’s rule.

The connections that underline the temple-cosmos relationship in Genesis 1–2 are numerous. The celestial bodies are referred to using the unusual term “lights,” which throughout the rest of the Pentateuch refers to the lights of the lampstand that functions to give light in the tabernacle. It should also be noted that the idea of rivers flowing from the holy place is found both in Genesis 2 (which portrays Eden as the holy of holies) and in Ezekiel’s temple (Ezek 47:1). A third element is that when people are assigned their function in Genesis 2:15, the priestly terms *‘abad* and *šamar* are used. The main connection, however, is the rest motif, for rest is the principal function of a temple, and a temple is always where deity finds rest. Further contributing to this important concept is the fact that, just as the cosmos is portrayed in temple terms, the temple is configured as a microcosmos. Yahweh is said to find repose in the temple (e.g., Ps 132:13-14).

3.7. Role and Status of People. The idea that people were created to do the work that the gods had tired of is found in the Sumerian account Enki and Ninmah and in the Akkadian Atrahasis Epic. In the ancient worldview people were slaves to the gods with no dignity other than that which came from the knowledge that the gods could not get along without humans to meet their needs. Whereas the Mesopotamian literature is concerned about the jurisdiction of the various gods in the cosmos, with humankind at the bottom of the heap, the Genesis account is interested in the jurisdiction of humankind over the rest of creation as a result of the *image of God in which people were created. The concept of being in the image of God provides for human dignity and the sanctity of human life in the biblical view. It could be said, then, that human dignity derived in Mesopotamia from being needed by the gods, in Israel from being entrusted by God. Humans in divine service in Mesopotamia were viewed as laborers, in Israel as priests. Despite these important differences, both cultures saw people as having been created to serve deity.

3.8. Depiction of Structural Cosmos. When the

philosophers of the ancient world did try to depict something of the structure of the cosmos, they usually divided it into three levels. In Mesopotamian models the cosmos in its most basic form was divided into heaven, earth and Apsu (under the earth; this information is thoroughly and conveniently gathered and discussed in Horowitz). Several documents divide the three levels still further. Some Sumerian documents speak of seven heavens and seven earths, while Akkadian texts favor three of each. In this model, the upper heavens belong to Anu. Here is where Tiamat's waters are contained. The middle heavens are occupied by the Igigi gods and Marduk, and the lower heavens by the stars. In the three levels of earth, the upper level is that occupied by people; the middle level, where the underground waters are, by Ea; and the lower region, the netherworld, is the dwelling of the Anunnaki gods. These levels (both of heaven and earth) are considered to be disk-shaped and are either held up at the edges by pillars/mountains or bound together with ropes. The sky has gates through which the heavenly bodies, as well as the clouds and winds, pass. The dry land is surrounded by a boundless ocean of primordial waters. The Egyptian depictions portray the gods in the various roles. The sky god Shu stands or kneels on the earth god Geb (in prone position) and holds up Nut, who represents the heavens. Stars are depicted as covering Nut, and the boat of the sun god sails over the top of her arched body. Though the artistic representation differs, there is little that differentiates the cosmological models of Egypt and Mesopotamia. Furthermore, when we compare this general cosmological model to Israelite texts, we find striking similarities. Since Israel had no revelation that would alter their cosmological model, it is not surprising to find that they conformed to the consensus of the day. God did not use a revised cosmology to communicate all of the important differences in cosmogony.

3.9. Worldview Conclusions. Summarizing the data introduced above, it is evident that the Israelite worldview had a number of elements in common with the broader culture of the day. Continuity with the ancient Near East is evident in issues concerning the cosmos; discontinuity is evident in issues concerning deity. Thus, the Israelites shared with their neighbors the belief that creation concerns functions, not structures, and that it involved bringing order out of chaos.

These are not perspectives that our modern culture typically holds. Israel also had no reason to deny the depiction of the cosmos common to the ancient world and believed that the cosmos should be perceived as a temple. Israel and her neighbors all believed that people had been created to serve God, though there is a significant variation in the understanding of how people served God. The discontinuity then widens as the role and status of deity becomes involved and theogony and theomachy are rejected as theologically deficient views. These latter are areas where Israel enjoyed revelation that helped them rise above the common philosophies of the day.

4. Literary Features.

B. F. Batto's summary of the situation probably well represents critical conclusions concerning the creation account in Genesis:

In its present form the Israelite primeval myth (Genesis 1—9) is a combination of an original Yahwistic primeval myth and later Priestly supplementation. J and P both drew heavily upon Mesopotamian cosmogonic tradition, even while creating a new and distinctively Israelite myth based on Yahwistic beliefs. J, being the first and lacking prior Israelite models, patterned his myth to large extent upon the Akkadian cosmogonic myth Atrahasis, both with regard to structure and themes. P, attempting to maintain continuity with the tradition established by J even while reforming it, was more subtle in the manner in which he drew upon Mesopotamian myth, principally the Babylonian myth Enuma Elish. (quoted in Clifford and Collins, 36-37).

This sort of maximalist position would see the biblical authors as working directly from Mesopotamian exemplars as they carried out theological transformations. Though this sort of conclusion is common, the summary of comparative literary studies of Genesis 1—11 offered by R. S. Hess in the introduction to *"I Studied Inscriptions from Before the Flood"* demonstrates that Batto's conclusions are far from universally held. D. Tsumura's introduction in the same volume details the rejection of dependence on the Babylonian materials by such well-known Assyriologists as W. G. Lambert and A. Sjöberg.

At the other end of the spectrum, a minimalist position, typical of traditional evangelical interpretation, would deny any possibility of

literary borrowing. For confessional scholars who consider it important to maintain the integrity of biblical inspiration, the idea that the author of Genesis made use of material from the ancient Near East need occasion no more concern than the idea that Solomon incorporated into the book of Proverbs some of the wisdom material that he had encountered in the wisdom of his world. Inspiration can operate through editors, redactors and tradents as effectively as it operates through authors. Nevertheless, given the complexity of the transmission of tradition and culture in the ancient world, literary dependence is extremely difficult to prove. In the end, A. R. Millard's assessment several decades ago of the prospects of literary borrowing in the flood narratives is appropriate for the creation narratives as well: "All who suspect or suggest borrowing by the Hebrews are compelled to admit large-scale revision, alteration, and reinterpretation in a fashion that cannot be substantiated for any other composition from the ancient Near East or in any other Hebrew writing" (quoted in Hess and Tsumura, 127).

DAN

In the Pentateuch Dan is the fifth son of *Jacob, the ancestor of one of the twelve tribes of Israel and the name of a city in northern Palestine.

1. One of the Twelve Sons of Jacob
2. The Name of the Clan Associated with His Family
3. The City
4. Historical Questions

1. One of the Twelve Sons of Jacob.

1.1. The Meaning of the Name. Many Hebrew names are translatable sentences or phrases, often expressing faith in God or a prayer to him. It has been suggested that the name Dan is probably an abbreviation of Danilu or Daniel, "The god El has judged/is my judge." In the rivalry between Leah and Rachel, Jacob's wives, Rachel was unable to bear children so she gave her husband her slave Bilhah, and from their union came a son. In the custom of the time Rachel was able to adopt the boy as her own son and named him Dan because she felt vindicated by God (Gen 30:1-6).

1.2. Dan's family. Dan was the fifth son of Jacob following four sons of Leah. No details of the history of Dan are given in the patriarchal narratives, but his household is listed with those of his brothers who went down into Egypt (Ex 1:4). Only one son is mentioned in connection with Dan. His name is Hushim (Gen 46:23) or Shuham (Num 26:42). T. R. Ashley accounts for the different renderings by "a simple metathesis

of consonants" (528 n.33).

2. The Name of the Clan Associated with His Family.

The descendants of Jacob are usually called "the tribes of Israel," but A. O. Mojola has argued that all Israel (*bēnē yiśrā'ēl*) constituted a tribe and that "clan" is a better translation of *šēbet*/*maṭṭeh* than "tribe." For this reason reference is made to the clan of Dan.

2.1. The Clan's History from Egypt to Canaan.

Some evidence suggests that the clan of Dan was small (six hundred fighting men according to Judg 18:11). It is somewhat surprising, then, to see the figures given in the two censuses in Numbers (62,700 in Num 1:39; 64,400 in Num 26:43). Recent attempts to explain these large numbers include E. W. Davies's conjecture that they are a literary convention for the theological purpose of showing that God's promise to the patriarchs of countless descendants was being fulfilled. Humphreys has revived and refined the argument that can be traced from F. Petrie to J. Wenham that the word *'elep* has a range of meanings, including a military unit ("troop"), and that this should replace the translation "thousand." This gives for Dan sixty-two troops adding up to seven hundred fighting men in Numbers 1 and sixty-four troops with four hundred men in Numbers 26. The number of men per troop could vary and be quite small. Humphreys also replies to criticisms of this approach.

2.1.1. The Construction of the Tabernacle. According to the book of Exodus, God gave *Moses instructions about the construction and furnishing of the *tabernacle during the *wilderness journey. One of the skilled craftsmen who worked on the furnishings was Oholiab from the tribe of Dan (Ex 31:6; 35:34; 38:23). He assisted his more famous partner Bezalel. They are both referred

to as capable teachers, engravers, designers and embroiderers. Oholiab is also called a weaver of fine materials. After the completion of the tabernacle when the tribes brought their offerings, Ahiezer from the tribe of Dan brought one silver dish and one silver bowl both full of fine flour mixed with oil for a grain offering, together with one gold pan full of incense, three animals for burnt offerings, one for a sin offering and seventeen for peace offerings (Num 7:66-71), a pattern repeated for each of the tribes on consecutive days. G. J. Wenham comments that placing the gifts of the tribes at this point in the narrative represents the response of the people to God's prevenient grace (Wenham 1981, 92). It also demonstrates that "every tribe had an equal stake in the worship of God and that each was fully committed to the support of the tabernacle and its priesthood" (Wenham 1981, 93).

2.1.2. After Sinai. The place of Dan varies in the lists in Numbers, which themselves vary according to the purpose of the list. Where the subject is leaders, the list is based on genealogy; where camping or marching, it is based on the formation of the clans in relation to the tabernacle (Ashley, 51-53). When the Israelites marched from Sinai, Dan brought up the rear, accompanied by Asher and Naphtali (Num 10:25). When the Israelites camped, Dan was on the north side alongside those same two tribes. On the first spying expedition, Ammiel represented Dan (Num 13:12), and when it came to apportioning the land the leader chosen from Dan to help with this task was Bukki the son of Jogli (Num 34:22). On the borders of the Promised Land Moses gave instructions for the pronouncement of blessings and curses on Mount Ebal in the covenant-renewal ceremony. Dan lined up with Reuben, Gad, Asher, Zebulun and Naphtali to respond to the twelve curses with a loud "Amen" (Deut 27:13-26, if the ceremony went as the Mishnah suggests; see Craigie, 331).

2.2. The Clan's Prospects. In Jacob's final blessing, Dan is said to live up to his name as judge of his people. G. J. Wenham suggests that this means his victories will benefit the whole nation of Israel rather than just his particular clan (Wenham 1994, 481). He is also described as a snake that bites the horse's heels (Gen 49:16-17). O. T. Allis takes this to be a reference to the cerastes, a small, venomous snake that hides in hollows from which it darts to make surprising attacks on passers by (Allis, 24). It may

well refer to Samson's exploits, as Jewish interpreters have held (e.g., *Tg. Neof.*), and possibly also to the sacking of Laish when the Danites moved north (Judg 17-18). In the final blessing of Moses, the clan of Dan is said to be "a lion's whelp" (Deut 33:22), which implies, according to P. C. Craigie, the fear and weakness of youth but with the promise of powerful strength in the future. The final line of verse 22 suggests that Dan will launch attacks from Bashan, but there are no other references to Bashan as a base for the Danites. F. M. Cross and D. N. Freedman argue that the word *bāsān* should not be understood as a proper name but as cognate to the Ugaritic *bṯn* ("viper"), and they translate the phrase, "Who shies away [or leaps forth] from a viper" (Cross and Freedman, 195, 208). This suggests a play on the words of Genesis 49:17. Although in Jacob's blessing Dan is the viper, here he is afraid of it, and the word for "snake" in Genesis 49:17 is different (*nāḥās*). It might therefore be better to see both blessings as predictions that the attacks of the Danites will be sudden and unexpected.

3. The City.

Dan is the only clan to have a city named after it. The Danites so renamed Laish after capturing it (Judg 18:7-29). The reference to *Abraham pursuing the kings who had captured *Lot as far as Dan (Gen 14:14) probably reflects the time of the later writer or editor. The same can be said for the description of Moses' view (Deut 34:1).

4. Historical Questions.

It is not unusual to find the sons of Jacob described as "eponymous ancestors" (Gottwald, 80, 854; for Dan, see Hadley, 497). This is often taken to mean that Dan is a fictional character (e.g., McCarter, 28-29) or at least not existing as the biblical text represents (e.g., Spina, 62). But much depends on the character of the narratives. They are stories about family life rather than tribal groups. G. J. Wenham argues that stories about human beings in other ancient Near Eastern literature fall into three categories: autobiographies or biographies that follow the events they describe quite closely, historical legends full of fantastic deeds, and purely fictional stories. He accepts K. A. Kitchen's judgment that the patriarchal narratives fall between the first two categories. In re-

alistic content they are close to the first category, and they lack the elements of fantasy in the second. Wenham concludes, “we are dealing with real historical figures” (1994, xxi-xxii). In the absence of corroboration of the biblical texts on details about Dan, scholars either manufacture their own diverse accounts or try to establish the plausibility of the biblical narrative (Hoffmeier; Kitchen).

DECALOGUE

The Decalogue, from the Greek translation meaning “ten words” or, in Hebrew, the *‘āseret haddēbārīm* (Ex 34:28; Deut 4:13; 10:4), is more commonly known as the Ten Commandments. This material is first encountered in Exodus 20, but the number ten and the familiar two-tablet description initially occur in Exodus 34. The Decalogue sits at the center of the *covenant between God and Israel, as mediated through *Moses. Its stipulations provide the foundational definition of an appropriate relationship between the Israelites and God and among individual Israelites under the terms of the covenant. In its OT context, the Decalogue is directed exclusively toward members of the Israelite community. As part of the Christian canon, more universal interpretations have been attached to it. One easily sees a significant influence on Christian thinking, as some informal definitions of Christian morality and piety are built upon the Decalogue. Its impact can also be observed on legal systems and business practices. Some contemporary discussions contend that the value of the Decalogue transcends any particular religious tradition and could therefore represent appropriate social values outside the domain of a religious setting.

8. Hermeneutical Issues and Contemporary Relevance

DATE OF EXODUS. See EXODUS, DATE OF.

DAUGHTERS OF MAN. See SONS OF GOD, DAUGHTERS OF MAN.

1. Date and Origin of the Decalogue.

According to the text, Moses received these com-

mandments directly from God after he ascended the holy mountain. This would place the date shortly after the Israelites' escape from *Egypt, which is frequently assigned to either the fifteenth or thirteenth century B.C. (*see* Exodus, Date of). Many critical scholars reject Mosaic *authorship of the Decalogue based on historical-critical analysis of the text. From a literary perspective, it is argued by some that the Exodus version of the Decalogue has been introduced into an earlier narrative. Comparisons of the Exodus version with that of Deuteronomy demonstrate that paraenetic expansions occurred as this material was used in different settings. Many historical-critical scholars assign dates of origin for this material ranging from the twelfth through the ninth centuries B.C. However, from social, political and legal perspectives, there is nothing in the short, succinct "ten words" themselves that could not date to the time of Moses. Neither are there verifiable historical anchors in the text. Thus, one's position on date and origin of the material hinges on larger questions of biblical authority and canon formation.

2. Numeration of the Decalogue.

Different numbering systems are assigned to the Decalogue. The divergence stems from the treatment of the commandments to worship no other gods, to have no idols and not to covet. Jewish, Roman Catholic and Lutheran interpreters treat the laws prohibiting worship of other gods and the use of idols as one commandment. The Jewish tradition retains the number ten by treating "I am the LORD your God, who brought you out of the land of Egypt, out of the house of slavery" as the first commandment. The Roman Catholic and Lutheran traditions divide the commandment that prohibits coveting into two distinct parts, separating coveting the neighbor's house from coveting the neighbor's wife, servants and livestock. In doing so, they too retain ten as the number of commandments. Orthodox and Reformed traditions view the prohibitions against the worship of other gods and the use of idols as two separate items, while treating the commandment against coveting as a single prohibition.

3. Locations of the Decalogue Within the Text.

The Decalogue occurs in more than one location in the Pentateuch. In Exodus 20, where God gives the law at Sinai, the Decalogue is situated at the beginning of the *book of the covenant.

Source and redaction critics have argued that the Decalogue interrupts the flow of material between Exodus 19 and 20:18. With the Decalogue removed, the remaining material describes a theophany in which God instructs Moses to set limits around the holy mountain, with only Moses and *Aaron allowed to ascend the mountain. The people, frightened by the thunderous theophany, request that Moses be their intermediary so that they will not die from standing in God's overwhelming presence. In the current structure of Exodus 19—20, God gives the Decalogue in the midst of that theophany. The commandments precede a larger body of legal and other material known as the *book of the covenant (or covenant code), contained in Exodus 21—24.

The Decalogue in Exodus appears to be given a second time in chapter 34. When Moses discovers that the Israelites began worshiping the *golden calf in his absence, he angrily breaks the tablets containing the laws. Moses then ascends Sinai yet again, where God gives a set of replacement tablets. Though Exodus 34:28 says that God "wrote on the tablets the words of the covenant, the ten commandments," the commands given in Exodus 34 are clearly different from the ones recorded in Exodus 20. The prohibition against *idols and the call to *sabbath rest do appear in Exodus 34, but the remaining stipulations pertain to religious *festivals and *sacrifices.

The Decalogue occurs yet another time in Deuteronomy 5, where its form and content are comparable to the material in Exodus 20. A book of speeches, Deuteronomy has a sermonic, exhortative quality. Here the Decalogue is incorporated into hortatory material by Moses that reminds Israel of its covenantal identity and responsibility in preparation for entering Canaan.

Deuteronomy recalls the giving of these laws at Mount Horeb, a more general name for the locale, rather than Mount Sinai, the more specific name for the mountain. Apart from that difference of name for the holy mountain, distinct differences between the Exodus version and the Deuteronomy version of the Decalogue are minimal. The commandment to observe a sabbath rest in Exodus is based on God's divine *rest on the seventh day. In Deuteronomy, the motivation for a sabbath rest is Israel's memory of its enslavement in Egypt.

4. The Decalogue as Covenant.

4.1. Definition. The Decalogue constitutes a covenant between God and Israel. The Hebrew term *bĕrît* is generally translated as “covenant,” though it is sometimes rendered “promise, pledge, obligation, agreement, contract or treaty.” Its etymology is uncertain. The most widely accepted suggestions include: (1) from the root verb *brh*, meaning “to see or decide”; (2) from the preposition *birît*, unknown in Hebrew but found in Akkadian, meaning “between”; or (3) from a noun *birîtu*, found in Akkadian and also in the Talmud, meaning “clasp, fetter.”

Whatever its exact etymological origin, in general a covenant is a solemn promise between two parties, made binding by an oath. Both parties recognize this promise as the formal act that binds them to fulfill the promises made in the covenant. Ancient covenants could take place between different sociopolitical groups, thus creating or regulating the relationship between them. Covenants could also be made between groups within one particular legal community, in which case obligations were assumed that were not otherwise provided for by the laws and norms of that community. In this ancient Near Eastern context, these covenants usually had the sanction of a god or gods, and thus the idea of covenant was closely related to religion.

4.2. Forms. Two primary forms of covenant rooted in ancient Near Eastern culture are represented in the OT materials. The *royal grant* covenant known from Assyrian, Babylonian and Hittite sources has been used to identify the form and interpretation of the Abrahamic and Davidic covenants. The function of the royal grant was to bestow land or a house to a loyal vassal for past loyalties and extremely faithful service. As such, the royal grant was a reward.

The second type of covenant found in the OT closely models the *suzerainty* covenants. First known from Hittite treaties dating as early as the Late Bronze Age (1400-1200 B.C.), this covenant type is present in several later periods as well. This wide range of usage means that while the form is helpful for understanding the function of the biblical material, it is not useful for dating covenants of this type. The suzerainty covenant is closely associated with the Mosaic covenant and, thus, the Decalogue.

The suzerainty covenant was one between a superior and subordinate political powers. Treaties of this type have been found to contain many

elements similar to those of the Mosaic covenant. (1) The treaty typically begins with a *preamble*, which gives the identity and title of the triumphant king, sometimes in detail and often opening with the phrase, “These are the words of . . .” (2) A *historical prologue* provides the foundation for the remainder of the covenant. It recounts the accomplishments of the king, especially those on behalf of the vassal. It may describe the past relationship between the two parties, likely emphasizing acts of benevolence by the suzerain for the vassal. It often reveals that the suzerain is responsible for placing the vassal power on the throne. (3) The *stipulations* spell out the obligations of the vassal to the suzerain. The content of these stipulations varies widely but is frequently meticulous in terms of military obligations. For instance, the vassal may not enter alliances with other independent kings and must be a friend to the suzerain’s friends and an enemy to his enemies. The vassal must answer any summons by the suzerain for military forces. The stipulations also define the treatment of refugees and war booty. Some of the more humorous prohibitions include “murmuring unfriendly words” against the suzerain. Last but not least, a stipulated tribute is imposed. (4) After the stipulations, provision is made for the *deposit* of the covenant agreement in a “sacred” place. Periodic public reading of the covenant is required. The covenant is usually placed in the sanctuary of the vassal’s temple and is read from once to four times yearly in a covenant-renewal ceremony. (5) *Witnesses* are then called to verify the implementation of the treaty. These are usually the respective gods of the groups involved. At times they include the features of the natural world, such as rivers or springs. (6) This is followed by *blessings and curses* that signify the good and the bad things that are to happen, according to the loyalty or lack of loyalty by the vassal to the suzerain. (7) Sometimes an oath or description of a ratification ceremony is included in the covenant, as is a binding symbol, such as a slaughtered animal. The latter represents what will happen to the vassal if the oath is broken.

Against this background, certain similarities with the Decalogue have been proposed. (1) The preamble finds a parallel in God’s statement, “I am Yahweh your God.” (2) The historical prologue, recounting the suzerain’s deeds on behalf of the vassal, is contained in the phrase “who brought you out of Egypt.” (3) The stipulations, or the terms of the covenant, are the prin-

ciples contained within the Decalogue.

Certain elements of the suzerain form are not part of the Decalogue itself but are described in other parts of the OT where keeping the covenant is the subject. For instance, the elements of depositing the law in a sacred place and of public reading are evident in Joshua 24. Deuteronomy 10:5 describes the ark of the covenant as a depository for the Decalogue. Public reading of the Torah, which includes the law, is mentioned in Deuteronomy 31:10-11. Witnesses are summoned in Joshua 24 (people and stones) and in Deuteronomy 32 (heaven and earth). Finally, *blessings and curses are attached to the book of Deuteronomy, which itself has been favorably compared to the suzerainty form.

Despite the shortcomings of the formal parallels with the Decalogue exclusively, the suzerainty treaty provides insight into reading and interpreting the exodus experience and the resulting covenant. Interpreted in that manner, the Decalogue represents an agreement between a superior party (God) and a subordinate party (Israel). In return for past deliverance and future provision, undivided loyalty in all matters is expected of Israel. Like the suzerainty covenants of the political realm, this covenant also hinged on a condition: Israel's observance of the stipulations. Whether one understands the response as one of obligation or gratitude is irrelevant at this point. Failure to keep the stipulations would lead to a breach of the covenant. Breach of the covenant would invoke the curses and thus ensure the demise of the vassal party.

5. The Decalogue as Law.

5.1. *Casuistic Law.* *Form-critical studies of OT law reveal two distinct types of law, along with a hybrid form that combines these two forms. The first type of law is *casuistic law*. Casuistic laws are conditional and are noted for their "if-then" structure: "If X does this, then Y will happen." This form of law establishes a hypothetical situation and prescribes the proper course of action should such a situation occur. Its *Sitz im Leben* ("setting in life") is thought to be the realm of the courts, because casuistic laws are concerned with typical problems that emerge in societies, and laws of this type are easily found in other secular legal codes.

5.2. *Apodictic Law.* The second form of law is *apodictic law*. These laws are absolute prohibitions of the "thou shalt not" variety, often con-

cerned with religious or moral issues. Unlike casuistic laws, apodictic laws offer no condition. They simply say, "Whoever does X will surely die" or "You shall not . . ." with the understood penalty being death. Even if death is not prescribed, death is the understood penalty for breaking apodictic laws. Some scholars initially argued that the apodictic laws were uniquely Israelite, with the *Sitz im Leben* being Israelite religion. Thus, these laws reflected Israel's attempt to live completely under the guidance of their God. This argument is no longer credible because apodictic laws have been found in other ancient Near Eastern materials as well. Instead, apodictic law seems to operate in settings that rely upon persuasion for urging compliance with the law rather than upon physical force or structures.

The negative prohibitions contained in the Decalogue resemble the apodictic laws, though the threatened punishment of death is lacking. Some scholars maintain that punishment by death is implied, though this cannot be conclusively demonstrated. Many of the Decalogue stipulations remain in the simplest of apodictic form, though expansions have been added to some, supplying justifying motives for the laws. For instance, one keeps the sabbath because God rested. One honors parents so that long life will follow. As the Decalogue operates within the suzerainty form of covenant given by God and mediated by Moses, their similarity with the apodictic form conveys the seriousness of keeping the covenantal stipulations.

5.3. *The Decalogue as Principles or Law?* Ultimately, is the Decalogue to be considered "law" in the strict sense? The Decalogue is contained within the Torah, a term frequently used synonymously with *law. Its location in Exodus, where it precedes the book of the covenant, and in Deuteronomy contributes to the perception that the commandments are laws. Similarities of form with apodictic law further encourage the conclusion that the Decalogue is legal material. The term *dēbārīm*, used to describe these commandments, is understood by some scholars of biblical law as a legitimate category or subcategory of legal material.

There are, however, some considerations that suggest that a wider understanding of the Decalogue is appropriate. First, the context for the giving of the Decalogue is a religious one, as God provides a covenant and in some sense a founding charter for the people delivered out of

Egypt. Second, penalties need to be stated and enforced when laws are broken if those laws are to be functionally effective. The stipulations of the Decalogue lack any prescribed punishment for those who break these laws, relying on fear of the Lord to promote allegiance to the terms of the covenant. Finally, the Decalogue addresses subject matter that is not “culture specific” but that instead has universal relevance and appeals to principles broadly held. For these reasons, the stipulations that form the Decalogue may be legitimately understood as “ordinances” or “principles” rather than as “laws” in the strictest sense (*see* Law).

6. Decalogue Content.

The suzerain-treaty form and the apodictic-law form should guide interpretation of the Decalogue. As an act of self-disclosure, this covenant indicates that God desires to be known by the Israelites. In typical suzerain fashion, the emerging relationship is based upon what God has already done on Israel's behalf. This is a covenant of choice, of *election. God has already chosen the Israelites to be a holy nation, and he has already been active on their behalf. Thus, the Decalogue is not a collection of commandments kept in order *to be* chosen by God. They are stipulations to be kept in response to *being chosen* by God. The deposit of these tablets, their public reading, the covenant-renewal ceremonies described in other locations and the Israelites' willingness to excommunicate, even kill, community members who violate the covenant affirm the central role of the covenant in Israel's identity.

Commentators have long recognized the Decalogue's personal appeal with its use of the singular pronoun “you.” Equally obvious is the clear progression of focus within the Decalogue material, though different categorizations and descriptions of this progression have been offered. Many have understood the first four laws as defining humanity's proper relationship with God. The fourth, regarding sabbath rest, expands beyond the divine-human relationship and begins to address life in community. The final six stipulations regulate relationships between members of the faith community. An alternative interpretation describes the first five, which each contain the divine name, as applying specifically to Israel; the second five commandments, which do not contain the divine name, address moral issues and are intended

for a more universal audience.

The *first commandment*—“you shall have no other gods before me” (Ex 20:3)—demands absolute loyalty to Yahweh, the God of Israel. As a first response to God's election of Israel, this principle calls for an allegiance appropriate to the elect status. As a people created by God and set apart for holy purposes, commitment to Yahweh is to be fundamental to Israel's identity. Of course, Israel was frequently tempted toward, and guilty of, choosing gods other than Yahweh. Baal, Marduk, Asherah and a host of ancient Near Eastern deities, each of whom was believed to rule a particular domain such as fertility or rain, competed with Yahweh for Israel's devotion. It is probable that ancient Israel was not always a monotheistic society. Even if one argues to the contrary, OT literature is emphatic that Israel frequently worshiped other false gods, real or imagined.

With the first commandment prohibiting external threats to Israel's relationship with God, the second and third commandments are designed to prevent internal erosion of the community's perception of God's power and of their relationship to God. In doing so, the stipulations prohibit two practices common among Israel's peers.

The *second commandment* prohibits the use of a *pesel* (“image”) in worship. The reference to things in heaven, on earth or under the earth covers all possible material forms. This prohibition of *idol worship served two primary functions. First, it distinguished Israelites from their ancient Near Eastern neighbors, many of whom used idols in their religious practices. The OT contains numerous references to such practices (cf. 2 Kings 17:7-18); archaeology confirms this testimony. Idols are physical representations of the deity, and herein lies one reason Israelites were not allowed to make such representations: few people were allowed to see the face of God and live. How, then, could one make an accurate representation of a God whose image had not been seen? Thus, integrity and the accuracy of the image representing God is an issue. Furthermore, idols are static, nonfeeling and non-responsive, not at all like the God of Israel (cf. Isaiah's parody of idols; e.g., Is 40:18-20; 41:5-7, 21-29; 44:6-20; 46:1-7). The OT presents Yahweh as a God who is dynamic, who rejoices and suffers with the chosen people and who sees the actions and hears the cries of the covenant people. God is known through actions on behalf of the people, as God acts to fulfill the covenant

within Israel's historical experience.

Second, idols are never *only* a visual representation. In ancient Near Eastern religions, idols were sometimes bathed, clothed and fed as though they themselves were gods. Thus, idols could become objects of allegiance and ultimately be hallowed as *holy objects. At that point, the representation itself threatens to cause violation of the first commandment as the idol assumes a place of priority in the devotion of the worshiper. Equally important is the issue of using the idol as a means of containing and manipulating God. The idol, and supposedly God, could be used whenever desired and was to some degree at the mercy and disposal of its owner. To fashion an idol is to attempt to reduce God to manageable proportions and to assume that God is susceptible to the control of the worshiper. Such a theology is at odds with the OT, which describes Yahweh as transcendent and beyond human control.

Whereas the second commandment regulates visual and physical representations of the deity, the *third commandment* focuses upon verbal representations of God. The linguistic range of meaning for *šāw'* ("misuse") includes false swearing, false speech, and that which brings disaster. Thus, the misuse described in this commandment pertains to associating the name of Yahweh with false or disastrous purposes. This prohibition was deeply connected with the significance attached to personal names in ancient Near Eastern culture. Names revealed the character and identity of the individual. A close relationship existed between one's name and one's reputation. Equally important when considering this commandment is the ancient Near Eastern belief in the power of the spoken word. At some level, a causal connection was assumed between words and events (e.g., the concept of *blessings and curses). Thus, to know the name of God was to understand something of the divine identity. To invoke the divine name was to associate the power and purposes of Yahweh with the thing being spoken and the purposes being represented. Using Yahweh's name in vain involves associating God with purposes and powers that are inconsistent with God's identity and will. The end result is a misrepresentation of God, a false claim to divine power and endorsement, and a miscommunication of truth.

The *fourth commandment* is best understood by considering the meaning of the root word for

*sabbath (*šabbāt*), which simply means "rest." The commandment could thus be read, "Remember the rest day by keeping it holy. Six days you shall labor and do all your work, but the seventh day is a rest day to the Lord your God." The Exodus version of the Decalogue anchors this commandment in God's rest as described in the *creation story. That act of divine rest is the theological framework for this regulation in which the sabbath becomes a special day set aside to remind the Israelites that the cycle of life should include a period of rest, refreshment and remembering their Creator. When Israel remembers their Creator, they remember that the same God delivered them from bondage. When they remember that newly acquired freedom, they remember the covenant. So it is no surprise that in the Deuteronomic version of the Decalogue, the reason given for observing the sabbath is not because God rested, but because God delivered the Israelites from Egyptian captivity. Thus, sabbath rest is about more than relaxation from toil and labor and the rejuvenation of tired muscles and aching backs. This "rest," contextualized by the words "remembrance" and "holy," is a weekly reminder for the Israelites of what God has done to create this covenant community and of the holy, separate identity it bears as the covenant people. In effect, the sabbath is a sign of the covenant.

Like the fourth commandment, the *fifth commandment* is expressed positively, calling for the Israelites to honor their fathers and mothers. This command is not the only regulation of the treatment of parents (cf. Ex 21:15, 17). **"Honor"* is a translation of *kābôd*, which also means "glory" and, interestingly enough, "weighty." To honor someone in this Israelite context was to regard that one as a person of worth and value. Though the fourth commandment has traditionally been a parent's refuge when children misbehave, this verse was not originally a catechism for that purpose. It was directed to the Israelite community as a whole, shaping the way they treated their aging parents. It functioned as a guideline within a covenant community composed of family units united in a tribal federation.

According to the exodus story, these were families in the process of moving from Egyptian slavery through a *wilderness wandering to the Promised Land. They were going from a setting where their Egyptian owners determined what they received, and who consequently had some responsibility for their care, to a wilderness set-

ting where God provided for them. From there, the Israelites eventually entered Canaan, the Promised Land. Once settled there, each family received a *land inheritance and from that point onward had the primary responsibility of caring for their own.

Meeting basic subsistence needs would have been a challenge for many of the Israelite families. Archaeological discoveries indicate that Israelites initially settled in the rough, undeveloped terrain of the hill country. Land needed to be cleared and terraced. Homes had to be built. Agrarian economies were developed. Rainfall was limited. Struggles for survival were common, with debt slavery always a lingering possibility. In a situation where resources were at a premium and sacrifices had to be made, the uncomfortable question became: Who is expendable? In such cases, it would have been tempting to spend resources on those who had most of their lives before them and whose young, energetic, virile bodies would soon help relieve the nearly insurmountable work load. To combat that possibility, this commandment insists that families honor the elderly, who are sometimes weaker and needier than their adult children. This stipulation, designed to protect those who may be regarded as unimportant, unproductive or burdensome, insists that human value and meaningful life are not equated with productivity.

The social structure of the Israelite tribal system, normally described as a tripartite structure of tribes, clans and families or *bêt 'āb* ("house of the father"), gives this law an additional significance. The *bêt 'āb* created an extended family setting in which the patriarch and matriarch of the family wielded much power over the lives of the individual family members of the younger generations. This structure had economic and political ramifications (cf. the *Jacob and Laban stories). Younger generations could easily tire of the lack of control they had over their own lives and over family decisions, leading to animosity toward the father and mother of the house. In a situation primed for tense situations, this commandment reaffirms the place of honor given to the head of the *bêt 'āb*.

The *sixth commandment* prohibits killing, which is ironic given the amount of violence contained in the OT. Indeed, interpretation of this commandment is difficult, given its context. The usual word for "kill" in biblical Hebrew is *hārag*, but that is not the word used here. This

commandment prohibits *rāṣaḥ*, an interesting choice because this word has a wider range of possible meanings than *hārag*. Normally *rāṣaḥ* refers to "murder," the willful, premeditated killing of an individual, often as an act of *blood vengeance. This would suggest that this commandment intended to limit acts of revenge to protect the life of innocent community members. However, *rāṣaḥ* can also refer to unintentional homicide, as in the laws of asylum (cf. Deut 4:41-42). This usage means that intentionality can no longer be the dividing line by which one keeps or breaks this command. The word also describes the execution of a convicted killer (cf. Num 35:30). Such usage demonstrates that the implications of this commandment reach far beyond simplistic or legalistic interpretations. This is a commandment that values life and relationships, leaving decisions to end life in the hands of God. Where taking the life of another had divine sanction, the OT generally associates those deaths with certain sins for which the prescribed punishment was execution. Punishment by death was limited to capital offenses (e.g., Ex 21:12-17) and to actions that threatened the holiness of the community and the integrity of Israel's covenant with God (e.g., Josh 7). Where the Israelite community was given authority to take the lives of individuals, those decisions were not to be made lightly.

Adultery is prohibited in the *seventh commandment* (see Sexuality, Sexual Ethics). Such a stipulation presupposes an understanding of marriage, because without the latter, the former is pointless. To some degree polygamy was practiced by some Israelites, although it is impossible to know how widespread it actually was. The economic realities of polygamy may have curtailed its popularity. In certain circumstances, a marriage could be dissolved, and Israelite law contained guidelines describing when divorce was appropriate. However, so long as the marriage was intact, certain standards were to be respected. Abstaining from adultery was one of those guidelines, although a double standard existed in Israel's patriarchal society. The law prohibited wives from having sexual relations with anyone other than their husbands. In contrast, men were not to have relations with the wives of other men. Elsewhere, death is clearly stated as the penalty for adultery (cf. Deut 22:22). In contrast, the penalty for the violation of a virgin was marriage or payment (cf. Ex 22:16-17;

Deut 22:28-29). In the clan-based, tribal-affiliated Israelite community, stable home lives were essential if the community itself was to remain functional. Without such stability, intratribal and intertribal conflicts arising from these acts would threaten the survival of the group (see Family Relationships).

The *eighth commandment* prohibits *theft. The choice of *gānab* as the verb suggests the element of “secrecy.” Questions have arisen about the relationship between this stipulation and the tenth commandment, given the apparent overlap. Drawing support from other laws (cf. Ex 21:16; Deut 24:7), some have suggested that this commandment refers to kidnapping. If one presumes that theft is a capital offense, such an argument has some logic, but there is no compelling evidence to support such a claim.

The mere possibility of stealing requires, first of all, a concept of ownership. If ownership grants access to certain people while denying access to others, that means that ownership establishes boundaries accompanied by restricted entry or access. To some degree property is understood to be an extension of the self of the owner. Consequently, the theft of property is a violation or injury of the person, not just loss of wealth. The loss may well deprive a person of the ability to survive. Elsewhere in Israel’s law, prohibitions of theft generally are related to the provision of basic subsistence needs. Along with personal violation and threat to survival, theft also contributes to the loss of privilege. The loss of those things reduces the possibility of a satisfying or abundant life.

Lying is prohibited in the *ninth commandment*. The Hebrew literally reads, “you shall not respond against your neighbor falsely,” and uses language that suggests a court context. Two immediate observations deserve comment. The first is only obvious in the Hebrew text. The verb used is *‘anā*, which is usually translated as “respond.” It can, however, also mean “oppress, afflict or put down.” Thus this verse could read, “You shall not oppress your neighbor by lying.” Lying is more than deceit and dishonesty; it oppresses the person to whom or about whom the lie is told. The second observation is the commandment’s reference to the neighbor. Thus the stipulation emphasizes that lying is a social, not a private, evil. The worst victim is the neighbor, which is to say, the one to whom or about whom the lie is told.

There is no lie that does not, in some way, affect others. At the very least, false information limits the hearer’s ability to make an informed decision because he or she does not have accurate information. In the Israelite community, lying was prohibited because of what it did to the recipients of the lie. The ninth commandment protected the neighbor as well as the neighbor’s reputation. It ensured the neighbor’s freedom to make an informed choice and thus helped the neighbor to decide and act with integrity. Ancient Israel had no place for such a casual approach to truth and lying, especially in their law courts. Elsewhere the laws stipulate that a person who gave worthless testimony about another was to receive the penalty that the one about whom the lie was told would have been subject to, if the testimony had been true (Deut 19:18-21). In some cases that meant death; in others it meant three- or fourfold restitution. Such strenuous penalties illustrate the seriousness of false testimony in the context of the faith community.

With the *tenth commandment*, questions frequently arise about the relationship between stealing and coveting, since their territory seems to overlap. There is one primary difference. Stealing is linked completely to the act itself, in which someone takes that which belongs to another. Coveting (*hāmad*), however, has to do with an attitude deep within. It involves desires that are so strong one is willing to reach out and take, or commit other unacceptable acts, to satisfy those desires.

After nine commands that either focus on God or outer behavior, the tenth command enters the realm of the heart and mind. This prohibition does not focus on outward, visible actions. It concentrates instead on a person’s thoughts, motives and attitudes. Covetous thoughts motivate and inspire, frequently producing action that will violate one of the previous nine commandments.

Laws legislate actions, not thoughts or attitudes, precisely because the former can be monitored whereas the latter cannot. The act of coveting cannot be witnessed, only becoming visible when that internal craving is acted upon. This tenth commandment’s shift to the interior dimension of the human life lessens the probability that the Decalogue functioned as an actual set of laws in ancient Israel. It does, however, demonstrate that God’s covenant never depends

solely upon adherence to external details. The Decalogue begins with a command that insists there be no God before Yahweh. Like coveting, one's loyalty to God also begins as an internal posture that only secondarily becomes evident in external practice. Thus two commandments that are essentially rooted in the heart and mind of the covenant people encircle a set of principles that properly order worship and community relationships.

7. Interpretation of the Decalogue.

7.1. Old Testament. When one studies the history of interpretation of these laws, or any biblical passage, one will notice development and change in the meaning assigned to these passages. Biblical passages take on new meaning, partially shaped by the context of the community or individual reading them. For that reason, understanding the history of interpretation is useful to readers who search the text for meaning.

Interpreters of the Decalogue should begin by remembering that in its original context, these stipulations were not universal truths revealed to the entire world. They were given for and directed to a specific group of people, Israel, that was chosen by God. These commandments helped define the nation of Israel in its relationship with God and to each other. Israel was rooted in and defined by the concept of "covenant."

Many Biblical scholars maintain that covenant is the key idea for understanding the OT. Israel repeatedly used the concept of covenant to understand their history, from the call of *Abraham through the people's return from Babylonian exile. It even influenced their understanding of God and their conception of proper social organization. Indeed, it is difficult to find a more foundational or relational term than *covenant*, especially in regard to the Israelite understanding of community.

Israel's covenant was foundational for its community in the sense that it specified the reason for entering into the agreement with God. God delivered them from bondage, which provided the motivation for entering the covenant, and the foundation for Israel's continuing trust in God. Furthermore, the ensuing commands in Exodus 20, and again in Deuteronomy 5, provided a framework that delineated the essential characteristics and values of the community.

God and Israel both expected these commandments to be accepted and shared by those who participated in the covenant.

The covenant defined by the Decalogue was relational in the sense that it formally established the faith relationship with God. Other contexts demonstrate that the primary relational characteristic that God brought into the covenant was *hesed*, usually translated as "steadfast love." Besides the accompanying responsibilities and privileges it created, this covenant was characterized by the assurance of God's steadfast love.

As the covenant described God's actions and intentions in this *hesed*-oriented relationship with the Israelites, it also delineated the basic expectations for the participants regarding their relationship with God and with other Israelites. In short, it outlined acceptable standards for relationships shaped by faith in the God of Israel.

The Decalogue's central location within the Mosaic covenant and the revelation at Sinai demonstrates its importance in the OT's theological understanding of Israel's identity. Other lists of "ten," and prophetic admonitions that loosely parallel the Decalogue without specifically naming it, confirm its significance. However, one must balance this testimony with the claim of 2 Kings 23, where during Josiah's reign a book of the law was found in the temple, the contents of which seemed unknown to the people. This raises the question of whether the law had as central a place in the lives of the people as the theology of the OT desired it to have. In fact, the Deuteronomistic History highlights disobedience as the reason for Israel's fall and subsequent exile, confirming that though the law was central to Israel's identity as a nation, the laws were not sufficiently observed to maintain the terms of the covenant.

7.2. New Testament. The NT contains various references to the Decalogue or portions of its stipulations (cf. Rom 13:9; Col 3:5-11; Heb 4:4, 10; Jas 2:11). Reference is made to them in the conversation between the rich young ruler and Jesus (Lk 18:18-23). Some view the Beatitudes as a reinterpretation of the Decalogue. Moving beyond these literal citings, larger interpretive questions hinge on the continuing validity of these commandments, given the new covenant through Christ. At the very least, interpreters should recognize that laws once meant for a specific group of people, Israel, are now being

redirected at another faith group that, while rooted in its Jewish heritage, has a different understanding of law and covenant.

Jesus occasionally challenged Jewish traditions regarding the law and offered new interpretations of it. He also understood his work as fulfilling the law. Jesus as interpreter of the law, or as the fulfillment of the law, is different from Jesus as the negation of the law, a description one hears all too often within the church. Jesus declared he was the fulfillment of the law, suggesting that the spiritual truths represented by the various laws were to be internalized. The transfiguration (Mt 17; Mk 9; Lk 9) depicts Jesus in conversation with Moses and Elijah, representatives of the Law and Prophets. John 1:16-17, directed at early Christians, describes how they received “one blessing upon another.” First the law was given through Moses; then grace and truth came through Christ. So Christians should not be quick to dismiss totally the OT material as worthless (see *DJG*, Law).

Equally important to a NT discussion of the Decalogue’s continuing validity is Paul’s perspective on the law, which is a more critical one than that of Jesus. Paul insisted that grace, not law, had the power to bring salvation and that “Christ is the end of the law” (Rom 10:4). However, he also insisted that all Scripture, which would have certainly included the OT law, is “inspired by God and is useful for teaching, for reproof, for correction, and for training in righteousness, so that everyone who belongs to God may be proficient, equipped for every good work” (2 Tim 3:16-17; see *DPL*, Law).

The heart of the discussion may be described as “law as source of salvation” versus “law as valuable for instruction.” Christ has done what the law could not do. Consequently, Christians do not seek salvation through the observance of the law. However, with Christ as the fulfillment of the law and its correct interpreter, OT law can continue to be a source of inspiration and a resource for wisdom. The new covenant through Christ, not the Decalogue, occupies the center of the Christian community. The spiritual truths represented by the Decalogue’s stipulations should be internalized as useful instruction for faithful living within the new covenant.

7.3. Later Judaism. One finds two themes in the rabbinic treatment of the Decalogue. One strand of tradition accords the Decalogue a central place in Jewish prayer and liturgy. Its com-

mandments were included among the material contained in phylacteries at Qumran. The Jerusalem Talmud (*y. Ber.* 1:5A) describes a direct correspondence between each word of the Shema and one of the Ten Commandments. A second strand of tradition, contained in the same document, downplays the centrality of the Decalogue in Jewish prayer, allowing the full revelation of God through Moses to be emphasized. Rabbinic literature is content to let this apparent contradiction stand.

7.4. Christian History. The Christian church’s interpretation of the Decalogue has varied greatly over the course of its history, again demonstrating the influence of culture and context upon interpretation. Early catechetical material, such as the *Didache*, demonstrates a legalistic use as a means of influencing morality. Others, such as Irenaeus, used the concept of natural law as a means of embracing the value of the Decalogue while still maintaining that the Jewish law was no longer valid. Augustine promoted a Pauline argument that the law itself was good but that its goodness had been obscured by sin. The value of the Decalogue within the new covenant was its contribution to shaping the new life in Christ. The influence of these movements continued in the thinking of Reformers in a manner that elevated these formerly community-oriented stipulations to the level of eternal, divine law applicable to all times and all peoples. As a result, in the post-Reformation, precritical period, the exposition of the Decalogue was a usual feature of theological works. As critical scholarship emerged in the academy, eighteenth-century treatment of the Decalogue, and indeed the entire Bible, analyzed the text with a variety of historical-critical methods. These analyses raised questions regarding the authorship, date and origin of the Decalogue. Meanwhile, within the confessional community, the treatment of the Decalogue as a set of eternal laws to be applied universally has generally continued unscathed. Unfortunately, this has encouraged many within Christianity to use the Decalogue as a gauge for measuring righteousness, substituting legalistic prohibitions for covenant faith. A number of recent books of an interpretive nature are available, each seeking to connect the truth or spirit of the Decalogue with contemporary issues, thus demonstrating its continued relevance (Marshall, Moriarty, Timmerman).

8. Hermeneutical Issues and Contemporary Relevance.

Given the specific Israelite origin of the Decalogue and the range of meaning assigned to it by readers throughout history, modern interpreters do well to resist merely insisting upon the universal relevance of these commandments. As universal morals imposed from without, independent of a relationship with the God who gave the Decalogue, these commandments lack spiritual value. Indeed, as apodictic law without a formal structure to enforce adherence to them, there is little motivation for keeping these commandments apart from the covenant. When they are applied beyond the bounds of the faith community, a different motivation is necessary. The statements given here distance interpretation of the Decalogue from the common Christian assumption that they are universal laws. There may indeed be eternal truths within them that are worthy of wide application, but these commandments depend upon the covenant for their authority.

A first step toward discovering the contemporary relevance of the Decalogue, therefore, requires a recovery of *covenant* and *community* as central concepts within the church. The covenant established the context in which these commandments were heard. It established God's prior action on behalf of the people, God's choice of these people and God's desire to communicate with them. The commandments of the Decalogue expressed the divine will for the covenant people. As such, they provided a gift of opportunity and a warning of potential destruction. They provided the foundational principles for thinking about God and about religious living, creating a distinct group of people by defining their relationship to God differently from that of other religious groups. The commandments pertaining to social relationships framed life between members of the group. Faithful living, and indeed a faith community, results from living by the terms of the covenant.

Covenant and community remain as emphases of the Decalogue when viewed through a NT lens even though the NT redefines the faith community. Theological and conceptual parallels exist in God's prior action on the behalf of a people whom God desired to choose and in the revelation of the divine will through Jesus, who is the new covenant. The Decalogue remains useful within the new covenant, though some

important shifts must be recognized. Rather than Israel, the faith community comprises followers of Jesus. Jesus' new command points to love of God and neighbor as the summation of the law. Christians do not keep the commandments as a means of keeping the covenant. Rather, they keep them as a way of expressing their love for God. The catechetical use of the Decalogue is not inappropriate so long as the distinction is maintained between law as "resource for instruction" and law as "measurement of piety" or worse, "source of salvation." With the Decalogue as a relevant resource for instruction, the challenge for the contemporary church is to utilize the positive principles contained in these apodictic formulations in ways that emphasize the spirit of God that undergirds the letter of the law.

DEUTERONOMY, BOOK OF

This article discusses the contents, theological themes and setting of the book of Deuteronomy. It shows how Deuteronomy relates to the OT books that precede and follow it. It describes the contents of the book as a series of speeches of *Moses on the plains of Moab, which re-present in a distinctive manner themes developed in the first four books of the Pentateuch. It goes on to review the interpretation of Deuteronomy in the modern period, explaining why it has been closely associated with the reform of King Josiah in the late seventh century B.C. and identifying the implications of this setting for its theological interpretation. Then, in critical dialogue with the thesis that Deuteronomy is the document of a Judean promonarchical program, it is argued

that the book presents a vision of a thoroughly distinctive constitution for Israel in which Yahweh's authority is mediated through the *tôrâ* (or *law) taught by Moses, with the people having final responsibility for managing Israel's affairs. The principal themes of the book are then reviewed in the light of this overarching view and in relation to other parts of the Bible.

1. Deuteronomy in the Canon of the Old Testament
2. An Outline of the Book
3. Deuteronomy in Modern Interpretation
4. Deuteronomy as a Constitution for Israel
5. Establishing a Setting for Deuteronomy
6. Deuteronomy in the Canon

1. Deuteronomy in the Canon of the Old Testament.

1.1. The Name of the Book. The name "Deuteronomy" comes from the Greek translation (LXX) of Deuteronomy 17:18, which misunderstands the phrase "a copy of this law" as "this second law" (*to deuteronomium touto*). The title in Hebrew is "These are the words," taken from the opening words of the book. Deuteronomy is not a mere addition of new material to that which was already known, but a re-presentation and inculcation of the requirements of the *covenant between Yahweh and Israel. The former title makes an observation about the relation of the book to the remainder of the Pentateuch, while the latter focuses on its content.

1.2. Its Place in the Canon. Deuteronomy is the fifth book of Moses, the last book in the Pentateuch. While the word *Pentateuch* is based on the Greek for "five scrolls," the Hebrew term *tôrâ* also came to designate the same five books. The association with Moses was a key factor in marking out these books as primary. In this context, Deuteronomy brings to a conclusion the story of the formative events of Israel's history with Yahweh. Its narrative of the death of Moses (Deut 34) marks the end of the primary era in Israel's life and the transition to the next phase.

Modern interpretation has aligned Deuteronomy not only with the books that precede it canonically but also with those that follow it (in the Hebrew canonical order): Joshua, Judges, Samuel and Kings—the Former Prophets in Jewish tradition or more generally the Historical Books. Deuteronomy occupies a position between Genesis—Numbers and Joshua—Kings. It is a kind of pause in the narrative, since the

story of the progression from the *wilderness of Sinai via the plains of Moab into the land itself is essentially told in Numbers and Joshua. This position outside the main line of the narrative has led to different placements of the book. Some scholars think of a *Hexateuch* in which Deuteronomy is aligned mainly with the preceding books, but the story unfolded there is perceived as having a true conclusion in Joshua, with its account of the taking of the land of Canaan, promised as early as Genesis 12:1-3 (von Rad 1966a). Others have marked off the first four books, Genesis—Numbers, as a *Tetrateuch* and made Deuteronomy the first book in the series that follows, the whole being known as the Deuteronomistic History, in which Deuteronomy provides the theological basis for the interpretation of history that follows (Noth). It is best to think of Deuteronomy as having both a concluding function and an orientation toward the ensuing history, given its nature as an exhortation to the people to keep the covenant once they have entered the land (so Clines).

2. An Outline of the Book.

Whereas Genesis through Numbers consists predominantly of narratives interspersed with laws and instructions, Deuteronomy is largely in the form of speeches of Moses. These are essentially four (Deut 1:6—4:40; 5:1—26:19; 27:1—28:68; 29:1—30:20), the last four chapters being a mixture of narrative and final sayings. The speeches are set in the plains of Moab, the position that the people of Israel have reached after their *exodus from *Egypt, the covenant made at Sinai (Ex 19—24) and the forty-year period of wandering in the Sinai wilderness, following their failure to enter the Promised Land at the first attempt due to their lack of faith in Yahweh (Num 13—14; note 14:34). The speeches are, therefore, both retrospective and prospective. The opening verses of the book place it in relation to the past events, in the form of brief allusion and on the assumption that the story is known. They include a reference to the defeats of the Transjordanian kings Sihon and Og (Deut 1:4; see also Num 21:21-35), which were a kind of beginning of the taking of the Promised *Land, though the decisive crossing of the Jordan would be left to *Joshua rather than Moses. Moses' initiation of the conquest is recalled in Deuteronomy 1—3, which tells again how Israel came to spend a long time in the wilderness

(Deut 1) and gives its own account of its progress to its present station, including the campaigns against Sihon and Og (Deut 2—3). After an exhortation (Deut 4), this part is framed by a report of *cities of refuge being set up in Transjordan (Deut 4:41-43), a mark of Israel's legitimate occupancy and jurisdiction there, which would be matched by similar appointments in due course in the land proper (Deut 19; see also Josh 20).

The exhortation in Deuteronomy 4 is centered on the covenant making at Horeb (Deuteronomy's regular name for Sinai; Deut 4:10-14), and this is elaborated in the first major set of instructions in the book (Deut 5—11). The book continues to revisit ground covered in the preceding narratives by giving a version of the Ten Commandments (or *Decalogue; Deut 5:6-21; see also Ex 20:1-17), followed by exhortations to keep the covenant of which these commands formed the fundamental requirements. These exhortations focus particularly on the first commandment in the sense that they warn Israel not to turn to the worship of other gods (Deut 7:1-5, 17-26). The apostasy at Sinai/Horeb is recalled in order to show that the people have already failed in this regard (Deut 9:4—10:11; see also Ex 32) and as a spur to greater faithfulness in the future. The reason for this uncompromising position lies in the *holiness of Israel to Yahweh, which is almost the same as the idea that he has chosen them as his special possession (Deut 7:6, see also Ex 19:5-6; see Election). The orientation of the exhortations is consistently toward the future life of Israel in the Promised Land, not only in the present generation but in those to come (the point is illustrated by Deut 6:1-3).

The larger part of Moses' second speech (Deut 12—26) takes the form of a law code augmented by motivations and exhortations. This code corresponds to the law code in Exodus known as the *book of the covenant (Ex 20:22—23:19) in the sense that it represents extensions of the Decalogue into specific cases. Resemblances between the Deuteronomic code and the book of the covenant have long been observed (see Driver, iii-x). Each is prefaced by a law governing worship at a place or places appointed by Yahweh (Ex 20:24-25; Deut 12) and proceeds to aspects of both religious and civil *law. The laws in Deuteronomy often differ in detail. For example, in the law concerning slave-release, Deuteronomy considers the female

slave on a par with the male, unlike Exodus (Ex 21:1-11; Deut 15:12-18).

The law governing worship is also distinctive in Deuteronomy (see further below) and dominant in the law code. Its formula recurs, with variations, a number of times, namely: “you shall seek the place that the LORD your God will choose out of all your tribes as his habitation to put his name there” (Deut 12:5; see also Deut 12:11, 14, 21; 14:23; 15:20; 16:6, etc.). This command corresponds to the holiness of Israel and the obligation to keep distinct from the other peoples of the land and their worship practices (Deut 12:2-4). Laws concerning religious ceremonies are to the fore in Deuteronomy 12–16, while laws on civil matters occupy Deuteronomy 19–25. A central section, not paralleled in the other pentateuchal law codes, addresses the political structure of the nation (Deut 16:18–18:22). Finally, the code is completed by a final command concerning worship (Deut 26). The bracketing of the code with religious requirements effectively signals that adherence to Yahweh and his covenant brings all of life under his sway.

Deuteronomy is not merely concerned with the covenant between Israel and Yahweh as a topic but is itself a covenant-making document. The chapters following the law code make this clear. Moses’ words in Deuteronomy 26:17-19 declare that the parties to the covenant are “today” (on the plains of Moab) taking its obligations on themselves. The next chapter prescribes a covenant confirmation to be performed after the occupation of the land at Shechem, involving the invocation of curses for breaching it (Deut 27). A further extensive section of *blessings and curses ensues (Deut 28). The covenant at Moab is then shown to correspond to the fundamental one at Horeb (Deut 29–30). The document of the covenant, called “the book of this law [*tôrâ*]” (Deut 28:61; see also 28:58), and apparently referring to a form of Deuteronomy itself (Sonnet, 235-62), is to be deposited by the ark of the covenant, kept in perpetuity by the levitical priests and formally read aloud at the Feast of Tabernacles every seven years (Deut 31:9-13; see Festivals and Feasts). The book then offers a final exhortation by Moses in the form of a song (Deut 32) and his farewell “blessing” (Deut 33), in an act that resembles a father’s final blessing on his children. Then, in accordance with the decree of Yahweh that

Moses would see the land but not enter it, the book closes with the account of his death on Mount Nebo (Deut 34).

This survey shows that Deuteronomy both fits into the story that stretches from Genesis to Joshua and has its own unique characteristics. Its reprise of history, law and covenant from the former books is not mere repetition but offers a complete and individual view of the foundations of Israel’s life. The scene has moved on from Sinai to Moab, and this shift has brought with it an entirely new covenant, which gives a basis for thinking about Israel’s responsibilities in the land in the light of their history with Yahweh to that point.

3. Deuteronomy in Modern Interpretation.

3.1. Deuteronomy as a Unique Document. Deuteronomy’s distinctive characteristics have dominated its interpretation in the modern period. The special style of Deuteronomy’s speeches of Moses was first noted in 1805 by W. M. L. de Wette, but the classic description of it came from S. R. Driver nearly a century later (Driver, lxxvii-lxxxviii; see also Weinfeld 1972, 320-65). Driver’s analysis laid the foundation for the belief that the kind of language found in the book, which was recognizable in other places in the OT, provided evidence for a whole class of literature, indeed a movement, that could be described as Deuteronomic. This language had a repetitive, sermonic style, with stereotyped phrases, especially on the topics of the imminent entry to the Promised Land and the need to keep the commands of the covenant and to worship Yahweh at the place that he would choose.

We have seen that the book falls into a series of speeches by Moses. However, as a covenant-making document, it also has structural similarities with ancient Near Eastern treaties. These similarities, especially to second-millennium B.C. Hittite vassal treaties, were first noticed by M. G. Kline and K. A. Kitchen (90-102; see also Craigie, 22-23). The main elements in the form can be given as follows, along with the corresponding sections of Deuteronomy (this division of the material only partly corresponds to its division according to the speeches of Moses): (1) a preamble announcing the treaty and those who are party to it (Deut 1:1-5); (2) a historical prologue rehearsing the previous relations between the parties (Deut 1:6–4:49); (3) general stipulations (Deut 5–11); (4) specific stipulations (Deut

12–26); (5) a deposition of the document for the purpose of public reading (Deut 27:1-10; 31:9-29); (6) witnesses (Deut 32); and (7) blessings and curses (Deut 27:12-26; 28:1-68). The match between the form of Deuteronomy and that of the treaties is not exact. For example, the last six chapters are not included in the analysis just offered, the “stipulations” are closer to ancient law codes than to treaty stipulations, and the curses section is much longer than in the known Hittite treaties. There is, in addition, a question whether the form is closer to Assyrian treaties of the first millennium (so Weinfeld) than to the Hittite treaties. However, the treaty analogy helps identify Deuteronomy as a book with its own independent standing and rationale. It is also a suitable vehicle for Deuteronomy’s highly developed covenant theology.

3.2. Deuteronomy as a Document of Reform. In modern times critical scholarship has regarded Deuteronomy as deriving from a later time in Israel’s history than that of Moses. How far it was thought to rest on Mosaic tradition has varied depending on the attitudes of different scholars. Its dating and interpretation, following Julius Wellhausen in the late nineteenth century, have been based on the assumption of its origin in King Josiah’s reform in the late seventh century B.C., that is, a century after the fall of the northern kingdom and only a generation before the exile of the people of Judah to Babylon (Clements, 69-83). The connection arose from the account in 2 Kings 22:8 of the discovery of “the book of the law” in the temple during renovations being carried out there in the year 621 B.C. This and similar terms were applied to a form of Deuteronomy both in the book itself and in Joshua (Deut 28:58, 61; 31:26; Josh 1:8). The chronology of the reform is given slightly differently in 2 Chronicles 34–35, which suggests that it had already begun in 628 B.C. and that the discovery of the “book of the law” merely gave it fresh impetus (see Nicholson 1967, 8-11).

On this view, the reform movement and the composition of Deuteronomy are inseparable. Deuteronomy was widely seen as the document that justified the measures taken by Josiah. The formula governing worship was thought to have been conceived to legitimate Josiah’s centralization of worship in Jerusalem by destroying the other sanctuaries of Judah. A plurality of worship places had been the norm in the earlier period, as evidenced by the stories of Samuel (1

Sam 9:14; 10:3) and Elijah (1 Kings 18). The law of the *altar in Exodus 20:24, furthermore, did not seem as exclusive as that of Deuteronomy 12:5. The unnamed “place” of the Deuteronomic formula was taken to refer to Jerusalem, and certain texts appeared to support this view (1 Kings 8:29; 2 Kings 21:4). The formal anonymity of the “place” in Deuteronomy was attributed to the need to be consistent with the Mosaic setting.

Deuteronomy thus became a midpoint, not only in the development of the OT religion, but also in that of the pentateuchal documents (JEDP) and law codes (see Source Criticism). The book of the covenant (Ex 20:22–23:19) represented the older traditions, while the Priestly writings contained the Holiness Code (Lev 17–26), sometimes regarded as a separate source but usually dated after Deuteronomy in any case. The progression from the book of the covenant through Deuteronomy to the Priestly writings/Holiness Code could be seen as tightening the regulation of worship. Where the book of the covenant allowed worship in a number of places, Deuteronomy restricted it to one, albeit with dispensations (see next paragraph), and the Priestly writings/Holiness Code restricted this requirement further (Lev 17:2-9).

Deuteronomy therefore came to be seen as the document of Josiah’s “centralization” of worship. Josiah’s destruction of local sanctuaries (2 Kings 23:4-14) brought about a major change in the life of Judah, for the people had been worshipping at the “high places” (as they are called in Kings), where they had honored deities other than Yahweh. Interpreting Deuteronomy against this background appeared to explain a number of the book’s features. Distance from the main sanctuary became a ground for permission to slaughter meat nonsacrificially (Deut 12:15-25) as well as to convert tithe-produce into money at home in order to repurchase produce for the offering at the sanctuary (Deut 14:22-27). In other instances an opposition is set up between the towns of Judah (or “gates,” as they are metonymically called in Deuteronomy) and the central sanctuary. For example, the Passover is to be celebrated at that place, not in the towns (Deut 16:5-6), and while legal proceedings were normally to be pursued in the localities, difficult cases had to be taken to a sort of high court at the sanctuary (Deut 17:2-7, 8-9). Regarding priestly service, Deuteronomy 18:6-8 permits

*Levites from the countryside to come to the main sanctuary to participate as priests in the worship there. This has frequently been regarded as one Deuteronomic ideal that Josiah refused to enact, since he took severe measures against the “priests of the high places” (2 Kings 23:5, 9).

The theory of centralization required an understanding of the nature of the reform movement that culminated in it. If Josiah was reasserting ancient Israelite religion in the face of Assyrian religious influences, why would that require centralization, if that had not formerly been essential to Yahweh worship (see Lohfink 1987)? It is now thought that the reform may have intended to oppose an upsurge of popular devotion to the goddess Asherah, on the grounds that the archaeological record attests a sudden increase in goddess figurines in the seventh century (Holladay). The reform may have faced two directions: on the one hand against this groundswell of popular piety throughout Judah, and on the other against the Assyrianization of the official worship that had taken hold under Manasseh (Levinson, 63).

In any case, the reform is still widely understood as emphasizing the spiritual and ethical side of religion, as against its external or ritual expressions. For example, Deuteronomy has the clearest concern in the law codes for the poor and disadvantaged (*see* Wealth and Poverty). It makes a number of provisions for the stranger, the *orphan and the *widow (e.g., Deut 14:28-29; 16:14). Such provisions can be seen as making a deliberate contrast with a more ritual concept of religion; in the case of the tithe, the “priestly” law presents it as a perquisite of the Levite (Num 18:21-24) rather than Deuteronomy’s concept of an offering put to charitable use.

In the development of the scholarly view of Deuteronomy, therefore, a certain paradox emerges. A document thought to concentrate ritual and sacrificial worship in one place, thus maintaining the privileges of the Jerusalem temple and its clergy, is also held to promote a more spiritual and ethical kind of religion. The paradox is often explained as a kind of compromise. The spirit of the reform was covenantal and prophetic, as shown by Deuteronomy’s affinities with northern traditions typified by the prophet Hosea, who also preached about the covenant and criticized Israel’s apostasy to the worship of

Baal (Hos 2; 8:1). These traditions were brought south by Yahwists fleeing the Assyrian ravages that led to the northern kingdom’s fall in 722 B.C. and fed into the reform movement in Judah. Covenant theology in Judah itself had taken a different route because of the continuity there of the Jerusalem temple and the memory of the promise to David (2 Sam 7). The Deuteronomic reform was, therefore, a compromise between the radical theology of the north and the temple-oriented theology of Judah (see Nicholson 1967).

Concentration of worship in Jerusalem could be seen as curtailing ritual worship generally (Weinfeld 1972, 190; see also Tigay, xvii), while controlling it in the capital, and therefore compatible with the prophetic themes of Deuteronomy. Its emphases on the preaching of the covenant, faithfulness to Yahweh as a matter of the “heart” (Deut 6:5) and care for the weak in society could thus be located in a royal reform of religion, inspired by a prophetic call to return to Israel’s covenantal roots. In Tigay’s words: “Deuteronomy’s aim is to spiritualize religion by freeing it from excessive dependence on sacrifice and priesthood” (Tigay, xvii).

In the dominant modern form of this analysis, M. Weinfeld situates Deuteronomy in the royal scribal schools of the late Judean monarchy. These schools were the counterpart of the scribal schools in Assyria that produced political treaties. The Judean scribes were influenced by wisdom thinking, which lay close to the spiritual and ethical form of religion found in Deuteronomy. For them political and religious ideals were inseparable. Weinfeld sees their reform as both “secularizing” and “demythologizing” (1972, 190-209). That is, religion itself has become more rational than older ritualized forms, and at the same time the life of Israel is largely freed from priestly control. Even the worship in Jerusalem, therefore, was radically altered by Deuteronomy’s program. The essence of this revolution in religious concepts was in the concept of *God himself. Weinfeld understands Deuteronomy’s idea of the placing of the divine name at the sanctuary (Deut 12:5) by reference to the (Deuteronomic) prayer of Solomon at the dedication of the temple. In that place the idea of the name’s presence at the temple is closely associated with the proclamation that Yahweh dwells in heaven. This is thought to imply that he does not dwell on earth (1 Kings 8:27, 29),

and Weinfeld concludes that Deuteronomy systematically develops a theology of divine transcendence, in contrast to the older, more naïve idea that God was actually present in the temple.

More radical than Weinfeld is the recent thesis of B. M. Levinson, who has argued that Deuteronomy is so innovative that it repudiates all older religious traditions. In particular it aims to replace the book of the covenant. This is one attempt to explain the differences between the book of the covenant and Deuteronomy. We shall return to this point below.

3.3. *Deuteronomy in Old Testament Religion.* In the usual critical discourse about Deuteronomy it is assumed that the book reached its present form over a period of time. What we have said thus far, therefore, refers properly to a core of the book. Scholars see the development of Deuteronomy as a development toward an ever more elaborate covenantal theology. Since the work of L. Peritt (followed in its main aspects by, e.g., Nicholson 1986), it has been supposed that Deuteronomy was largely responsible for creating the OT's covenant theology. Further work attempted to discern levels of this development in the book by *literary-critical means, and it is widely thought that a progression toward greater conditionality can be found. This view of Deuteronomy as an initiator of covenantal thought may be aligned with the idea that court scribes turned to Assyrian treaty models in order to express their own theological and political ideas.

4. Deuteronomy as a Constitution for Israel.

In the section that follows we outline an alternative analysis to that described above, which will in turn lead us back to the question of setting in Israel's history.

4.1. *The Laws of Officials.* We saw earlier (see 2 above) that Deuteronomy presents a vision of Yahweh as the sovereign agent in all of Israel's life. This appears in the form of the law code, in which civil laws are framed by the fundamental command to adhere to Yahweh. It is implied also in the borrowing of the treaty form itself, mixed with the law-code form, to express the idea of Yahweh as Israel's overlord. So far these ideas could be embraced within the account offered above, in which the book promotes the royal reform of Josiah. However, Deuteronomy's program for the government of Israel in Deuteronomy 16:18—18:22, a part of its law

code that has no counterpart in the other codes, suggests a different setting.

At the heart of this section is the Deuteronomic law of the king (Deut 17:14-20), the only law concerning the king in the OT. In it Israel is permitted to appoint a king, with certain important conditions attached. A king of Israel must be a "brother" Israelite (Deut 17:15; this key term is lost in some translations, including NRSV, because of their inclusive-language policy). He must not make himself powerful by amassing a cavalry and especially not by entering an alliance with Egypt for the purpose (Deut 17:16). He must not surround himself with a harem, in the manner of other oriental kings, nor acquire a fortune for his own use (Deut 17:17). On the contrary, he must keep his own copy of the "this law," namely, Deuteronomy (Deut 17:18; this was the text on which the name of Deuteronomy was based, see 1 above). He must be a student of the law and not aspire to rise above his "brothers" in status (Deut 17:19-20).

This remarkable portrait looks like a direct repudiation of the style of kingship adopted by Solomon, in some ways the most successful king of Israel (1 Kings 10:26—11:3). Moreover, it runs counter to basic expectations regarding kingship throughout the ancient Near East, for in general the king was chief executive in both religious and political administration (Ahlström, 1-25). It may be an idealized portrait, for it was hardly matched by any king of Israel or Judah. What is important, however, is that its context among the other laws of officials (Deut 16:18—18:22) appears to sideline the king altogether. First, it is not the king but Yahweh who has power to give land (a royal prerogative in the ancient Near East; Deut 16:18; 17:14). Second, only the king is an unessential part of the picture in this section: *judges must be appointed (Deut 16:18); priests are chosen by Yahweh (Deut 18:5); and likewise the *prophet will be raised up by Yahweh to succeed Moses (Deut 18:15; this must be understood as a succession of prophets). Nor is this king a "son of God," as David is (Ps 2:7); that title is applied to Israel as a whole (Deut 1:31; 14:1; for fuller analysis along these lines, see B. Halpern).

4.2. *Sovereignty of the People Under Torah.* Israel, therefore, should be quite distinct from other ancient Near Eastern societies. It had, after all, escaped from a tyranny in Egypt, and Yahweh's intention in delivering his people

from that slavery was to liberate them into service to himself (Ex 5:1; Deut 26:8-11). In Israel power would not be concentrated in an individual but diversified in the other major offices (see Lohfink 1993). Moreover, the final political responsibility lay with the whole people. The people as such are addressed in many instances of the second-person singular in Deuteronomy. In Deuteronomy 16:18 the people are responsible for appointing judges. It is the people too who *may* appoint a king (Deut 17:15). This sovereignty of the people in principle is effected in practice by representatives. However, these take their authority from the “assembly” of Israel. Israel as an assembly is encountered by Yahweh at Horeb, and the day of that meeting comes to be designated “the day of the assembly” (Deut 9:10). Future meetings of the people at the great annual worship events are then seen as realizations of that first encounter. These are typified by the gathering for the Feast of Tabernacles in the seventh year, at which the “book of the law” is formally read (Deut 31:10-13). The authority of the assembly is therefore derivative. Real authority lies with Yahweh’s *tôrâ* itself.

The primacy of *tôrâ* (“law”) explains the role of Moses in the book, for it is he who mediates it by his preaching in the covenant renewal at Moab. His teaching responsibility is established in Deuteronomy 4:14, where it appears to entail an interpretive activity in relation to the Decalogue. The teaching of the *tôrâ* is carried on in Israel in a number of ways, not least by parents who teach their children (Deut 6:7-9), but it is symbolized especially by the prophet. Of the offices prescribed in Deuteronomy 16:18—18:22, only the prophet is expressly said to be Moses’ successor (Deut 18:15). The point of this is to ensure that the primacy of *tôrâ* is guarded in all of Israel’s subsequent life.

In Samuel’s time the elders of Israel take up the permission given in Deuteronomy 17:15 and demand that Samuel give them a king (1 Sam 8:4-9). The people are represented by “the elders of Israel,” and the authority of Yahweh and his *tôrâ* reposes in Samuel the prophet, who in that office functions as the successor of Moses.

4.3. Deuteronomy’s Main Features in this Framework. We can now return to some of the main features of Deuteronomy in light of the view of the book outlined above.

4.3.1. *Tôrâ*. Deuteronomy’s strong emphasis on the *tôrâ* itself, or the “words” of Yahweh, in-

deed the whole vocabulary of law (“the commandments, the statutes and the ordinances,” Deut 5:31), derives from this supremacy of *tôrâ* in Israel’s life. This recognition should govern our understanding of **law* in Deuteronomy. Too often in interpretation law has been cast in a negative role, as something opposed to **grace*. In Deuteronomy, however, it is a function of Yahweh’s gift of **life* to Israel. The law imposes an obligation to maintain a society in which justice reigns. The basis of the laws in a love of justice is asserted in hortatory tones in Deuteronomy 16:20, and the pursuit of it is seen as the way to life. The administration of justice in Israel as an obligation of the people places it in the context of Deuteronomy’s radical vision for freedom in service to Yahweh and a society that protects the individual from the tyranny of powerful hierarchies.

4.3.2. Election, Brotherhood and Spiritual Religion. Israel as the chosen, holy people of Yahweh (Deut 7:6) may be read in terms of both its external and internal relations. Externally, it means that Israel is chosen, not other nations. The rejection of other nations is grounded in their wickedness (Deut 9:5b). However, the choice of Israel is dependent solely on Yahweh’s love for them, rather than either their great size (Deut 7:7) or their righteousness, for they too were wicked (Deut 9:4, 6-7). The theology of **election* both explains Israel’s favored position with Yahweh and secures that it is due to his grace only.

In terms of Israel’s internal relations, the whole people of Israel are elect, “children of the LORD” (Deut 14:1), not just the king. In this sense election is consonant with the Deuteronomic theme of the brotherhood of all Israelites. This is one of the most powerful expressions of the unity of the people before Yahweh and their freedom from tyranny. Deuteronomy consistently minimizes distinctions of rank between members of the community. It even downplays tribal distinctions (introduced in the context of the conquest of Transjordan [Deut 2—3], in the ceremony on Mounts Gerizim and Ebal [Deut 27] and in the blessing of Moses [Deut 33]). Strikingly, the term “brother” is often used in unexpected places. It is used of debtors and slaves (Deut 15:3, 7, 12) to assert their full membership in Israel and their fundamental right to the benefits of the Promised Land. It also emphatically includes women

within the designation “brother,” in a bold extension of this metaphor of equality (Deut 15:12). The purpose of these laws of release of debts and slaves is to restore those who have become disadvantaged to their position of full rights in the Promised Land, especially so that they can participate in the feasts. (It is no accident that the laws providing provisions for release come almost directly before the laws about the feasts.)

The concept of brotherhood is truer to the concerns of Deuteronomy than the general notion of ethical sophistication or enlightenment, which is sometimes attributed to an upward evolution in Israel’s religion. The vision here is, on the one hand, not so inclusive, since it distinguishes between Israelites and others in its provisions (e.g., Deut 15:3; 23:19-20) but, on the other hand, it goes much deeper, for it envisages a society that is quite distinct from every other known society in its world: based on the absolute respect for all its members, all equally enjoy the protection of the law of God.

It is in this context too that one must understand the religion of the “heart” in the book. It used to be held that Israel’s religion was in its early stages corporate and ritualistic and that it gradually progressed to a higher level, characterized by individualism in ethical responsibility and spirituality. It was thought to be the classical prophets, as well as Deuteronomy, who provided evidence of this development. The point rests on a fallacy. In Deuteronomy Israel is indeed called to “love the LORD your God with all your heart, and with all your soul, and with all your might” (Deut 6:5). This, however, is in the context of the speeches of Moses’ address to the people as a whole. The call to love Yahweh has analogies in the treaty language of the ancient world. In Deuteronomy it is one way of expressing the command that the people as a whole should be faithful to Yahweh rather than defect to other gods. It is the people in all the dimensions of life—in their pursuit of justice, rigor in implementing the laws and worship together—who are commanded to love Yahweh with all their heart, mind and soul.

4.3.3. Land. Deuteronomy’s setting on the border of the Promised Land, together with repeated allusions to “the land the LORD your God is giving you to possess,” makes *land one of the dominant themes in the book. Deuteronomy contains delightful images of a plentiful land

(Deut 8:7-10; 11:9-11). This emphasis is often attributed to the increasingly precarious hold that the people had on their land in the late seventh century B.C. A conditional theology of land was developed as part of an explanation of its loss. However, Deuteronomy’s theology of land goes well beyond the simple idea that it is possessed as a reward for keeping the covenant. The insistence that Yahweh (not the king) is the giver of land is crucial, as is the fact that he gives it to the people as a whole. The theme of land cannot be separated from the idea of the unity and brotherhood of the people nor from their covenantal relationship with Yahweh. (C. J. H. Wright [1990] explores the relationship between these themes of brotherhood and land.)

We saw this connection between brotherhood and land in the preceding section (see 4.3.2 above) when we observed that the laws of release secured the participation of all Israelites in the annual feasts. Indeed, the land theme finds its highest expressions in the images of Israel gathered at the place of worship. Deuteronomy, more than other books, portrays worship as celebratory, involving all the people, with scant attention to priestly mediation or to the range of *sacrifices. The people are seen feasting and rejoicing together (Deut 12:6-7, 12; 14:22-27; 16:14-15). The poor are included, and the offerings have an explicit connection with provision for them (Deut 14:28-29). These are pictures of a people enjoying the land they have been given, returning grateful worship to God for it and at the same time expressing their unity, compassion and justice (Lohfink 1995). Their eschatological vision is at the very heart of Deuteronomy.

4.3.4. Covenant. Descriptions of Deuteronomy’s *covenant theology have often focused on different perceptions of the relation between law and grace in successive redactional layers. There are indeed complementary aspects of covenant in the book. The word *bērit* (“covenant”) is closely associated in some texts with the Decalogue (Deut 4:13; 5:2-3); in another it is in a hendiadys with *hesed* (“steadfast love,” Deut 7:9); the same context recalls the “oath” that Yahweh made to the patriarchs. These passages illustrate the richness of the idea in the book, embracing promise, command and the loyalty that gives covenant its qualitative content. Covenant in Deuteronomy cannot be reduced to a kind of tense dialogue between polar opposites

of law and grace (pace von Rad, who thought he could discern in the book “a declension from grace into law” [1996b, 91]). Such a concept is foreign to the book’s own discourse. Covenant consists instead in the vision of a full and vital relationship between Yahweh and Israel, in which his blessing is received with grateful rejoicing and issues in their commitment to a just society.

The most interesting aspect of Deuteronomy’s covenant theology lies in the structural relationship between the covenants of Horeb and Moab, which is a key to understanding the book. The succession of Horeb and Moab is a kind of fusing of horizons between generations. This in turn is part of Deuteronomy’s establishment of a solidarity of Israel. The classic case is Deuteronomy 5:2-3, in which the Moab generation are addressed rhetorically as if they were the Horeb generation. The concept of the Moab covenant, with its repeated use of the hortatory “today,” is to make the Horeb covenant perpetually alive in each generation of the people. In doing so it is no mere repetition of previously existing laws and commands. Rather, the teaching of Moses represents a continual updating and reapplication. The death of Moses outside the land has a positive function for interpretation in this connection (Olson). The people, in the land without Moses, will be responsible themselves for maintaining their life with Yahweh. The Moab covenant both establishes covenant renewal as an essential dimension of covenant itself and imposes an obligation of reinterpretation.

4.3.5. The Chosen Place and the Divine Name. Finally, Deuteronomy’s command to “seek the place that the LORD your God will choose” (Deut 12:5, etc.) should be related to this notion of perpetual covenant renewal. The refusal to name a particular place, far from being a mere device in keeping with the Mosaic setting, is consistent with a vision that includes the changing scenes of Israel’s life in all its generations. In this vision, no particular place is paramount or signals the end of Israel’s journey. Not only Jerusalem but also Shiloh in its time corresponds to the formula (Jer 7:12), as does even Gibeon (Josh 9:27). The “chosen place” is a counterpart in the ongoing life of Israel to the encounter at Horeb. As Israel once stood “before Yahweh” at that mountain (Deut 4:10), so it comes “before Yahweh” at his chosen place forevermore (Deut 12:7). The “chosen place,” therefore, in com-

mon with Moab, represents fresh Horeb-like encounters, now projected indefinitely into Israel’s future.

Indeed, Israel’s story in Deuteronomy is constructed as a journey. The journey proceeds from Egypt through wilderness (note the locations along the way [Deut 1:1]) to Moab, Shechem (Deut 27), the “chosen place,” exile and back again to land (Deut 30:1-10). Deuteronomy’s view of covenant is that at every stage of its life and at every place Israel should reenter the covenant afresh (“today”) as if for the first time (see further McConville and Millar).

The theology of the divine name is in close connection with that of place. It has nothing directly to do with the mode of the divine presence (pace Weinfeld, whose thesis about transcendence does not account for the repeated “before the LORD” in the “name” passages; see further Wilson). Rather, it is part of Deuteronomy’s insistence on the people’s dealing always with Yahweh rather than with other gods. (The command to seek the place that Yahweh will choose and put his name there is in express contrast to the command to destroy the “places” at which the other peoples worship their gods and to blot out their names from those places [Deut 12:2-4]). Since the “name theology” is not, after all, about the nature of Yahweh’s presence, it is mistaken to find in it a dispute about presence with the priestly literature. Deuteronomy does not describe the tent of meeting and its geography of holiness, because it has a different mission from the texts that explore that topic (Ex 25—31, primarily), namely, to demonstrate Yahweh’s sovereignty in every aspect of Israel’s life and to recall the people to their commitments on the broadest canvas.

5. Establishing a Setting for Deuteronomy.

In my view, the vision of Deuteronomy is for a society quite different from that which Josiah tried to create, mainly because it does not promote the idea of king as chief executive. Indeed, it proposes a structure of authority in Israel that is thoroughly at odds with the monarchic idea. This leads to the question: What is the best situation for the book? Deuteronomy could come from an early period, before the establishment of the monarchy at all; it could be a counterprogram to a monarchic reform, whether Josiah’s, Hezekiah’s or some other king’s; or it could be a postexilic reflection on the failure of the monar-

chy and an attempt to construct a better alternative. In favor of the last possibility, it is argued that the king law (Deut 17:14-20) is utopian and that it could never have been really implemented (Lohfink 1993). Others have believed, however, that the king law is ancient and that the laws governing the officials belonged to a premonarchic constitution of Israel (Halpern; see again 4.2 above on the king law in relation to 1 Sam 8). A decision on this cannot be made with certainty, and then only in the context of decisions on a whole range of issues. In my view, the affinities between Deuteronomy and the prophetic books play an important part here. The book's similarities to Hosea, for example, are well known (Weinfeld 1972, 366-70), especially their sharing of the themes of covenant, opposition to other gods and coolness about kings. The theological sequence of punishment and restoration by means of repentance (Deut 30:1-10) is shared with a number of prophetic books, as is the importance of the religion of the "heart" (the Deuteronomic text just quoted is close in substance to Jeremiah's new covenant [Jer 31:31-34]). These correspondences are often explained on the premise of Deuteronomic influence on the prophetic books as a scholarly activity in late Judah and the exile. But the ideas shared by Deuteronomy and the prophets can equally well be traced to an earlier time, when the basic issues of Israel's existence were being thrashed out.

6. Deuteronomy in the Canon.

We can now make some further observations about the location of Deuteronomy in the OT and the Bible. In relation to the Pentateuch, we raised the question earlier (see 3.2 above) about how it relates to other law codes, especially the book of the covenant. The resemblances yet differences between Deuteronomy and the book of the covenant raise the question whether the relationship between them is one of displacement or development. B. M. Levinson took the former view, believing that Deuteronomy deliberately reuses elements of phraseology and vocabulary from the book of the covenant in completely new ways. However, this seems to underestimate the fact that both codes, together with the Holiness Code, stand in the canonical Pentateuch. What is interesting theologically is that codes that cannot easily be harmonized have been brought together into an entity that has an over-

arching rationale. We have referred to Deuteronomy as a kind of hermeneutic, and this juxtaposition of the different codes shows one function of the canon, namely, to invite further theological interpretation.

In relation to the Historical Books, the intriguing comparison lies in the presentation of kingship. Deuteronomy's preference for a decentralized administration of Israel sits in tension with the divine favor enjoyed by David and his dynasty in the narrative that follows. Here again there is an invitation to careful interpretation. The path to the dynastic promise to David involves contingencies in which the choices made by Israel are scrutinized critically (1 Sam 8—12). The story of David is a tribute to God's mercy and accommodation to the sinfulness of Israel. It is one possible story among other possible stories. The confrontation between Deuteronomy and the Historical Books sets the reality of human life, with its mix of good and bad choices, alongside the call to uncompromising faithfulness and perpetual renewal.

Deuteronomy has interfaces with other parts of the OT as well. In common with the wisdom literature, especially Proverbs, Deuteronomy knows of an order in life, both moral and natural. Yet both books know also that truth cannot be reduced to simple equations. Deuteronomy's theology of mercy for a people it knows to be already rebellious is a case in point. Yet people are still called to be trained in what is right because a joyful human experience depends on acknowledging that life is a gift from God.

We have already noticed affinities between Deuteronomy and prophecy. Superficially the difference between these blocks may be expressed as Deuteronomy setting out an agenda in advance, while the prophets recall a people who have strayed. Yet we have seen that Deuteronomy too already addresses the people as those who need to be rebuked and brought into a true path. The loudest echoes of prophecy come in Deuteronomy 32, which gives poetic expression to the Deuteronomic themes of fidelity to Yahweh (and the dangers of infidelity), of judgment and of the mercy of God coming through in the end. There are particular echoes of Isaiah 40—55.

Deuteronomy contributes to the Bible's theology of the salvation of the world. This is so despite the absence of an explicit theology of salvation for the nations, and indeed its com-

mand to show no mercy to the people of the Promised Land (Deut 7:1-5). The picture is relieved by Deuteronomy 2, in which Yahweh is the giver of land not only to Israel but to other nations as well (see also Amos 9:7). Furthermore, Israel's obedience to *tôrâ* is presented as a witness to the nations (Deut 4:6-8). Indeed, the eschatological pictures of Israel functioning as a covenant society may be seen as a paradigm of a nation living before God (see Millar, 147-60).

It remains to indicate some specific ways in which Deuteronomy relates to the NT. The central question is how its vision of a people under *tôrâ* might help to understand the nature of the people of God in Christ. First, it seems that Deuteronomy's idea of the people has informed the writings of Luke. In Luke 1—2, the church is conceived as "Israel," the people (*laos*) of God to whom Jesus has come. Acts 2—5 shows the apostles gathering the true "Israel" out of the Jews and only then beginning the Gentile mission. These two stages belong together: Israel is only complete when the Gentiles are brought in. In this context, Acts 15:14 alludes to Deuteronomy 14:2; 26:18-19, as well as Exodus 19:5. Similarly, Acts 3:22-23 cites Moses' saying that Yahweh would raise up a prophet like him (Deut 18:15, 18-19). There are further Deuteronomistic echoes in the same passage (Acts 3:26).

Second, Paul, in Romans 10:1-5, expressly draws the reflection on *tôrâ* in Deuteronomy 30:11-14 into his christology. It seems that Paul's understanding of faith in Christ subsumes the keeping of the *tôrâ*, this having been accomplished by Christ. It follows that Paul's concept of salvation in this place is filled with content drawn from Deuteronomy. The keeping of *tôrâ* and faith in Christ are not opposites. On the contrary, Christ's fulfillment of the *tôrâ* confers validity on it.

Finally, the *tôrâ* in Deuteronomy as a vision for society in the midst of a godless world may be aligned with Jesus' prophetic opposition to social and political oppressions of his time. In announcing the kingdom of God, Jesus turned a searchlight on society as it was, not only Roman but also Jewish. He did so by exposing the failures of people to live by the covenantal standards of justice and righteousness. The Deuteronomistic resonances in Jesus' teaching consist in the refusal of both to identify their understanding of the kingdom of God with one particular institution, whether political or reli-

gious. This is the point of Deuteronomy's demand that the people constantly reinterpret *tôrâ* and eschew reposing absolute authority in any human agency. In doing so, it precludes the use of religious authority to justify any status quo. This is the lasting contribution of the book. It is capable of informing practical thinking about the organization of societies while maintaining a vision of the kingdom of God.

DIVINATION, MAGIC

Divination and magic were widely practiced in the ancient Near East and are vigorously condemned in the Pentateuch and throughout the Bible. The practices overlap in many important ways and have similarities with *prophecy and religion, which makes it difficult to clearly distinguish between them. All involve interactions with supernatural beings or powers. While the Bible prohibits divination and magic, some permitted practices share common features. On the other hand, approved practices such as prophecy, prayer or the laying on of hands are denounced when practiced with a magical mindset. For these reasons, descriptions of the methods in-

volved are not enough; one must also consider the beliefs motivating the practices and the practitioners' worldview.

1. Background
2. Torah's Prohibition
3. The Methods of Divination and Magic
4. Theological Perspectives

1. Background.

Even while risking oversimplification, concise definitions of the practices of divination and magic are useful. Divination attempts to gain supernatural knowledge, usually either to understand why something has occurred or to predict the future. Magic attempts to use supernatural powers to influence people, events or other supernatural beings. Biblically approved practices emphasize divine initiative and divine prerogative. Magic and divination are human efforts to understand, control or manipulate the divine realm by methods believed to practically guarantee the desired results. These tend to be the satisfaction of immediate human needs, such as healing, protection, sustenance or knowledge.

The religions of the ancient Near East were infused with magic and divination. Illness, famine and military defeats were frequently believed to have spiritual origins. In both Mesopotamia and Egypt, skilled practitioners of magic were highly regarded. *Moses and *Aaron confronted these magicians when they sought to release the Hebrews from Egypt (Ex 7:11). *Balaam was an esteemed diviner whom Balak, king of Moab, attempted to use to curse Israel (Num 22:4-7). These cultures approved certain forms of magic by designated practitioners but outlawed other practices, often labeled witchcraft or sorcery. For example, the Babylonian Code of Hammurabi (c. 1868-1728 B.C.) punished sorcery with the death penalty. Witches were viewed as being in league with demons and causing bad things to happen. The approved magicians would use magic to counteract these influences and act as diviners of useful information.

God placed Israel in the midst of cultures saturated with divination, magic and witchcraft. He desired that the Israelites come to him for revelation and insight. In the midst of uncertainty, they were to rely on his trustworthiness and provisions, not attempt to manipulate their circumstances. Divination and magic were strongly

denounced because they drew people away from God and dependence on him.

2. Torah's Prohibition.

The Pentateuch contains the most extensive biblical prohibition of divination and magic:

Let no one be found among you who sacrifices his son or daughter in the fire, who practices divination or sorcery, interprets omens, engages in witchcraft, or casts spells, or who is a medium or spiritist or who consults the dead. Anyone who does these things is detestable to the Lord, and because of these detestable practices the Lord your God will drive out those nations before you. You must be blameless before the Lord your God. The nations you will dispossess listen to those who practice sorcery or divination. But as for you, the Lord your God has not permitted you to do so. (Deut 18:10-14 NIV).

Elsewhere the Israelites were prohibited from pursuing divination and sorcery (Lev 19:26) or consulting mediums and spiritists (Lev 19:31). A sorceress was to be put to death (Ex 22:18), as were mediums and spiritists (Lev 20:27). In contrast, instances of divination and magic are recorded in the Pentateuch without condemnation. Laban is said to have used divination to discover that God had blessed him through his nephew Jacob (Gen 30:27). Jacob used what some view as a magical practice to influence his flock's breeding (Gen 30:37-43). *Joseph gave his brothers the impression that he used his silver cup for divination (Gen 44:5, 15).

Each of these passages, however, raises difficulties in translation. Laban's statement traditionally translated "I have divined" can also be rendered "I have grown rich." G. J. Wenham prefers this translation, noting it unlikely that Laban would use divination while prospering. Rather than practicing magic, Jacob may have used his years of shepherding experience cunningly to outwit Laban by manipulating normal breeding patterns to produce stronger animals for himself. Joseph did not state that he used his silver cup for divination, which is part of the ruse to determine if his brothers had repented of their crime against him. Regardless of these problems, the lack of explicit condemnations does not necessarily mean the texts support these practices, nor does it in any way contradict the clear prohibitions against divination and magic.

3. The Methods of Divination and Magic.

3.1. Divination. Divination and magic involve a number of practices described by various names. The supernatural information obtained by divinatory (or mantic) methods can come from natural phenomena or altered states of consciousness. The supernatural signs are called omens or portents and are "read" to determine their meaning. The ancient Near Eastern cultures prodigiously recorded omens and their interpretations. The omen interpreters were called seers or soothsayers.

Numerous natural phenomena were interpreted as omens. Underlying these practices was the belief that the universe was interconnected and that the parts reflected the whole. For example, in astrology the positions of the stars and planets are believed to reflect the divine will. Understanding how the parts relate to the whole thereby gives insight into the divine will and the future. Magical methods then allow humans to influence those events.

Astrology was practiced throughout the ancient Near East but was prohibited in Israel (Is 47:13). It never became popular, like other forms of divination, perhaps because of Israel's belief in God's sovereignty over the stars (Gen 1) and the prohibition of sun, moon or star worship (Deut 4:19). Just as the stars were used to discern the divine will, so too were many smaller objects. Livers and entrails were believed to reflect divine dispositions when an animal was sacrificed and were examined in a practice called hepatoscopy (Ezek 21:21). Clay models of livers with inscriptions have been found in the regions occupied by ancient Israel. Augury finds omens in the movements of animals, especially the flight paths of birds. This was usually practiced on high ground and may have been why Balaam divined from a barren height (Num 23:3). Hydromancy used the movement of oil drops on water in a cup to give omens. This may have been the method referred to by Joseph (Gen 44:5, 15). A Mesopotamian handbook for reading these omens dates from the nineteenth to seventeenth centuries B.C., around the time of Joseph. Rhabdomancy (or belomancy) involved throwing sticks or arrows into the air and reading omens from their patterns when they landed (Ezek 21:21). Throughout the ancient Near East trees were believed to represent life, which then endowed wood with special powers leading to rhabdomancy and divining rods (Hos 4:12).

Many other objects were also used for divination.

Casting lots (or cleromancy) was another divinatory practice common in the ancient Near East. This method was sanctioned in Israel with the Urim and Thummim (Ex 28:30; Lev 8:8; Num 27:21; Deut 33:8). Their precise nature is not known, but they were small objects held in a pocket on the high priest's breastplate (*see* Priestly Clothing). The priest threw them to receive guidance from God. Although similar to rhabdomancy and other lot-casting methods, the Urim and Thummim were viewed differently because they were given by God and used to determine his will (Prov 16:33).

Divination by ordeal was another method approved for particular situations. People suspected of crimes would undergo some process that would normally injure them. Their innocence would be divinely revealed if they survived unharmed. The Pentateuch called for this practice when a woman was suspected of adultery (Num 5:11-28). Other ancient Near Eastern cultures used similar practices, but the similarities are procedural. The other cultures believed guilt magically weakened people, which the ordeal would reveal mechanistically. Israel, it seems, believed that God used the procedure (harmless in and of itself) to reveal whether the woman was guilty or innocent. Thus, similar practices are viewed completely differently depending on the mindset and beliefs of the practitioners.

The prohibition of infant sacrifice that begins the Deuteronomic condemnation of divination may refer to another form of ordeal divination (Deut 18:10). Why infant sacrifice is listed with divination is unclear, unless they are similarly detestable to God (Deut 12:31). The Hebrew terms used literally mean to make a child pass through fire. This may have been another method of divination by ordeal whereby the effects on the child would be taken as omens. However, little is known about this ritual, except that as part of worshiping the god Molech it was a capital offense in Israel (Lev 20:1-5).

A second category of divination involves divine revelations during certain experiences, including visions, trances and dreams. The distinction between these methods and accepted means of prophecy and revelation had more to do with the message's source than the practice's

methodology. Thus, visions and dreams were used by God to communicate with his people (Num 12:6). God sometimes gave the interpretation of symbolic dreams, as with Joseph (Gen 40—41). In contrast, a dream leading people away from God was to be rejected and the dreamer put to death (Deut 13:1-5). Prophets from other ancient Near Eastern cultures used many methods to induce altered states of consciousness for divination. In contrast the biblical record shows God revealing his messages to prophets and others in various ways, sometimes when the recipients least expected revelation. The appropriate locus of control remains with God, not humans.

Mediums, also called spiritists, soothsayers or oracles, communicate directly with spiritual beings. Communication with the spirits of the dead is a particular form of mediumship called necromancy. Saul's use of the medium of Endor to contact Samuel's deceased spirit affirms that necromancy can bring contact with spiritual beings, even while it reinforces the illegitimacy of this practice (1 Sam 28:7-19).

3.2. Magic. Magic cannot be completely distinguished from divination, but the emphasis shifts from understanding supernatural phenomena to using supernatural powers. Magic is often difficult to distinguish from religion, with magic usually characterized as deviant, antisocial and sometimes illegal. Such is the view of the Pentateuch (Ex 22:18; Lev 19:26; Deut 18:10). Magic is often synonymous with sorcery and witchcraft. If a distinction is made, sorcery is magic learned from master practitioners, while witchcraft deals with innate supernatural powers.

As with divination, magic includes both materialistic methods using the alleged interconnectedness of the universe and direct contact with spiritual beings. Within the first approach, sympathetic magic uses the similarity of objects to cause desired effects. Some herbs look similar to parts of the human body and thereby gain magical reputations for healing those body parts. Thus, mandrakes have fleshy, forked roots that resemble the lower parts of the human body and were used to promote fertility (Gen 30:14-17), though the text shows their ineffectiveness (Wenham, 247). However, this passage counters the magical use of herbs, since Leah gives up the mandrakes and becomes pregnant, while Rachel uses the mandrakes and remains barren

for the time being.

In contagious magic, objects that have been connected or in close proximity are believed to influence one another, such as how psychics claim to locate missing persons once they obtain something belonging to the person. Malevolent magicians cast spells on people via a piece of their hair or clothing. To counteract this type of magic, special protective objects can be worn (charms or amulets), incantations cited or rituals performed. The third commandment against taking the name of the Lord in vain may partly involve a reaction against its use as a magical incantation (Ex 20:7; Deut 5:11). These practices are believed to work once correctly performed, unlike prayer, where the response depends on God's will.

Other magic involved direct contact with spiritual beings, enlisting their help in achieving certain goals. Hence magic is frequently connected with evil spirits and demons. These practices easily degenerated into idolatry and sacrificing to demons, which is strongly condemned (Deut 32:17). The teraphim were household idols sometimes worshiped in the cultures surrounding Israel (Gen 31:19) and were also used in magic and divination (Judg 17:5; Zech 10:2; *see* Idols, Idolatry, Teraphim, Household Gods).

4. Theological Perspectives.

Numerous reasons are given for these many prohibitions. Divination and magic were integral to the religions of the nations surrounding Israel (Deut 18:9). They are wrong in and of themselves, thus leading to God's punishment of these nations (Deut 18:12). If Israel adopted these practices, they would become like those nations instead of remaining blameless before God (Deut 18:13). These practices entail rebellion against God (1 Sam 15:23), so God will turn his face from those who practice them and cut them off from the community (Lev 20:6). Divination and magic wreak havoc with one's relationship with God because at their root they are rival religions.

God acknowledged the human desire for spiritual knowledge and foresight. Immediately after prohibiting divination and magic, God promised to provide revelation, but at his initiative through his *prophets (Deut 18:15-20). These prophets were to be tested by examining the accuracy of their predictions (Deut 18:21-22).

They were to be trusted by the reliability of their message compared to God's previous revelation, not because they worked wonders (Deut 13:1-5).

Uncritical acceptance of messages because they were received in a supernatural experience is unwise. Problems also occur when people demand special knowledge or answers from God. There are "secret things" that belong to God (Deut 29:29). Divination and magic are attempts to gain knowledge and control that God declares are not needed. When things do not make sense or the future looks anxiously uncertain, divination and magic are tempting rivals to trusting God. Even the means God gives people to legitimately communicate with and worship him can be used in magical ways (Ps 51:16-17; Acts 8:18-24). The distinction between illegitimate magic and true worship does not arise solely from the external manifestations of the practices. The state of a person's heart, and who or what is being pursued, are vitally important.

Divination and magic are dangerous because they bring people into contact with evil spiritual beings and forces. The Pentateuch demonstrates that these powers can be harnessed. But the power of God is always superior. Joseph interpreted *Pharaoh's dreams when the Egyptian magicians could not (Gen 41; cf. Dan 2; 4). The Egyptian magicians and sorcerers changed staffs into snakes and brought plagues of blood and frogs (Ex 7:10—8:15), but they could not bring about (or counteract) the later signs and wonders that God brought through Moses. Balaam the diviner could not curse those whom God had not cursed (Num 23:8). These false gods and magical powers offer short-term benefits, but their abilities fade in comparison to God's power and provision (Deut 32:37-39). Israel's later history shows the tragedy of people turning to divination and magic and being led away from God into falsehood and evil (Is 47:13-15; Jer 14:14; Ezek 22:28-29). The choice is between deepening one's dependence on God or using impersonal, instrumental approaches in attempting to gain control of one's life.

DREAMS

The astute reader of the Pentateuch notices that relevant passages seem to vary on the subject of dreams as a legitimate means of divine revelation. One also notes that this approval and disapproval of dreams runs along genre lines. Narrative passages set in foreign contexts cautiously present dreams as valid revelatory experiences. Legal texts that promote the superiority of Mosaic *prophets as the means of divine revelation forbid trusting dreams as revelatory. People in Mesopotamia, the putative patriarchal patrimony, left evidence of their struggles to un-

derstand the import of nocturnal visions. In its treatment of dreams the Bible fits within this broader ancient context.

1. Dreams and Their Interpretation in Mesopotamia
2. Dreams and Their Interpretation in the Pentateuch

1. Dreams and Their Interpretation in Mesopotamia.

According to Mesopotamian texts, deities communicated with humans by direct means, such as dreams, or by indirect means, such as omens. Ample cuneiform sources document both types of revelation.

For almost fifty years, scholars investigating dreams and visions in the Bible have looked to A. L. Oppenheim's seminal 1956 volume *The Interpretation of Dreams in the Ancient Near East with a Translation of an Assyrian Dream-Book*. Oppenheim noted three types of dreams: (1) auditory message dreams; (2) symbolic message dreams needing the services of a professional interpreter; and (3) psychological status dreams requiring use of a dream book. He believed that divination by dreams was a marginal component of Mesopotamian society.

With the aging of Oppenheim's manual and the publication of numerous texts in the interim, students of oneiromancy have desired an updated study on this subject. S. A. L. Butler's recent *Mesopotamian Conceptions of Dreams and Dream Rituals* provides such a reexamination of Mesopotamian oneirology. In it she considers how the Mesopotamians regarded dreams and their rituals. Noting the enduring human fascination with dreams, Butler asserts,

For centuries Man has been convinced that his dreams (however weird) contain a message, which often requires interpretation; hence the existence of Dream-Books and, in recent times, psychoanalysts. People are reluctant to accept that anything so personal and vivid as a dream might be insignificant. Ancient and "primitive" peoples believed that dreams were divine communications, while psychoanalysts claim that our subconscious is trying to express itself while the conscious censor is dormant. Even if one derides the idea that dreams are applicable to reality, these subjective experiences affect one's mood, and nightmares are impossible to ignore. (Butler, 2)

This presumption of meaning underlies both ancient and modern attempts to grapple with these nocturnal illusions.

Nearly all genres of the vast array of Mesopotamian texts refer to dreams and their illumination. Within these texts, one recognizes “a fundamental separation between the significant/true dreams originating from the gods, presenting a message concerning the future (prognostic dreams); and the irrational/false dreams, either nightmares sent by hostile deities or evil powers, or merely pleasant dreams, neither having any mantic import (symptomatic dreams)” (Butler, 6). In actual human experience, however, the practice of oneiromancy would be limited naturally, since a person would no doubt see more symptomatic than prognostic dreams over the course of a lifetime (Butler, 6).

2. Dreams and Their Interpretation in the Pentateuch.

Dreams structure accounts by threading together disparate narrative elements. J. M. Husser writes:

The Joseph story is the best biblical example of a story in which dreams have this narrative function: the short story runs from a crisis towards its resolution, even though the latter is announced from the start in Joseph's dreams (Gen. 37), which also play a part in the origin of the crisis. As regards the epic genre, Jacob's dream at Bethel (Gen. 28), set as it is against his struggle by night at the ford across the Jabbok (Gen. 32), has a similar structuring function in the Jacob cycle. These two events parallel each other symmetrically at two significant points in the cycle, and make the patriarch's coming and going into a veritable initiatory journey, extending from a promise to its realization, from the initial conflict between the twins to the exchange of a blessing, hard won. (Husser, 103)

2.1. Positive Assessment.

2.1.1. Abimelech's Acquisition. According to Genesis 20, when *Abraham journeyed toward the Negev, King *Abimelech of Gerar acquired *Sarah for his harem. In a curt dream God scolded Abimelech for this careless action. God declared, “You are about to die because of the woman whom you have taken; for she is a married woman.” Before reporting Abimelech's assertion of Abraham's complicity in this event, the writer emphasizes that Abimelech had not

approached Sarah (Gen 20:4). In fact, Genesis 20:6 notes that God himself had prevented Abimelech from touching Sarah. This pair of sentences reveals the importance of the dream for the Abraham and Sarah story. God had announced that Sarah and Abraham would have a son within the year (Gen 18:10), but they chorled at the chance of this happening. Genesis 21 records that Sarah bore a son. Abimelech's acquisition of Sarah stands between these two reports. The dream significantly results in Sarah's salvation, but the notices about Sarah's stay in the harem are the key to this narrative. Though Sarah was available, Abimelech did not avail himself of her. The only man who approached Sarah in the interim between God's *promise and God's provision of the heir was Abraham. In contrast, after Abraham received the initial promise of family, fame and favor, he went to *Egypt. In circumstances almost identical to the Abimelech events, *Pharaoh acquired and then freed Sarah. Significantly, however, the author says nothing about Pharaoh foregoing his right to have Sarah (Gen 12:10-20). The general promise had been given, but the particular moment for the arrival of the son was delayed. By the time of the sojourn in Gerar, *Isaac was on the way. In this way the author establishes that Isaac's paternity was legitimate.

2.1.2. Jacob's Ladder. Genesis 28:10-17 reports *Jacob's dream after he left Beer-sheba to go to *Haran. Along the way, he camped in Luz/Bethel, where he dreamed of a ladder extending to heaven, with messengers of God ascending and descending on it. This “ladder,” a term unique to this biblical passage, may relate to a Mesopotamian word (*similtu*) for steps, ladders or siege ladders. Given the link between heaven and earth and the frequent associations between the Bible and *Babel, Jacob's “ladder” may connect to the stepped towers, or ziggurats, of Mesopotamia.

Additionally, within this broader ancient Near Eastern context, some have supposed that Jacob's dream represents an incubation type of dream experience, since he slept and offered a sacrifice, suggesting that he helped to hatch this vision by magical means. This supposition is misguided, however, because it appears that the vision came without encouragement by Jacob.

Some provocative parts of the dream are superfluous to the point of this event for the Jacob story. This seems to subvert the idea that dreams

alone were revelatory events. The angels on the steps were not directly involved in the announcement, and Jacob did not need to seek out an oneiromancer. The dream was an auditory message dream with significant visual appeal. Yahweh, without resorting to any expert, identified himself as the God of Jacob's ancestors and promised that Jacob's offspring would eventually inherit the foreign *land where this dream was occurring. God also promised that Jacob's offspring would become both numerous and a *blessing to others. Finally, God vowed to be present with Jacob, protecting him wherever he might go and returning him to this land of promise. The prognostic dream message was sealed, not with an image or an act but with the solemn phrase "I will not leave you until I have done what I have promised you" (Gen 28:15).

2.1.3. Jacob's Leaving. Genesis 31:10-13 reports a chimerical conversation between Jacob and a divine messenger. The messenger provided a means by which Jacob, whom Laban had cheated, could recoup some of his losses. This dream connects Jacob's return to Palestine and the staircase dream he had at Luz/Bethel. The same God contacted him in each instance.

2.1.4. Joseph's Story. Six visual-symbolic, prognostic dreams occur in the *Joseph cycle. Symbolic dreams (such as Gen 37—41) "remain the closest to our common experience of dreams, and illustrate best the positive attitude of biblical authors towards them. In Gen. 41:25, the divine origin of this kind of dream is clearly affirmed, but if these authors allow for the possibility that such dreams are sent by God, they also underline the essential role of the interpreter, without whom the divine message would remain enigmatic" (Husser, 91). Two dreams (Gen 37) depicted Joseph's promotion over his brothers. Also, Pharaoh's butler and baker each dreamed (Gen 40) about how Pharaoh would lift their heads. Finally, Pharaoh had two dreams regarding the future of Egypt. Thus, these symbolic dreams occur in three pairs. This doubling of messages may have enabled the mantic to decode the message more easily (Gnuse, 34).

All six dreams accurately portray the future and are set in a foreign venue. The last four dreams happened in Egypt. The first two occurred in Palestine, the land that was almost, but not quite, Israel's home. The particular events portended seem secondary to the larger narrative intent, which is to outline the eventual rise

of Joseph, the quintessential dream analyst, to a position from which he would preserve his family. Joseph's emerging facility in unscrambling dreams demonstrated his acumen to rule Egypt by divine wisdom and by Yahweh's blessing.

2.1.4.1. Joseph's Dreams. A triad of notices regarding Jacob's family situation introduces Joseph's dreams. First, teenaged Joseph returned from the flock with a bad report about his brothers (Gen 37:2). Second, Jacob favored Joseph over his brothers and made his preference public with a special garment (Gen 37:3). Finally, the family fractured. In light of these slights, the brothers hated Joseph (Gen 37:4).

In the context of this disheartening background, the naive and perhaps wily Joseph detailed his dreams. First, Joseph summoned his brothers to describe how a group of sheaves representing the family members bowed down to a sheaf representing him (Gen 37:5-8). With Joseph's disclosure, predictably his brothers' hatred for him was sealed. In the second case (Gen 37:9-11), Joseph envisioned celestial bodies bowing down to him, a dream that caused even Jacob to rebuke him. Understandably, Joseph's relationship with his brothers deteriorated further.

According to both stories, Joseph would better his brothers. The denouement of these prognostic dreams occurred when Joseph's brothers came to Egypt to obtain food and fell down before their brother in confusion and contrition (Gen 42:6; 43:26, 28).

We note that these first two dreams lack a precise interpretation, contrasting with the structure of the remaining four dreams in the Joseph story. Husser explains:

The absence of an interpretative phase in the economy of the dream account fulfils a precise narrative function here: to underline the naivety of the youngest brother as he confronts his kin. Scandalized, they understand only too well what his dreams announce. Similarly and inversely, the emphasis placed on the interpretative phase in the narratives of Genesis 40—41 has an equally precise function: to highlight the fact that dream interpretation is a special charism, a prophetic act inspired by God, by contrast with the methods of diviners. The presence or absence of interpretation, therefore, is not just a question of literary form, a form that may be more or less complete, but

relates directly, in these precise cases, to the significance and function of the dream narratives. (Husser, 113)

2.1.4.2. Butler and Baker. The prognostic dreams of the cupbearer and baker demonstrated that Joseph's gift of oneiromancy was not limited by geography. The God who gave him interpretations was able to reveal meanings to him in prison in a completely foreign land. In fact, Joseph was able to interpret the dreams even though the dreamers had been unable to find a native interpreter (Gen 40:8). The cupbearer's dream of the vine, grape clusters and cup was a sign that Pharaoh would lift the cupbearer's head in honor within three days (Gen 40:9-15).

Seeing the good news his cellmate had received, the baker shared his vision of bread and birds. Joseph relayed that Pharaoh would lift the baker's head in honor (Gen 40:16-19). These two dreams and their interpretations brought Joseph near to Pharaoh's household, the place where he would demonstrate one last time his ability to understand what God was saying through nocturnal messages. This prison story demonstrates Joseph to be superior to those in close contact with the Egyptian throne.

2.1.4.3. Pharaoh Frets. After Joseph languished in prison for two years, Pharaoh saw a pair of symbolic, prognostic dreams. Both dreams are reported without any intervening interpretation. First, Pharaoh dreamed that he was standing by the Nile and witnessed seven thin cows devour seven fat cows (Gen 41:1-4). Second, Pharaoh dreamed that seven thin ears of grain swallowed up seven plump ears of grain (Gen 41:5-8). The narrative delays the interpretation of the dreams until Joseph is recalled from prison. The fulfillment of the dream's intent is seen in the need for Joseph's care of the land during the years of famine. Genesis 41:15 is the key verse in the narrative. Pharaoh related to Joseph that he had had dreams that no one could interpret. Joseph, however, had gained a reputation as a dream interpreter and was presented as superior even to Pharaoh. But though Joseph had knowledge superior to Pharaoh, he could not supplant Pharaoh. Becoming Pharaoh-like, second in command, a virtual king, still he could not replace the Egyptian king (Gen 44:18).

2.2. Negative Assessment: Deuteronomy. Not surprisingly, given its anti-other perspective, the book of Deuteronomy denigrates dreams, some-

thing the other nations might use, in favor of Mosaic prophecy. After establishing that the worship of the nations should be destroyed to prevent apostasy (Deut 12), Deuteronomy 13:1-5 (MT 13:2-6) demands that the people should be ever vigilant against the reestablishment of these spiritual enticements in the future. A prophet or dream-diviner who suggested that Israel follow a god other than Yahweh, even if this person was skilled in his or her craft, was to be ignored. Because Yahweh might be testing the loyalty of his people, the instigator was to be killed for urging disloyalty to Yahweh. Though it is not clear from the context whether the dreamer and the false prophet were legitimate functionaries in the past who had become corrupt or were new arrivals on the religious landscape, they are certainly rejected by Deuteronomy. Their crime was inciting disloyalty against Yahweh. The writer does not hint that the techniques of these persons could not work but rather that they had the wrong message for the people.

Deuteronomy also describes the proper kind of messenger for Israel, prophets in the Mosaic mold (Deut 18:9-22). The book, however, does remain silent regarding dream-diviners. Perhaps the very personal nature of dreams renders them suspect in a society in which prophecy for the community took precedence. By means of a process of desacralization, dreams were finally reduced to "natural phenomena belonging to the realm of deceptive illusion" (Husser, 95). By virtually ignoring them, it appears that Deuteronomy considered dreams as symptomatic and personal but not as the prognostic and public channels of divine conversation recorded in Genesis. Since the dream carried no real message from the outside, by definition the dream could not be revelatory. According to Deuteronomy, when God wanted to speak to his people, he used not dreams but prophets.

EDEN, GARDEN OF

The issues to be analyzed in connection to the garden of Eden are diverse and complex. Elements of significance include geography, cosmography and etymology (comparative Semitics) and require investigation of ancient Near Eastern practices as well as theological and textual contexts.

1. The Name *Eden*
2. Gardens in the Ancient Near East
3. Paradise in the Ancient Near East
4. The Location of the Garden
5. The Theology of Eden
6. The Role of Eden in the Narrative
7. The Human Role in the Garden

1. The Name *Eden*.

Early comparative Semitic studies suggested that the Hebrew word should be considered a cognate to the Sumerian *EDIN*, “steppe country,” but more recent data attest a link to an Aramaic cognate that means “to enrich, make abundant” (Millard; Tsumura, 123-37; Semitic evidence is presented in detailed summary in Wallace 1992, 2.281-83). This semantic range is confirmed in Ugaritic occurrences and yields the idea of “garden of abundance.” Tsumura’s study concludes that it refers specifically to an abundance of water supply (Tsumura, 137; cf. Gen. 13:10).

In ancient Near Eastern literature, it is not unusual to find creator gods with a watery abode. Mesopotamian Enki/Ea and Canaanite El are notable in this regard (Tsumura, 148-53). El particularly is said to reside at the source of

the rivers (Tsumura, 153). The OT reflects the same kind of concept: “In the pride of your heart you say ‘I am a god; I sit on the throne of a god in the heart of the seas’” (Ezek 28:2 NIV). Because the garden was planted in a well-watered place (Eden), it took Eden as its name. In the first mention of the garden, the Lord plants the garden *in* Eden, suggesting to some that the garden itself is not Eden but within or in proximity to Eden. Thereafter, however, the text speaks of the garden *of* Eden and never uses a definite article, suggesting it is treating the word as a proper noun. But technically speaking, Genesis 2:10 indicates that the garden should be understood as adjoining Eden because the water flows *from* Eden and waters the garden. The picture is of a mighty spring that gushes out from Eden and is channeled through the garden for irrigation purposes. All of these channels then serve as headwaters for the four rivers flowing out in various directions as the waters exit the garden. This type of waterworks was known in the ancient world. For instance, Sennacherib had created an elaborate network of canals and sluice gates to control the waters of the Khosr River and to provide irrigation channels to the city of Nineveh and its surrounding farmland. A. K. Grayson (114-15) notes:

Sennacherib devoted a great deal of time and expense to artificial irrigation. Early in his reign he had a canal dug to bring water from the River Khosr through Nineveh, but as his park and gardens were expanded, some time between 700 and 694, greater irrigation works were necessary. The requisite water was found in mountain springs to the north east of Nineveh, and sixteen new canals were excavated to conduct this supply to the city and its suburbs. To carry off the excess water during the flood season Sennacherib formed

a large marsh, which was stocked with the flora and fauna of the Babylonian marshes. The point is that the text describes a situation that was well known in the ancient world: a sacred spot featuring a spring with an adjoining, well-watered park, stocked with specimens of trees and animals.

2. Gardens in the Ancient Near East.

Next we need to understand the designation “garden.” The word generally refers to a parklike setting featuring trees and what we would call landscaping. This is in contrast to the American usage of garden, which, more often than not, refers to a small rectangular plot of ground with rows of vegetables or flowers. We should rather think of what we would call a “country garden” or of something like the Botanical Gardens or Busch Gardens. In the same way that a garden of the palace would be adjoining the palace, Eden would then be the source of the waters and the residence of God, and the garden would adjoin God’s residence. Gardens of this variety were a common feature in palace complexes in the ancient world, as indicated, for instance, in Nebuchadnezzar’s famous hanging gardens. They were planted with fruit trees and shade trees and generally contained watercourses, pools and paths. Their arboretums contained many exotic trees and plants, and sometimes included animals. K. Gleason (383; also see Stager) writes:

Kings boast of large parts of cities devoted to these parks, of the great irrigation works that feed them, and of the distant lands from which the plants and animals are gathered. Tiglath-pileser I (1114-1076 BCE) created a combined zoological park and arboretum of exotic animals and trees. Ashurnasirpal II (883-859 BCE) created a garden/park at Nimrud (Kalhu) by diverting water from the Upper Zab River through a rock-cut channel for his impressive collection of foreign plants and animals. Sennacherib (704-681 BCE) makes a similar claim for Nineveh. Parks are beautifully represented on the reliefs from Sargon II’s (721-705 BCE) palace at Khorsabad, in which a variety of trees and a small pavilion with proto-Doric columns are depicted. Other reliefs depict lion hunts and falconry in the parks. A clay tablet from Babylon names and locates vegetables and herbs in the garden of Merodach-Baladan II (721-710 BCE). In the palace reliefs of Ashurbanipal, the garden

symbolizes the abundance and pleasures of peace after bravery in battle.

Such gardens have also been excavated at Pasargadae, Cyrus the Great’s capital city. Temple complexes also sometimes featured gardens that symbolized the fertility provided for by the deity (Cornelius, 1.875-78). The produce of these temple gardens was used in offerings to the deity, just as the temple flocks and herds were used for *sacrificial purposes.

3. Paradise in the Ancient Near East.

The paradise motif in the ancient Near East is nearly nonexistent. Recent studies have shown that even those texts that have at times been considered paradisiacal are simply describing “an initially inchoate world” (Jacobsen, 182) rather than an idyllic existence (Batto). For instance, one Sumerian myth states that the high plain was not yet tilled, canals were not opened, no dredging was done, no one was planting in furrows, humans walked about naked, and there were no predators bringing terror to people (Batto, 45-46). This tale leads to the institution of civilization, especially kingship. The description offered in Genesis 2:5-6 has some similarity to that found in these types of “not yet” statements of Sumerian literature, but the subsequent idyllic existence of the garden finds no parallel.

4. The Location of the Garden.

The location of the garden, if the headwaters of the Tigris and Euphrates are located near it, would immediately evoke in our minds the mountains of Armenia between the Black Sea and Lake Van, where the sources of those rivers are located. But before we jump to that conclusion, a couple of caveats must be considered. This is not a modern geographical text any more than Genesis 1 is a modern scientific text. It is true that the sources of the rivers were known in the ancient world. Shalmaneser III writes: “At the headwaters [*rēš*; the Hebrew term the NIV translates “headwaters” and the NRSV “branches” is simply the word *rōʾšim*, “heads”; the Akkadian cognate is regularly used to describe the sources of the rivers] of the Tigris, on a cliff where its spring comes out, I fashioned a relief” (CAD N/1.109). Interestingly, Naram-sin at the end of the third millennium reports reaching the spring (*nagbu*, singular) of the Tigris and Euphrates.

But we have to be careful about the extent to which we read our scientific knowledge into the

text. In the ancient world, they had words that we translate “sources,” “springs” and “headwaters,” but they believed that the true source of all fresh water was the *apsu*, the subterranean waters on which they believed the earth floated. The Israelites were not ignorant of these ideas, nor had they been disabused of them (cf. Ps 24:2). Yet we must be clear: the *apsu* waters have some basis in reality. They are not entirely a mythical construct, though there is a mythic dimension connected to them. At the same time, it should be realized that the geography used here is not a topographical geography, but a cosmic geography. (Concepts such as the tropic of Capricorn are parts of our cosmic geography. It is real, but not in the same topographical category as the Thames.) Though the four rivers were real bodies of water, their description here concerns their cosmic role. The river of Eden was the place of God’s abode and was the source of life-giving water that flowed through the rivers, benefiting all the earth.

The idea of four streams flowing from the temple or palace to water the four corners of the earth is represented graphically in a couple of places. In the eighteenth-century B.C. palace of Zimri-Lim at Mari, there is an investiture-scene fresco on the walls. In one of the panels two goddesses hold jars, and out of each flows four streams of water going off in different directions. Similarly, an ivory inlay from thirteenth-century Ashur features a god in the middle from whom four streams of water flow. He is flanked by two sacred trees, which in turn are flanked by winged bulls (for photographs, see Stager, 38, 41).

Turning our attention to the names of the rivers, we know the Tigris and Euphrates, but not the Pishon and Gihon. Some have attempted to identify them with canals, with other rivers of Mesopotamia (Balikh, Diyala, Zab, etc.), with other rivers outside of Mesopotamia (e.g., Nile, Indus, Ganges) or with larger bodies such as the Persian Gulf or the Red Sea. It is not impossible that the Pishon and Gihon are major rivers that dried up in antiquity. Analysis of sand patterns in Saudi Arabia and satellite photography have helped identify an old riverbed running north-east through Saudi Arabia from the Hijaz Mountains near Medina to the Persian Gulf in Kuwait near the mouth of the Tigris and Euphrates. This would correlate with the information given for the Pishon River (Sauer). The river is believed to have dried up between 3500 and 2000 B.C. Today the dried riverbed is called Wadi al-Batin. The an-

cient river has been dubbed the Kuwait River. The Hijaz Mountains area is also home to the famous “Cradle of Gold” (Mahd edh-Dhahab), one of the richest gold mines in the region of Medina. This area along the Red Sea produces spices and precious stones as well. Perhaps because of the mention of gold in relation to Havilah, it is mentioned in several other passages (Gen 10:7; 25:18; 1 Sam 15:7; 1 Chron 1:9). Genesis 10:29 describes Havilah as the “brother” of Ophir, a region also known for its wealth in gold. A final alternative for the identification of the Pishon and Gihon is that they are cosmic waters (Neiman). But until more information is discovered, they must remain mysterious.

In English we can use the word “location” in several ways. One way would be in the sentence, “What is your location?” which carries the implication that directions can be given. But a second way would be in a sentence such as, “The most important quality of a house is its location.” Here the issue is not getting directions. We might say that it rather concerns how strategically the house is situated. It is this element that the text is concerned with when it describes the location of the garden of Eden. It was said that “All roads lead to Rome.” That was not describing what one would find out from a map (though many roads *did* lead to Rome). It was an affirmation about its cultural and political centrality. Locating Eden in reference to the Tigris and Euphrates is the same kind of statement. Its location is not given so that it can be found but so that its strategic role can be appreciated. All fertility emanates from the presence of God. All of this does not imply that Eden is not an actual physical location—only that the geographical details are not necessarily supposed to offer a roadmap. It would be like the understanding in the Gilgamesh Epic of the location of Utnapishtim’s dwelling: real and describable as beyond Mashu’s mountains, but not readily accessible.

5. The Theology of Eden.

We must first recognize that the garden of Eden was not, strictly speaking, a garden for humans but was the garden of *God* (Is 51:3; Ezek 28:13). Wenham (19) explains:

The garden of Eden is not viewed by the author of Genesis simply as a piece of Mesopotamian farmland, but as an archetypal sanctuary, that is a place where God dwells and where man should worship him. Many

of the features of the garden may also be found in later sanctuaries particularly the tabernacle or Jerusalem temple. These parallels suggest that the garden itself is understood as a sort of sanctuary.

The presence of God was the key to the garden and was understood by author and audience as a given from the ancient worldview. His presence is seen as the fertile source of all life-giving waters. "It is not only the dwelling place of God. It is also the source of all the creative forces that flow forth from the Divine Presence, that energize and give life to the creation in a constant, unceasing outflow of vivifying power" (Neiman, 324).

This concept is well known in the Bible. Ezekiel 47:1-12 shows the life-giving waters flowing from the temple (see also Ps 46:4; Zech 14:8). Perhaps the most familiar picture, however, comes in Revelation 22:1-2, where the river of the water of life flows from the throne of God. This association between ancient Near Eastern temples and spring waters is well attested. In fact, some temples in Mesopotamia, Egypt and in the Ugaritic myth of Baal were considered to have been founded upon springs (likened to the primeval waters), which sometimes flowed from the building itself. Thus, the symbolic cosmic mountain (i.e., temple) stood upon the symbolic primeval waters (i.e., spring; Lundquist, 208). On this point, then, the ancient world and the biblical picture agree. When we see that creation as a whole was understood in terms of a cosmic temple complex (see *Cosmology; Creation*), it would be logical to understand the garden as the antechamber to the holy of holies. Eden proper would be the Holy of Holies, and the garden adjoins it as the antechamber. In this regard it is of importance to note that the objects that were kept in the antechamber of the sanctuary are images intended to evoke the garden. The menorah is a symbol of the tree of life (Meyers, 142), and the table for the bread of the Presence provided food for the priests. In conclusion, then, the garden is understood to be the antechamber of the Holy of Holies (Eden) in the cosmic temple complex. With this understanding, it can be appreciated that in the aftermath of the *Fall, the greatest loss was not access to paradise; it was access to God's presence. The temple provided for a partial return of that presence, and the antechamber of the temple was reminiscent of the proximity to God's presence that had once been enjoyed.

6. The Role of Eden in the Narrative.

Despite the significance of this theological backdrop to the garden of Eden, we must recognize that it is no more than a backdrop. Genesis 2 is not trying to develop the idea that Eden is the place of God's presence or the Holy of Holies of the cosmic temple. Those are givens that are simply assumed by author and audience. The text is most interested in the garden as the means by which God provided *food for people (Gen 2:9). Trees of the garden provided food, not for the deity (as in the parks that sometimes adjoined temples) but for the people who served the deity. By providing food the garden actualized the benefits that had been granted in the *blessing in Genesis 1:29-30. In the sequence established in Genesis 1—3, it is interesting that Genesis 1 deals mainly with sacred time (the focus of days one, four and seven), Genesis 2 with sacred space and Genesis 3 with status in sacred space. These are the three major categories of ritual concern in the ancient world and the Bible.

7. The Human Role in the Garden.

In Genesis 2:15, the role of Adam is identified as the text says God put him in the garden "to till it and keep it." The verbs and the grammatical forms are intriguing here. The grammatical problem is that the pronominal suffix connected to each of the verbs is feminine, though the word for garden is masculine. The alternative is to view the forms as infinitive long forms (Jouon §49d). None of the choices is easy to accept, and the suggestions of alternate antecedents have not been persuasive. At this stage it is probably still preferable to accept that the object of these two verbs is the garden, but there may be more information yet to be unearthed.

More useful information can be derived from semantic study of these words. The verbs *ʿabad* and *šamar* (NRSV "till" and "keep") are terms most frequently encountered in discussions of human service to God rather than descriptions of agricultural tasks. The verb *ʿabad* certainly can refer to farming activity (e.g., Gen 2:5; 3:23), but in those contexts the nuance of the verb is conditioned by its direct object (the ground). When the verb does not take a direct object, it often refers to the work connected with one's vocation (e.g., Ex 20:9). The broader sense of the word is often connected to religious service deemed as worship (e.g., Ex 3:12) or of priestly functionaries serving in the sanctuary

precinct (e.g., Num 3:7-10). In these cases, the object of the verb usually refers to what or whom is being worshiped (e.g., Ex 4:23; 23:33).

Here, then, is a succinct statement of the problem when we try to decide whether *‘abad* is referring to agricultural tasks or sacred service. If the object of the verb is the garden (and we cannot be certain that it is), we have a bit of an anomaly. The verb will usually take dirt/soil/ground objects when it refers to agricultural work and will usually take personal objects (God, Baal, Egypt) when sacred service or servitude is the point. “Garden” could be in either category, depending on whether it is understood as a place where things grow or a place where God dwells. There is one pertinent exception in each category. Numbers 8:15 has the tent of meeting, a sacred place, as the object of the verb *‘abad* to refer to sacred service, while Deuteronomy 28:39 has vineyards as the object of the verb to refer to cultivation as an agricultural activity. This means that neither direction enjoys strong support in the semantic range, but each could be set forth as a possibility. We will thus have to look to its contextual partner, *šamar*, to take us one direction or another.

The verb *šamar* is used in the contexts of the levitical responsibility of guarding sacred space as well as in the sense of observing religious commands and responsibilities. This verb is used in agricultural contexts only when crops are being guarded from people or animals who would destroy or steal. In Eden we presume that there is no one to guard against. When the verb applies to levitical activity, it could involve control of access to the sacred precinct, but it is often used more generally to performing duties on the grounds.

To conclude, then, (1) since there are several contexts in which *šamar* is used for levitical service along with *‘abad* (e.g., Num 3:8-9), (2) since the contextual use of *šamar* here favors sacred service, (3) since *‘abad* is as likely to refer to sacred service as to agricultural tasks and (4) since there are other indications that the garden is being portrayed as sacred space, it is likely that the tasks given to Adam are of a priestly nature: caring for sacred space. In ancient thinking, caring for sacred space was a way of upholding creation. By preserving order, chaos was held at bay.

If the priestly vocabulary in Genesis 2:15 indicates the same kind of thinking here, the point of caring for sacred space should be seen as much more than landscaping or even priestly

duties. Maintaining order made one a participant with God in the ongoing task of sustaining the equilibrium God had established in the cosmos. (For an understanding of Israelite rituals in this light, see Gorman, 28-29.) Egyptian thinking attached this to the role of priests as they maintained the sacred space in the temples but also to the king, whose task was “to complete what was unfinished, and to preserve the existent, not as a status quo but in a continuing, dynamic, even revolutionary process of remodeling and improvement” (Hornung, 183). This combines the subduing and ruling of Genesis 1 with the *‘abad* and *šamar* of Genesis 2.

EGYPT, EGYPTIANS

At about 650 miles from north to south and roughly 550 to 650 miles from east to west, Egypt today (including Sinai) is a large desert rectangle that occupies the northeast corner of Africa, where it links onto Western Asia. The only habitable areas, watered by the Nile, are the narrow Nile Valley and the broad alluvial Egyptian (or Nile) Delta through which the Nile reaches the Mediterranean Sea—barely five percent of the total land surface of modern Egypt. Along with a few desert oases west of the Nile Valley (fed by artesian wells), this five percent is the real Egypt, both in antiquity and even now. The Egyptians were and are the inhabitants of the Nile Valley and Delta from remote times and are basically a blend of north-African and Mediterranean stock, with slight additions from the Levant; they are not Arabs except in language and by medieval and modern culture. Traceable in writing from its invention around 3000 B.C., the original Egyptian language was the outcome of the mutual impact of early Hamitic (north-African) and early Semitic, showing elements of both, being truly "Afro-Asiatic." It went through some six historical phases: Archaic, Old, Middle, Late Egyptian, Demotic (named from the script) and Coptic, the last-named being written in a modified Greek alphabet in Roman/Byzantine times and used until the coming of the Arab invasion and imposition of Arabic from the seventh century A.D. The ancient Egypt that we meet from time to time in the pages of the Bible is that of a rich and complex civilization whose history runs from approximately 3000 B.C. to Roman times. This article divides into four broad parts: Egypt in earliest Hebrew "ethnography" (Gen 10); the Egypt of the patriarchs (early second millennium B.C.); the Egypt of the exodus (late second millennium B.C.); and Egyptian impact on the early Hebrews, having left Egypt behind them.

1. Egypt Among the Nations (Genesis 10)

2. Abraham and Egypt (Genesis 12:10-20)

3. Joseph and Jacob in Egypt

4. Oppression in and Exodus from Egypt

5. Egypt's Impact on the Early Hebrew Community and Culture

1. Egypt Among the Nations (Genesis 10).

1.1. Egypt as Mizraim. In biblical Hebrew, the usual word for Egypt takes what appears to be a masculine dual form, *miṣrayim*, "the two Miṣrs." In Akkadian (Assyro-Babylonian), the term *miṣru* can be used for "border(line)," "(state) frontier," "the marches" and land or terrain. In all likelihood, the dual *miṣrayim* meant originally "the two lands" or "the two borderlands/marches." From earliest historical times, Egypt's kings claimed a dual kingship (e.g., "Lord of the Two Lands," "King of South and North Egypt"), since a ruler of the south had overcome and become king also of the north, out of which political union the pharaonic monarchy was born. Early Semitic-speaking travelers going southwest into Egypt would find themselves first skirting along the borderland between desert on their left (east) and watered, green cultivation on their right (west). Then, passing the apex of the Nile Delta, they would find themselves at a different border: the River Nile emerging from its long, narrow valley, bounded westward (as far south as one might journey) by seemingly endless desert. This no doubt created an end-of-the-world experience for someone coming from out of the adjacent Near East. *Mizraim* came to serve also as the current Hebrew term for the people, the Egyptians.

1.2. Egypt's Zones and Neighbors. In Genesis 10:6, 13-14, Mizraim (Egypt) occurs in two separate and complementary contexts. In the first verse (Gen 10:6) Egypt is ranked among her immediate neighbors: Cush to the south, Put to the west and Canaan on the northeast. Cush is Nubia, known as Kash or Kush in many ancient Egyptian documents, and it extends along the narrow Nile Valley between mineral-bearing deserts from (modern) south Egypt into the northern Sudan. Put can now be set in part of Libya; it appears in Egyptian texts in that context as Pudu or Pyudu during at least the eleventh to ninth centuries B.C. In cuneiform (sixth century B.C.), *Putu-iaman* is "Greek Libya" and may well be Cyrenaica at that period. *Canaan*, of course, is well known as a term for basically western Palestine from near Gaza to south of Tyre, and between the Jordan Valley and the Mediterranean Sea. The second passage (Gen 10:13-14) includes two sets of names. One set designates parts of

Egypt herself. Pathros (NRSV Pathrusim; Heb *patrûsim*) in verse 14 transcribes Egyptian **p3-t3-rs(y)*, “the Southland” (i.e., Upper Egypt, the Nile Valley from the first Cataract at Aswan north to the Delta apex). Naphtuhim represents the Delta (Lower Egypt) and is most likely based on a possible Egyptian **n3(yw)-p3-(i)dh(w)*, “those of the (Delta) marshes.” A second set of names designates people further out. Lehabim is most likely a variant of Lubim (“Libyans”), perhaps closer to Egypt than Put. Caphtor is certainly cuneiform Kaptara and Egyptian Keftiu (*kftiwy*), to be located in Crete and the Aegean isles; the Keftiu-folk in Egyptian tomb-paintings are the same people as those to be seen in the famous Minoan frescoes in the palace of Knossos in Crete. Lud is often linked with Lydia; the Casluhim remain obscure. The Philistines certainly came from the Aegean, as their material culture clearly shows. So, Egypt finds closer definition and external contexts and connections in these verses.

2. Abraham and Egypt (Genesis 12:10-20).

Here we have the first Hebrew involvement with Egypt: going there under stress of famine, which they did twice. Inadequate rains and crop failure in Canaan intermittently brought its inhabitants to seek relief in Egypt, where the Nile seemed always to guarantee plenty. In fact, Egypt too suffered famines, when the great river failed to flood the land or did so to massive excess (see 3.1 and 4.2, below). The earliest example of Egypt’s role in famine relief dates to approximately 2400 B.C., namely, a fragmentary scene from the pyramid-complex of King Unis of the Sixth Dynasty. This shows a group of foreigners (desert-dwellers or Semites?) emaciated by starvation. Later, the kings Merikare of the Tenth Dynasty (c. 2100 B.C.) and Amenemhat I, founder of the Twelfth Dynasty (c. 1970 B.C.), each built fortifications on Egypt’s East Delta borders to restrain or control entry from Canaan for that and other reasons. Thus, an *Abraham seeking entry perhaps up to a century later would have been in good company, and Genesis 12:15, 20 reflects the presence of Egyptian border-officialdom. His visit could probably have been sometime during the later Twelfth to early Thirteenth Dynasties (roughly 1870-1750 B.C.). The famous tomb-painting at Beni-Hasan (c. 1870 B.C.) shows a group of Semitic traders (“thirty-seven Asiatics”) visiting Egypt and being admitted by two officers: a chief

of hunters (a desert-ranger, in modern terms), and an appropriate bureaucrat, “scribe of royal records.” The Semitic leader Ab-sharru (“the Father is ruler”) bore a name of the same type as Abram (“the Father is exalted”). In brightly colored garments, the men are accompanied by their womenfolk, children and donkeys.

The Genesis narrative would appear to imply that while Abram dwelt in the pastures of the eastern Delta he was close to the *pharaoh’s residence, where he was peremptorily summoned, then dismissed (Gen 12:18-20). During the Twelfth to Fifteenth Dynasties (c. 1970-1550 B.C.), Egypt’s main capital was at Memphis and its adjoining suburb of Ithet-tawy, some one hundred miles south of the main entry point into the East Delta from Canaan. But during that time, the pharaohs had established an East Delta residence at Ro-waty, later called Hat-waret (Greek, Avaris), now the ruin-fields of Tell ed-Dab’a (or Tell el-Dab’a). This was close to the route of entry from Canaan and would have been the appropriate venue for the meetings of Egyptian kings with such as Abraham, *Joseph and *Jacob. This was no longer the case after the Hyksos Fifteenth Dynasty (ejected by 1540 B.C.), until about 1300 B.C. and the time of *Moses—too late for the patriarchs.

Pharaohs were never loath to add ladies to their harems, foreign as well as Egyptian. Mentuhotep II (c. 2000 B.C.) had swarthy Nubian belles among his harem members buried at Thebes, while Syrian girls are known under Thutmose III (c. 1460 B.C.). People of importance to the king were given escort in or out of Egypt in Middle Kingdom times. Just as Abraham was given a posse to escort him out of Egypt (disgraced), so a century or so before the fugitive Egyptian courtier Sinuhe was given a special escort to bring him back to court (in honor) when he returned from Canaan, around 1930 B.C. (cf. *ANET*, 21; *COS* 1.38:81).

3. Joseph and Jacob in Egypt.

3.1. Joseph’s Early Career in Egypt. Sold into Egypt as a young male *slave, Joseph made his mark in the household of his master, ended up unjustly in prison because of his master’s wife, then finally at court became a chief minister of the king, well-placed to rescue his own family when famine again haunted Canaan. Joseph’s Egypt found the pharaoh still with an East Delta residence (Gen 40—41) and a set of high offi-

cials (Gen 39—41). It was a land into which Levantines could be sold as slaves (Gen 37:1; 39:1) and in which they might serve both in large households (Gen 39) and at the king's court in high office (Gen 41). Unfaithful wives were not unknown (Gen 39); foreigners might be given Egyptian names (Gen 41). *Dreams were considered significant (Gen 40—41) as well as *divination practice in cups (Gen 44). The East Delta was good for pasture (Gen 46—47); grain was stored in local centers (Gen 41:48); the nobler dead were mummified and encoffined (Gen 50; *see* Burial and Mourning).

These details and more find their counterparts in the ancient Egypt of the monuments and documents (for detailed treatments, *see* Kitchen 1994; 2003). The price paid for Joseph, twenty shekels, is the correct average price current in the early second millennium B.C., as in the Code of Hammurabi (§§116, 214, 252, expressed as one-third of a mina) and other contemporary cuneiform documents. Other Semites were sold into Egypt; a trading expedition to Lebanon under Amenemhat II (c. 1900 B.C.) brought back sixty-five “Asiatics” among its acquisitions, while others came as slaves in tribute (1,002) or as prisoners of war (1,554) at that time. In Egypt, from approximately 1730 B.C., we have the list of seventy-seven servants in an official's large household, forty-eight of whom were “Asiatics” (i.e., Levantines like Joseph). For Semites in high office, we have a man like the chancellor Hur (Thirteenth or Hyksos Dynasties); and already in the Thirteenth Dynasty, Semitic kings reached the throne, such as Khendjer (name from Semitic *ḥanzir*, “boar”). Excavations at Avaris show the considerable Canaanite population there during the Hyksos period and before it (Bietak 1996). Thus it is little wonder that it was necessary to specify that Potiphar (even with an Egyptian name) was “an Egyptian” (Gen 39:1). Actual unfaithful wives in real life in ancient Egypt are not (so far) revealed to us, but they gave rise to such incidents in popular stories, such as the unfaithful wife of Webaoner in the Tales of the Magicians (Papyrus Westcar) of the sixteenth century B.C. (Simpson, 16-19), and another in the Tale of Two Brothers (Papyrus D'Orbiney, thirteenth century B.C.; *ANET*, 24; *COS*, 2.40:85-86). Storing grain in local cities stemmed from the nature of Egyptian administration and geography. The long valley of Upper Egypt and scattered distribution of Delta settle-

ments alike militated against storing all grain-tax in one central granary at the capital (especially if needed to pay for state disbursements locally); thus, it was normal for the grain from each province to be stored in that province, other than a limited direct tax levied by the state and the temple revenues, shipped to the capital and to the temples' stores respectively.

The name given to Joseph (Gen 41:45), as those cited for his Egyptian wife, former master and father-in-law (Gen 39:1; 41:45), are all genuinely Egyptian but need care in their elucidation. Zaphenath-paneah was often thought to stand for *ḏd-p3-ntr-iw.f-ḥ*, “the God speaks and he lives.” But, apart from the late date of this type of name (tenth to sixth centuries B.C.), this class of name never uses the noun *God* in place of a specific deity, such as Amun or Ptah or Montu. Moreover, the name itself was suitable only as a birth name, and appointment to high office was not a rebirth! However, an equally good equivalent linguistically is to understand Zathenaph for Zaphenath (Egyptian *ḏd-n.f*, “who is called”), plus the name *ip-ḥ* for Paaneah. This latter name is very common in the early second millennium B.C., but not so later on. Joseph's full name would then have been “Joseph who is called (I)piankh.” Precisely this sort of formula, “X [Semitic name] who is called [*ḏd-n.f*] Y [Egyptian name]” is found over and over again for both men and women in the list of forty-eight foreigners in Papyrus Brooklyn 35.1446 (c. 1730 B.C.), besides other sources, and with continuation into the late second millennium B.C. also. Asenath is from **iw.s-n.t*, pronounced *as-en-at*, for which we possess the masculine equivalent *af-en-at* [*iw.f-n.t*], as before a common name format for the early second millennium B.C. Potiphar/Potiphera may be variants of the one name; they represent Egyptian *p3-di-p3-r* current from the thirteenth century B.C. onward, but descended from the type *didi-* (deity), via *p3-didi-* (deity), attested in the feminine so far.

Dreams were held to be so important that manuals of interpretation were compiled for “deciphering” them. A splendid specimen in the British Museum (Papyrus Chester Beatty III) dates to the thirteenth century B.C., but by its classical language is most likely a recopy of a manual first composed in the early second millennium. After a column stating the situation—“If a man sees himself in a dream”—there follows a series of lines describing the person's actions in the dream, then the note “good” or “bad” and its in-

terpretation. As for cup-divination (of movements of oil on water), from Egypt comes a pair of small figures, each depicting a figure kneeling with its chin on a cup, gazing into it, seemingly performing this rite; they appear to be of Middle Kingdom date (twentieth to sixteenth centuries B.C.). Certainly of that date are two Old Babylonian tablets of this time, dealing with this technique.

3.2. *Jacob's Time in Egypt.* When Jacob and his family eventually arrived to settle in Egypt (Gen 46—47), they were given part of Goshen to stay in, with its pastures, in the East Delta. Goshen is once equated (Gen 47:11) with the “land of Rameses,” an equivalent term from the thirteenth century B.C., which was the region adjoining Avaris, directly north of which (at Qantir) Ramesses II built his city Pi-Ramesses (or Pi-ramesse), the Egyptian original of the Hebrew term. By the sixteenth century B.C., there was already a tradition of sending cattle and the like from as far away as Thebes to pasture seasonally in the Delta (First Kamose Stela, *ANET*, 232), since its pastures were much valued within Egypt.

Eventually, old Jacob died, having given instructions that he was to be buried back in Canaan (Gen 49:29). That presented a practical problem, so Joseph adopted the Egyptian solution of having Jacob mummified and mourned for the requisite seventy days (Gen 50:2-3) to be able to take him there. In turn, when Joseph died at the age of 110 years, he too was embalmed and “put in a coffin in Egypt” (Gen 50:26). That was the ideal age, often wished for in Egyptian texts, especially in the late thirteenth century B.C., so perhaps that was a detail that Moses found desirable to retain. In Joseph's own time (perhaps about the seventeenth/sixteenth centuries B.C.), other Semites resident in Egypt took the same path to the afterlife. One named Abdu was buried in a wooden coffin at Saqqara (cemetery of Memphis), and that coffin contained the dagger of another Semite named Nahman, dated to the Hyksos period by the royal name Apopi on the dagger handle. Thus, it is interesting to see others besides Joseph taking to Egyptian ways in this sphere. Attempts to set a late date for the Joseph narrative (e.g., Redford 1970) are based on the misinterpretation of linguistic data and a failure to distinguish between early, original indicators and later retouches (Kitchen 1973; 2003).

4. Oppression in and Exodus from Egypt.

4.1. *Situation in the Oppression.* Times change, and thus in early Hebrew history a new Egyptian king arose who knew nothing of Joseph (Ex 1:8), evidently long dead. This growing foreign group needed to be curbed, so why not exploit their labor potential in new building projects (Ex 1:8-14)? In addition, a ban on growth was attempted (Ex 1:15-22). In this situation, a certain child was born, then by his mother's arrangement found by a princess and nurtured at court (Ex 2). He there grew up, but his hasty deed in killing one of his people's oppressors meant he had to flee for his life into Sinai, until a new king arose, and his God commissioned him to return and challenge the pharaoh and lead his people out of Egypt and back to Canaan. Such was the early life of Moses. From the rich but unevenly preserved resources of information from ancient Egypt, pertinent information bears on various details of the narrative in Exodus 1—6.

Raamses and Pithom (Ex 1:11), along with Succoth later (Ex 12:37; 13:20), belong together and can be closely located on the map. Beyond any serious doubt, Raamses is Pi-Ramesses, the once vast Delta residence-city built by Ramesses II (1279-1213 B.C.), marked by ruin-fields that extend for almost four miles north to south and nearly two miles west to east, centered on Qantir (Tell el-Dab'a), a dozen miles or so south of Tanis (Zoan). A first palace was founded by Seti I (1294-1279 B.C.) and was much extended by Ramesses II, who erected also great temples of stone and vast areas of mud-brick housing, stores, chariotry/horse stabling and the like. The heyday of Pi-Ramesses/Rameses was during the thirteenth and early twelfth centuries B.C. From about 1130 B.C. onward, it swiftly declined; the king stayed in Memphis, and shifts in the eastern Nile courses ended Pi-Ramesses' role as a major port, in favor of Tanis.

Everything of Pi-Ramesses has been leveled to the ground long since. The temple stonework was removed and recycled to build big new temples at Tanis (Zoan) and other places from the Twenty-First Dynasty onward (c. 1070 B.C. and following). The disused mud-brick structures crumbled back into the Nile mud whence they had been drawn. The former cults of the gods of Pi-Ramesses were transferred to Tanis and Bubastis as merely minor benefices, of religious “archaeological” interest; record of them was hidden away (fourth century B.C.) deep inside

the Bubastis sanctuaries and in obscure inscriptions on private statues in the Tanis temple—in no way accessible to outsiders (Jews or others) in the fourth century B.C. Thus, the biblical tradition of Rameses in particular has to go back to the thirteenth/twelfth centuries B.C.; the minuscule fourth-century mentions were not available to biblical writers or editors.

Mentioned only once, Pithom (Ex 1:11) and then Succoth (on the *exodus route, Ex 12:37; 13:20) have to be considered together. The Hebrews were *not* to go northeast by the Mediterranean coast route (Ex 13:17; see 4.2 below) but in fact went east-southeast from Rameses via Succoth, but not Pithom. As they then continued east via the Re(e)d Sea to Sinai, Pithom was evidently behind them, and thus south of Rameses and west from Succoth. Two ancient sites fit these conditions quite closely. Near the west end of Wadi Tumilat is Tell er-Retabe; some nine miles or so east of it is Tell el-Maskhuta, whence the route runs to the Bitter Lakes and then over toward the deserts to Sinai. Contrary to repeated and mistaken claims (e.g., Holladay; Redford 1982) that Tell el-Maskhuta in particular dates only from the seventh/sixth centuries B.C., both sites are solidly attested for the thirteenth century B.C. by Ramesside remains *and* thirteenth-century textual mentions. At Tell er-Retabe, Ramesses II built a military compound and a temple with stone-faced facade for the sun god Atum lord of Succoth. At Tell el-Maskhuta, archaeologists long ago found statue-groups, a falcon and the like of Ramesses II linked with the sun god Re, plus later a statue of Prince Ramesses-Merneptah; the texts associated with these finds demonstrate that they were local, *not* reused from Pi-Ramesses. Texts of various dates give Tjeku (or Tjuku = Succoth) as the name of Tell el-Maskhuta, especially on the stela of Ptolemy II. Furthermore, the locations of Pithom (= Pi-[A]tum) at Tell er-Retabe and of Succoth at Tell el-Maskhuta are also clearly indicated (Gardiner, 268-69) by a Roman milestone found at Tell el-Maskhuta that states, “From Ero [= Heroonpolis/Pithom] to(ward) Clysma [= Suez]: 9 (Roman) miles.” It is, in fact, nine Roman miles, on the way to Suez, from Pithom/Heroonpolis/Tell er-Retabe to Tell el-Maskhuta (where this stone was found), “within a few hundred yards” as Gardiner expressed it. In addition, soon after Ramesses II, Pithom became known as “Pithom-of-Merneptah.” Consequent-

ly, it all fits (cf. further, Kitchen 1998, 66-85). Being Tjeku/Succoth throughout, Tell el-Maskhuta was never Pithom; Tell er-Retabe was. For textual evidence that, in Ramesside times, there existed a *place* Tjeku (Succoth), not only a district, see ODM 1076 and Papyrus Anastasi V (cited in translation in Kitchen 1998, 73-75). Failure to find Ramesside remains at Tell el-Maskhuta by the Canadian expedition (so successful in other matters) proves very little, given that the site had in parts been massively disturbed from the mid-nineteenth century onward, a factor they failed to allow for.

Captive foreign labor was exploited by the pharaohs of the Empire or New Kingdom period in particular, not least under Ramesses II. Already around 1460 B.C. under Thutmose III, we have the famous scene of foreigners (Semites, Libyans) slaving away at brick making for the temple of Amun in Thebes. A later leather roll, housed in the Louvre, itemizes forty young stablemasters who had to act as taskmasters for a target of two thousand bricks in a day. Absence of straw for brick making (cf. Ex 5:7, 18) is cause for concern in a contemporary papyrus, as is also the production of set quotas of bricks (Ex 5:8, 13-14, 18). Moreover, much like the Hebrews (Ex 5:14), in the papyri others were beaten up by taskmasters. They were not alone in these labors; we read also of “Apiru-folk who drag stone for the great pylon-gateway” of Ramesses II at Memphis. While in Nubia, that king’s viceroy Setau was royally commissioned to raid the southern oases and to seize Libyans to build a temple there (at Wadi es-Sebua). The work records from the Valley of the Kings at Thebes and its satellite village (Deir el-Medina) show that workmen sometimes gained numerous days off for all manner of reasons, including going “to worship their god.” Thus it is little wonder that up north (and with foreign slaves asking leave) the pharaoh reacted angrily (Ex 5:1-5) to yet another request (by Moses) for simply “time off” (as he saw it), without of course any inkling of the consequences that were to follow in that case.

4.2. Conditions and Background of the Exodus (Exodus 7–15). The pharaoh was determined not to let go of his Hebrew labor force; it took ten plagues to break his will and his grasp (Ex 7–11). The plagues fall into three groups of threes, both by nature and by literary format, and culminate in a distinct tenth (cf. Hoffmeier, 145-47). The first trio (plagues 1-3) arose in and

from the river: red waters, dying fish and frogs coming onto land, then mosquitoes (“gnats”). The second trio (plagues 4-6) took place on land, set off by the first three: flies (on the dead matter) breeding, the dead creatures and the flies carrying infections that led to cattle plague, then boils on humans and beasts alike. The third trio (plagues 7-9) hit the early and later crops (hail, then locusts) and ended with a “thick darkness.”

Careful studies (especially by Hort 1957, 1958; Hoffmeier, 146-49) of the reported phenomena suggest that they formed part of a clear sequence of interlocking episodes, originating with an especially high flood of the Nile. This brought down masses of *Roterde* (fine-grained “red earth”) and *flagellates* from the upper Niles and Atbara (plague 1), which asphyxiated the fish (taking their oxygen). Decomposing fish infected the frogs, who came ashore (plague 2), infecting green vegetation. The numerous pools bred mosquitoes (plague 3). Particular types of flies (plague 4) spread disease. The cattle plague (plague 5) was an anthrax ingested from infected pasture (from plague 2), while the boils on people and beasts (plague 6) came from infectious bites from the types of fly in plague 4. Then, as winter passed into spring, massive hail (plague 7) ruined early crops (flax, barley; Ex 9:31), followed by locusts (plague 8) that stripped the rest. By March, we are in the *khamsin* season, of strong dust-laden winds, which were worsened (plague 9) by ground dust from earlier conditions. Going through a nine-month sequence from July/August (Nile flood) to March/April (crops and *khamsins*), the narrative and phenomena alike form a single, unitary sequence, as is illustrated by the literary format of three stylistically repeating series, before the culminating tenth plague is reached. This one has no clear link with the main series; it remains in the realm of the supernatural, as often observed. But the main series could not have been arbitrarily dreamt up by some writer in far-distant Babylon (or even tucked away in upland Jerusalem) having no close knowledge or experience of Egyptian conditions. Nor could so closely patterned a narrative have been jigsaw-fitted together from disparate source documents.

Coming to times and places, the tradition of 430 years from the exodus back to Jacob’s arrival in Egypt agrees well with a late second-millennium exodus (see Exodus, Date of). A bottom

date of around 1260/1250 B.C., for example, would bring Jacob to Egypt about 1700 B.C. and set the lives of his predecessors broadly in the nineteenth/eighteenth centuries B.C., which fits very well with other data on the patriarchs (for Jacob and Joseph, see 3 above). Regarding places (see 4.1 above for Rameses, Pithom and Succoth), the series of Bitter Lakes (with Balah and Timsah) gave Egypt a north-south water defense-line, along the line of the modern Suez Canal. That line was made continuous by linking the lakes by canals. The phrase “Red Sea” is a persistent mistranslation based on the Greek version. The Hebrew *yam sūp* stands for “Sea of Reeds,” applicable to the whole line of the lakes and watercourses just mentioned and in which salt-tolerant reeds grow (halophytes; see further Hoffmeier, 209, with figs, 27-28). Hebrew *sūp* and Egyptian *ṭwf(y)* are clear cognates (Ward), ruling out other recent suggestions (e.g., “the end”; cf. more fully Hoffmeier, 199-222).

In theory, the crossing of the Sea of Reeds could have occurred within a broad north-to-south sweep between Qantara and Suez. But some limits can be set to this. The Hebrews were not allowed to take the shortest route to Canaan, lest they see war and then recoil back into Egypt (Ex 13:17). Not without reason. Under Seti I and Ramesses II in particular, the Mediterranean coast road to Canaan was guarded by a series of Egyptian fortresses and depots, partly shown in the Karnak temple war scenes of Seti I, partly listed in an almost-contemporary papyrus and in some cases actually found through ground survey and by excavation (cf. Oren). For the Israelites to have gone that way would have been suicidal, humanly speaking. Also, with its long sand ridge between lake and sea invoked by some as a possible scenario for the crossing of the waters, the Lake Bardawil simply did not exist in antiquity, thus ruling that theory out. As the Hebrews emerged from Wadi Tumilat toward the general district of Ismailia, their crossing may rather have occurred somewhere between Lake Timsah and (at the extreme) Suez, more likely in the northern half of this southern segment (for further review of differing views and additional background to the exodus, see Hoffmeier; Kitchen 2003, both with full references).

5. Egypt’s Impact on Early Hebrew Community and Culture.

The Egyptian impact on the early Hebrews did

not suddenly disappear the moment the latter marched off over the desert plains east of the Reed Sea. Several features in the present-day Pentateuch exhibit a longer-lasting influence, which deserve brief review.

Most tangible is the portable tent-shrine, the *tabernacle, built at Sinai of local acacia wood. Affording an outer room and an inner sanctum, this socket-jointed and gilded frame supported canopies of colored, decorated cloth under protective skins. It stood in a rectangular court of cloth-draped wood frames. From long ago, it has been dismissed as a figment of the imagination of Jewish priests exiled in Babylon (c. 550 B.C. rather than 1250 B.C.). But the archaeology and texts of Egypt and her neighbors demonstrate otherwise. The gilded-wood, socket-joint technology is Egyptian, attested for religious use from the First Dynasty (c. 3000 B.C.) onward, most spectacularly in the secular bedroom-suite “tabernacle” of Queen Hetep-heres (c. 2600 B.C.), with its gold-plated, interlocking timber frames, besides tomb-scenes of such tabernacles in use for rituals of, for example, mummification. Tablets published from Mari (early second millennium) mention such tabernacles in religious use, with coverings upon frames (called *qeršu*; cf. Heb *qērāšim*, for the tabernacle frames). Also in the Semitic world, the god El at Ugarit is described as living in a tabernacle (also of *qrsm*) in the thirteenth century B.C. Back in Egypt, each New Kingdom pharaoh (during at least 1460-1140 B.C.) had a nest of gold-plated, solid-walled tabernacles over his coffin in the Valley of the Kings, as the intact set from Tutankhamun’s tomb vividly exemplifies. In the thirteenth century, probably contemporary with Moses and his artisans Bezalel and Oholiab, Ramesses II had a war-tent of a type identical with the Hebrew tabernacle: two rooms, outer and innermost, and set within a rectangular precinct (in his case, of shields). In the first millennium, Assyrian royal tents were of a different design, within oval or round enclosures, not rectangular—quite different from the Hebrew tabernacle, which is of late second-millennium type. A real tabernacle of the twelfth century B.C. was set up at Timna (at the northeast edge of Sinai), of wooden poles set in stone walling, with woolen-cloth covering (parts of it being found), probably by the Midianites. So any idea of the tabernacle of Exodus being a fiction can be dismissed; it was an ancient Semitic concept, here

executed with Egyptian technology. Likewise, furnishings such as the ark of the covenant on its removable poles through rings and the special long trumpets of Numbers 11 show an Egyptian stamp; again, items from Tutankhamun’s tomb (c. 1330 B.C.) illustrate these (for details, see Kitchen 1993, 2000; Homan).

The Sinai *covenant itself, embedded in Exodus to Leviticus and renewed in Moab and occupying most of Deuteronomy, has a format and content that is datable and not the product of mere chance. The changing forms of treaties, law-collections and covenants can now be followed through almost two thousand years, from approximately 2500 B.C. to about 650 B.C., through six phases. The covenant contained in Exodus to Leviticus and Deuteronomy belongs in phase 5 (with thirty or so other documents), about 1400 to 1200 B.C.—and *neither earlier nor later*. Before and after that two-century span, the formats were wholly different. Thus the essentials of those parts of the Pentateuch must originate then (format) or in part earlier (laws that are already old). But how could Hebrew brick-slaves in the East Delta know about such matters? Not at all—unless someone of theirs had been at the court of Pi-Ramesses, where such things were not just known but were enacted, such as the treaty between Ramesses II and the Hittites in 1259 B.C. Had there been a Moses at that East Delta court in those days, there is no problem; if not, the problem is insoluble. Given that much in the patriarchal narratives (despite unfounded denials) goes back to the early second millennium (including details concerning Joseph as well as the framework of Gen 1–11, which is of a kind also peculiar to that time in its literary arrangement and subject matter), it becomes evident that a great deal in the Pentateuch came down to, or originated in, the late second millennium B.C., whenever it reached its final form in “classical” Hebrew of the tenth century B.C. onward. In these matters, the Egyptian contribution has its limits, but it is part of the positive evidence that can be quite clearly quantified (cf. Kitchen 2003).

Other more modest contributions come from Egypt. These include loanwords from Egyptian that appear in the narratives about Egypt in Genesis and Exodus, such as the words for “magician,” “basket” (Ex 2:3), “river” (Nile), “reed/papyrus,” “pitch,” “(river’s) edge,” and so forth (cf. Hoffmeier, 88-89, 138-40, with notes). In lit-

erary matters, the New Kingdom warrior-pharaohs during at least 1450 to 1180 B.C. commissioned a series of triumph-hymns to celebrate their victories over other nations and peoples. The Hebrew counterparts to these appear in Exodus 15 and Judges 5, the former being especially appropriate as a Hebrew triumph-hymn over a pharaoh—turning the tables, so to speak. Discerning scholars have long since ascribed these two Hebrew triumph-hymns to the thirteenth/twelfth centuries B.C. in view of their linguistic and literary features (cf. Hoffmeier, 201-3, with references). This class of composition goes very far back in Egypt, to the third and early second millennia B.C., well before the New Kingdom, even (for examples, cf. Kitchen 1999).

EGYPTIANS. See EGYPT, EGYPTIANS.

EL ELYON. See GOD, NAMES OF; MELCHIZEDEK.

ELDERS. See LEADERSHIP, ELDERS.

ELEAZAR

Of the eleven people in the Bible who bear the name Eleazar (*ʿelʿāzār*), meaning "God has helped," one is significant to the Pentateuch. The third son of *Aaron and Elisheba (Ex 6:23; Num 3:2), Eleazar, together with his father and three brothers, Nadab, Abihu and Ithamar, was consecrated as priest (Ex 28:1).

1. Priest
2. Successor to Aaron

I. Priest.

The listings of Aaron's sons suggest two pairs—Nadab and Abihu; Eleazar and Ithamar (Num 3:2; 1 Chron 24:1-5)—the first characterized by failure and the second by blessing. The census of the tribe of *Levi in Numbers 3 names Eleazar as the chief of the tribe and superintendent of the Kohathites, who were to care for the sanctuary and its furnishings (Num 3:32). In addition to Eleazar's general oversight of the entire *tabernacle and its contents, Numbers lists his specific responsibilities as including the oil for the light in the sanctuary, the fragrant incense, the regular grain offering and the anointing oil (Num 4:16). By this point in the pentateuchal text we have already encountered the bracing and cautionary account of Nadab and Abihu's fiery destruction as a result of their presenting

“alien fire” before the Lord (Lev 10:1-2; *see* Nadab and Abihu).

In addition to the Nadab and Abihu story, Eleazar’s name is also associated with another frightening account of fiery judgment. Following the rebellion instigated by the Korah (of the Kohathite branch of the Levites), fire “came out from the LORD” and consumed the 250 followers of Korah (Num 16:1-35). The Lord then commanded Moses to tell Aaron to retrieve the holy censers from the smoldering remains of the rebels and scatter the coals some distance away (Num 16:37). Eleazar then was commanded to hammer the censers into sheets to overlay the altar; the censers were holy because they were presented to the Lord and became a sign to the Israelites that “no one except a descendant of Aaron should come to burn incense before the LORD” (Num 16:38-39).

2. Successor to Aaron.

The status of Eleazar is reinforced by the story of Aaron’s death. At God’s command, Aaron, Moses and Eleazar climbed Mount Hor. After Moses removes Aaron’s garments and puts them on Eleazar at the Lord’s command, Aaron dies. The two survivors descend Mount Hor, and the community of Israel mourns Aaron for thirty days (Num 20:28-29; Deut 10:6). Thus Eleazar succeeds his father Aaron as high priest (Num 20:26). Eleazar then assists Moses with the second census, which takes place on the plains of Moab by the Jordan, across from Jericho (Num 26:63). It is Eleazar who, along with Moses and the other elders of Israel, hears the inheritance plea of the daughters of *Zelophehad (Num 27:2). After entering the land of Canaan, Eleazar and Joshua will give the daughters of Zelophehad an inheritance in the territory of Manasseh (Josh 17:4). When the Israelites fight against Midian, they bring the captives, spoils and plunder to Moses and Eleazar. Eleazar then commands that the gold, silver, bronze, tin, iron and lead and all that could withstand fire be put through the fire and then purified with water (Num 31:13-24).

With Moses’ death, Joshua assumes command of the tribes, but apparently under Eleazar’s supervision (Num 27:18-23). Eleazar assists Joshua in partitioning Canaan (Num 34:17; Josh 14:1; 19:51; 21:1), though the fact that his name precedes Joshua’s may indicate that Eleazar has the more prominent role in the allotment of the

land. The book of Joshua ends with a record of Eleazar’s death and burial at Gibeah, the land allotted to his son Phinehas in the hill country of Ephraim (Josh 24:33).

Eleazar’s son Phinehas is the hero of a memorable story in Numbers 25. At the incident of “Baal of Peor,” Phinehas demonstrates his zeal by slaying Zimri the Simeonite and Cozbi, a Midianite woman, presumably as they were locked in sexual embrace. Thus Phinehas “turned away” Yahweh’s anger from Israel (Num 25:1-15) because Phinehas was “zealous for the honor of God and made atonement for the Israelites” (Num 25:13 NIV). As a consequence the Lord made a “covenant of peace” with him and his descendants, “a covenant of a lasting priesthood” (Num 25:12-13 NIV). The Chronicler traces the ancestry of the high priesthood from Aaron through Eleazar and then Phinehas on down through Zadok and finally Jehozadak, who was deported into exile in Babylon (1 Chron 6:3-15). Thus the high priestly line of Aaron through Eleazar and Phinehas was significantly maintained. For David’s day, the Chronicler numbers sixteen leaders among Eleazar’s descendants, and eight from among Ithamar’s descendants (1 Chron 24:4). The descendants of Ithamar appear to have remained in favor until Solomon, who banished Abiathar for having sided with Adonijah in the succession struggle (1 Kings 2:26, 27). He then appointed Zadok, a descendant of Eleazar, to fill the high priestly position (1 Kings 2:26-35). Significantly, Ezra was in the line of Zadok and Eleazar (Ezra 7:1), and the high priest’s office remained in the family of Zadok until the time of the Maccabees.

It is common in contemporary criticism to find the view that the pentateuchal stories of priestly selection reflect later struggles for ascendancy within the priesthood and the ultimate triumph of the Aaronic priesthood. In other words, the pentateuchal stories of the ascendancy of Aaron’s line are largely the priestly (P) contribution of the exilic or postexilic era, with Phinehas’s “covenant of a lasting priesthood” being a polemical case in point. We should not easily dismiss the possibility of an exilic or postexilic shaping of the narrative in order to reinforce rhetorically the pedigree and validity of the Zadokite priesthood. Such a theme would surely have spoken to the setting, and the Chronicler and Ezra-Nehemiah demonstrate a heightened interest in establishing the creden-

tials of the priesthood. However, behind much of contemporary critical thought on this topic lies J. Wellhausen's hypothesis of the evolution of the priesthood. Briefly stated, Wellhausen maintained that in earliest Israel there was no hereditary priesthood (such is the view of Wellhausen's J source), and it was not until the time of the kings that a levitical priesthood emerged in Jerusalem. In the postexilic period the Aaronic priesthood gained ascendancy, and the Levites became their assistants. On this account of the matter, historically speaking, Zadok was not of the line of Aaron but came, as it were, from nowhere.

Wellhausen's theory is in its details quite complex and interlocks with his documentary hypothesis, which itself has undergone substantial revision over the years. There is no doubt (as Wellhausen pointed out) that the history of the priesthood in Israel is a complex one, particularly given the evidence from the books of Judges, Samuel and Kings. And much work remains to be done in refining our understanding of the history of the priesthood (*see* Priests, Priesthood). But ultimately one is left to consider whether the pentateuchal account gives us credible historical traditions regarding the rise of the priesthood or whether those traditions were fabricated in whole or in part to support later priestly political interests. As for Eleazar, he is a transitional figure in the pentateuchal account of the priesthood, and it is worth pondering why (if Eleazar is fictitious) a later Aaronic priesthood would not have carried forward the life and priestly influence of Aaron to the very verge of Jordan—unless perhaps stubborn historical tradition stood in the way.

ELECTION

After the word **creation*, there is a sense that the term *election* captures the entirety of the Pentateuch in one concept. Surprisingly, the precise

Hebrew root *bhr* ("to choose, to elect") appears relatively infrequently in the Pentateuch, especially before the book of **Deuteronomy*. Yet we need to be cautious about drawing too quick a conclusion about this fact. As Preuss argues, one cannot "proceed by noting the appearance or absence of the world 'election' and then choosing to draw or not draw certain conclusions" (Preuss, 1.27). Careful attention to the narrative context where *bhr* appears explains why this is so. In the Pentateuch itself, election is the central concept used to recapitulate the story of God's **promise* to the people of God, **Israel*. The term also points forward to the story of God's establishment of Israel in the **land* with a temple and a king.

1. Election in Genesis Through Numbers
2. Election in Deuteronomy
3. Conclusion

1. Election in Genesis Through Numbers.

The most remarkable aspect of election in Genesis through Numbers is its relative absence and unimportance. As the narrative of the Pentateuch unfolds, related conceptuality and narrative themes appear—one must think how the divine promise given to Abram in Genesis 12:1-9 determines the whole theme of the Pentateuch (Clines). But the precise conceptuality and vocabulary remains presupposed, not expressed.

In the few cases that the term arises, however, it refers to the human choice of land (Gen 13:11; 23:6) or people (Ex 18:25) or describes "choice" objects, such as particular chariots and officers (Ex 14:7; 15:4). Only in the long story of the "rebellion" of Korah in Numbers 16:1—17:13 does the narrator attribute a "choice" to Yahweh before Deuteronomy. God "elects" **Aaron* among the house of **Levi* to be **holy*, that is, set apart to approach God as **priests* (Num 16:5, 7; 17:5 [MT 17:20]). Only as a result of a debacle in the desert does Yahweh specifically "choose" the sons of Aaron to serve as priests among Israel.

The use of *bhr* in Genesis through Numbers shows an interesting fact. In its first telling, the narrative proceeds without divine election. Never does Yahweh explicitly elect **Abraham* or the other ancestors. Election never directly enters the rationale of Yahweh's deliverance of Israel from slavery in **Egypt*. Israel never receives the **law* at Sinai because they are God's "chosen." Divine election might be everywhere in

the story of Israel before arriving at the edge of the Promised Land, but it is nowhere as well.

2. Election in Deuteronomy.

The book of Deuteronomy has a particular narrative setting: it takes place as *Moses' final testimony to Israel before Israel crosses the Jordan River into the Promised Land. Even as it anticipates Israel's occupation of the land, it recapitulates the narrative previously given. It is a second telling of Genesis 12—Numbers, especially the regiving of the law at Sinai. Now, however, most of the book's speech is placed directly in the mouth of the character Moses rather than an anonymous narrator. In this retelling, election plays a significant role to summarize the previous narrative.

In Moses' speech, *bhr* summarizes God's faithfulness to the promise to Abraham, *Isaac and *Jacob in giving offspring to inherit the land. It is not the "fathers" themselves who are spoken of as the "elect." God "loved" (*'hb*) "your fathers." Election encompasses the generation hearing Moses' speech. God "chose you, their descendants after them, out of all the peoples" (lit., "chose in their seed [*zr'*] after them in you from all the nations"; Deut 10:15; cf. 4:37). Election rhetorically incorporates the audience of Moses' speech into the same story as Genesis 12, where God promises to Abraham that his "descendants" (seed, *zr'*) will inherit the land (Gen 12:7). God's love of the ancestors is found in the election of the present generation.

Election similarly is used to tie the audience of Moses' speech to the *covenant given to Israel at Sinai, a covenant given to make Israel "my treasured possession [*sĕgullā*] . . . a priestly kingdom and a holy nation" (Ex 19:5b-6). In Deuteronomy 7, when Moses reviews the story of Israel, he uses *bhr* to refer to the covenant at Sinai. He interprets Yahweh's words there in terms of election and again ties his audience to a previous point in the story through his use of the second-person plural pronoun:

The LORD your God has chosen [*bhr*] you out of all the peoples on earth to be his people, his treasured possession [*sĕgullā*]. It was not because you were more numerous than any other people that the LORD set his heart on you and chose you—for you were the fewest of all people. It was because the LORD loved you and kept the oath that he swore to your ancestors, that the LORD has brought you out

with a mighty hand, and redeemed you from the house of slavery, from the hand of Pharaoh king of Egypt. (Deut 7:6-8; see also 14:2)

Moses' interpretation of the earlier narrative grounds Yahweh's election of Israel at the edge of the Promised Land in Yahweh's love for Israel, a love also seen in Yahweh's faithfulness to the promise given to the ancestors.

The concept of the "election of Israel" emerges first in the speech of Moses in the book of Deuteronomy. As Moses reviews the pentateuchal story, he uses election to tie the present generation at the edge of the land to the previous crucial events in the narrative: the election of the ancestors, the deliverance from Egypt, and the giving of the law at Sinai. The concept does not function to describe directly the previously narrated events in a positivistic manner. The term functions more subtly and powerfully; it provides an interpretive summary of the previous narrative that the character Moses uses to incorporate "you," both Israel at the edge of the Promised Land and the contemporary reader, into the story summarized in Moses' speeches and thus the story told in the first place from Genesis 12 onward. Moses' narrative recapitulation uses *bhr* to highlight the significant events of the story and thereby to re-interpret it all as a story of Yahweh's election of Israel.

In the book of Deuteronomy, however, Moses does not only speak his own words to Israel—he also speaks the words of Yahweh in the commandments given to him: "These are the statutes and ordinances that you must diligently observe in the land the LORD, the God of your ancestors, has given you to occupy" (Deut 12:1). Moses' voice here merges with Yahweh's throughout Deuteronomy 12—26.

As in the speeches of Moses, *bhr* refers to a previous section of the Pentateuch in Moses' repetition of Yahweh's command. In this situation, however, the term justifies the commandment to financially support the *priests from the *sacrificial system: "[The priests] may eat the sacrifices that are the LORD's portion . . . for the LORD your God has chosen [*bhr*] Levi out of all your tribes, to stand and minister in the name of the LORD, him and his sons for all time" (Deut 18:1b, 5). The verse summarizes the narrative of Numbers 16:1—17:13. The term *bhr* ties the narrative and the legislation together to provide a rationale for the legislation. Yahweh's election

of the priests eventually places upon the Israelites the necessity of providing for their material well-being.

Yahweh's election does not merely extend to groups of people and the past. Within Moses' rendition of Yahweh's commandments, *bhr* also anticipates a place in the future for the center of the worship and sacrifice to Yahweh. Even as the concept of election summarizes and interprets previous narrative events, it also foreshadows a narrative event in 1 Kings—the construction of the temple in Jerusalem. Various formulas express the same concept: “the place that the LORD your God will choose as a dwelling for his name” (Deut 12:11; see also Deut 12:5, 14, 18, 21; 14:23, 24, 25; 15:20; 16:2, 6, 7, 11, 15; 17:8, 10; 26:2; 31:11). The temple is not an arbitrary location. When it is built at an unspecified future time and place, it will represent the specific location for the fulfillment of the commands for the sole place for the sacrificial system in the worship of Yahweh. Its divine election will make it, when it appears, the only legitimate temple to Yahweh. The elect people will gather at the elect temple under the guidance of the elect priests.

One final significant occurrence of the term arises in the commandments of Deuteronomy 12–26: the election of a king as indicated within “the law of the king” (Deut 17:15). Again, the term *bhr* points forward to a future narrative: “When you have come into the land that the LORD your God is giving you, . . . you may indeed set over you a king whom the LORD your God will choose [*bhr*]” (Deut. 17:14a, 15a). The text anticipates a future event of a final divine election: a king to reign over Israel in the land. While the king is not involved in as many laws as the future temple, the king is no less elected than the temple. The verse anticipates again an unspecified event of the divine election of a king over Israel after the Israelites enter the land. Election in the Pentateuch looks beyond the chronology of the Pentateuch to anticipate future events in the story of Israel. The king rounds out the list of the elect: an elect nation arising from the key events of the calling of the ancestors, the deliverance from Egypt and the giving of the covenant at Sinai that will live in the Promised Land around an elect temple with elect priests, all under the jurisdiction of an elect king. Divine election, therefore, summarizes significant events and institutions within the story of Israel, from its inception to its full establish-

ment in the Promised Land, especially as reviewed in the words of Moses.

Therefore, it is Deuteronomy that emphasizes Yahweh's election of Israel through the Pentateuch narrative. Yet such an election does not nullify the necessity of Israel's election of Yahweh. Yahweh's election of Israel is what permits Israel's election of Yahweh through keeping the covenant. In the confirmation of the covenant given in Deuteronomy, Moses concludes: “I call heaven and earth to witness against you today that I have set before you life and death, blessings and curses. Choose [*bhr*] life . . . for that means life to you and length of days, so that you may live in the land that the Lord swore to give to your ancestors” (Deut 30:19-20). Election runs both ways between God and God's people, though God's election of Israel has a narrative, theological and logical priority over Israel's election of Yahweh.

3. Conclusion.

Election arises as a significant concept in Moses' speech to Israel that recapitulates and marks the events in the divine calling of Israel in the book of Deuteronomy. It also arises in Moses' repetition of divine speech in the future establishment of a temple and king in Israel. In this retrospective and prospective function of the concept, the word gathers significance. The concept calls for a particular people, Israel, to live faithfully in covenant with Yahweh as God's treasured possession and thus as a holy nation, a kingdom of priests. It is a communal, not individualistic, concept about the life of the people of God in the world. In Israel's distinct identity and communal formation in the world, living by the covenant around the elect temple under the elect king, election provides a narrative summary of the main storyline of the Torah that points to the vocation of Israel. Through their contemporary election, God calls Israel in fulfillment of God's promise to Abram: they become the people through whom “all the families of the earth shall be blessed” (Gen 12:3). Election thereby serves as an interpretative concept of the plot of the Pentateuch and beyond.

ESAU, EDMITES

Esau first appears in Genesis as the name of the older twin brother of *Jacob (Israel), son of *Isaac and Rebekah. He is associated with the lifestyle of the hunter, in juxtaposition to his brother's preference for the more settled life of the herding tent-dweller. He is also attributed with being the ancestor of the Edomites, who are therefore considered to be “brothers” of the Israelites (Deut 23:7). No etymology is offered for the name Esau itself, but Edom (“red” in Hebrew, possibly relating to the red sandstone characteristic of Edomite territory) is associated with Esau in his birth story (Gen 25:21-26), where he came out “red” (*ʿadmōnī*) and “hairy” (*šēʿār* = Seir, the territory of the Edomites), as well as in the later account of when he sold his birthright to Jacob for a pot of “red [stew]” (Gen 25:30). The Edomites later came to be known as Idumeans (Greek *Idoumaia*).

1. Esau
2. Edomites

1. Esau.

1.1. Esau and Jacob: A Dramatic Story of Sibling Rivalry. The sibling rivalry encountered between Jacob and Esau, closely paralleled by that of *Cain and *Abel as well as *Joseph and his brothers, makes for some of the most dramatic reading in the Bible. The birth story in Genesis

25:21-26 is quite remarkable, complete with miraculous conception, prophetic announcement, reversal of birth order and etymological explanation of names. It also forms a striking parallel to the birth story of the twins Perez and Zerah in Genesis 38:27-30, including reversal of birth order, conspicuous presence of the color red/scarlet and significant verbal parallels (e.g., between Gen 25:24 and 38:27, as noted by Sarna [270]). The text of Jacob's impersonation of Esau (Gen 27:18-27) builds to a climax of suspense (Gen 27:21-22) that is anticipated in the previous scene of Jacob's plotting with Rebekah (Gen 27:5-17), and followed by Esau's anguished but futile pleading (Gen 27:30-38). The result was a threat of death by Esau, provoked by Jacob's deceit to the point of murderous intent, from which Jacob was forced to flee in fear for his life (Gen 27:41-45). The immediate consequence of the deceit was a forced exile for Jacob from the Promised *Land; the longer-term consequence was the establishment of a pattern of deceit in Jacob's life that was repaid sevenfold. The reunion of the twins in Genesis 32-33 is then equally dramatic and suspenseful. The text intentionally builds up the tension with expectations of well-deserved retribution from the wronged and potentially murderous “unchosen” twin, clearly anticipating renewed conflict (Gen 32:6-11). The surprise ending of reconciliation (Gen 33:4) is anticipated by Jacob's “wrestling” in Genesis 32:24-32, when Jacob's name is changed by God to signal a transition from a relationship of deceit to one that God had restored (*see* Israelites). The reconciliation is sealed by Esau's unexpected generosity of forgiveness (Gen 33:4, 9), which, like Joseph's forgiveness of his brothers (Gen 50:15-21), is treated with some suspicion by Jacob (Gen 33:10-17). In contrast to Esau's earlier plan of killing Jacob upon Isaac's death (Gen 27:41), Jacob and Esau then bury Isaac together as reconciled brothers (Gen 35:29), just as Isaac and *Ishmael had together buried their father *Abraham (Gen 25:9). The amicable separation of Jacob and Esau due to the overabundance of God's blessings upon both (Gen 36:6-8), remarkably reminiscent of the earlier separation of Abraham and *Lot (Gen 13:5-12), leaves them firmly as brothers with no hint of the earlier sibling rivalry and struggle to explain the later animosity. The artistic literary structure of the whole, arranged chiastically and bracketed by

the *genealogies of the descendants of Ishmael and Esau, is well documented by M. Fishbane (1975), C. Westermann and S. Walters. B. Dicou also provides a useful study of Edom as “Israel’s brother and antagonist.”

From a wider perspective, the power struggle between Jacob and Esau, arising out of jealousy, had potentially disastrous consequences (as witnessed by the Cain and Abel conflict in Gen 4), but ultimately points to God’s plan of salvation. The total pattern is consistent with other such stories: jealousy sparked by parental favoritism, provoking *sin that threatens God’s harmony, punished by *exile but followed by reconciliation. This pattern of sibling rivalry develops a major theme in Genesis, asking: *Who will inherit the covenantal *promise to Abraham?* On a more fundamental level lies a deeper question that then continues through Exodus and Numbers: Is God *able* to fulfill the promise to Abraham in the face of barrenness and rivalry and sin that continue to threaten the chosen people? The tension is set up deliberately, with barrier after barrier presented and overcome by God. In the *wilderness complaining stories, this question takes on more profound implications as God continues to prove his *ability* (miraculously defeating armies, providing food and water in the desert), while his *willingness* is brought into question by the people’s incessant complaining, stubborn disobedience, sinfulness and even blatant idolatry. That he does, in fact, fulfill the promise despite all of this is good news indeed for the perpetually imperfect people of God. The familiar pattern of jealousy and sin with which any family will readily identify is thus used to illustrate an important theological lesson about God’s continued love and care for the sinner—even for the “unchosen” like Esau, as well as showing the ultimate fulfillment of God’s plans in the triumph of reconciliation.

1.2. The Birth Prophecy. Rebekah’s role of inciting her favorite son to deceit against her husband is often condemned as typical of female treachery. However, one finds a common theme in biblical stories of *women exhibiting heroic female “trickiness” that is undoubtedly admired by the biblical author (and even explicitly vindicated on occasion, as with Judah’s daughter-in-law *Tamar in Gen 38:26). In this case it would seem that Rebekah took it upon herself to act on God’s behalf to fulfill God’s prophecy regarding her sons, while her husband was obviously

planning to circumvent God’s intentions. It is highly interesting in this regard that it was to Rebekah, rather than to Isaac himself, that God had revealed his plans for succession of the promise, as it had been Rebekah who had taken the initiative to inquire of God in the first place (Gen 25:22). Perhaps Isaac, after his experience on Mount Moriah (Gen 22), overly feared Yahweh (who is even named “the Fear of Isaac” in Gen 31:42, 53) and was thus slow to seek his plans. This might explain the necessity for Abraham to send a servant to *Haran to acquire a wife for Isaac from his own family, so the wife could support his faith after his mother Sarah had died (thus “Isaac was comforted after his mother’s death” in Gen 24:67). Isaac’s plan to bless Esau may well have gone directly contrary to God’s plans, not to mention the legalities of Esau having already sold his birthright to Jacob with a sworn oath (Gen 25:33). Or perhaps Isaac either remained unaware of this transaction or considered it invalid, since he still sought to bless Esau as firstborn. In either case, Rebekah’s intervention may have been necessary to uphold the integrity of the *covenant.

Within the prophecy itself (Gen 25:23), written in exquisite poetic form, an interesting wordplay unfolds.

Yahweh said to her:

Two nations are in your womb,
And two peoples from within you will be
separated.
And one people more than the other
people will be stronger,
And the older [*rab*] will serve [*ya’ābod*]
the younger [*šā’ir*].

The birth oracle seems to lend justification to Rebekah’s actions and the final outcome that results, yet the specific wording strikes an odd chord. Specifically, the “younger” is called *šā’ir*, provocatively mimicking the word for “hairy” (*šē’ār*), which is associated with Esau two lines later in the birth narrative (Gen 25:25). The birth etymology is then illuminated by the later association of Edom with the territory of Seir (Gen 32:3; 36:8-9). The word for “will serve” (*ya’ābod*), meanwhile, sounds a bit like “Jacob” (*ya’āqob*), who “grasps the heel” of his brother. Thus the roles seem to be reversed, even within the wording of the prophecy itself, as it predicts the reversal of the inheritance. This theme of reversal then continues with the blessing intended for the elder bestowed instead upon the

younger, while its fulfillment (at least in the immediate sense) seems itself to be reversed again (see below).

It is directly following the Jacob-Esau birth narrative that we find the story of Jacob buying Esau's birthright for a pot of red stew (*'ādōm*), accompanied by an explanatory note about Esau also being called Edom. In light of this, combined with the birth oracle, Isaac's intention of blessing Esau seems strange, and Rebekah's deception necessary, though not entirely satisfactory as a solution.

1.3. Esau Rejected as the Unchosen Despiser of His Birthright. God's rejection of Esau, passing over the firstborn for the younger brother Jacob, is dealt with in various ways. The view of Esau found in Malachi 1:2-3, followed in the NT by Romans 9:10-16 ("Jacob I have loved, but Esau I have hated"), seeks to illustrate God's sovereign choice of Jacob over Esau as inscrutable (determined before their birth and thus before either had done anything either good or bad). Other texts (such as Heb 12:16-17) seek to condemn Esau as a way of justifying God's rejection. His choice of wives is certainly noted as a "source of grief to his parents" (Gen 26:35; 27:46; 28:8), with rabbinic interpretation attributing this to their pagan religious influences. A majority of later biblical references emphasize Genesis 25:34 in presenting Esau as a "godless" man who sold his inheritance as eldest son for a single meal, thus showing how he despised his birthright. In this instance even the pleading of tears could not alter the rejection.

H. C. Brichto's theory regarding the active observance of an ancestor cult in ancient Israel, with the firstborn bearing the responsibility of acting as priest of that cult and providing ritual meals for the ancestors (in addition to receiving a double portion of the inheritance), may shed further light on the extent of Esau's wickedness in "despising his birthright." If the "red [stew]" were in fact being prepared as a ritual blood-offering (*dām*) for the ancestors, then Esau's insistence on eating it would rightly cost him the birthright of family priesthood. Pentateuchal laws prohibiting the eating of *blood may be related to this, as may the "gorging and guzzling" law of Deuteronomy 21:18-21, which assigns the death penalty for "gluttony" as demonstrating filial disrespect. Considerable archaeological evidence for such a cult does exist, and prophetic denouncement would seem to confirm its con-

tinuance into monarchic times. Thus, while in purely economic terms one would think that Esau would realize the value of the birthright and not despise it, if the birthright in question involved family priesthood for an ancestor cult, it becomes much more understandable that Esau the hunter might despise such religious duties.

1.4. Isaac's Prophetic Blessings and Their Fulfillment. The theme of reversal introduced in the birth narrative is continued with the blessing intended for the elder being bestowed instead on the younger. Isaac's prophetic blessing of Esau in Genesis 27:39-40 is surprising in a number of ways. First, in view of God's blessings on both Isaac and Ishmael, as well as Jacob's blessings of all of his sons together in Genesis 49, the implication of the exchange between Isaac and Esau in Genesis 27:33-38, that Isaac had only one blessing to give, seems odd. Esau had pleaded for his father to bless both of them (Gen 27:34, 36, 38), which Isaac implied was impossible (Gen 27:37). But this is, in fact, exactly what God then proceeded to do: he blessed them both, just as he had also blessed both Isaac and Ishmael, though the covenant itself was not extended.

The blessing to Jacob (intended for Esau) in Genesis 27:27-29 was one of material prosperity and abundance of food, plus hegemony over his brothers and other nations (that they would "serve" [*'bd*] him and "bow down" to him, and he would be "lord" over them), in addition to a repetition of the blessing given to Abraham that those who blessed him would be blessed and those who cursed him would be cursed. Esau's blessing mirrors Jacob's in significant ways but then seems to go on to contradict it.

Esau's position relative to the abundance of the earth as asserted in Genesis 27:39 is debated. The Hebrew preposition *min* could be interpreted positively in the partitive sense as providing "a portion from," in which case the first part of Esau's blessing is a duplication of Jacob's. Alternatively, the preposition could be interpreted negatively in a separative sense as "far from" or "away from," in which case Esau's blessing represents the opposite of Jacob's. While rabbinic interpretation has long favored the first of these options, the second is the one most commonly chosen by modern commentators. The implication is that since agricultural abundance has already been given to Jacob, Esau's provision must come from the spoils of the sword instead

(Sarna). It is the reverse of Jacob's blessing, not a repetition of it. This also better fits the contrast of lifestyle noted between them earlier, that Esau was a hunter whereas Jacob was a farmer/herder, suggestive of a parallel with the lifestyle contrast between Cain as a farmer and Abel as a herder. However, as we see Esau's prosperity lived out in Genesis 33:9 and 36:6-7, it becomes evident that Esau was, in fact, blessed by God with abundance.

The more important part of Esau's blessing in Genesis 27:40 predicts a life of hostility similar to that predicted in Genesis 16:12 for Esau's uncle and father-in-law Ishmael (the unchosen older brother of Isaac). The following line then confirms Jacob's hegemony over Esau: Esau was destined to "serve" (*'bd*) his brother Jacob. The next lines, however, seem to effect a revocation of that dominion after all with the addition of a promise that Esau would eventually throw Jacob's yoke off his neck.

As the story continues, then, it would seem that the reverse is what actually happens, since Esau remains prosperous in the Promised Land while Jacob must flee to Haran under threat of death from a murderous Esau (Gen 27:41-42). Jacob then suffers servitude (*'bd*) in a sort of voluntary "exile" from the Promised Land—a foreshadowing, perhaps, of the Israelite slavery in Egypt. Such exile is found frequently in the biblical text as a traditional punishment for sin (compare Adam and Eve, Cain, various levitical laws that use exclusion from the community as the ultimate punishment and the covenant curses in Lev 26:33, 38-44; Deut 28:64-65). Then, when they are finally reunited in Genesis 33:1-15, it is Jacob who "bows down" seven times to Esau upon his return, in dire fear of reprisal for his past sins. He is followed by all of his wives and children, who likewise bow down to Esau. In addition, we find that Jacob repeatedly calls Esau his "lord" and himself Esau's "servant" (*'bd*). All of this constitutes a highly ironic reversal of Isaac's blessing, right down to the specific vocabulary used.

The blessing was clearly fulfilled in the Iron Age relations of Israel and Edom, however. Similar to Isaac's prediction of enmity between Esau and his brother in Genesis 27, Balaam's oracle in Numbers 24:18 counts Edom as an enemy that would be conquered. In Exodus 15:14-16 (the "Song of the Sea"), Edom is listed along with the nations of Philistia, Moab and Canaan

toward whom the exodus miracles were directed in order to create fear and thus ease the establishment of the Israelites in the Promised Land. Edomites are listed among the enemies of Israel in the time of Saul (1 Sam 14:47), and Edom was subjugated to Israel from the time of David (2 Sam 8:11-14; 1 Kings 11:14-22; 22:47; 2 Kings 3:8-10, 26). They then rebelled successfully in the time of Jehoram and won their independence for a while (as seen in 2 Kings 8:20-22; 16:6; 2 Chron 20:1-26; 21:8-10; 28:16-18). This subjugation and subsequent successful rebellion during the Iron Age fulfilled Isaac's prophetic blessing of Genesis 27:40. Fighting continued, however, with Israel again gaining the upper hand for a time and regaining control of trade routes through Edomite territory (2 Kings 14:7, 22; 2 Chron 25:14-20; 26:2). This Iron Age historical context of conflict, subjugation and rebellion has long been presumed to be the best context for understanding the pentateuchal account of this eponymous ancestor of Edom.

1.5. Sympathetic Treatment of Esau in Character and Full Genealogy. From a literary standpoint, it is most interesting to note that while Edom would be counted as a foreign enemy in the often presumed Iron Age context of the author(s) of these texts, the text itself is much more sympathetic to the position of Esau than one would expect. In the major part of the text in Genesis, and also in Deuteronomy, Esau (and Edom) is presented in a surprisingly positive and sympathetic light as one favored by Isaac and wronged by his brother, toward whom he later acted in Godlike generosity of forgiveness. He is also presented, with full genealogy, as one to whom God did grant a secure inheritance.

Jacob is granted the primary inheritance, but only by deceit, suffering slavery in exile (albeit voluntary) as the expected punishment for such a sin, as well as the reprisal of suffering repeated deceit himself as a pattern through the rest of his life. Esau is treated generally as the more honorable, the favorite of his father Isaac (Gen 25:28) who was wronged by his brother (Gen 27:35-36) but prospered in the land of promise during his brother's exile (Gen 33:9). In Genesis 36:7 it becomes apparent that God had chosen to bless them both after all, while Deuteronomy 2:5, 22 makes it clear that God had granted an inheritance to Esau that would not be taken away.

Esau also is shown to exhibit the graciousness

of God by forgiving his brother upon his return (Gen 33:4, 9-10), just as Joseph graciously forgave his deceitful brothers in Egypt (Gen 45:1-15) and again at the climax of the narrative (Gen 50:15-21). Within this climactic reconciliation scene, then, it would seem that Isaac's prophetic blessing of Jacob in Genesis 27:29 is ironically reversed as Jacob and all his family bow down to Esau and call him "lord" (Gen 33:3-8).

The presence of full genealogical records for Esau's descendants (Gen 36; 1 Chron 1:35-54; parallel to those of Jacob, as Ishmael's stand parallel to those of Isaac), given with the same care and importance as those for Israel's own descendants, indicates more than academic interest in nearby foreigners. In addition, Yahweh is said to dwell in Seir/Edom (Deut 33:2; Judg 5:4; cf Teman [in Edom] in Hab 3:3) as a seat of his power, while Jeremiah 49:7 associates Teman with wisdom. All of this is hardly the expected perspective for an "enemy."

The reader is drawn to see Esau as a tragic figure, the firstborn and rightful heir, and Jacob almost as a villain who deceitfully usurped his place and hence was punished. We see Esau, like Ishmael (and also, in some respects like Lot), as the unchosen descendant of Abraham who nevertheless still received a special blessing and inheritance from God (cf. Gen 17:18-21; 21:13, 18, 20). This sympathetic treatment of Esau seems inexplicable in the later Iron Age setting of the independent Edom apparently anticipated in Isaac's prophecy.

1.6. Esau's Wives. Esau married two Hittite women (Gen 26:34; 27:46; included among "Canaanites" in Gen 28:1, 6, 8): Judith daughter of Beeri and Basemath daughter of Elon (Gen 26:34). These foreign wives are noted to be a "source of grief" to Isaac and Rebekah (Gen 26:35; 27:46; 28:8), who therefore urged Jacob to avoid this mistake by marrying among their own family in Haran (though this may also have been an excuse to put him out of harm's way). So Esau then also married Mahalath, daughter of Ishmael (Isaac's brother) and sister of Nebaioth (Gen 28:9). The genealogy in Genesis 36:2-3 lists two Canaanite women—one Hittite and one Hivite—as his wives: Adah daughter of Elon and Oholibamah daughter of Anah daughter of Zibeon, along with Basemath daughter of Ishmael and sister of Nebaioth. Esau then settled in the hill country of Seir, establishing the nation of Edom (Gen 36:8). His

wives are thus

- Judith daughter of Beeri the Hittite (Gen 26:34)
- Basemath daughter of Elon the Hittite (Gen 26:34)
- Mahalath daughter of Ishmael son of Abraham, sister of Nebaioth (Gen 28:9)
- Adah daughter of Elon the Hittite (Gen 36:2)
- Oholibamah daughter of Anah daughter of Zibeon the Hivite (Gen 36:2)
- Basemath daughter of Ishmael son of Abraham, sister of Nebaioth (Gen 36:3)

It is possible here that among these two lists of three wives the same three women are meant, with just a little bit of confusion in the lists, possibly arising from the use of alternative names (as with Jacob/Israel, Esau/Edom, etc.). Or it is possible that he had more than three wives. Despite the claims of close kinship ties, the ethnic diversity of Esau's wives suggests an Edomite population that was a composite of diverse ethnic elements, including at least Horite, Hittite, Hivite and Ishmaelite/Egyptian.

2. Edom.

2.1. Geography and Archaeology of Edom. Geographically the Edomites settled to the south of the Dead Sea, bordering on the southern Judean desert in the hill country of Seir (Gen 36:8-9), a mountainous region along the Wadi Arabah characterized by red-colored sandstone. Edom also bordered Moab to its north, in modern Jordan. It included Teman, Zoar and Bozrah (Buseirah), extending from the Dead Sea down to the Gulf of Aqabah (at Elath and Ezion-geber), where it controlled important Arabian trade networks. Through it ran an important north-south trade route later known as the "King's Highway" (Num 20:17).

N. Glueck's excavations in Transjordan, especially at Tell el-Kheleifeh, reveal much about Edomite culture. J. R. Bartlett documents a number of early Egyptian references to both Edom and Seir, dating back to the fifteenth to twelfth centuries and associated with people called "*Shasu*" (a term used to designate bedouin like wanderers, similar to early usage of "Hebrew," "*Habiru*" and "*gēr*"; see Alien, Foreign Resident). Copper mining and smelting was an important industry in the area from early Chalcolithic

times. Bronze Age population was light, increasing somewhat in the Iron Age but always considerably smaller and poorer than their Israelite neighbors. Archaeological finds from Horvat Qitmit, an Edomite sanctuary in Judah, show them to be engaged in active trading relations with Judah and also to be worshipers of the god Qaus in typical Canaanite fashion.

2.2. Prophetic View of Edom as Descendants of Esau. Isaac's prophetic "blessing" of Esau in Genesis 27:39-40, characterizing Esau's descendants as living perpetually in hostility against his brother but eventually breaking free, anticipates the Iron Age nation that came into regular conflict with the nation of Israel at various points, as reflected in the Deuteronomistic History and the Chronicler's History, as well as in the prophecies of Amos and Obadiah (among others). From Genesis we gain insight into the Israelite view of Edom as a nation with significant kinship ties to Israel, whom God himself had exempted from conquest (Deut 2:5) and who were to be accepted into the congregation of Israel in the third generation (Deut 23:7-8). Yet the pattern of hostility between Edom and Israel is also exemplified by the sibling rivalry of their ancestors Esau and Jacob and by Edom's refusal to allow Israel passage on their way to the Promised Land following the exodus.

2.3. Passing Through Edom. The chief account of Israel's passage through (or around) Edom is found in Numbers 20:14-21, where the Israelites pleaded to pass through Edom's territory, promising not to turn aside from the road and even offering to pay for any water their livestock might drink. Edom, however, stubbornly refused them and even came out against them in force. Deuteronomy 2:1-23 supplies further details of the Edomite settlement and God's commands to Moses concerning them, specifying that Horites (possibly Hurrians) had previously inhabited the hill country of Seir (Deut 2:12), but that God had driven the Horites out and given the land to the descendants of Esau as their inheritance (Deut 2:22). Therefore the Israelites were not to provoke them to war because Yahweh would not give them any of this territory (Deut 2:5). Rather, they were to pay in silver for food and water as they passed through this territory (Deut 2:6). This supports the account in Numbers, where this very offer is made but apparently refused by the Edomites. Deuteronomy 2:4, 8, 29, however, imply that Edom did let them pass peacefully,

justifying the distinction drawn in Deuteronomy 23:7-8 where Edomites are eligible to enter the assembly of Yahweh in the third generation. Judges 11:14-18 clarifies the matter by asserting that following Edom's refusal, the Israelites turned aside and went peacefully around the Edomite territory instead of passing through it.

ETHICAL INTERPRETATION. See HERMENEUTICS.

ETHICS

The Pentateuch primarily focuses on God's creating and saving actions. Its narrative concerns God's *creation, *promises and the formation of Israel at Sinai for the sake of all nations. Classical ethics focuses on ideal human character, the ideal results of human actions and the highest

good. The biblical story of God and humanity is the setting of the study of ethics in the Pentateuch. This narrative uniquely influences contemporary ethical discourse. It contains divine speech and created relationships, a specific view of humanity and laws within a historical narrative context.

Little was written on OT ethics between World War II and 1982, but subsequently a flood of books and articles has engaged the subject in the following classical categories that also provide the outline for this article.

1. An Underlying Principle for Pentateuchal Ethics
2. Character Formation: Developing a Sense of Duty
3. Moral Obligation and Authority
4. Moral Obligation and Laws
5. Conclusion

1. An Underlying Principle for Pentateuchal Ethics.

The ideal goal of human character and actions in classical ethics is called the *summum bonum* ("highest good"). The search for this ideal has led in three directions: happiness, perfectionism (or self-realization) and relationship to someone (God) or something (e.g., the universe). Relationship to God is the focused area of inquiry in the Pentateuch. In OT ethics the highest good has most commonly been called the "underlying principle" (Janzen), "underlying rationale" (Barton) and "central tenet." *Underlying principle* and *highest good* have slightly different referents but are sometimes used synonymously. *Highest good* is a general concept, while *underlying principle* refers specifically to the rationale found in the study of OT texts.

The search for an underlying principle in OT ethics has led to an analysis of God's attributes (justice/righteousness, holiness and love) for the most fundamental quality of ethical action. Imitation of the attribute is thought to result in the highest ethical human action. The dilemma of choosing one over the others has resulted in the proposal that *God* (rather than an attribute of God) is the underlying principle. As a result, the focus has moved to "middle values" that actually can be imitated, such as family (Janzen, 40), the social shape of Israel (Wright, 229) or hope in God (Ellul).

1.1. Justice and Righteousness. Some consider the word pair justice/righteousness to be the

unifying underlying principle of OT ethics. Their meaning in the OT, however, is easily misconstrued in English. The Hebrew words *mišpāt* ("legal judgment, justice") and *šēdāqā* ("righteousness") are often used interchangeably and in parallelism (e.g., Gen 18:19, 25). In relation to human action *mišpāt* is commonly understood to mean a mode of action that refers to a specific legal judgment rather than an abstract concept. *Šēdāqā* is not abstract but most often refers to a quality or condition of a person in a specific relation to another person.

Lexicographical information cannot communicate the narrative context of the relationships that give the English words *justice* and *righteousness* their content. The biblical occurrences of all forms of the root *šdq* ("righteous") refer less to an individual's ethical norm than to the relationships between people in a community of God. Scholars have described *šdq* as the quality of a person, an attribute of power given as a gift by God, an attribute of God's love that brings and maintains social health in communities, and their individuals, God's and humanity's covenant faithfulness within communities, and faithful action within the whole created order (see Mogensen).

The English definition of *mišpāt* leans in two directions: (1) "distributive" (*distributiva*) justice, which is neutral, disinterested, punitive and based on merit; and (2) "well-being" (*salutifera*) justice that seeks to restore equity and health, is benevolent, and does not judge strictly on merit but on what may increase the quality of life in relationship (Mogensen, 71). The shift to understanding God's *šēdāqā* as a "justice of well-being" occurred when God's love (*'ahābā/hesed*) was shown to be its biblical context. God's love and righteousness are not antithetical. In the biblical context, righteousness is subsumed under love. God is interested in the *covenant relationship and *šēdāqā* as a kind of covenant maintenance.

The concept of *šdq*, which usually signifies human actions that are acceptable to God, is more abstract within the biblical context of cosmological justice. The drowning of the Egyptians in the Red Sea, the destruction of Sodom by a sulfurous fire fall, plagues that break out during Israel's disobedient wilderness wanderings and warnings not to practice abominations lest the land vomit out its inhabitants (Lev 18:25-28) all imply a common ancient Near Eastern

belief in a cosmic order or cosmic justice (Schmid; Koch). In this concept the covenant community is extended to include the nonhuman creation. Yet this notion is not wholly abstract, for in the biblical context God creates and directs this order.

The relational concepts of righteousness and justice have been a significant proposal for the underlying principle of OT ethics. In ancient Israel, deliberation on legal cases by family groups “at the gate” (Gerstenberger) or by the sages (Perdue) was governed by this underlying unwritten law and sense of justice. The written law of the Bible and the narrative in which it is presented reveal this “unwritten communal sense of justice” (Patrick, 198). This sense, however, is subsidiary to the larger overarching narrative in which the “ethic” is set, and to the God whose love provides the context for ordinances, justice, judgments and righteousness. It serves best as a “middle value” (see 1.4 below) for ethics in the Pentateuch.

1.2. Holiness. A second major proposal for the underlying principle of OT ethics is the holiness of God and the corresponding declaration, “You will be holy, for I am holy” (Lev 11:45; 19:2; 20:7, 26; Num 15:40; Kaiser 1983, 1994; see Holy and Holiness, Clean and Unclean). The concept of *qōdeš* (“holiness”) in the Pentateuch is part of a comprehensive priestly worldview of separation (“dedication” or “consecration” are both translations of *qōdeš*) and purity (“clean” and “unclean”). Just as created realms were separated at the beginning (Gen 1), so the world may be ordered by distinctions and separations between places, times, animals and persons. On the hierarchical holiness continuum, cleanness prepares a person for holiness. In its narrative and canonical context, holiness is (1) conferred upon people, not an inherent quality; (2) a public and corporate action of setting aside; and (3) for mission.

1.2.1. Holiness Is Conferred. The OT phrase “be holy” is easily misconstrued as the ontological quality “be perfect.” This erroneously shifts the ethical context from a holiness that derives from and is a part of a specific relationship with God to a reflexive holiness that derives from the individual, as in Korah’s rebellious attempt to redefine the context and ownership of holiness (Num 16). The positive theological context of conferred holiness is established in Leviticus 19–22, particularly in the phrases “I am the

LORD who sanctifies you” (Ex 31:13; Lev 20:8; 21:8; 22:32) and “I am the LORD who sanctifies them” (Lev 21:15, 23; 22:9, 16). God’s instruction to “Speak to all the congregation of the people of Israel and say to them: ‘You will be holy, for I the LORD your God am holy’” (Lev 19:2 NRSV) demonstrates that holiness functions to point to a higher good, namely, to a right relationship with God. This relationship entails holiness as one of the forms of moral obligation (Gammie), but it is subsidiary to the holiness of God. “You will be holy” is not an imperative command (“Become holy!”) or reflexive (“Make yourselves holy”) but a statement of the necessary relationship to God.

1.2.2. Levitical Holiness Is Public and External. Cleanness and uncleanness are the arena of human decision and action. A legally achieved and publicly recognized cleanness was prerequisite to approaching holiness. The whole of Leviticus is dedicated to the restoration of purity (cleanness) from the state of uncleanness (Kaiser 1994, 997–1000). Cleanness denotes an ordered relationship with God, creating a capacity for the levitical holiness that generates from God’s holy character. Holiness is often a *temporary* public designation that confers a state of holiness in a special public act by means of God’s action. In Israel, although holiness had a behavioral dimension, it was not strictly ethical. Rather, holiness was fundamentally missional and cultic (sacramental), as in Nazirite vows, which set apart people for temporary public tasks (Num 6:1–21). Animal or land tithes (holy because they were God’s due) could be made common (redeemed) simply by purchasing them back from God for their value plus one-fifth (Lev 27:9–33). This sacramental sense of holiness was not conveyed ethically or morally. Rather, these temporarily dedicated people and things pointed toward the primarily *missional* (set apart to do God’s work) theme of levitical holiness.

1.2.3. Holiness Is Missional. The term *holiness* has no content apart from its missional context in the Pentateuch, as Israel was set apart for God’s mission in the world. Their mission as God’s people was to be a *blessing to all nations (Gen 12:3; 18:18; 22:18; 28:14; Ex 19:5–6; 22:31; Deut 7:6; 14:2, 21). The canonical narrative context of holiness assumes the exodus as part of the fulfillment of the Abrahamic promise to be a blessing to all cultures of the earth. The refrain

"I am the LORD your God" and its longer form, "I am the LORD who brought you out of the land of Egypt," repeatedly accompany the laws of holiness (Lev 11:45; 18:1-5; 19:34, 36; 22:33; 23:43; 25:38, 42, 55; 26:11-13). Holiness is not for the purpose of perfection or an individual ethic but in order to be a blessing to the whole world. A *particular ethical sociality* is integral to this mission. In the five main texts in which the people's holiness is specifically commanded ("You will be holy"), very specific kinds of behavior are named as a means to the cleanness that is attendant to holiness. They represent a contrast to the social practices in Egypt and Canaan and include diet (Lev 11; 20), sexual practices (Lev 18), the Ten Commandments (Lev 19), the prohibition of child sacrifice (Lev 18, 20) and wizards (Lev 20), and the keeping of all commands (Lev 19:37; Num 15:38-41).

The subject of holiness is important in the Pentateuch, but several difficulties remain in considering it as the underlying principle for OT ethics. Holiness is too easily abstracted and translated as perfectionism, separated from its specific missional content. Holiness is not a principle but a condition conferred by God from the character of God. Cleanness as a public act of separation for temporary holy service has a limited scope. Levitical holiness as an underlying principle puts too much weight on a single theme and book of the pentateuchal narrative. Holiness is subsidiary to the larger overarching narrative in which it is set (Barton 1998, 35). In the canon, holiness results from a complement of justice and love (Goldingay, 42). It is most useful as a middle value (see 1.4 below) for ethics in the Pentateuch.

1.3. Love of God, Love of Neighbor. Jesus, Hillel and Akiba all agreed that the sum of the Torah is love (Bamberger, 892). Jesus quotes "You will love the LORD your God with all your heart and with all your life and with all your might" (Deut 6:5) and "You will love your neighbor as yourself. I am the LORD" (Lev 19:18b) as a summary of the whole law (Mt 22:37-40; Mk 12:29-31; Lk 10:27-28). Jesus teaches that the sovereignty and fatherly love of God is the basis by which ethical communities are formed (see *DJG*, Ethics of Jesus, §3.7). Paul makes a similar claim in Romans 13:8-10 and Galatians 5:14 (see *DPL*, Ethics, §2). In the Pentateuch, however, the term that is translated "love" (*'ahābā*) has a very limited usage. In Leviticus 19:18 and 34 (the only occur-

rences of the root *'hb* in Leviticus), love is commanded toward neighbors and toward resident aliens as a response to the LORD's deliverance from Egypt.

The root *'hb* ("love") also has a very limited context within its limited uses. In Deuteronomy, *'hb* occurs sixteen times in relation to love for or by God and for the neighbor or stranger. In these texts love is always treated within the same limited sociological themes and word clusters that provide a specific definition. Love means obedience to the commandments (Deut 13:3 [MT 13:4]; 23:5 [MT 23:6]), usually with the motive of prosperity (Deut 6:5; 7:13; 10:12; 11:13, 22; 19:9; 30:6, 16, 20) and as a response to deliverance of the ancestors from Egypt (Deut 4:37; 6:5; 10:15, 18-19; 11:1). When God's love is the subject, the limited context is then deliverance of the ancestors from Egypt (Deut 4:37; 10:15; cf. 23:5). Twice love is used as the principle warrant for human behavior: once to encourage love for the stranger and once to encourage the killing of dream diviners (Deut 13:3).

Jesus and Paul are certainly correct in identifying some kind of love as the summary of the law. The problems, however, are that the English word is far too general and the Hebrew word *'ahābā* that is translated "love" is sociologically far too specific. The familiar injunction to love one's neighbor (Lev 19:18) was a practiced norm in Israel, not an ethical ideal (Clements). The general term *love* was understood in terms of particular public behaviors in limited biblical contexts. Another Hebrew word and concept (*hesed*) may better serve as a context for Jesus' and Paul's reference to love (see 1.5 below).

1.4. Problems with an Underlying Principle. The problems related to finding a unifying underlying principle for ethics in the Pentateuch are shared with the rest of the OT (Birch 1991, 41). The first problem is genre reductionism. The Bible is rich in the genres of narrative, law, wisdom and prophecy. All its genres are necessary to an OT ethic, not just the overtly didactic (e.g., law). All forms of the text provide helpful ways of seeing and acting (Birch and Rasmussen). Because only narrative and law are substantially represented in the Pentateuch, care must be taken not to form conclusions independent of the canon's other resources. The tendency of the search for an underlying principle to focus narrowly on a single genre should be avoided, or the results will be distorted. Pen-

tateuchal law and narrative cannot be understood independently (see 2.1 below).

The second problem with finding an underlying principle is the tendency to reduction by broad abstraction. Ideal abstract standards are fundamentally foreign to the OT approach to ethics (Childs, 648-716). A single abstract principle can distort the interpretation of individual genres. The search for systematic coherence must not diminish the distinctiveness of a text's or genre's individual moral reasoning (Keck). The priestly, sapiential, royal and prophetic traditions each warrant differential treatment (Janzen, 75). The complexities of an individual text's sociohistorical settings, chronologies and traditions present a further challenge. Understanding with certainty what Israel believed and practiced is not possible through the opaque window of an historical text. When the variety of texts is considered, abandoning the search for an underlying principle may be warranted (Bar-ton).

Appeal to middle values and "middle paradigms" (Janzen) preserves the diversity of OT genres, avoids the undue abstraction of a single unifying principle and provides a way between unity and diversity. Values discovered in the Pentateuch (justice, love, obedience, priestly service) may then be considered individually as principles and viewed as middle values. Paradigms (e.g., Israel's relationship to Sinai law) may function to define a specific direction from historical context while providing relevance beyond its specific history (Wright, 225-31). The "familial paradigm," with its values of life, land and hospitality to all (Janzen, 12), originates in Abraham's family kinship and God's promises. Janzen proposes that this paradigm also unites other middle paradigms of the OT under the family rubric, when they are seen as distinct modes of seeking the same God-willed life (Janzen, 178).

The familial paradigm functions best as a development of Genesis narrative values. Middle paradigms resolve the tendency to ignore OT diversity, as long as they do not subordinate that diversity to one unifying paradigm. Recent discussions of paradigms and middle values point to the overarching OT historical narrative that stands in place of an ahistorical underlying principle. The Bible is fundamentally a story of a people's journey with their God. A *biblical ethic* will necessarily be one that portrays life as

growth and development (Hauerwas, 24). In place of an underlying principle is a *narrative text* that includes many genres.

1.5. A Narrative About *Hesed*: *Unrelenting Love*.

The Pentateuch is unified by an overarching biblical narrative that is difficult to reduce to a principle. Severing agents of the text from their actions in order to establish a principle is contrary to the "moral psychology" of the text (Hauerwas, 23). For the purpose of ethics, it is necessary that the narrative speak for itself. Summary narrative themes that necessarily point to the text have been proposed: God's "creating and redeeming acts"; "hope" that derives from God's creating, calling, promising and delivering actions (Brueggemann; Ellul); and God's faithfulness (Hauerwas; Clements).

The unique Hebrew concept that briefly contains the themes of the narrative and simultaneously necessitates reference to the narrative is *hesed*. Imitation of the *hesed* of God is considered the central theme of Jewish ethics (Breslauer). Usually translated "steadfast love," "kindness," "lovingkindness" or "covenant loyalty," *hesed* is not an abstract ethic but the underlying value of God's character and a high ideal in human virtue. *Hesed* is a beneficent action in the context of an enduring commitment between two parties, rendering assistance to one who is unable to help himself or herself (Clark, 267). It is inherently woven into the narrative of creation, rebellion, promise and redemption. Several noteworthy dissertations have dealt with this difficult-to-translate term, as its meaning is broader and deeper than a single English or German word can render (Glueck in 1927; Bowen in 1938; Sakenfeld in 1978; Clark in 1993). In general it may be translated "unrelenting love," which implies an agent (God) behind the term and indicates historical movement (Israel's history).

In the Pentateuch, *hesed* (21x) is a virtue in human affairs (Gen 20:13; 21:23; 24:49; 40:14; 47:29). It is declared and expanded by God as the central feature of his name (Yahweh), his promises and his active reputation (Ex 20:5-6; 34:6-7; Num 14:17-19; Deut 5:9-10; 7:9-13). The quality *hesed* is repeated to God by the patriarchs and by Israel in praise of that reputation (Gen 19:19; 24:12-14; 32:10 [MT 32:11]; Ex 15:13; Num 14:18) and to each other (Gen 24:27; 39:21; Deut 7:12). The overarching narrative demonstrates the unrelenting love of God to his

people throughout Israel's history. It was the unrelenting love of God that sent the remnant into exile, brought them back to the land and promised a renewed covenant.

Other proposals for major themes of the narrative (grace, *ḥnn*; compassion, *rhḥm*; faithfulness, *ʾmt/ʾmn*; love, *ʾahābā*) are all elements of *ḥesed* (Clark, 267). Being *qds* (holy) means “manifesting the unrelenting love” of the God who has brought us out of Egypt (Hauerwas, 67; see Ex 6:7; 16:6; 20:2; 32:4, 8; Lev 11:45; 19:36; 22:32-33; 25:38; 26:13; Num 15:41; Deut 5:6; 6:12; 8:14; 13:5, 10; 20:1). The fullest and highest expression of *ṣēdāqā* (“righteousness”) draws from the content of *ḥesed* (see Hays; Mogensen; Gen 21:23; 38:26; Deut 5:10). *Mispāt* (“justice”) is also best understood as a part of *ḥesed* (Heschel, 195-220; Berkovitz; see Gen 39:21; 40:13-14; Ex 20:6; 34:6-7; Num 14:18-19; Deut 7:9-12; 10:17; 32:4). *Ḥesed* serves, in brief form, as a major theme of the Pentateuch and, at the same time, necessitates reference to the narrative itself, requiring the actual telling of the story. *Ḥesed* is a signpost that points to the overarching biblical narrative. It could be developed further in relation to the whole canon as an ethic of the imitation of God (see Heschel, 207-11).

2. Character Formation: Developing a Sense of Duty.

The Pentateuch is a unique resource for the formation of character. When character (identity) is formed, internal motivation for ethical action (a sense of duty) is developed. Ethical inquiry into the Pentateuch properly begins with an awareness of the metanarrative context in which God acts. People are created, fall out of relationship with the Creator, need and receive promises of blessing, are delivered from bondage and move toward the fulfillment of the promises made by God. This subject matter and narrative form influence the formulation of the inquiry. The Pentateuch sets the stage for Christian ethics, providing presuppositions concerning human character before engaging in any ethics of obligation (e.g., Gen 1–3).

The Pentateuch is first about God's actions and secondly about the formation of a people in relation to God. Rather than answering, “What shall we do?” it speaks first to the question, “Who shall we be in response to God's actions?” *Abraham's and *Moses' calls are made in the context of promises that a people will be formed

(Gen 12:1-3; 15:1-6; 17:1-14; 22:15-19; Ex 3:6-10). God's calls to identity as a people precede the giving of laws. The narrative context focuses on being and character formation as the *source* for action and obligation. Indeed, Sinai's obligations are repeatedly punctuated with the reminder of the source of Israel's identity through the refrain “the LORD, who brought you out of the land of Egypt” (Ex 16:6; 20:2; Lev 11:45; 19:36; 22:33; 25:38; 26:13; Num 15:41; Deut 5:6; 6:12; 8:14; 13:5; 20:1). The Pentateuch forms character by providing a particular view of reality, namely, the view of the narrative text itself.

The narrative contains examples of responses to the Creator that are both positive (*Abel, *Noah, Abraham) and negative (*Cain, Ham, Sodomites). The stories are realistic in their complexity and ambiguity. Reality is not idealized. Noah and Abraham both exhibit weak character in their choices at times (Gen 9:21; 20:2). The people sin, fail, hope, persevere, reconcile and struggle. In the midst of the ambiguity, however, clear reasons for good actions are expressed, both in the realm of the “natural” order of creation and in response to God's acts of redemption: “If you do well, will you not be accepted?” (Gen 4:7a NRSV), and “You must follow exactly the path that the LORD your God has commanded you, so that you may live, and that it may go well with you, and that you may live long in the land that you are to possess” (Deut 5:33 RSV). The narrative provides an overall view of reality that influences one's way of life and subliminally shapes character to see the world truthfully (Goldingay; Hauerwas; Birch and Rasmussen).

The Pentateuch's narrative form also functions to establish the authenticity (validity) of this view of reality (Birch 1988, 80). Since human experience is essentially narrative in form (and not abstract), the Pentateuch provides a medium that immediately engages the narrative quality of our lives (Crites). Further, the multivalence of the pentateuchal narrative corresponds to human experience.

2.1. The Narrative Source of Character and Identity. The main pentateuchal source for strong character (including a sense of duty to others and God) is found in the retelling of narrative promises and exodus redemption history. The promises to Abraham are repeated and the story of Sinai is retold in Deuteronomy and Joshua, creating a particular view of reality that shapes identity.

2.1.1. *Being Human.* The characters of the OT may be exemplary in specific actions, but the hero of one circumstance is often the heel of the next. The “saint” and “sinner” are often the same person. This observation led to the nineteenth-century conclusion that the ethical ambiguity of the biblical patriarchs evolved into the high morality of Israel’s prophets (Janzen, 8), leaving the patriarchal narratives in the hinterland of OT ethical discussions. Recently, however, scholars have suggested that the patriarchs contribute to character formation precisely because they are simultaneously saints and sinners. The narrative establishes a reality in which a person is capable of good even while affirming the fundamental canonical confession that human beings are sinners.

For Christian (as well as Jewish) ethics, the view that persons are inclined to both good and evil is a necessary function of the text. It trains us to see ourselves as sinners, as part of God’s narrative, and not our own (Hauerwas, 33). The text addresses “the total issue of man” rather than dealing with only the moral problem (Heschel). The Pentateuch presents *law* in the midst of a narrative that describes in detail the sins and troubles of its primary characters. It does not fail to describe Cain’s murder of Abel, Abraham and Sarah’s trouble in their sojourns, broken relations in Jacob and Joseph’s families, slavery in Egypt, struggle toward exodus and Sinai, the *golden calf and other rebellions, long wilderness wanderings and the repeated apprehensions surrounding the promised prosperity in the acquisition of land. The Pentateuch is a unique resource for ethics in that it provides an extensive story of failures as the lens through which intermingled successes should be viewed. Further, the context in which the law is presented forms an honest view of human character and a worldview in which laws, principles and codes can be understood.

The Pentateuch is relentless in presenting a view of people as willfully overreaching their powers in order to live as authors of their own stories (*sui generis*), deceived about the nature of reality (e.g., *Eve, Cain, Noah’s neighbors, Israel in the desert). The Bible addresses the problem by presenting a truthful view of the world, a view that can be gained by reading the narrative (Hauerwas, 31). This truthful view includes acknowledging tendencies to overreach the limits of human freedom to usurp the place of God, as

in the case of Eve, and to hide that freedom in Israel’s various idolatries, thus losing freedom in what is finite (R. Niebuhr).

The pentateuchal narrative demonstrates that each generation needs to be schooled in the language of sin and to use it about themselves. This task requires a learning community of faith (Hauerwas, 33). Israel is reminded to teach the commandments to their children (Deut 6:7-9) and to repeat the stories of the past (“My father was a wandering Aramean”), especially in times of prosperity, when the temptation to self-deception about one’s true identity is greatest (Deut 26:1-11). The story calls the community to choose a life that is faithful to God’s story and warns against future temptations to abandon their place in it (Deut 27—30).

The view of reality found in the Pentateuch begins with the acknowledgement of a tendency to sin and a self-deception about sin (Gen 2—4). In response to this situation, God called the Hebrew people to become God’s people, to accept a place in God’s history and to live according to that calling (Gen 12—Ex 18). The center of that calling was not individual, but corporate. When the Hebrew slaves were called out of Egypt into the wilderness, the stated purpose was the worship of the God of the Hebrews (Ex 3:18). In the wilderness Israel was formed by receiving the instruction of the law and through worshipping the one God. The center of Israel’s calling and identity, and thus ethical formation, was the community of study and worship.

2.1.2. *Being a Transformed Community.* The narrative of the Pentateuch assumes a faith-centered historical community as its social context. Each person is held accountable for his or her actions by a community that finds its identity in the worship of the one living God, responding to the reiterated promise (Gen 12:1-3; 15:1-6; 17:1-8; 22:15-19; 26:2-5; 28:13-15). The Christian use of the Pentateuch for ethics cannot overemphasize worship and community. A worshipping community is the pentateuchal context of the formation of character and right living. The integral relationship between worship and right action is demonstrated in the difficulty that exegetes have in attempting to divide ceremonial from civil and moral ordinances in the Sinai law. They are bound together as character and right action are bound.

The laws contained in the Pentateuch are set in the context of a community that is being

transformed. This observation recently has played a more prominent role in methodology (Birch; Hauerwas), leading to a closer reading of the sociohistorical settings of OT laws (Barton). Attention also has focused on the voice of the overarching narrative and its influence on the formation of communities today. In every case an important critical aspect has been gained by closer attention to the historical community and narrative contexts of the text, thereby avoiding ahistorical abstractions. With renewed attention to the context of historical community and the witness of the narrative context, the text functions as a self-authenticating call to good character.

The narrative discloses reality and has the power to transform a community in at least three ways (Birch, 1988, 82-84). (1) Its salvation stories transform the reader, the central salvation story of the exodus being especially effective (Ex 1—15). Israel understood deliverance as a gift of life-giving grace (Deut 26:1-11; Josh 24:1-18). Its memory and retelling had the power to transform later generations: “Not with our ancestors . . . but with us, we who are here, all of us, alive this day” (Deut 5:3). (2) Stories of transformation in the text invite the reader to similar transformation, to new life and new understanding in relation to others and to God. When Jacob is at the Jabbok crossing, he struggles with alienation from his brother, is given a new name and is reconciled to his brother (Gen 32:22—33:11). (3) Unexpected results in pentateuchal stories can transform a reader. The verdict in the case of *Tamar and *Judah forces the reader to reconsider assumptions about righteousness (Gen 38:26). They invite readers to think about complex relationships in which God has a stake and to consider that stake in relation to their own complexities of relation. While the first two kinds of transformation create hope within the community of faith, the third has the potential to bring hope to those standing outside the community. In each case transformation is possible when hope is taken from reading the narrative.

Hope is a primary source of good character. Although the word *hope* only occurs once in the Pentateuch, the words of promise and fulfillment to Abraham, *Isaac, *Jacob, Moses and Israel carry hope as a major theme. Significant attention has been given to the hope generated from biblical stories of deliverance and redemp-

tion (Ellul; Brueggemann). Hope is a question prior even to faith and love in a time of alienation and abandonment. Christian ethics is categorically an eschatological ethics of hope (*see DJG, Ethics of Jesus*). Communities of faith become and remain ethical in hope that God’s promises for an eternal covenant will be fulfilled. The narratives of deliverance and promise in the Pentateuch and their ownership by members of faith communities are the means by which that hope is inculcated and retained. The retelling of the past, shared, biblical story and a present and future hope in its promises are the source of character formation.

2.2. Creation: A Basis for Character Formation.

The fundamental fact that we are creations of the Creator is the basis for a sense of duty in the first biblical examples (before Sinai), as well as in later arguments (“motive clauses,” after Sinai). The arguments of the texts assume that when one’s identity is located in this Creator-created relationship, good character and good decisions will follow.

2.2.1. *Being Created.* While the giving of the law at Sinai is the dominant biblical context of character formation and obligation, *creation is the first setting of ethical narrative. Eden is the first test of character in relation to the Creator (“Where are you?” Gen 3.9). The contrasts between Abel and Cain, Enoch and Lamech, and Noah and his generation can each be judged in relation to the Creator and good human order. The renewed interest in creation as a context for ethics begins with such pre-Sinai stories. Creation is the proper theological context, since it is first in the canon, the first source of order and the first source of life. In one sense, all of the Pentateuch can be read from a creational perspective. The exodus is nothing less than an act of creation that is completed in *tabernacle worship (Ex 10:22; Lev 26:13; Deut 4:32; 32:6). The priestly legislation of Leviticus has a creational context (Brueggemann). Israel’s ritual worship participates in recreating the world. Creation is completed when the created worship the Creator. The human perspective of being a creation in relationship with a Creator is fundamental to identity and character formation.

In the Abraham narrative a character-forming worldview is presented through a web of dramatic sociological consequences for unethical actions (Fretheim). In Genesis 20 *Abimelech’s camp suffers extensive consequences

(sickness, closed wombs) because Abraham and Sarah have not disclosed their relationship as husband and wife. All are caught in cosmological consequences resulting from a violation of created orders. While similar dramatic consequences do not result from such actions today, the narrative demonstrates a cosmology in which unethical actions have widespread consequences. A legal reading of the text reinforces this explanation, showing the necessity of this particular cosmology to the interpretation of the consequences (Bruckner). The web of moral physical consequence constitutes a cosmology in which human conformity to the pattern of the Creator's natural order is wisdom (Goldingay, 42).

"Motive clauses" accompany some laws in Exodus—Deuteronomy, providing a reason for keeping them (Uitti, 20) and forming an argument that appeals to common orders of creation rather than their covenant context. The motive clauses of Deuteronomy especially appeal to basic human categories of empathy, common sense, self-preservation and conscience. Some motive clauses appeal to human empathy for the powerless by recalling a similar experience: "Remember that you were a slave in Egypt" (Deut 24:18a RSV). Common sense is given as a motive in the release of a slave: "Do not consider it a hardship when you send a slave out as a free person; for at half the cost of a hired servant the slave has served you six years" (Deut 15:18). Self-preservation motivates honest business practices: "You shall have only a full and honest measure, so that your days may be long in the land" (Deut 25:15b NRSV). Conscience is also a basis of appeal: "As for the Levites resident in your towns, do not neglect them, because they have no allotment or inheritance with you" (Deut 14:27 NRSV). These rational motives make their human appeal within the text itself, based on the Creator's intention for the creation to be fruitful (Gen 1:28; Barr, 95-96). They build character by reflecting on the advantages of living with an enlightened self-interest in the Creator's world.

2.2.2. The Character of Creation's Freedom. Modern understanding of created humanity is often based in the fallacy (adapted from Kant) that the idea of God safeguards a person's freedom and thus one's moral character and action. On the surface this argument convinces us that as creations of the Creator, we ought to live re-

sponsibly and are free to choose a responsible way of life (Hütter, 32). From the perspective of the Pentateuch, however, especially Genesis 1—11, the Creator has *not* endowed the creation with a self-legislated freedom. The initial problem presented at *Eden is that humanity was not able to self-legislate its freedom/responsibility.

The dominant assumption that we are capable of this self-legislation has caused many readers to misinterpret the instruction given at Sinai. The idea of self-legislated freedom supposes that the law, because it is external to the "free self," is opposed to creation and created freedom. It supposes that law is given to limit creation's freedom. The Pentateuch, however, ends with the claim that the Sinai law is *the means to life* and its freedom: "This is no trifling matter for you, but rather your very life; through it you may live long in the land" (Deut 32:47 RSV; see Deut 30:15-19). The Sinai instruction is given by the Creator as a part of the substantive freedom of creation for a blessing of all creation. Sinai is the necessary way out of the bondage of Egypt. It is the Pentateuch's path to a relationship of freedom between the creation and the Creator.

The Sinai law presented in Exodus—Deuteronomy is not in opposition to the created freedom between Creator and creation, but an agent of that freedom. Good character is built when this essential, dynamic relationship between Creator, creation and law is understood. Without the fundamental concept of freedom and responsibility, right action will be for the wrong reasons. Obedience to the Creator is not a limitation of freedom but the way of freedom, forming the basis for good character (Hütter).

2.3. God and Character Formation: The Unique Context of Biblical Moral Discourse. The covenant-seeking God of Noah, Abraham and Sarah, Isaac and Rebecca, and the family of Israel is the ultimate source of, and provides validity for, character formation in the Pentateuch. This is the God "who will cause to be what will be" (Ex 3:14-15) and who is transcendent, personal, willing, acting and speaking (Gill, 32). Good human character is derived from a faithful relationship and interaction with a personal God, not simply by study of the text. The dialogues between God and Abraham at Hebron, Jacob at Jabbok, Moses at Horeb and the many discussions in the wilderness wanderings form a pentateuchal model of interactive character formation. A static biblical ethic is not possible, because the

living Word cannot be systematized (Ellul).

The dynamic nature of character formation has its source in God *as compassionately righteous*: “You shall not abuse any widow or orphan. If you do abuse them, when they cry out to me, I will surely heed their cry. . . . And if your neighbor cries out to me, I will listen, for I am compassionate” (Ex 22:22-23, 27 RSV). Pentateuchal justice and righteousness are not simply values, but rather God’s stake in human history (Heschel, 198-200). God does not say to Cain, “You have broken the law.” Instead he asks, “What have you done? Listen; your brother’s blood is crying out to me from the ground” (Gen 4:10 RSV). God’s justice and righteousness are an *a priori* of biblical faith, not an added attribute. God is the *source* of righteousness (Gen 18:25; Deut 1:17; 32:4).

Care should be taken to avoid moralizing the pentateuchal narrative without reference to God’s deeds. The focus of the narrative is on God’s actions, and moralizing may miss the point altogether (Westermann, 86). This caution is manifest in the first words of the Decalogue: “I am the LORD your God, who brought you out of the land of Egypt, out of the house of bondage. You will have no other gods before me” (Ex 20:2-3; Deut 5:6-7). The expression “who brought you” is a regular and substantive identification of “the LORD your God” and a constant reminder that the identity and character of the people of God necessarily begins with the presence and action of God (Gen 15:7; Ex 6:7; 16:6; 20:2; 32:4-8; Lev 11:45; 19:36; 22:33; 26:13; Num 15:41; Deut 5:6; 6:12; 8:14; 13:5; 20:1).

3. Moral Obligation and Authority.

A Christian perspective on ethics in the Pentateuch walks a line between antinomianism (against the law) and a new nomism (legalism), as OT laws are a central focus of OT ethics. *How* the idea of law is upheld and *for what purpose* it is kept are the critical issues. Intrabiblical development of justification and righteousness concludes that they (and the law) are a matter of faith. If the law has been fulfilled in Christ, “Do we then overthrow the law by this faith? By no means! On the contrary, we uphold the law” (Rom 3:31 RSV). The law in general retains authority, but the nature of its authority is debated. Recent scholarship addresses the authority of ancient laws and principles and the current basis for the authority of OT laws. Authority intrinsic

to the Pentateuch includes: (1) the authority of the voice of God, most often given in specific commands or prohibitions (positive law); and (2) forms of “natural” or “creational law” that may be implied or assumed by the text.

The continuing practical authority of laws of conduct is not due exclusively to the historical law codes themselves. They continue to be read primarily by people in faith communities who regard the whole book as authoritative, precisely because they view themselves as part of the biblical narrative line. The incorporation of the readers as people of God in the continuing overarching narrative is the primary factor in the present authority of any OT laws. A particular law is authoritative *as practiced law* when the community teaches it as a necessary practice. The laws are authoritative as part of a whole biblical narrative that has been accepted by the community of faith as binding on its conscience. The necessity of particular laws to ethical or moral behavior is the subject matter of OT ethics. Using pentateuchal laws as a source for ethics means establishing *how laws will be used* as authoritative for the person of faith.

3.1. Authority of God’s Voice. Moral discourse in the Pentateuch is centered on God. It is directly theological (Nysse, 342). The authority to keep the law is found in God’s direct speech to Moses. God’s authority *as God* is assumed in the text. Even the so-called Ten Commandments are not *commanded*, but simply spoken by God (Ex 20:1). A text prohibiting deceptive measurement in business adds, “For all who do such things, all who act dishonestly, are abhorrent to the LORD your God” (Deut 25:16 NRSV; Lev 19:35-36). A reminder that the LORD is one’s God accompanies laws concerning sexual taboos (Lev 18:6), the manufacture of idols (Lev 19:4), mockery of the deaf and blind (Lev 19:14), dietary issues (Lev 22:8), harvesting practices (Lev 23:22) and redemption regulations (Lev 25:17). “I am the LORD” occurs with statutes more than forty times in Leviticus 18–26. The unjust often assumed that God was not a factor (Ps 10:13; 94:7; Zeph 1:12), but discourse within pentateuchal law forces the reader to engage the living God, rendered present in the reading of the text (Nysse, 344).

In addition to God’s authority *as God*, God’s claim on a redeemed people *as a redeemed possession of God* lends authority to law woven into the redemption narratives (Ex 19:4-6). This claim is

the foundation for OT ethics as normative (Childs, 671-72). God has elected, redeemed and established a covenant with a people. A recital of the Bible's covenantal narrative leads to an inherent authority in biblical laws of obligation. Two rhetorical elements express this authority. (1) God directly calls the people of God to respond as a delivered people and offers several motivations for accepting the law's authority. Most prominent are "that you may live long in the land" (Lev 25:18; Deut 5:33; 11:8-9; 22:7; 30:6; 32:47) and "For I am the LORD who brought you up from the land of Egypt" (Ex 20:2; Lev 11:45; Num 15:41; Deut 5:6; 13:5). (2) Moses' Deuteronomic sermon on the plains of Moab also demonstrates the present rhetorical authority of OT law. Deuteronomy 5:3 pushes the past Sinai event into the present: "Not with our ancestors did the LORD make this covenant, but us, who are all of us here alive today" (RSV, see also Deut 4:13; 5:5). A later generation accepts this claim as present truth. The traditional practice in historical Israel was to retell the deliverance story as a call to present commitment (Deut 26:17-18; Josh 24). Modern communities of faith continue the practice of reading biblical narratives as directly addressed to them. In this way creation, patriarchal and exodus narratives, and stories of the wilderness wanderings become a kind of personal history, providing a source of authority for keeping OT laws.

3.2. Authority of Biblical "Natural" Law. The recent discussion of "natural" law and its authority is based in the biblical perspective that God's "law" is inherent in the creation ("positioned in the heavens," Ps 119:89-91; see Rom 1:18-32) and therefore has authority, not just for the believer, but also over all creation (Levenson). Generally, *natural* law is binding on all people, supplementing *positive* law (explicitly commanded or forbidden) that has its canonical context in covenants made by God with Israel and humanity (e.g., Gen 9:1-17). Within that covenantal context, however, is a kind of biblical natural law (Barton 1998, 58-76). Although the term *natural* is not used in the Pentateuch, it is common scholarly parlance for problems and proposals concerning biblical natural or creational law in the Pentateuch (Barr, 95-96; Barton 1998, 58-76). In the past, biblical evidence of natural law was dismissed because Israel's revealed writings are historical and not natural. Even so, biblical texts make arguments for laws

based on the nature of life, not just on the authority of God's speech (Barton 1998, 61). Genesis—Deuteronomy presents evidence that has led to the conclusions that natural law has "some basis" (Barr), may be used "in quotes" (Barton) and is "not exactly" correct (Wright). *Creational law* may be a better term for describing the biblical evidence.

3.3. Biblical Evidence of Creational Law. The term *creational* is sometimes used in discussions of natural law, in part because it is closer to the concept of the biblical text. *Creational* is used formally in biblical theology to refer to texts that contain cosmological motifs or that use the creation as a warrant in an argument or where the primary relationship is between the Creator and the creation. That relationship itself is a basis of authority for human obligation.

Evidence of creational law in Genesis begins in the first chapter. In Genesis 2 God speaks command and prohibition to Adam and Eve; later he does the same with Noah (Gen 1:26-28; 2:15-17; 9:1-6). After Adam and Eve ate from the tree in *Eden, God asked, "What is this you have done?" (Gen 3:13b). The narrative discloses that what they did was not *arbitrarily* wrong, but wrong because it destroyed the Eden relationship of trust, order and life, overturning these for selfish motives. The primary horizon of righteousness in the OT is the creation of the world and the moral order that derives from its created character (Barton 1998, 67). Moral obligation is sometimes a matter of human understanding rather than a God-given command. Cain is asked, "Why are you angry?" (Gen 4:6a). Lot said to the men of Sodom, "I beg you, my brothers, do not act so wickedly" (Gen 19:7 NRSV). Abimelech said to Abraham, "You have done things to me that ought not to be done" (Gen 20:9b NRSV). These dialogues cannot be described in terms of positive law. The narrative simply assumes what is right and wrong. This creational law has an intrinsic authority based in the *natural* understanding that a specific action is understood to be wrong.

In Genesis God made Abraham the administrator of righteousness and justice and declared that he kept God's commandments, statutes and laws (Gen 18:19, 25; 26:5). In Exodus Moses knew God's statutes and laws and could teach them to others even before he had been to Sinai (Ex 18:20). Able men of Israel could *judge many legal cases without Moses' counsel (Ex

18:26) using “normal human common sense” (Barr, 99). The juxtaposition of Exodus 18 (before Sinai) and Exodus 19–24 (after Sinai) demonstrates that God’s creative activity in the daily and transcultural administration of justice has an important place alongside the formation of Israel and the law at Sinai. It functions to establish the primary authority of law in a creational and universal context.

In Leviticus the context of law is Sinai, given by God. The general consensus is that cultural anthropology brings us closer to the internal logic of the texts (Douglas). It is argued that there was something naturally understood about the categories of clean and unclean and that anything crossing “natural” boundaries was defective and even dangerous. Seeds, for example, should not be crossbred, and fabrics should not be mixed (Lev 19:19). Though not what *we* would consider obviously natural or unnatural, the logic of the text (clean and unclean) and comparative anthropological studies indicate that laws concerning food and sexuality in Leviticus imply some kind of creational or natural law. This understanding accepts a creation-based authority in the levitical laws.

In Numbers, created human common sense is used to write legislation that God approves as positive law (Num 27). *Zelophehad died without a son, so his daughters brought their case to Moses, arguing that their father’s inheritance ought to come to them, despite standing law. This natural-law argument by women in a patriarchal culture was declared correct by God (Num 27:5-7). The case, argued on the creational basis that their father’s name should not be lost, was won by the daughters and established a statute and ordinance for all Israel (Num 27:8-11; 36:2; see Barr, 99-100).

Deuteronomy recommends God’s laws as excellent laws: “What other great nation has statutes and ordinances so righteous as all this instruction?” (Deut 4:8a). This implies some standard of measurement that must be prior to those laws (Barton 1998, 73). Deuteronomy repeatedly appeals to the common sense of the reader. Obedience to the laws of Deuteronomy is required because God gives them (Deut 30), yet its motive clauses repeat a creational argument: “that you may live long in the land” (Deut 5:33; 11:8-9; 22:7; 30:6; 32:47).

In a formal sense, natural law is not presented in the Pentateuch. All of the examples

above are contextualized in Israel’s revelation and do not rest on “natural human intuitions about ethics” (Barton 1998, 74). These examples do, however, disclose Israel’s belief that all humanity lives within the constraints and blessing of the Creator-created relationship. Israel’s experience of *natural* law points to *creational* consequences, motives, arguments and contexts as well as to the Creator. It does not point to universal abstractions founded upon the idea of creation.

4. Moral Obligation and Laws.

In the OT, moral obligations are governed by laws and by values and principles discerned within the laws and the narratives of the Pentateuch. Recent scholarship addresses which OT laws should be kept, how should they be kept and the criteria for such decisions.

The primary authority of OT law for the Christian derives from the overarching narrative of the formation of a people of God in both Testaments. The authority of this narrative and some laws, *by their association with the overarching narrative*, has shaped the character of faith communities. Particular laws have been handled in various ways: *contravened* by the conscience of the church (the practice of slavery laws), *summarized* as values within the community (hospitality to strangers) or *declared fulfilled* by the gospel (laws of sin-atoning sacrifice). Others have been *accepted* as wholly authoritative for conduct (almsgiving, the Ten Commandments).

4.1. Using Old Testament Laws as Moral Obligation. Six hundred thirteen distinct laws (365 prohibitions and 248 positive commands) are found in the Pentateuch, by the count of Rabbi Moses ben Maimon (Maimonides) in the twelfth century. His interpretation of these laws has had a lasting influence on the interpretation of biblical law. How any one of the laws is interpreted depends on the history of its interpretation by communities of faith, on its literary context or the character of its law code and on the theological history of the interpreter. The laws are interwoven with narrative, are not ordered by subject and are sometimes viewed as being in tension with each other.

Four major series of legal material have distinct characteristics. (1) The Ten Commandments, “ten words” or *Decalogue is the best-known law series of the Pentateuch, in part because it is the lens through which the law that

follows is viewed (Ex 20:2-17; Deut 5:6-21; see Ex 34:11-26; Lev 19:4-16; Deut 27:15-26). (2) The *book of the covenant (Ex 20:23—23:19), considered the oldest written legal material, was received by Moses on Sinai after the Ten Commandments were spoken directly to the people. It was subsequently written and accepted by the people (Ex 24:4-7). (3) The Deuteronomic Code (Deut 12—26) is the reiteration of Sinai law forty years later by Moses on the plains of Moab. It contains many parallels with the Covenant Code in Exodus, demonstrating an intrabiblical development of law. The homiletical introduction of Deuteronomy includes the famous Shema (“Hear, O Israel”) that Jesus quotes as the greatest command: “You will love the LORD your God with all your heart, with all your life and with all your might” (Deut 6:5). (4) The Holiness Code (Lev 17—26) stands at the center of a larger body of so-called priestly law (Ex 25—31; 35—40; Lev 1—Num 10) that governed the historic sanctuary in Israel. This legal material also contains a wide range of social (including so-called ceremonial law) and civil law, interspersed with sermonlike addresses. It includes at its center the well-known “You will love your neighbor as yourself; I am the LORD” (Lev 19:18b; cf. Mk 12:31) and “You will be holy, for I the LORD your God am holy” (Lev 19:2b).

The history of interpretation of OT laws covers a wide spectrum (see Wright). A focus on historical development between the Testaments has retained the primacy of the gospel and important historical distinctions. It has, however, led to views that the laws and their authority have been superseded by the gospel (e.g., Marcion; Noth). The alternate focus on continuity between the Testaments has led to attempts to retain as many of the actual laws as possible by dividing moral law from civil law (Origen) or by advocating different categories (e.g., moral, civil and ceremonial) of law (Calvin). A commitment to continuity has led some to advocate a return to keeping, as much as possible, all 613 laws (see review in Wright, 213-20) and a new legalism.

A newer historical perspective maintains that the actual laws of the OT cannot be applied today as prescriptive or normative, based on their historical complexity and distance (Barton; Wilson; Clements; Birch and Rasmussen). Several warrants are offered. First, the laws may represent an idealized law in Israel rather than actual practice (Barton). Second, they were written

down over a long period of time and represent many different sociological contexts, some of which are difficult to identify (Goldingay). Third, the laws in Deuteronomy show modifications of laws in Exodus. Since they are not consistent, they cannot be moral norms, especially not for us (Wilson). Fourth, some laws are offensive, such as stoning for adultery or regulating slavery. These and others are rendered obsolete when subordinated to the law of love expressed in the NT. Recent work has sought to deduce applicable principles for nonbinding historical laws. Barton suggests that fundamental elements may be derived concerning the “general drift” of the laws: obedience to divine will, conformity to a pattern of natural order and imitation of God (Barton 1978).

In spite of the difficulties, OT laws continue to be used by the church as authoritative and as a central source of ethics. The impulse to preserve the primacy of gospel does not require the nullification of OT laws. On the contrary; conviction of sin comes by means of a valid law, and human communities still require ordering (Calvin; Luther). In this regard, recent work on the creational basis of OT law is useful. If based in creation, laws remain valid and useful, although not binding on the new covenant.

Maintaining the continuity of law between the Testaments sometimes has been accomplished by dismissing the ceremonial laws and retaining some civil and all moral laws. This sorting of individual laws into categories is a long-established tradition (Origen; Calvin; Westminster Confession; Kaiser 1983, 44-48). These broad divisions do not exist, however, in the law codes themselves, and the separation of moral law from civil and ceremonial law is foreign to both Testaments (Goldingay; Wright). It is difficult to preserve the social complexity of many individual laws when a single category is chosen.

Another approach analyzes the function of an individual law in its sociohistorical context by answering the following questions: Whose power does it affect? How did it function in the overall system? Is it central or peripheral to the social objective in the rest of the material? Does it reinforce other primary legislation, or is it a modification or a secondary application (Wright)? In this way a “flat equality” of laws is avoided, and the priority of laws may be discerned. When the principle of the contextual meaning is un-

derstood, it may be applied in the present. This view presupposes that the sociological setting of particular laws can be recovered with confidence. Limitations of this method include the tendency to dismiss laws because of difficult analysis and to apply others a bit too simply (Goldingay).

Recent discussion has sought to incorporate continuity between the Testaments while recognizing historical development within the Bible. The difficulty in actually dividing laws into civil and moral categories leads to an individual consideration of each law for ethics. This maintains a high continuity between the Testaments without superimposing categories on the text or arbitrarily picking and choosing individual laws. In order not to render OT law practically obsolete by a focus on intrabiblical development, the creational context of law is being reconsidered. A creational context for law maintains the primacy of the gospel as well as the necessity of the laws for guidance in the created order. Both approaches suggest that principles may be derived from pentateuchal law, either from individual laws or from the general perspectives of certain groups of laws.

4.2. Principles from Old Testament Laws. Many OT laws are historically and culturally bound, but determining the principle behind their meaning may shed light on their present value. The Decalogue, although historically conditioned, is general in scope. Deuteronomy, though full of culturally specific laws, advocates a general attitude of love and gratitude. The Decalogue and the Deuteronomic call to love form a basis for seeking principles from OT laws. Without the attention to principles behind the text, many laws would be abandoned to their historical particularities or flatly applied as timeless laws. On the other hand, derived principles, although helpful in bridging an ancient gap, do not have the authority of the biblical text's actual laws (Goldingay).

The distinct OT law codes are an ancient testimony to the justice and righteousness that God requires and may be studied for their inherent values (Patrick, 254-61). The Decalogue is a set of principles and values in the ancient world that is easily applied in the present, in spite of an erosion of the meaning of sabbath. The *book of the covenant (historically most distant) contains principles of a "whole life scope" for God's law, combining what we call secular, reli-

gious, moral and technical laws and demonstrating the value of every human life under the rule of God. The principles of the Deuteronomic Code urge justice in community, the strong enforcement of law against the lawless, compassion for the weak and needy, and exclusive loyalty to God. The Holiness Code expresses a counterbalance to the rationalistic spirituality of Deuteronomy. Its values include holiness as a unique combination of moral and amoral aspects (such as the arrangement of the sanctuary), either of which can pollute the community. The center of the Holiness Code (Lev 19) demonstrates this synthesis in combining laws on citizenship, land, sexuality and love of neighbor as necessary to holiness (Patrick, 261). One recent reading of the purity codes of Leviticus derives ecological principles for the care of the earth (Barton 1998).

Another kind of ethical principle observed in the study of OT laws is the intrabiblical development of law. The so-called second law (Deuteronomy) adapts the book of the covenant. The pattern is generally toward a more complex and more compassionate sociological setting (Deut 17:8-13 sanctions this development of new laws). Several principles have been suggested to explain development in OT law. (1) No law should be interpreted independently of others like it in the biblical canon. By tracing canonical development we can set parameters of the entire canonical witness to a law (Childs). (2) A broader authority for biblical ethics is established in the recognition that reason (a kind of natural law) is at work within biblical revelation (Barr). (3) Development within the canon demonstrates that the changing conditions of historical and sociological context require an adjustment in laws. This development is seen as a biblical principle that may be applied today in a new sociological context (Barton; Fretheim).

4.3. The Ten Commandments as Obligation. The Decalogue has been identified as the primary obligation of God's delivered people, serving as a unique guide for ethical living. The Pentateuch establishes the priority of the Decalogue among all the commandments. The complete Decalogue is presented twice (Ex 20; Deut 5), and Leviticus 19 has all ten commands in some form. In Moses' homilies the Decalogue is presented as a special part of the Sinai covenant (Ex 34:28; Deut 4:13; 10:4). The presentations of the Decalogue in Exodus and Deuteronomy dis-

tinguish it from the rest of the commands by narrative structure: it is established at the beginning of the Sinai declaration, set apart from other laws, and is the window through which the others are viewed. The Ten Commandments were spoken directly to the people (Ex 20:1) “with a loud voice” (Deut 5:22), written separately and by God. They retain the rhetorical force of an encounter with the direct speech of God and an encompassing scope in a brief form. These features have made the Decalogue the entry point for OT ethics throughout the Judeo-Christian tradition.

The rhetorical force of individual prohibitive commands (“You will not”) logically implies counterpart rights. For example, “You will not murder,” spoken as a command of God, implies a universal human right not to be murdered. Even though the commandments are spoken to a historically specific people, the principles of the commands reveal God’s presuppositions concerning the ordering of all creation. In this way the Decalogue serves as an archetype and mandate for a contemporary articulation of universal human rights (Harrelson).

Recent thought on the Decalogue identifies two tendencies that are avoided by reading in context. On the one hand, commands may be read too abstractly and subsequently understood as arbitrary rules, while on the other hand they may be read historically too specifically and understood simply as Israel’s folk law. The first tendency is balanced by attention to the narrative context of relationship to Israel’s creating and delivering God. The second tendency finds balance in the context of relationship to the God of all the earth (Ex 9:29; 19:5), who gives the law as a blessing to all nations.

Attention to the Decalogue as a part of the story of God’s creating and redeeming work with Israel is focused by the refrain that accompanies both versions of the Ten Commandments: “I am the LORD your God, who brought you out of the land of Egypt, out of the house of slavery” (Ex 20:2 NRSV; see Deut 6:21-25). Separated from this claim, the principles of the Decalogue cannot be justified. If God had not delivered the people, how could they have had no other gods before him? It is argued that obligation cannot be separated from this overarching context and shared experience of deliverance (Hauerwas). Obligation must have as its source an ownership of the narrative of deliverance and renewed creation.

As a result, the Decalogue and ethics are only secondarily a matter of obligation and “rules.” It is primarily a part of the larger picture of God’s project to bring social order to the beloved creation.

The tendency to dismiss the commands as the folk law of Israel has led to a response of increased attention to the law’s relationship to the Creator of “all the earth,” who gives the law as a blessing to all peoples (Ex 9:29; 19:5). The “ten words,” spoken into existence like the creation itself, result in a new, previously unknown reality. At Sinai, by word and action, God creates a new, particular kind of society, with relationships based in faithfulness to God. This “new” people’s relation to God is full of creation themes. In the Exodus narrative God commands the forces of nature in the plagues and firstborn deaths. Leaving the chaos of Egypt, the people pass through death-threatening waters to a new life (Ex 15). God’s ordered justice has been subverted in Egypt, but the exodus and new law integrate God’s created order and social order, bringing victory to God’s intentions in creation (Fretheim). Taking into account their historical context, in the Ten Commandments God advances his intent to reorder a chaotic creation, first in Israel and then in all the earth.

5. Conclusion.

The ethical influence of the Pentateuch can be summarized under four points.

5.1. God’s Unrelenting Love. The search for underlying principles for ethics can never be separated from the narrative of God’s unrelenting, loving pursuit of the creation. The stories of Abraham, Sarah, Isaac, Rebecca, Jacob, Leah, Rachel, Joseph and his brothers, Moses, and the rebellious people Israel form the setting for the ethical contributions of the Pentateuch.

5.2. Building Character in the Created. Character formation in the Pentateuch is founded in the Creator-created relationship. This formation includes living with the following convictions: (1) the relationship is broken by human rebellion, resulting in broken human lives that continually need restoration; (2) the created are called to worship the Creator in a community of faith; (3) God’s law is established as *created* law, and its keeping or breaking has a web of consequences for human and nonhuman creation; and (4) a personal relationship with the Creator who is present and active in the creation is nec-

essary for biblical character formation.

5.3. *The Authority of the Creator and the Redeemer.* The life-restoring response of those redeemed by the Creator is to keep the instruction given by God for right living. The Redeemer's direct speech provides authority for the instruction given at Sinai. The law's authority is also presented in the creational consequences, motives and arguments of the narrative.

5.4. *Right Living of the Redeemed.* The instruction ("law") of the Pentateuch has been handled in the Christian community in various ways: (1) summarized as principles or values; (2) declared fulfilled in Christ; (3) contravened; and (4) accepted as wholly authoritative. In general, the canonical understanding has affirmed the priority of the Ten Commandments, the keeping of the law as a result of faith and the law as a guide (not a means) to life. The 613 commands are not all applicable laws for right living today but provide authoritative instruction for reflective, intelligent and wise living in the presence of God.

ETHNICITY. See BORDERS; NATIONS, TABLE OF.

EVE

Eve (*ḥawwā*), the first woman, is a figure of complexity in the biblical text. She figures prominently in the first four chapters of Genesis, and for centuries she has played a crucial role in theological reflection and debate over gender issues. Eve is the name bestowed on the first woman by her husband, *Adam, the first man. Interestingly, this name is not given until after the *"Fall" (Gen 3:20). The name *ḥawwā* is related to the Hebrew verb *ḥāyâ*, "to live." The text relates Adam's choice of her name to her role in becoming "the mother of all the living" (Gen 3:20). In addition to being the first woman and Adam's wife, she is also the mother of *Abel, *Cain and *Seth (Gen 4:1, 25).

1. Woman as Divine Image
2. Eve as 'Ēzer, "Helper"
3. Eve Tempted
4. Eve Under Judgment
5. Echoes of Eve

1. Woman as Divine Image.

It is significant that the man and woman are not first defined by their sexuality or gender; they

are first defined by the fact that together they are created in the *image of God (Gen 1:27; 5:2; De Groot, 3). Humanity, male and female, was formed on the sixth day of *creation, according to the first creation account. Together the man and woman receive the blessing of God and the multifaceted divine command to be fruitful and to multiply; to fill the earth and to subdue it; and to have dominion over the fish of the sea, the birds of the air and over every living thing that moves on the earth (Gen 1:28). Together they are among his works that he pronounces very good (Gen 1:31).

Genesis 5:2 reaffirms that male and female together are created in the image of God. Together as a unit God calls them "humankind" (**ādām*) on the day of creation; together he blesses them. The biblical text thus affirms the equality between the sexes that existed at creation.

God's first command to the couple (Gen 1:28) concerns their work assignment, their responsibility to the earth and its creatures, and their duty to reproduce. Only indirectly does it concern their relationship to their Creator or to each other. God's command to them shows he chooses to use them as his administrators over his creation. From the beginning God delegates a portion of his power to man and woman.

2. Eve as 'Ēzer, "Helper."

Genesis 2 gives us an alternative view of the woman's creation. God creates the man and places him in a garden east of *Eden (Gen 2:8). God notices that the man is alone and gives the first negative statement in the biblical text: "It is not good that man should be alone; I will make him a helper comparable [*'ēzer kēnegdô*] to him" (Gen 2:18). The idea is introduced but not developed that God acknowledges that even he is not enough for the man. G. von Rad comments that "solitude is therefore defined here very realistically as helplessness" (von Rad, 80).

Here the biblical text introduces the ideas of aloneness and loneliness. At the start of human existence, the man needed something that he did not have and that was not yet created. Judging from the biblical account so far, one would expect an instant helper. Not so! Instead a delay occurs. God delegates to the man the task of naming, a principle already established in the Genesis 1 account in which God names the day and night, the land and sea (Gen 1:5, 10). An as-

sembly of all the animals God created is paraded before the man God has named Adam. Adam names the animals, but none like Adam is found among the animals.

It is then that God fulfills his commitment to make a helper for the man. The word often translated “helper,” *‘ezer*, is not a comment on the woman’s status and lacks overtones of subordination and inferiority. Instead, it describes one who possesses the desire and the ability or capacity to help another, a partner (see Fretheim, 352). The OT later describes God himself as a helper (see Gen 49:25; Ex 18:4; Deut 33:26; Ps 121:1-2; 146:5; Hos 13:9).

God then creates the woman in a way different from the manner in which he created his other works. In Genesis 1 God speaks the heavens and the earth and the animal and plant life into existence. In Genesis 2 he forms the man from the dust of the earth. But in the case of the woman he causes a deep sleep to come upon the man and from the side (or rib; *šēlā*^c) of the man, he fashions woman (Gen 1:3, 20; 2:7, 21; see Ex 25:12-14 for a similar use of the word *side*) and takes her to the man (Gen 2:21-22). As T. E. Fretheim comments, “The relationship of the woman to the ‘rib’ entails no subordination, any more than man’s being created from the ground implies his subordination to it” (Fretheim, 352). J. Calvin, recognizing that man was formed to be a social animal, commented that the woman was created so that human beings might cultivate a mutual society between themselves (Calvin, 128).

The text evokes the man’s delight. No longer lonely, Adam expresses joy in his completeness and exclaims that now before him is “bone of my bone and flesh of my flesh!” He calls her *’ššā*, “woman,” for she was taken out of the side of the *’āš*, “man” (Gen 2:23). This statement recognizes the similarities and differences within humanity as a unit but stresses the equality of male and female before God and with each other.

The text also establishes the basis for sexual intimacy and emphasizes its rightness, its goodness, the longevity of its duration, and the exclusivity of the new relationship between the man and the woman. In terms of equality, the woman was brought to the man by God, but it is the man who leaves his father and mother and joins with his wife (Gen 2:24). Together they become “one flesh” and are recognized as a new entity. The text indicates they approach each other naked

and unashamed, equal in their standing before God, equal in their enjoyment of each other and equal in their stewardship over creation.

From the start, however, they remain different in their functions and in how they were made by God. Several points emerge: first, their nakedness carries with it both a physical and psychological openness and vulnerability; second, God treats them as a unit, but he also treats them as individuals; third, there is joy associated with their creation and union.

3. Eve Tempted.

So far, the primary human character has been the man. With Genesis 3, the emphasis shifts, and the woman now becomes the center of attention. While the man played the lead role in the creation, the woman now plays the lead role in the part of the text that has become known as the temptation and *Fall. Here in Genesis 3:2-3 we first hear the voice of Eve (cf. Gen 3:13; 4:1, 25). The narrative allots a balance in textual space to each gender.

The text presents several ideas within these stories as normal, though they have caused interpretive difficulties. Adam and his wife evidently conversed face to face with their Creator on a regular, even daily, basis. And, without fanfare or surprise, the text presents a talking, vertically erect *serpent.

Scholars throughout the centuries have wondered why the serpent approaches the woman and not the man. Various interpretations have emerged, including that she is the more accessible; the more gullible or susceptible; the weaker and more easily deceived; the more curious by nature; or the more theologically centered. The text suggests that she had received God’s command about what to eat and what not to eat only secondhand from her husband Adam (Gen 2:16, 17). S. Niditch posits that the woman seeks knowledge and therefore tests the limits of authority (Niditch, 13). M. Luther maintained that the serpent chooses or attacks Eve because she is the weaker (Luther, 151). He argued that Satan presents the woman with a twofold temptation: (1) God did not say this; therefore you may eat of the tree; (2) God has given you everything; therefore, you have everything in your possession; therefore, one single tree is not really forbidden to you (Luther, 153). Calvin agreed with D. Kimchi that the text telescopes an originally longer conversation between the

woman and the serpent (Calvin, 147). He added that the woman was alone and the man was not with her during the conversation but joined her later (Calvin 151; but see Gen 3:6).

By her choice to eat the fruit offered by the serpent, the woman introduces unbelief and sin and, as Augustine noted, pride into the creation. Her action shows she readily listened to a voice other than God's, agreeing with the serpent and implicitly proclaiming God a liar. After eating the fruit, Adam and his wife do not avoid the serpent; instead, they avoid each other, and they hide from God (Luther, 171). When God confronts the couple, he asks how they know they are naked, wanting to hear their version of what happened. Adam blames God for sending him the woman, and the woman blames the serpent for deceiving her (Gen 3:8-13).

4. Eve Under Judgment.

God sentences the serpent first, and the serpent loses its uprightness and is condemned to crawl on its belly, presumably losing its ability to speak and to be understood. Enmity erupts between the serpent and humankind (Gen 3:15), deepening the distinction between man and beast. G. von Rad raises the possibility that from then on humankind has seen the snake as an evil being (von Rad, 89). Where formerly there had been a conversational familiarity between the woman and the serpent, God now places an enmity between the serpent and the woman and her offspring.

Genesis 3:15 is the only place in the Hebrew Bible where the Hebrew word for "seed" or "descendant" occurs with the third person feminine pronominal suffix—"her seed" (*zar'ākā*) (Hamilton, 50). A male descendant of Eve will bruise the head of the serpent. This descendant of the woman has been understood traditionally by Christians as the first reference to the *Messiah.

The biblical text recounts God's penalties for the disobedience of the woman and the man in opposite order of their occurrence. While the sentences given by God on the man and woman involve punishment, it is important to note that neither person is cursed. Instead, God curses the serpent and the ground (Gen 3:14, 17). God decrees that the man's physical labor in procuring food will increase, while for the woman he decrees an increase in her pain in bringing forth children, an increase in her sexual desire for her husband, and the result that her hus-

band will rule her (Gen 3:17, 16).

The *sin against God affected all creation. Human action brought alienation into human relationships and between each individual and God. It led immediately to Adam and Eve's self-justification, and their *exile from the garden. In this story lies the biblical explanation for untold human misery and suffering for generations.

M. Henry saw the woman's punishment as containing sorrow and subjection. Both punishments came for a sin in which she had "gratified her pleasure and her pride," he wrote. She passed on pain and sorrow, the consequences of her sin, to the human race (Henry, 1.19).

Another result of her action is that her relationship with the man changes. The sin of disobedience results in punishment, though it is tempered with mercy. Her "desire" will be for her husband, and he will "rule" over her. The meaning of this desire has been a matter of speculation. Is it her desire for mastery, which he in turn will not permit? More likely it is her desire for sexual intimacy despite the pain of childbearing. Her subjection will not be to an enemy or to all men, but only to her husband. But the notion of patriarchy is seen as part of the judgment and not a divine decree of creation (Fretheim, 363; cf. Meyers, 95-121). She will bear children with increased pain, but this will be tempered by the blessing of her fulfilling the command to be fruitful and multiply (note Eve's awareness of God's work in the birth of Cain and Seth [Gen 3:1, 25].) Significantly, the sentences brought on the man and the woman become a template for those later in the biblical text: punishment in the biblical text is designed to bring repentance (see Amos 4:6-11).

5. Echoes of Eve.

Adam's designation of Eve as the "mother of all living" suggests a connection with ancient Near Eastern literature. Although her name is associated with fertility, and fertility is a major topic in other ancient Near Eastern religions, there are notable differences between the biblical text and other literature. For example, ancient Near Eastern literature is replete with mother goddesses. The Akkadian goddess Mami is known as the "mistress of all gods" and creatures. Ugaritic texts call Asherah the creatress of the gods and the nurse of the gods; she fulfills the role of mother goddess. Asherah also is men-

tioned in connection with sacred trees and festivals. But the oneness and exclusivity of God and the fact that he never has a consort are confirmed repeatedly in the biblical text (Deut 6:4).

The Genesis account also differs from other ancient Near Eastern texts in that it contains an unexpected twist: it does not reflect unending life, prosperity, or blessing. The biblical account of humankind's first parents ends in banishment, death, punishment, pain, hardship and loss of children. Genesis 2:4—3:24 in particular counteracts a theology seen elsewhere in the ancient Near East. In the biblical text, the interaction of the woman and the serpent leads to punishment, while in ancient Near Eastern literature their interaction often leads to fertility. Another striking literary difference that further establishes the uniqueness of the biblical text is that ancient Near Eastern literature often seeks to explain the gods' origins; the stories are theogonic (Hamilton, 39). In contrast the biblical text simply states, "In the beginning God created the heavens and the earth" (Gen 1:1).

In the NT, although Paul refers to Eve as the one deceived, he places the blame for humankind's sin on Adam. All humankind receives the legacy of death because of Adam (see Rom 5:12-19; 1 Cor 15:21-22). According to Paul, Eve illustrates how humankind is seduced into evil (2 Cor 11:3; 1 Tim 2:13).

Rabbinic teaching common in the Second Temple era of Paul's day took a negative view of Eve and portrayed women as unreliable and as secondary to men. For example, women, both consciously and unconsciously, became the agents of seduction, and the brazen woman in Proverbs lures the simple man to his death (Prov 7).

Eve's position in the text as created second can be used to argue for her superiority as the final created being or, conversely, for her inferiority to man. Historical Judaism traditionally argues for the superiority of the man (see *Gen. Rab.* 18.2), as does Islam (see Al-Baghawi, *Mishkat al-Masabili*). The Talmud, however, argues for the superiority of the woman (*Sanh.* 39a).

Eve serves as a transitional figure in the text. She comes into a world teeming with life, order, happiness, harmony and the physical presence of God. This world defines no social or sexual roles, knowing no hierarchy within humanity. This somewhat simple world changes because of Eve and Adam's action. Because of the cou-

ple's disobedience, they now know the difference between good and evil; death enters the world; the world order now includes much harder work and much more pain. Their choice brings in a new hierarchy and worldview. The woman and her offspring lord it over the snake (although the snake will strike the heel of her offspring), and the man lords it over the woman.

The stories in Genesis 1—4 of creation, temptation and Fall, and the vignettes from the life of the first family—all stories in which Eve figures markedly—show a higher theme than gender superiority. Among other things, they illustrate the need for intimacy between man and woman. They portray the intimacy God desires to have with each person. They show the boundaries of an ordered, happy society, and the consequences of disobedience. The stories also illustrate how often men and women fail each other, become estranged and separate themselves from God. Thus they set the tone for much of the rest of the biblical text.

EVIL

The primary Hebrew terms rendered "evil" (*ra'*, *rā'ā*) designate the opposite of good or righteousness. In the Pentateuch this is foundationally the sinful condition of the human heart and its outworking that are unacceptable before the Lord. The term also commonly refers to difficult circumstances. Rampant moral evil, which is under God's judgment, may at times seem pervasive, but it is no threat to God's sovereignty. Some 111 of over 750 uses of the relevant forms in the Hebrew Bible are found in the Pentateuch: forty-one in Genesis, thirty-seven in Deuteronomy, only eleven in Exodus, seven in Leviticus and fifteen in Numbers.

1. The Tree of the Knowledge of Good and Evil
2. The Evil Inclination of the Heart
3. Evil Circumstances
4. Evil Against the Covenant

1. The Tree of the Knowledge of Good and Evil.

The initial biblical uses of *evil* in Genesis 2—3, though perennially debated among pentateuchal critics, hold foundational significance for biblical theology. This succinct portrayal of the origin of human nature and humanity's tragic fall into sin provides the desperate backdrop against which the mighty redemptive acts of God throughout Genesis and the Pentateuch, as well as the entire biblical canon, are revealed as even more glorious. The description of the pristine environment of *Eden focuses on two trees at the center of the garden: "the tree of life" and "the tree of the knowledge of good and evil" (Gen 2:9).

The fruit of all trees was available to eat, except that of the tree of the knowledge of good and evil. Its prohibition was apparently designed by the Creator as a test of obedience, with a deadly punishment for failure to obey (Gen 2:16-17). Among many diverse proposals as to the meaning of the tree of knowledge of good and evil, the three most commonly held general views are: (1) the tree would make possible certain human faculties, such as moral values or self-determination; (2) the tree would introduce the knowledge of sexual relations; and (3) the tree would give access to some kind of universal knowledge (Wallace).

The first and third views have merit, in that the man and woman did exercise self-determination, tragic though it was, and they did acquire the ability to know and to do good and evil through the experiential awakening resulting from their choice. While their newly fallen state of knowledge could hardly be called omniscience (as is the case with God), it could be called godlike (Gen 3:22) in some meaningful sense. Although humankind's likeness to God was already substantial (Gen 1:26-27), the temptation to be even more godlike by gaining the "wisdom" of "knowing good and evil" (Gen 3:5-6) apparently held decisive appeal (Sailhamer 1992). The consequences of that capitulation were cosmic in scope, including not just the previously threatened death (Gen 3:19; see Gen 2:17), but the first of the curse sections (Gen 3:14-19) for sinful (i.e., evil) behavior in the Pentateuch (cf. Lev 26; Deut 28). Whatever "godlikeness" was gained, it was hardly worth expulsion from the garden (Gen 3:22), as well as the resulting desperate spiritual condition and distancing from the Lord God.

2. The Evil Inclination of the Heart.

While "the knowledge of good and evil" offered the opportunity to choose the good, the prevailing direction for the human race turned out to be the choice for evil. Eventually, humanity's corporate wickedness became so pervasive that "every inclination of the thoughts of their hearts was only evil continually" (Gen 6:5 NRSV). In a reversal of the wording of Genesis 1, where everything that God "saw" was good, the Lord now "saw" (Gen 6:5, 12) humanity's bent for evil saturating the world. As a result, the Lord regretted creating the human race (Gen 6:6).

Such utter moral corruption (Gen 6:11-12),

which worked itself out in chronically violent behavior (Gen 6:11, 13), brought on the Lord's unprecedented judgment in the *flood. A. P. Ross points out the wordplay between "corrupted" and "destroyed," both of which derive from the same Hebrew root (*sāḥat*). In other words, since humanity was wantonly destroying the good world God had created, God responded by justly destroying them. Only *Noah, who "walked with God" and is described as "righteous" and "blameless" (Gen 6:9), in contrast to the overwhelmingly evil bent attributed to the rest of humanity (Gen 6:5), and his family are said to have been spared by God's *grace (Gen 6:8).

The flood, however, did not cure the evil intent of the human heart. Though God promised there would never again be a reenactment of that judgment on humankind (Gen 8:21-22; 9:11, 15; cf. 2 Pet 3:6-7) he did so in spite of clearly recognizing that "every inclination of his heart is evil from childhood" (Gen 8:21 NIV).

Although evil is never again described as all-encompassing, the remainder of the Pentateuch contains numerous examples of that ongoing evil intent. Whether the blatant wickedness of Sodom (Gen 13:13), *Joseph's evil treatment at the hands of his brothers (Gen 50:15, 17), or Israel's tendency to the evils of idolatry (Ex 32:22; Deut 4:25) or grumbling unbelief (Num 14:27, 35; Deut 1:35), it is still the evil human heart that overflows into wider behavior. That is undoubtedly a major reason why, as *Moses looked ahead, he repeatedly urged the new generation that would enter the Promised Land to "purge the evil from among you" (e.g., Deut 13:5; 17:7).

3. Evil Circumstances.

The Hebrew terms most commonly rendered as moral evil are also frequently used to refer to that which is more generally *bad* in a variety of senses. For example, *Lot feared the disastrous (i.e., evil) judgment coming upon Sodom (Gen 19:19). Joseph delivered a bad (evil) report on his brothers (Gen 37:2), and they, in turn, sold him into slavery, telling *Jacob that Joseph was killed by some ferocious (evil) animal (Gen 37:20, 33; see also Lev 26:6). Upon arriving in Egypt, Jacob said of his life, "My years have been few and difficult [evil]" (Gen 47:9), contrasted with Abraham's death at a "good [*tôb*] old age" (Gen 25:8). The Hebrews making bricks in Egypt found themselves in an increasingly difficult

(evil) situation (Ex 5:19). Later, that same exodus generation bitterly complained about how "evil" (i.e., dry and desolate) Kadesh-barnea was (Num 20:5), though they had forfeited their claim to a land flowing with milk and honey (Num 13:27). The next generation was promised that if they were obedient to the Lord as they lived in the land of promise, they would be spared the "evil" diseases of Egypt (Deut 7:15).

4. Evil Against the Covenant.

The final references to *evil* in the Pentateuch (Deut 30—31) seem purposefully to recall the initial uses (Gen 2—3; 6; 8). Moses restates the covenant to the generation about to enter the land, echoing the choice given to *Adam and *Eve: "I set before you today life and prosperity [good], death and destruction [evil]" (Deut 30:15 NIV; cf. Gen 2:17). Tragically, Moses knew in advance that all too soon Israel's choice would be to "do evil in the sight of the Lord" and to "become utterly corrupt," bringing "disaster" (evil) from the Lord (Deut 31:29). Thus, in these two epochal life-and-death choices that the Lord graciously gave to humankind made in his image, which form an *inclusio* around the Pentateuch, the outcomes are eerily parallel: choosing to know and to do evil, with deadly consequences.

EXILE

The OT concept of exile, though most often associated with the latter part of Israel's history (the removal of Israel to Assyria, Judah to Babylon), finds its canonical roots in the Pentateuch. In fact, the first recorded exile is *Adam and *Eve's banishment from the garden of *Eden. Throughout the rest of the Pentateuch the details and implications of this central concept are spelled out in terms of exile's cause (violation of covenant standards), effects (defeat, departure from one's homeland, a shattering of various relationships, deprivation) and ultimate outcome (a divinely initiated return and restoration). It is against this primary canonical backdrop that the balance of Israel's history, characterized as it was both by exile and restoration, should be read.

1. Exile in the Text of the Pentateuch
2. Theological Motif of Exile

1. Exile in the Text of the Pentateuch.

A semantic field of words in the Pentateuch can be associated with the idea of exile, among which can be found the important verbal root *glh* ("uncover, remove") with its various derivatives. While *glh* generally denotes the uncovering of an object, in the Pentateuch it usually refers to the uncovering of the human body (Gen 9:21), especially in Leviticus where *glh* regulates behavior with regard to nakedness within the family context (Lev 18:6-19; 20:11-21). The background for nakedness related to exile is the idea of prisoners of *war being led naked into exile as a form of humiliation. This is well known from ancient Near Eastern inscriptions and pictorial depictions from the middle of the second millennium onward (cf. the ivory inlays from Megiddo).

Nakedness associated with exile is also reflected in the use of the adjective *ʿērōm* ("naked") in Deuteronomy 28:48, where the Israelites are confronted with a vision of exile as one of the curses in case of *covenant breakage.

Interestingly, *ʿērōm* only appears in one other context within the Pentateuch, namely, in the account of the *Fall (Gen 3:7, 10, 11). In this case, the realization of nakedness is depicted as an immediate result of *sin and precedes God's curses on fallen humanity and the expulsion from Eden (Gen 3:24).

The root *šbh* ("take captive") is used in a more technical way to denote captivity or the act of taking captive. Genesis 14:14 describes Lot as having been taken captive by the invading kings, while Laban accuses Jacob of having taken away his daughters like "captives of war" (Gen 31:26). During the wanderings in the desert, the king of Arad takes captive some of the Israelites (Num 21:1), while the Israelites themselves take captives from the Midianites (Num 31:9). In Deuteronomy 20–21 legislation regarding warfare and conquest are presented, and the taking of captives is regulated in a more detailed manner (Deut 21:10-14). The derived noun *šēbī* ("exile") also appears in the context of the curses and *blessings at the end of Deuteronomy, in relationship with the verb *glh*, demonstrating the close semantic relationship between the two roots. God is prophesying captivity for Israel's descendants if they do not adhere to the stipulations of the covenant (Deut 28:41).

The verb *pûš* ("scatter") can be found in important contexts pertaining to the concept of exile in the Pentateuch: three times in the Tower of *Babel narrative (Gen 11:4, 8, 9), where God scatters humankind in response to their endeavor to make themselves a name by building a tower; and two times in the final chapters of Deuteronomy (Deut 28:64; 30:3) within the context of the covenant blessings and curses. The verb denotes a rupture of sociological ties as an important characteristic of the exile motif.

An often-overlooked aspect of the semantic field of "exile" can be found in the root *šûb* ("turn back, return"), referring to the positive connotations of the idea of exile—the return from exile—and as such serving almost as an antonym to *pûš*. While *šûb* occurs in a variety of contexts, such as the physical reversal of direction in the movement of objects (Deut 24:13) or persons (Gen 21:32; Ex 13:17), it is also used figuratively in the sense of reestablishing a broken relationship (Gen 41:13; Num 35:28). Especially the moral and theological character of the root has to be noted, namely, expressing the restoration of the relationship between God and an in-

dividual or between God and the people of Israel as a whole (Deut 4:30). As such, it is used almost as a *Leitwort* in the important passage of Deuteronomy 30:1-10, occurring seven times in only ten verses (Deut 30:1, 2, 3 [twice], 8, 9, 10). The subject of *šûb* in this passage alternates between the people of Israel and God; that is, if they return to him, he will return to bless them by gathering them “from all the nations among which he has scattered” them (Deut 30:3), referring to the possibility of exile. One can observe this same usage of *šûb* as a synonym for the return from exile, especially in the exilic prophets, speaking of Israel’s return to their own land (Jer 31:16; Ezek 29:14).

In summarizing the textual evidence, it can be demonstrated that the different verbal roots and their derivatives frequently occur in proximity to each other, forming a distinct semantic field connotative of the idea of exile in the Pentateuch.

2. Theological Motif of Exile

While the theology of exile is usually associated with prophetic literature, the Pentateuch presents a rather developed picture of this theological motif. In this section, several important occurrences of the concept of exile in the Pentateuch will be mentioned, reflecting its development in early Israelite history. The initial appearance of exile in the Pentateuch has to be associated with the account of the Fall in Genesis 3. Here the first awareness of nakedness as related to the fall into sin, together with the resulting expulsion from paradise, initiates the recurring theme of exile in the Pentateuch. *Adam and *Eve experience various aspects of exile as a direct result of their disobedience (Gen 3:6): the shame evoked by nakedness (Gen 3:7), the breakage of the harmonious relationship with God (Gen 3:8) and *land (Gen 3:17-19), and the forced leaving of the homeland (Gen 3:24). But they also receive the promise of restoration, in the form of the programmatic prophecy in Genesis 3:15 that traditionally has been understood as pointing to the *Messiah.

In the following generation of humanity the exile motif is presented by the alienation of *Cain from the ground (Gen 4:13-14), which is linguistically connected to the exile from Eden in the preceding chapter (Gen 3:24) by the recurrence of the verbal root *grš* (“to drive out, cast out”). Breaking the harmonious relation-

ship that should exist between humanity and land since creation (Gen 2:15) leads Cain to be a “wanderer” and “fugitive” in the land of Nod, the land of “wanderings” (Gen 4:16), never being able again to establish firm roots.

The Tower of Babel narrative (Gen 11:1-9) uses the introductory geographical notion of migrating “eastward” (Gen 11:2) in order to indicate a movement away from God’s blessings, that is, from Eden toward exile, represented by the scattering of humankind through divine intervention (Gen 11:4, 8-9). The call of *Abram out of “*Ur of the Chaldeans” (i.e., from the east; Gen 11:28; 12:1; 15:7) reverses this situation, indicating a movement back from exile toward the Promised Land.

*Jacob has to leave his home and go into exile after he has received the patriarchal blessings from his father in place of *Esau and has to fear his brother’s retribution (Gen 27:41-45). However, although Jacob’s dishonesty results in years of hardship and exile in the continuation of the narrative, Esau is not portrayed very positively, since he previously “despised his birthright” (Gen 25:34) and was “a source of grief” to his parents (Gen 26:35), indicating that God’s blessing rightly rests on Jacob. There is a promise of return from exile included in the story (Gen 28:15), which finds its fulfillment in the return of Jacob to Canaan and his reconciliation with Esau (Gen 32).

After killing an Egyptian in an impulsive act of self-justice (Ex 2:11-15), *Moses, being afraid of the legal consequences, flees into exile to Midian and returns after forty years to *Egypt, in order to lead the people of Israel out of their Egyptian exile back to a place known to them only from family traditions. However, the patriarchs Jacob and *Joseph had made it clear that Egypt was never to be considered their home, merely a place of exile from which the people of Israel were to return one day to Palestine (Gen 49:29-32; 50:24). In the history of Israel, since the time of Abraham, Egypt always played the role of providing temporary exile to *Israelites on an individual basis or as a group (Gen 12:10; 37:28; 46:3-6). It is therefore no wonder that Yahweh threatens Israel with the possibility of bringing them back to Egypt as punishment for their disobedience (Deut 28:68).

An interesting aspect of Israelite legislation is the institution of the *cities of refuge in Numbers 35:9-15 (see also Ex 21:13; Deut 4:41-43;

19:1-13). In the case of the unintentional killing of another person, these cities provided a type of exile for the accidental slayer where he had to stay until the death of the local high *priest, in order to be protected from retribution. Although it is not clear whether the death of the high priest served as expiation for the death or demarcated the end of a judicial era, the elements of exile inherent in the institution of the cities of refuge are clearly discernible. There is a rupture of relationships, the necessity of leaving home and finding refuge or asylum somewhere else for a certain period of time, but there is also the possibility of return, when certain conditions have been met.

Functioning as a key passage for the theological motif of exile in the Pentateuch, Deuteronomy 30:1-10 deserves special attention. It occurs within the context of the covenant renewal at the end of the Pentateuch, including the *blessings and curses, with the ultimate curse being exile (Deut 28:41). While the terms and conditions of the covenant are presented to the people (Deut 29), Deuteronomy 30:1-10 depicts the results of covenant adherence and continues with an appeal to choose between *life and death after having laid out the consequences of each choice. As mentioned above, the root *šûb* is central to the passage, strongly indicating the presence of the theological theme of exile and, more precisely, return from exile. This is conditioned by genuine repentance and return to God (Deut 30:1-2) and will result in a restoration of property (Deut 30:3), prosperity (Deut 30:5), homeland (Deut 30:4-5), protection from enemies (Deut 30:7) and, most importantly, a renewal of the relationship between God and the individual or people, characterized by the circumcision of the heart (Deut 30:6) and obedience to the law (Deut 30:10).

In conclusion, the motif of exile in the Pentateuch must be understood from the perspective of covenant theology. The following elements can be identified as part of the theological theme: the breakage of the covenant relationship as caused by an act of disobedience with regard to the precepts of the law. This leads to exile in the form of a departure from the individual's or people's known environment, their homeland, the shattering of the harmonious relationship between humanity and land, the rupturing of social ties, including humiliation, often violence and always loss of possessions. How-

ever, together with the threat of exile, a promise of restoration and return is made based on the *repentance of the individual or people during their experience of exile. Return from exile is always initiated by God and accompanied by promises of complete restoration of former circumstances and often more. The motif of exile, as developed in the Pentateuch, is one of the governing themes of Israelite history, perhaps the *Leitmotiv* with regard to Judaism, and continues to be important for Christianity as there remains an expectation of the final return from history's exile to humanity's homeland, typologically foreshadowed by the land gift to Israel after their Egyptian and Babylonian exiles respectively.

M. G. Klingbeil

EXODUS, BOOK OF

Exodus is the second of the five books of the Pentateuch. The name *Exodus* is derived from the title of the book in the Greek and Latin versions of the Bible (in the Hebrew text, the title is "And these are the names," after the opening words, or "Names"). The word *exodus* means "road out" and refers to the key event in the book, the divine act of deliverance at the sea that enabled the people of God to escape from *Egyptian oppression.

1. The Story Line of Exodus
2. Exodus Within the Context of the Pentateuch
3. The Structure and Genre of Exodus
4. The Origins of Exodus
5. Chronology and Geography
6. Key Themes in Exodus
7. Some Special Issues
8. Exodus in the Old and New Testament

1. The Story Line of Exodus.

The people of Israel, having settled in Egypt because of famine conditions, grew "exceedingly strong" there. But after many years (unspecified) and a change in Egyptian leadership they were enslaved and their future was jeopardized. In response to their cry, God committed himself to their deliverance and commissioned *Moses to take up the task. In the face of *Pharaoh's continued failure to let the people go, God through Moses sent various *signs and wonders; these (ten) plagues culminated in the death of the Egyptian firstborn.

In the wake of this event Pharaoh let the people leave Egypt, but he quickly changed his mind and pursued them. The people were finally delivered when God parted the waters of the Red Sea for the Israelites to pass through but closed them up again to engulf the pursuing Egyptians. Moses and his sister *Miriam responded to God's salvation by leading the people in songs of thanksgiving. God then guided the Israelites through the wilderness toward the land of promise, sustaining them with food and water and protecting them from marauders.

Upon the Israelites' arrival at Mount Sinai,

God, through the mediation of Moses, concluded a *covenant with the people, revealed the *law and gave instructions for constructing a divine dwelling place in their midst. The Israelites, however, violated the covenant by building a *golden calf, and their future was again threatened, this time by the wrath of God. Through Moses' mediation the covenant was renewed and God's relationship with Israel was reestablished, but this time in such a way that God's mercy and forgiveness were lifted up for special attention. The book ends with the construction of the *tabernacle and God's descent to dwell among the people.

2. Exodus Within the Context of the Pentateuch.

Exodus does not stand alone but is an integral "chapter" in the larger Pentateuch (*see* Literary Structure of the Pentateuch). Exodus carries key Genesis themes forward and in turn provides the essential backdrop for what happens in the rest of the Pentateuch. Exodus may be considered the center of the Pentateuch, especially in view of the exodus deliverance, the giving of the law at Mount Sinai and the construction of the tabernacle.

2.1. Exodus and Genesis. Exodus is literarily linked to Genesis. The opening list of names (Ex 1:1-5) harks back to the *genealogy of Genesis 46:8-27 and makes clear that the people whose story Exodus tells are to be identified with the family of *Jacob that had migrated to Egypt (*see* Gen 47:27-28). The journey of *Abraham and *Sarah to Egypt and their ventures there (Gen 12:10-20) anticipate Israel's later experience (note the confrontation with Pharaoh, the plagues and the people going out with gifts). The oppressive sojourn in Egypt and the exodus are foretold in Genesis 15:13-14. The opening segment of Exodus is also linked to Genesis with its reference to the fulfillment of God's promises to the ancestors (*cf.* Ex 1:7 with Gen 17:6). These divine promises are the driving force behind God's actions on behalf of the enslaved Israelites, as God remembers the covenant with Abraham, *Isaac and Jacob (Ex 2:24; 6:4-5, 8; *cf.* Gen 15:18; 17:1-8). This covenant continues to include the promises of a land (Ex 3:16-17; 6:8; 32:13; 33:1-3; *cf.* Gen 12:7; 13:15; 15:18-21; 17:8; 24:7; 26:3-4; 35:11-12; 50:24), many descendants (Ex 32:13; *cf.* Gen 13:16; 15:5; 17:5-6; 22:17-18; 26:4, 24; 46:3) and a special relationship with

God (Ex 6:7; cf. Gen 17:7).

The close connection between Exodus and Genesis is not simply linked to the ancestral promises. Exodus 1:7 also establishes a connection between the growth of the Israelites in Egypt and the divine word in *creation (see Gen 1:28; 9:1, 7). That is to say, God's activity among the Israelites has a creation-wide purpose. God's redemptive work on behalf of Israel stands in the service of God's intentions for the creation as a whole. Exodus 9:16 is especially to be noted: God acts on Israel's behalf in order to "make my name resound through all the earth." Redemption leads to a new creation.

2.2. Exodus and Leviticus—Deuteronomy. Exodus is closely linked to the books that follow. Exodus closes with God coming to dwell among the Israelites in the tabernacle, built exactly according to the Lord's command. Leviticus begins at that point (Lev 1:1) as God speaks to Moses from the tabernacle regarding the offerings to be brought there (Lev 1—7). These offerings are related primarily to the sinfulness of the people (evident especially in Ex 32:1-6) and the revelation of God as merciful and forgiving (Ex 34:6-7). The texts regarding *sacrifice are thus good news. The God who has chosen to dwell *with* the people (Ex 40:34-38) provides offerings *for* them, for the purpose of the restoration of relationship. Furthermore, God's instructions for the appointment of priests (Ex 29) are fulfilled in Leviticus 8.

All of the laws in Leviticus and the instructions in Numbers 1:1—10:10 are set in the context of Mount Sinai. Numbers 10:11 reports the people leaving Sinai, and the balance of Numbers narrates the second stage of Israel's wilderness wanderings. Still, several of its stories bear a family resemblance to the first stage in Exodus 15:22—18:27 (cf., e.g., Ex 17:1-7 with Num 20:2-13). The last chapters of Numbers record that the Sinai generation of the Israelites died off in the wilderness and the new generation (see Num 26) proceeded to the border of the land of promise. The book of Deuteronomy consists of God's word to this new generation. Deuteronomy especially depends upon Exodus, with its rehearsal of Exodus events (e.g., Deut 11:1-7), almost exact repetition of the Ten Commandments (Deut 5:6-21; *see* Decalogue), recasting of the Exodus laws (cf., e.g., Ex 21:2-11 with Deut 15:12-18) and hortatory appeals to God's Exodus activity as motivation for this redeemed people's

trust and obedience (e.g., Deut 5:15; 15:15; 16:12; 24:18, 22).

3. The Structure and Genre of Exodus.

Exodus is a complex body of literature, and readers are assisted in their understanding of the book by observing its structure(s) and types of literature.

3.1. Structure. Exodus is an integral part of the Pentateuch but also has its own integrity as a book. The book moves from Israel's bondage to Pharaoh to its bonding with its ancestral God, from serving Pharaoh to serving Yahweh (the Hebrew root *'bd* ["to serve"] occurs ninety-seven times in Exodus). The key to this transition in Israel's servitude is the deliverance at the Red Sea. As such, the book of Exodus moves from slavery through salvation to worship; the number of chapters focused on an enslaved Israel approximates the chapters given to matters of worship, and God's redemptive act enables Israel's new standing before God. More particularly, the book moves from the enforced construction of buildings for Pharaoh to the glad and obedient offering for a building for the worship of God (see Fretheim 1991). The journey of God in Exodus is also notable. God is hardly present at the beginning of the book, but at the end God has moved down from his distant abode at the top of the mountain to become an intense presence in the very midst of the community of faith.

In its broadest outlines the book may be structured as follows:

3.1.1. Israel in Egypt, Its Deliverance by God and Its Response (Ex 1:1—15:21). More specifically, this segment may be outlined: Israel's growth and bondage in Egypt (Ex 1:1—2:25); the call of Moses (Ex 3:1—7:7); the plagues (Ex 7:8—11:10); Passover and Unleavened Bread (Ex 12:1—13:16); deliverance at the sea (Ex 13:17—14:31); the songs of Moses and Miriam (Ex 15:1-21). This entire section follows the general pattern of a lament psalm (cf. Ps 13); it moves from the situation of distress and the cry to God (Ex 1—2) to God's response in word and deed (Ex 3—14) and concludes with the people's response of praise and thanksgiving (Ex 15:1-21).

3.1.2. Israel in the Wilderness and God's Providence (Ex 15:22—18:27). In strictest terms, Israel leaves Egypt for the wilderness at Exodus 12:37-42, but the escape from Egypt is not final until the sea has been crossed and Pharaoh's armies have been defeated.

3.1.3. *Israel at Sinai (Ex 19:1—40:38)*. This section may be outlined as follows: God's covenant with Israel and the gift of law (Ex 19:1—24:18); God's instructions regarding the tabernacle and its leadership (Ex 25:1—31:18); Israel's fall and restoration (Ex 32:1—34:35); the obedient construction of the tabernacle and God's descent to dwell therein (Ex 35:1—40:38).

3.2. *Genre*. Exodus consists of several types of literature, but narrative predominates and provides the framework for the book as a whole (see Mann; Fretheim 1991). Other types of literature are woven into this framework, including poetry (Ex 15:1-21), laws (Ex 20:1-17; 20:22—23:33; 31:12-17; 34:11-26) and instructions for celebrating Passover and Unleavened Bread (Ex 12:1-27; 12:43—13:16) and for building the tabernacle together with related institutional matters (Ex 25:1—31:18). That neither the laws nor the instructions relating to worship stand isolated from the narrative is important for the interpretation of the different genres.

3.2.1. *Regarding Worship*. Two blocks of Exodus texts attract attention. First, in Exodus 12:1—15:21 the reader moves from Passover and Unleavened Bread (Ex 12:1-27) to narrative (Ex 12:27-42), back to the same religious festivals (Ex 12:43—13:16), then again to narrative (Ex 13:17—14:31) and finally to the liturgical responses of Moses and Miriam (Ex 15:1-21). Genres of worship enclose the narratives of God's saving work and suggest how these texts are to be interpreted. On the one hand, the practices of Israelite worship have shaped the telling of the story—liturgy has shaped literature. On the other hand, the narratives give "body" to the liturgical material. Readers encounter the narrative of the tenth plague (Ex 12:29-42) through the lens provided by the immediately preceding Passover material (Ex 12:1-28). The final plague thereby becomes the first observance of Passover; the historical event is represented as a liturgical event. God is thereby understood to act on behalf of Israel's salvation in both historical deed and liturgical event. As with the first celebration of Passover, so also in all subsequent celebrations, God works salvation on behalf of faithful participants.

The worship materials associated with the instructions regarding the tabernacle, its leadership and the *sabbath (Ex 25:1—31:18), and Israel's obedient response (Ex 35:1—40:33) enclose the narrative regarding the sin of the golden calf (Ex 32:1—34:35); this section con-

cludes with a narrative regarding God's descent to the place of worship. The tabernacle, especially when viewed as a place of sacrifice (see Lev 1—7), is thus seen as a divine provision for the sake of a sinful people. God will be with this people and act on behalf of their redemption. These somewhat tedious texts are thus understood to be crucial, for they constitute God's provision for the ongoing forgiveness of the people of God.

3.2.2. *Regarding Law*. The law is not drawn up into a code but is integrated into Israel's life journey. The reader moves from the story (Ex 19:1-25) to law (Ex 20:1-17) to story (Ex 20:18-21) to law (Ex 20:22—23:33) and back to story (Ex 24:1-18). As such the law is understood in more personal and relational terms; it is a gift of the God who is always willing the best for Israel. Moreover, the law is thereby seen in dynamic rather than static terms, as God is seen to have new words to speak in view of life's ongoing twists and turns. New occasions teach new duties; that is, God's law is open to new developments (as in Deuteronomy or Acts 10:1-29) rather than forever fixed. Moreover, the giving of the law by God is more closely related to God's action in the narrative; God's purposes in both law and story are seen to be parallel, "for our lasting good, so as to keep us alive" (Deut 6:24). Law is to be obeyed, not just because God says so, but because it serves life and contributes to the well-being of the community.

4. The Origins of Exodus.

The study of Exodus has usually been joined with the study of the Pentateuch as a whole. The traditional understanding of Moses as the author of the Pentateuch, though still affirmed by some, has usually been set aside in favor of a more complex understanding of origins (see Source Criticism). The Documentary Hypothesis—that the Pentateuch consisted of four major sources (J, E, D, P) and redactors, written over some five hundred years from about 950 to 450 B.C.—emerged in the nineteenth century and has had considerable influence (see Childs). Though this understanding of pentateuchal origins is in disarray these days, and scholars now speak in these terms with less precision (though see Propp), most consider the Pentateuch (including Exodus) to be a composite text that came into being over an extensive period of time. Additionally, most scholars believe that the

major written sources contain much older material (both oral and written) that was handed down through the generations, perhaps even from the time of Moses. Similarities between the laws in Exodus 20–23 and ancient Near Eastern law codes from the second millennium may also speak to the age of some of the material in Exodus.

5. Chronology and Geography.

The narrative of Exodus is usually not considered historical narrative, at least in any modern sense. The book makes no claim to be writing a history of this period; theological and kerygmatic interests and issues dominate its pages. Whatever historical data the texts present have been included and interpreted in view of these overarching interests, which makes the task of the modern interpreter more difficult. The data may often not have been understood in a precise or literal fashion, but at times it may have been.

In the legitimate scholarly effort to discern times and places for the events of which the book speaks, the evidence is meager and ambiguous. For example, the names of the pharaohs are not given, the location of the sea crossing and the wilderness stops are unknown (*see* Exodus Route and Wilderness Itinerary), and the chronological references are vague (e.g., Ex 9:31–32) or, if precise (e.g., Ex 40:17), are of uncertain relationship to a given year. We know, for example, that the stay at Mount Sinai lasted eleven months and nineteen days (*see* Ex 19:1; Num 1:1; 10:11), but we are not told what year or even what century is involved. The reference to a 430-year sojourn in Egypt (Ex 12:40) is also difficult to assess; compare, for example, the 400 years of Genesis 15:13 as well as the four generations in Genesis 15:16, which in turn matches the genealogy in Exodus 6:14–25 (*cf.* Gal 3:17). In addition, 1 Kings 6:1 speaks of 480 years from the exodus to the building of the temple (956 B.C. or so), but is the number literal or symbolic (*i.e.*, 12x40)? (*See* Exodus, Date of.)

As a result of these uncertainties, scholars disagree about matters of *chronology and geography (*see* Bright). In this difficult effort to reconstruct the history of the period, some possibilities have emerged, though no specific evidence has been unearthed. Inasmuch as Semitic foreigners are known to have lived in Egypt during the second millennium, the pres-

ence of Israelites there would fit the pattern. Some linguistic influence has been noted (e.g., Moses is an Egyptian name). The involvement of Israelites in building the store-cities of Pithom and Rameses (Ex 1:11; Heb Raamses) fits well with the known use of slaves in the construction activities of certain pharaohs in the fourteenth and thirteenth centuries B.C.

Most scholars date the exodus in the early part of the reign of Ramesses II (c. 1279–1213 B.C.). On the basis of 1 Kings 6:1, some consider the exodus to have occurred some two hundred years earlier, during the reign of Thutmose III (c. 1479–1425 B.C.). It is possible that both of these hypotheses could be at least partially right if the people of Israel left Egypt at different times over the course of the centuries they were in Egypt (*cf.* the various journeys in Gen 37–50). This understanding could also help explain the ambiguity of the texts that speak of the route of the wilderness wanderings; people coming out of Egypt may have taken different routes along the several existing trails through the wilderness. The location of Mount Sinai is also uncertain; most locate it in the south-central part of the Sinai Peninsula and identify it with Jebel Musa or a nearby mountain, although a more northern location is also possible.

Also difficult to assess is the number of Israelites who are said to have participated in the exodus from Egypt. Exodus 12:37 speaks of “about six hundred thousand men on foot, besides children” (*cf.* Ex 38:26; Num 1:45–46; 4:48). It is commonly agreed that this would mean more than two million people. The number has been interpreted in several ways: (1) literally; (2) taking *’elep* to refer to “family units” rather than to “thousand,” so that the number is six hundred family units (*see* Historical Criticism); and (3) hyperbolically. It seems best to understand the number in terms of the approximate population of Israel at the time of David and Solomon; the number would be a way of confessing that all Israel from this later time came out of Egypt.

6. Key Themes in Exodus.

The book of Exodus is filled with matters of theological interest, not least because God is often the subject of the speaking and acting (*see* Brueggemann; Dozeman; Fretheim 1991, 1996; Gowan; Janzen).

6.1. A Theology of Creation. *Creation is the most basic theological category with which the

book of Exodus works. It is the Creator God who has enabled Israel to be fruitful and multiply and grow “exceedingly strong” (Ex 1:7, 20; see Gen 1:28); without this creative work of God there would be no people to redeem. Because this creative divine work is endangered by Pharaoh’s genocidal policies, seen both in the killing of children and in the negative effects of these policies on the natural order (the plagues), God must act to save creation, both human and non-human.

It is this Creator God who accomplishes Israel’s redemption, the hymnic celebration of which (Ex 15) is filled with creation vocabulary and themes. Moreover, God’s redemption of Israel is not an end in itself but is for the sake of all creation, that it might be restored to what God intended it to be. The effect of God’s salvation on the nonhuman may be observed in the wilderness wanderings as the natural order, devastated by the plagues, begins to function again according to God’s intentions. This close linkage of creation and salvation can also be observed in several Isaiah texts (e.g., Is 35:1-10). Regarding humans, the issue for God finally is that his name be declared to the entire earth (Ex 9:16) and that God be known by all (see next section). God’s calling of Israel is in tune with God’s own work and is given a creation-wide scope. Because “all the earth is God’s” (Ex 9:29; 19:5), Israel is called to be a priestly kingdom and a holy nation among all others.

6.2. The Knowledge of God. The verb *yādaʿ* (“to know”) is a key word in Exodus (see Propp). In an ironic way, it is Pharaoh who sets the question to be addressed: “Who is Yahweh?” (Ex 5:2). God himself, who “knows” Israel’s suffering and sin (Ex 2:25; 3:7; 32:22) and knows them “by name” (Ex 33:17), is caught up in the concern that this knowing be mutual. And so God speaks and acts so that people (Egyptians, Israelites, all) may come to know the answer to Pharaoh’s question. Most basically, God speaks and acts so that Israel may know God’s name, that it is “the LORD your God, who has freed you from the burdens of the Egyptians” (Ex 6:7 NRSV; cf. Ex 6:37; 16:6, 12; 33:16). Moreover, this knowledge is to be passed on to their children and grandchildren (Ex 10:1-2), and the worship life of Israel is to be ordered in such a way that the people will know that Yahweh is their God who has brought them out of Egypt (Ex 29:46) and sanctifies them (Ex 31:13).

But the divine purposes with respect to the knowledge of God is expanded to embrace others, including Pharaoh and the Egyptians (Ex 7:5, 17; 8:10, 22 [MT 8:6, 18]; 9:14, 29; 11:7; 14:4, 18) and the Midianites (Jethro comes to know and confess, Ex 18:11; cf. 15:14-16 for still others). God’s concern for self-disclosure is thus expanded to include the world (see Ex 9:16). The creation-wide purposes of God in these events (noted above) are once more clearly in view.

The narrative of the call of Moses, drawn out over several chapters (Ex 3:1—7:7), speaks in remarkable ways about how the knowledge of God is gained. While God takes the initiative with Moses, and this connects in turn with existing knowledge of God available in the tradition (Ex 3:6; 6:3), Moses’ persistent inquiries draw God out, and consequently more knowledge of God becomes available. Human questions find an openness in God, and God’s interaction with a questioning human party leads to Moses’ fuller knowledge of God and God’s ways. Simple deference on the part of Moses would have closed down the revelatory possibilities.

Knowledge of God is gained, then, not only in and through inferences drawn from divine actions in history, but also through direct conversation. When the events of which God speaks do take place, they enhance the already-existing knowledge of God. God’s personal encounter with Moses enables Moses to see the “something more” in the event when it does occur.

6.3. The Portrayal of God. How does the book of Exodus answer Pharaoh’s question: Who is Yahweh? Readers must be careful not to jump to easy conclusions. Exodus reveals a complexity in the character of God that defies any simple description. God himself makes several claims regarding the divine identity. Direct statements such as “I am compassionate” (Ex 22:27 [MT 22:26]) prepare readers for the climactic divine self-identification in the narrative (Ex 34:6-7 NRSV): “The LORD, the LORD, a God merciful and gracious, slow to anger, and abounding in steadfast love and faithfulness, keeping steadfast love for the thousandth generation, forgiving iniquity and transgression and sin, yet by no means clearing the guilty, but visiting the iniquity of the parents upon the children and the children’s children to the third and the fourth generation.” Given the status of this claim in Exodus (and in the OT, e.g., Joel 2:13), the God who is the subject of sentences in the narrative

is to be interpreted through this confessional (creedal) lens.

One important aspect of the portrayal of God in Exodus is that God works directly, but always through means. The opening chapters of Exodus set this divine way in place (Ex 1:15-22; 2:1-10): God works through five lowly women, acting in civil disobedience, to accomplish the divine purposes (and God is hardly the subject of a verb!). Thereby God works in unobtrusive, vulnerable and even risky ways, but these women prove to be highly effective against Pharaoh's ruthless power. The divine declaration regarding Israel's liberation in Exodus 3:7-10 furthers the point. God will not act alone in accomplishing the deliverance of Israel. God will work in and through Moses (note that both God and Moses will "bring" Israel out of Egypt; see Ex 14:31; Is 63:12). In some sense God has chosen to be dependent on human (and nonhuman) agents in moving toward the divine objectives.

In the plague narratives divine agency is explicitly associated with only six plagues (nos. 1, 4-5, 7-8, 10), in five of which Moses, Aaron and nonhuman agents are involved (1, 5, 7-8, 10); in four plagues only human agency is cited (2-3, 6, 9). Bracketing the plague narratives, only God is cited as agent in Exodus 7:3 and only Moses and Aaron in Exodus 11:10. In the four cases where a plague is removed (2, 4, 7-8), God acts "according to the word of Moses" (Ex 8:13, 31 [MT 8:9, 27]; 9:33; 10:18). In the sea-crossing narrative, the divine instruments include several nonhuman agents (east wind, sea, cloud, darkness, walls of water, deep, earth); the nonhuman is the savior of the human! God also acts through Moses' hand and rod, which "divide" the sea and close it back up (Ex 14:16, 21, 26-27). Again, while God takes the initiative, God chooses not to act alone.

The Exodus narrative raises the question: Who will be recognized as the sovereign one, Yahweh or Pharaoh? A parallel question is: What kind of sovereignty is being exercised? Pharaoh's and Yahweh's ways of being sovereign are contrasted in the narrative (cf. Ex 3:7-10 with Ex 5:5-18). In Exodus 5:5-18 (and elsewhere) Pharaoh, upon hearing the cries of the people, is unmoved by their suffering, blames them for the problems they face and intensifies the oppression. In his exercise of sovereignty, Pharaoh holds absolute sway and remains unaffected by his subjects; he is an unmoved mover.

In contrast (Ex 3:7-10; cf. Ex 2:23-25) Israel's God hears the cries of the oppressed, "knows" their suffering in such a way that their experience becomes his own and moves in powerful ways to remove them from the situation with the help of Moses (who can resist the call of God to do so). Later in Exodus readers will witness a God who is open to reversing directions for the sake of the people upon Moses' intercession (Ex 32:14). Israel's God is a suffering sovereign who does not insist on absolute control; at the same time, God will be persistent and powerful in moving toward his salvific goals and will remain steadfast in love and always faithful to *promises made. At the end of Exodus, God chooses to be intensely present among a persistently disloyal people.

6.4. Oppression and Liberation. As noted above, the liberation of Israelite slaves is a central event in Exodus, but it is not the final objective of God's work; redemption is in the service of a new creation. To this end the Exodus narrative moves beyond liberation to new vistas of life and well-being, embodied especially in the gift of the law "for our good always" (Deut 6:24) and the provision of life-giving worship at the tabernacle for a sinful people. The experience of liberation that propels Israel on its journey from Egypt to the land of promise cannot bypass these Sinai provisions, for God determines that they are necessary for true life. Liberation is not enough.

Salvation is a complex reality in Exodus. Most obviously it refers to God's deliverance of Israel from Egyptian oppression (*yěšū'ā* ["salvation" in Ex 14:13; 15:2; *nāšal* ["deliver"] in Ex 3:8; 6:6; 18:4-11; *gā'al* ["redeem"] in Ex 6:6; 15:13). Salvation here has a sociopolitical dimension, though its effects upon Israel catch up the human spirit as well (see Ex 6:9). In these texts salvation is understood as deliverance from the *sins of other people* (the Egyptians) and their devastating effects. Later in Exodus salvation is understood as deliverance from *their own sins* and their effects. Moses prays that God deliver the people from the effects of their sins (Ex 32:7-14) and forgive the sin of the people (Ex 32:32; 34:9); the identity of God is marked by the forgiveness of iniquity, transgression and sin (Ex 34:7). In the provisions for offerings at the tabernacle, salvation is associated with atonement (see Ex 29:36; 30:10, 12-16; Lev 1—7 develops the language of atonement more fully). Also to be noted are

God's provisions in the wilderness for Israel's health and healing, food and water, and protection from their enemies (Ex 15:22—17:16). The verb *nāṣal* ("deliver," see above) is used in Exodus 18:8 for God's deliverance from "all the hardship that had beset them on the way" through the wilderness. In these varying contexts it is shown that God's salvation has to do with both internal and external dimensions of life, with both sin and hurt (and all their effects), whether self inflicted, imposed by others or due to causes unknown.

The word of God announced to Moses regarding future events has a two-edged character to it. Most basically, it is good news for the Israelites: God will deliver them from oppression and lead them through the wilderness to a land they can call their own. But this word is also a hard word, even an offensive word, especially for Pharaoh and the Egyptians. For God here takes sides: against the oppressor and for the oppressed. How is Israel (or any reader) to interpret this divine will and action? The answer is not obvious, for the oppressed might turn the tables and become the oppressors. It is precisely in view of this possibility (and reality, as it turns out) that the law formulates what it means for God to be compassionate and for Israel to act in a corresponding way toward the needy neighbor (Ex 22:21-27 [MT 22:20-26]; a common theme throughout pentateuchal law). If Israel (the people of God!) becomes the oppressor, then God will respond toward them as God did toward the Egyptians. Remarkably, God binds himself to the law in seeing to the deliverance of the oppressed, whoever the perpetrator might be.

6.5. Covenant and Law. It is important to note that the Israelites are God's people from the beginning of the book of Exodus (see "my people" in Ex 3:7 and often; "my [firstborn] son" in Ex 4:22-23), rooted in the covenant with Abraham (Ex 2:24; 6:4-5). Israel does not become God's people after the sea crossing or in the making of the *covenant at Sinai. Of what import, then, is the latter covenant? The covenant at Sinai is a vocational covenant within the context of the Abrahamic covenant (note that Moses appeals to the latter when the former has been broken, Ex 32:13). The vocational covenant is defined in Exodus 19:5-6: Israel is to be a priestly kingdom and a holy nation. Israel is to function among the nations as a *priest functions at the tabernacle. Israel is set apart not only *from* other peo-

ples but *for* a specific purpose in relation to those nations, for, as God says, "the whole earth is mine" (see Ex 9:29; 1 Pet 2:9 picks up on this understanding).

The covenant at Sinai is made with God's elect people, and the law is a gift to an already-redeemed community. The law is not a means by which the relationship with God is established (or reestablished). Israel's obedience of the law, while certainly in the best interests of its own life as a community, is finally in service of the vocation to which it has been called by God (Ex 19:5-6; cf. Deut 4:6).

7. Some Special Issues.

The book of Exodus presents the reader with several issues that call for focused attention.

7.1. The Name of God (Ex 3:14; 6:2-3). The translation of God's response to Moses' request for the divine name is uncertain. Most common is "I am who I am" (see NRSV or NIV footnotes) or "I will be who I will be" (see Propp). It has been suggested that this response is, in effect, a refusal to give the name. But the fact that the name Yahweh (usually "LORD" in English) is used in apposition to "the God of your ancestors" in Exodus 3:15-16 suggests that God does respond to the request. Indeed, God freely gave this name to the ancestors (e.g., Gen 28:13). This prior use of the name Yahweh has complicated interpretations of Exodus 6:2-3, where it is said that the name Yahweh was not "known" by the ancestors. If one gives "known" its broadest sense, however, then the point may be that God will be *fully* known as Yahweh only in and through the experience of these constitutive events in Israel's life, events that fulfill the ancestral promises associated with the name Yahweh (see God, Names of).

The significance of the name is also uncertain, but the context suggests a meaning that goes beyond "God is" or "God is present," however much these senses are implied. This name, associated closely with the ancestral God, is given an active sense with the sending of Moses (Ex 3:14-15) for the purpose of the fulfillment of God's promises of deliverance and land (Ex 3:16-17). This suggests the sense that Yahweh will be faithfully God for Israel; the people can count on God to be faithful to promises made.

7.2. The Plagues. The plague narratives are highly stylized accounts, using the same or similar language and structure again and again.

Even so, the plagues are progressive in the damage they inflict upon the land and people of Egypt. Generally moving from nuisance to death, they increasingly become a threat to Egypt's well-being. Readers can also see progress in the way in which the hardening of Pharaoh's heart is reported under continuing pressure to let the people of Israel go (see 7.3 below). The stylized narrative is also characterized by the use of hyperbolic language; the word *kōl* ("all, every") occurs over fifty times in the plague cycle (see, e.g., Ex 9:25-26), where everything is affected or nothing. These narrative features may reflect a dramatized ritual practiced in Israel (see Ex 10:2) that was not unlike that made explicit for the tenth plague (Ex 12:1-30), where it is clear that liturgy has shaped the nature of the literature, which in turn affects interpretation.

The plagues may be understood as the cosmic effects of Pharaoh's genocidal actions that have violated the integrity of God's intentions for the creation (see Ex 1:7). Commonly in the OT (e.g., Hos 4:1-3), violations of the moral order have an adverse effect upon the cosmic order. In response to Pharaoh's actions, the natural order increasingly reverts to chaos. The plagues are not an arbitrary divine judgment; rather, God, working through various human and nonhuman agents (see above), gives Pharaoh (and his people and land) up to the consequences of his own antireational behaviors.

The narrative refers to the plagues as *signs and wonders (e.g., Ex 7:3; 8:23 [MT 8:19]; 10:1-2). While having a devastating judgmental effect in their own right (Ex 6:6; 7:4), the plagues may also be viewed as ecological signs of historical disasters to come (the Passover and sea crossing). For example, the word used for the plague of frogs (*nāgap*, "smite") is used again in the Passover narrative (Ex 8:2 [MT 7:27]; 12:23, 27). As such, the plagues may function not unlike ecological events do today: signs that need attention if we would avoid possible devastating effects on people and land.

7.3. The Hardening of Pharaoh's Heart. How to understand this theme has long exercised interpreters; the tendency has been to claim that God has determined Pharaoh's behaviors from the beginning or that Pharaoh's freedom of will is intact throughout ("heart" is better translated "will" in the sense of "resolve"). A mediating position, wherein Pharaoh's future becomes inevi-

table in the course of the story, seems closer to the textual data. Three verbs (meaning "to make heavy, hard, firm, or strong") are used twenty times; in ten cases God is the subject, in ten cases Pharaoh (or his heart).

The changing subjects and the sequencing are important. God recognizes Pharaoh's stubbornness from the outset (Ex 3:19), so that God's decision to harden his resolve (initially stated in Ex 4:21) is in response to an already-existing obduracy. God's strengthening of Pharaoh's will is an intensification of a practiced stubbornness. Note also that once the plagues begin, God clearly acts to harden only after the sixth plague (Ex 9:12), after Pharaoh's obduracy has been specifically exercised (Ex 8:15, 32 [MT 8:11, 28]). Pharaoh's pattern of willfulness in time makes his end inevitable (he is last the subject in Ex 9:34-35), but this was not the case at the beginning of the narrative.

As noted above, the strengthening of Pharaoh's resolve (and that of the Egyptians) was finally for the purpose of God's gaining glory (honor) so that the Egyptians might "know" that Yahweh is God (Ex 14:4, 17-18). It should be noted that these events would not redound much to the glory of God if Pharaoh were only a puppet in the hands of God (see *Hardness of Heart*).

8. Exodus in the Old and New Testament.

The texts speaking of the exodus and related events are certainly the most commonly referenced pentateuchal passages in the rest of the Bible. On the one hand, what God does in these events is understood as paradigmatic for God's activity in the world. On the other hand, what Moses and Israel do is often recalled, both in positive and (mostly) negative terms.

8.1. The Old Testament. The Israelites formulated creeds or confessions of two basic kinds, both of which have their roots deep in the book of Exodus. One type of creedal statement gathers claims about God that focus on divine acts (see Deut 26:5-9; Josh 24:2-13; Neh 9:9-21; cf. Judg 11:15-18; 1 Sam 12:6-18; Jer 32:18-23). Another type of creedal statement articulates claims about God in more abstract ways; the most common formulation is that of Exodus 34:6-7, which has echoes throughout the OT (e.g., Ps 86:15; 103:8; Joel 2:13; Jon 4:2). The presence of these types of creedal statements within narratives and other genres suggest that

they represented a center for Israel's reflection about God. Just as the historical recitals determined those events in Israel's history that were constitutive of its present existence and thus separable from all other events as crucial for faith, so also the generalizations about God provided an interpretive clue for the kind of God believed to be active in those events.

Israel's life of worship was grounded deeply in these events (Passover, Unleavened Bread, covenant and covenant renewal). In and through these acts of worship God's salvific actions on behalf of Israel were regularly made available to the faithful worshiper. The Exodus events were also a major resource for Israel's psalmody (e.g., Ps 77:16-20 [MT 77:17-21]; 78:9-16; 80:8 [MT 80:9]; 81:1-16 [MT 81:2-17]; 105:23-45; 106:6-33; 114:1-8; 136:10-16).

More generally, God's activity in the exodus events are appealed to as grounds for God's present action on behalf of the community (Ps 74:2, 12-15; Is 63:10-15). The story of God's Exodus deliverance is viewed in Solomon's prayer as constitutive for the people of Israel (1 Kings 8:15-21) and is appealed to in specific association with the need for continuing forgiveness (1 Kings 8:46-53). Moreover, the theology of the temple is dependent on an understanding of God's dwelling place among the people (see 1 Kings 8:1-13).

From another perspective, the long story of Israel's infidelity often harks back to Exodus and the story of the *golden calf in particular (Ex 32). The presentation and condemnation of Jeroboam's apostasy (1 Kings 12:25-33) is told in similar terms. The fall of the northern kingdom is said to have had its roots in this idolatrous act (2 Kings 17:7-8, 34-40) as with the fall of the southern kingdom (2 Kings 21:14-15; see Judg 6:7-10; 1 Sam 8:8; 1 Kings 9:9).

Reflections about God's judgment of Israel for its idolatry is viewed as a return to slavery in Egypt (Deut 28:68; Hos 8:13; 9:3-6; 11:5), with Israel itself now being subject to the plagues (Deut 28:21-22, 27, 59-61; Amos 4:10; Hag 2:17; cf. Ex 15:26; Deut 7:15).

The wilderness wandering traditions are used in various ways depending on the interests and needs of the situation. Emphasis could be placed on divine action (Ps 136:16; Amos 2:10) or the murmuring (Deut 9:7-29; Ps 78:8-54; 95:9-11; 106:13-23; Ezek 20:6-26), or be understood as a "honeymoon" period (Deut 32:10-14; Jer 2:2;

Hos 2:14-15 [MT 2:16-17]; 11:1-2).

In the prophets, Exodus themes become a key resource for the proclamation of a new act of divine deliverance, a new exodus (e.g., Is 11:15-16; 35:1-10; 43:15-21; 51:9-11; Ezek 20:33-38) and for hope more generally (Hag 2:4-5). This divine action will be constitutive of the people of God, so much so that the new exodus will overshadow the old (Jer 23:7-8). God will establish a new covenant with Israel (Jer 31:31-34; 32:40), and all the nations will stream to Zion, conceived in terms of a new Sinai from which the law will be newly proclaimed (Is 2:1-5; Mic 4:1-5).

The exodus and related events continue to play an important role in the Jewish community in the intertestamental period (e.g., Wisdom of Solomon, *Jubilees*, Josephus and Philo).

8.2. The New Testament. The creedal use of Exodus materials in the OT (see above) may provide a pattern for such recitals in the NT, especially the sermon of Stephen (Acts 7:17-44) and in the catalogue of the faithful in Hebrews 11:23-29.

Christological reflection is made especially rich with Exodus themes and images (see Fretheim 1991; Jesus, like Israel, is "called out of Egypt" (Mt 2:15; cf. Hos 11:1) and tempted in the wilderness (Mt 4:1-11). The death of the innocents at the hand of Herod (Mt 2:16-18; cf. Jer 31:15) echoes the policies of Pharaoh (Ex 1:15-22). Jesus not only celebrates the Passover meal (Mt 26:17, 26-28; Mk 14:12-25) but, in a remarkable theological extension, is himself identified as the "passover lamb" (1 Cor 5:7; 11:25; cf. Jn 19:36) and the "supernatural rock" who followed Israel in the wilderness (1 Cor 10:4; cf. Ex 17:6). He assumes the role of a new Moses (or perhaps the instructing God) as he teaches his disciples from the mountain (Mt 5-7); at the same time, the pyrotechnics of the Sinai revelation bear some discontinuities with Jesus in Hebrews 12:18-24, as do various other dimensions of the old covenant (e.g., Heb 7-10). In what is perhaps the most astounding claim made about Jesus using Exodus themes, Israel's God "tabernacles" in his very person (Jn 1:14). Drawing upon virtually every existing interpretive means available to them, the NT writers used Exodus texts as a vehicle for interpreting and proclaiming God's act in Jesus.

At the same time, Exodus texts are not only applied to Jesus; an important level of continuity

is seen between Israel and the church as the people of God. Exodus texts are among those “written down” for the “instruction” of the Christian community (1 Cor 10:11). As such, they can be used for warning (1 Cor 10:6-11; Heb 3:7-19), apologia (Acts 7:17-44), instruction (Rom 9:15; 1 Cor 9:8-12; 2 Cor 8:14-15), specification of what love requires (Rom 13:8-10; cf. Mt 19:16-22), examples of human faithfulness (Heb 11:23-29), reminders of the identity and missional purpose of the people of God (Tit 2:14; 1 Pet 2:9-10; Rev 1:5-6; 5:10) or as resources for reflections on the sacraments (Mt 26:28; Jn 6:22-59; 1 Cor 10:1-4; 11:25) and eschatology (Rev 8:6—9:21; 15:1-5; 21:3; 22:4).

8.3. Postbiblical Developments. Exodus has proved to be a remarkable resource for liturgical, theological and ethical reflection and practice for both Judaism and Christianity through the centuries. (For a survey of postbiblical Jewish and Christian interpretations of Exodus, see Hahn. For the exodus as paradigm of liberation from oppression, see Pixley; Walzer.)

EXODUS, DATE OF

In this day and age of biblical scholarship the debate no longer rages whether or not there was any exodus of biblical proportions. In fact, the consensus that there was not has become firmly entrenched in critical circles. In such a climate, the question concerning the date of the exodus might be lightly dismissed in some quarters as naive, presumptuous or quaint. Nevertheless, for those who take the biblical record seriously, debate continues concerning the most appropriate historical setting for this pivotal event in Israel's theology and self-understanding. After examining the most common suggestions for the date of the exodus event, this article will explore the contribution of the various lines of investigation and then offer a summary of the current state of the discussion. It will be left to other articles to explore the various theories concerning whether there was an exodus event or not and what its magnitude may have been.

	Traditional Divisions		Date of the Exodus	Megiddo	Jericho	Pharaohs
1550 						

Table 1: Four Proposed Dates of the Exodus

1. Proposals: History of the Discussion.

1.1. Fifteenth Century, Late Bronze I (c. 1446 B.C.). This traditional dating of the exodus is acquired by simply adding up numbers in the Bible. The most important passage is 1 Kings 6:1, which indicates that the exodus occurred 480 years before the dedication of Solomon's temple in 966 B.C. The resulting date of 1446 is further supported by Jephthah's comment in Judges 11:26 that the Israelites had arrived in the land three hundred years earlier. In this view, the biblical data are given pride of place while advocates of this view attempt to reconcile the archaeological and historical data as well as they can.

1.2. Fifteenth Century, End of Middle Bronze (revised dates, c. 1470). In the late 1970s J. Bimson advanced the proposal that a better fit of the archaeological data for the conquest with the biblical record could be found at the end of Middle Bronze Age (MB; traditionally 1550). The Late

Bronze Age (LB) was characterized by a problematic lack of fortified cities. The MB in Canaan, in sharp contrast, featured the massive and numerous walled cities that the books of Numbers and Joshua seem to suggest, and many of them were destroyed at the end of the period. Furthermore, Bimson contended there was no ready historical explanation for this widespread destruction that brought an end to MB. (Weinstein's list of destroyed cities includes Tell el-ʿAjul, Tell el-Hesi, Lachish, Tell Beit Mirsim, Jericho, Bethel, Shechem, Hazor, Dan, Tell en-Nagila, Malhata, Ashkelon, Beth-zur, Bethshemesh, Gibeon, Shiloh, and Taanach.) The consensus in scholarship was that the destruction was the aftermath of the Egyptian expulsion of the Hyksos after the latter had taken refuge in Canaanite cities (Weinstein). The problem is that the Egyptian historical records do not support the destruction of more than a few cities of

Canaan. Bimson's proposal suggested that this putative association of the end of MB with the Hyksos expulsion had led scholars to misdate the demarcation line between MB and LB. He argued that MB could be extended to about 1430, thus making Thutmose III the *pharaoh of the exodus, which he dated to 1470. The exciting excavations of M. Bietak at Tell el-Dab'a (Pi-Ramesse or Piramesse) were invoked in support of this thesis, since the findings at that site had suggested that the transition between MB and LB should be lowered.

The critique of Bimson's proposal came from numerous quarters. Bietak objected that his suggested alteration was only fifty years, therefore still in the sixteenth century, and could not be stretched as far as Bimson needed it to be. B. Halpern objected that the changes suggested by Bimson would leave a reduced time span for LB I that could not possibly accommodate the archaeological data.

1.3. *Thirteenth Century, Late Bronze IIB (c. 1250).*

In this scenario, the Israelites were oppressed by the Nineteenth Dynasty kings and pressed into service by Ramesses II to build his great capital city, Pi-Ramesse (Tell el-Dab'a). In this view Ramesses II is identified as both the pharaoh of the oppression and the pharaoh of the exodus. The exodus cannot be placed in the time of the next pharaoh, Merneptah, without eliminating the wilderness wandering, since Merneptah's Stela from his fifth year (1207) attests Israel as established as one of the inhabitants of Canaan. This position has experienced diminishing support among critical scholars in recent decades, since many who previously held it opt for theories that no longer accept a historical exodus in favor of peasant revolt, peaceful infiltration or other theories (see Hess 1993; Younger).

1.4. *Twelfth Century, Iron I (c. 1150).* On the basis of the excavation results at a number of sites, notably Lachish, Heshbon and Gibeon, G. Rendsburg suggests a date for the exodus of about 1150. This allows for a better fit with the occupational history of Jericho, Ai and Bethel as well. He points to the biblical statements about the Philistines (Ex 13:17; Josh 13:2, which he does not take as anachronistic) and the ancestral genealogy of David (150 years from Nahshon to David) to suggest that this is also the view offered in the text. He sees Ramesses II as the pharaoh who began the oppression and Ramesses III (1184-1153), a century later, as the

pharaoh of the exodus, with the result that the Israelites were arriving by land at the same time that the Philistines were arriving by sea. What reviewers have found most difficult to accept in his proposal is that the reference to Israel in the Merneptah Stela designates the Israelites as a people still living in Egypt in slavery.

2. Contributing Data.

2.1. *Contribution of the Biblical Text.* Taking the biblical text seriously or at face value comes with certain minimal requirements of details that must be accounted for. Even if the number 480 from 1 Kings 6:1 is schematic in nature (see 4.1 below), the understanding of the text is that there was a punctiliar event that took place about a dozen generations or a few centuries earlier. Prior to the event there was a period of oppressive enslavement during which time cities were being constructed in the eastern Delta region using brick (Ex 1:14), one of the cities notably named Rameses (Ex 1:11; Heb Raamses). The event itself was accompanied by upheaval in Egypt (Ex 7—11) and was led by an Israelite who had been raised in the royal household of Egypt (Ex 2:10-11), fled into exile (Ex 2:15) and returned during the reign of the successor to the throne (Ex 2:23). The event was followed by an extended period in the wilderness, which in turn was climaxed by a successful series of military campaigns against the occupants of the land (Josh 6—12). These campaigns decimated the population of the land but did not necessarily result either in massive destruction of cities or in the occupation of those cities by Israelites. These military campaigns were followed by protracted centuries of conflict with the remaining inhabitants of the land on various levels, but also evidenced a high level of assimilation with the lifestyle and culture of the native inhabitants (Judges). This sketch will give an idea of the most basic elements that comprise the biblical account.

2.2. *Contribution of Egyptology.* Aside from the specific issues to be dealt with in subsequent paragraphs, of most significance in this section are the known details of the activities of the pharaohs. This study is complicated by the general lack of consensus on the particulars of Egyptian chronology. The low chronology currently appears to be gaining the edge as the consensus shifts (see assessment of the complex issues in Hoffmeier 1989, 182) so that will be used in the remainder of this article. Table 2: Comparison of Egyptian Chronologies

ence table 2 will detail the differences for the most significant pharaohs.

The earliest pharaoh with major support as connected to the biblical events is Thutmose III (1479-1425), so we will begin with him. He continued his predecessors' active hostility against foreigners, of whom the Hyksos had been the major representatives. This was reflected in his frequent campaigns into Canaan, eighteen in all, the most prominent being the battle of Megiddo in 1456. As a result of his military initiatives, Canaan came under Egyptian control and became a buffer zone between Egypt and the powers to the north, Mitanni and the Hittites. In addition to his military activities, Thutmose III was also an energetic builder, with projects in the Delta region attested in Memphis and Heliopolis (Bimson, 249). He is also now considered the one who began rebuilding a citadel and storage facilities at Tell el-Dab^a, which was eventually named Pi-Ramesses.

The next pharaoh, Amenhotep II (1427-1400), had only a few campaigns into Syro-Palestine, notably in his seventh and ninth years, and these were concentrated in Syria and the northern section of Palestine (Weinstein, 13).

Thutmose IV (1400-1390) was the architect of peace with Mitanni. He campaigned against Gezer, the only town in Palestine mentioned by name (Weinstein, 13-14), and his reign was judged by the kings of Palestine in the Amarna period as representing the peak of Egyptian

control in Canaan. They complain that after his time, lands were being lost to the *ʿapiru* (EA 85). Egyptian inscriptions are very sketchy about the extent and targets of his military activity.

The reign of Amenhotep III (1390-1352) was characterized by the perception of stability in Egypt's role and stature in Canaan as peace-keeper and overseer. But this was at least partially an illusion, as it became clear as time went on that at this stage control of the region was already slipping away. There was little Egyptian military activity in Syro-Palestine during this time.

Amenhotep IV/Akhenaten (1352-1336) was by all accounts preoccupied with his religious reforms, resulting in some degree of neglect of the deteriorating condition in Syro-Palestine. There is lack of agreement among modern scholars at the extent of his negligence, ranging from almost total neglect to a measured policy shift that allowed the political interests to work at eliminating their own problems. In the estimation of the kings of the region, the *ʿapiru* were running wild and unchecked by the Egyptians, absentee landlords whose representatives were supposed to maintain control but were not given the necessary support and resources to succeed.

The next significant pharaoh in the exodus debate is Seti I (1294-1279), the Nineteenth Dynasty pharaoh who began to reestablish Egyptian control in Canaan. During his reign there were encounters with the Shasu, especially in northern Sinai. North of Gaza, however, he met

little resistance along the major trade route up to Megiddo. In one major military action he had to secure the area of Beth-shean, which had come under attack. Seti built a palace for himself in Avaris/Qantir (Tell el-Dab^a). His renewed interest in building in the Delta region reflected an attempt to establish lines of continuity between the Nineteenth Dynasty and the Hyksos.

Continuing the focus on the Delta, Ramesses II (1279-1213) established Memphis as his administrative center and established Pi-Ramesses as his residence in the eastern Delta. His military exploits targeted the growing power and influence of the Hittites. Losses in the aftermath of the battle of Qadesh required Ramesses to assert his control over various cities in Canaan that thought they saw opportunities to pull away from Egypt.

Finally, Merneptah's reign (1213-1203) witnessed the earliest conflicts with the Sea Peoples, who were allied with Libyans. In addition, his stela indicates earlier military action against Ashkelon, Gezer, Yano^aam and Israel. This inscription has been the subject of intense debate, which we will now try to summarize.

2.2.1. Merneptah Stela. This victory poem contains the earliest extrabiblical reference to Israel and has been quite controversial. Uncontested is that it is to be dated in Merneptah's fifth year toward the end of the thirteenth century. The significant line reads "Israel is laid waste; its seed is not." The context refers to four entities in the land of Canaan/Kharu. Three of them, Ashkelon, Gezer and Yano^aam, are marked by the determinative that indicates they were city-states. Israel, in contrast, is marked by the determinative that indicates it was a socioreligious group. This marks a largely immovable end point for discussion about the exodus. Not only was Israel in the land by 1207, but it is likely that they had not just gotten there, and more likely that the initial campaigns of the conquest had been completed and the transition had been made into the judges period. Even if we allow only five years for the initial stages of the conquest and then add a generation in the wilderness, this inscription would push the latest possible date of the exodus at least back to 1240 or 1250, or midway through Ramesses II.

2.2.2. Karnak. In 1978 F. Yurco deduced that reliefs on the western face of the enclosure wall of the Cour de Cachette at Karnak belonged to Merneptah rather than Ramesses II, as previously thought. The relief pictures the siege of

three fortified cities and the conquest of a fourth entity not connected to a fortified city. Only one of the cities is identified: Ashkelon, one of the four enemies listed on the Merneptah Stela. Consequently, Yurco surmised that the two other besieged cities pictured on the wall but not named could be Gezer and Yano^aam, also listed on the stela. If this correlation between the wall and the stela holds, the fourth scene on the wall could well represent the Israelites. A. F. Rainey (2001) rejects this last identification because Egypt's enemy in scene four has chariots, which Rainey considers unlikely for Israel in this period. He suggests that Israel should be associated with the Shasu pastoralists who were being brought as prisoners in the wall reliefs rather than with the enemy of scene four. Most have accepted Yurco's identification, which only reinforces the conclusions drawn from the Merneptah Stela.

2.2.3. Excavations. The only two Egyptian cities named in the biblical text in such a way that archaeology would be expected to find something are Pithom and Rameses (Heb Raamses in Ex 1:11)—the two store cities being built by the Israelites. A consensus has developed identifying Pithom, *p(r) jtm* ("house of the god Atum") as Tell er-Retabe and Rameses, *pr r^amss* ("house of Ramesses") as Tell el-Dab^a.

Excavations directed by M. Bietak have uncovered buildings at Tell el-Dab^a—the ancient Avaris/Pi-Ramesses—dating to the beginning of the Eighteenth Dynasty, probably Thutmose III (1479-1425). This was a brick citadel associated with storage facilities to support military efforts in Canaan (Hoffmeier 1997, 122-23). The major development of the site was by Ramesses II (1279-1213), who established it as his capital city. Since it eventually became the city of Rameses, it could be contended that that more familiar name was used in the biblical text anachronistically. The finds from the Thutmose III era would support the identification of the Israelite building projects as store cities (Ex 1:11).

Pithom, a second store city built by the Israelite slaves, has been identified as Tell er-Retabe along the Wadi Tumilat. Scarabs from Thutmose III and Amenhotep II (1427-1400) have been found there along with New Kingdom architectural remains. Nothing found at this site poses problems for any of the proposed dates, nor has it produced anything to support one date over another.

2.2.4. Hyksos. In order to place Israel within

the history of Egypt, one must decide their relationship to the Hyksos, a West Semitic people who ruled Egypt for several centuries. The first reason that people have been interested in establishing a relationship between the Israelites and the Hyksos is to be able to link the fall of MB cities, connected to the Hyksos, with the Israelite conquest. This has become of diminished significance, since there is increasing skepticism that the expulsion of the Hyksos (c. 1550) included large-scale destruction of Canaanite cities that would account for the fall of so many fortified cities at the end of the MB IIC/III (Kelm, 23). The second reason is simply that both the Hyksos and the Israelites represent substantial groups of West Semitic peoples in Egypt. Rather than identifying the Israelites as Hyksos, it has been more common to understand the enslavement of the Israelites as a result of the Hyksos expulsion. In Exodus 1:10, the fear is that the Israelites will join with Egypt's enemies (i.e., the Hyksos) and fight against them and leave the country.

2.3. Contribution of Sinai Exploration. The surveys conducted by archaeologists in the Sinai over the last several decades have turned up little to advance the discussion concerning the date of the exodus. I. Beit-Arieh's fifteen years of survey work in the Sinai turned up no appreciable evidence of a group matching the description and itinerary of Israel passing through Sinai during LB, this despite the fact that earlier, similarly wandering populations did leave remains (e.g., so erosion cannot be blamed). These data remain problematic, but they withhold their support equally from all of the proposals regarding the date of the exodus.

2.4. Contribution of the Amarna Texts. The 382 letters of the Amarna texts reflect the political situation in the Levant in the middle of the fourteenth century, LB IIA. Important to the question of the date of the exodus, then, is the determination whether or not the presence of the Israelites is reflected in these texts or not. There is no reference to Israel or the Israelites as such in the texts, though some have tried to include them in some of the disruptive or fringe groups that the letters discuss (particularly the 'apiru renegades).

The 'apiru (sometimes *ḥapiru* or *ḥabiru*) are considered to be warlords, brigands and disenfranchised peoples on the outskirts of society. Rainey has demonstrated that the term cannot be etymologically related to "Hebrew," and the

range of use of the term makes it clear that the 'apiru cannot be equated with Israelites. Nevertheless, some would contend that it does not entirely rule out the possibility that Israelites, along with other peoples, could have been designated by the term. The 'apiru are consistently viewed as a threat to Egyptian interests in the area, and some of the vassal cities are accused of siding with the 'apiru. The threat of the 'apiru extended into the regions north of the territories that Israel eventually controlled, particularly in the area designated Amurru in the area of the Orontes and the Beqa' Valley.

The Amarna period in Syro-Palestine featured fifteen to seventeen major city-states, whether as vassal cities or Egyptian administrative centers (Finkelstein, 254-55; Bunimovitz, 326). Five of those cities also figure prominently in the text of Joshua. Three are among the southern coalition (Jerusalem, Lachish and Gezer; Josh 10), a fourth, Hazor, is the head of the northern coalition (Josh 11), and the fifth, Shechem, is where the Israelites gather for the *covenant-renewal ceremony (Josh 8; 24).

If the exodus took place after the Amarna period, then there would be no difficulties to contend with—the texts would simply be viewed as portraying the preconquest Canaanite population. But for those who favor putting the exodus in the fifteenth century, the Amarna letters require closer evaluation. The four cities from the texts that are opponents of the Israelites in the OT are said to be defeated by *Joshua, but none of them are occupied by the Israelites. Consequently, there would be no problem with those cities having non-Israelite occupants in the Amarna period. In fact, the claim has been made that the profile of Gezer, Jerusalem and Hazor in the Amarna texts corresponds exactly to what would have been expected in the aftermath of Joshua's conquest of the region (Waterhouse, 36-40). Shechem is more difficult.

Shechem was destroyed at the end of MB (mid-sixteenth century), but Temple I on the site appears to have continued to be used, though excavations produced no bichrome ware characteristic of LB I (see Stager 1999). Excavations from the late 1960s suggested that Shechem was reoccupied from 1450 through approximately 1150 (Campbell, 41). The refounding of the city is often connected to the time of Thutmose III, but firm evidence is lacking. Another destruction layer was identified near the end of LB

(Amarna Shechem?), but there was subsequent rebuilding (by a group that used the collar-rimmed jars characteristic of the Iron Age) with no notable occupation break and continuity across the transition from LB to Iron I. Another massive destruction layer is evident in Iron I (commonly attributed to Abimelech, Judg 9). The dating of the beginning of the LB settlement of Shechem would be crucial. Those arguing for the fifteenth-century exodus would have to posit the resettlement of the town in the early fourteenth century and after Joshua or accept that the Israelites were granted access to Shechem and Mount Ebal by a cooperative Labayu (or his predecessor). S. D. Waterhouse contends for the latter on the basis of Amarna letter EA 289, in which Jerusalem's Abdi-heba accuses Labayu (governor of Shechem) of siding with the 'apiru. For those who place the exodus in the thirteenth century, the Israelite activity would have to be squeezed in between the destruction of Amarna Shechem (Stratum XII) at the end of the fourteenth century and its reoccupation. Though there was a general depopulation of Shechem, the excavators indicate that there is no noticeable break in occupation between strata XII and XI (Toombs, 73). There is therefore no break in occupation to correlate to activity by Joshua in the thirteenth century.

Jericho, Ai and Bethel, at the fringes of the territories controlled by Labayu in Shechem and Abdi-heba in Jerusalem, are not mentioned in Amarna. In fact, this section of the land goes largely unmentioned in the Amarna materials. M. Adamthwaite goes so far as to contend that it is not even clear from the Amarna texts that Labayu should be seen as king of Shechem, connecting him instead with Transjordan Pehel. South of Shechem, the next major centers were Jerusalem and Gazru (Gezer), Ayyaluna (Aijalon) to the west, and Yapu (Joppa) on the coast. This silence would be understandable if the cities had already been destroyed by the Israelites but would make little sense if they were the significant cities of the conquest period that had not yet been attacked.

A last site to consider is Gibeon. This town is of interest because it is portrayed as a significant city in the biblical account, is located in the zone that goes unmentioned in the Amarna texts, yet is not destroyed. Whether the conquest was pre-Amarna or post-Amarna, it would be reasonable to expect this city to be mentioned. Unfortu-

nately, seven seasons of excavation at the site from 1956 to 1962 and subsequent surveys in 1983-1984 have failed to turn up any evidence of LB occupation. Again, neither date is favored by the data from this site.

The question that must be addressed by the supporters of the fifteenth-century exodus is: If Israel was in the land during the Amarna period, where are they in the Amarna texts? The answer that would make the most sense is that they had disbursed to their tribal territories and were trying to settle in the land. They were perceived by the Amarna governors and kings as part of the 'apiru who were disrupting the land early in the judges period.

2.5. Contribution of Archaeological Excavation in Israel. The issues here are complex, conclusions often controversial, and attempts hampered by insufficient or partial data. Joshua 12 offers a list of thirty-one kings of cities that were conquered in Cisjordan by Joshua and his armies. Obviously a minimal expectation would be that all of these cities were occupied at the time of Joshua. Three further indications that archaeology could check would be (1) whether there was a change in occupation (reduced population, abandoned or new occupational layer); (2) whether there was evidence of destruction (when the biblical account indicates that the city was destroyed); and (3) whether the details of the site could be confirmed (e.g., city walls or gates).

Of the thirty-one cities, five have not been identified with any certainty (Hormah, Libnah, Lasharon, Madon, Goiim). Of the twenty-six that have been identified, four have not been excavated (Geder, Adullam, Tappuah, Hephher), leaving an archaeological database of twenty-two cities. Of those twenty-two, Joshua only reports burning three of them (Jericho, Ai, Hazor), and four others are individually identified as being attacked and their occupants totally destroyed (Hebron, Lachish, Eglon, Debir). The data for the twenty-two identified and excavated cities are summarized in table 3.

Table 3 is based entirely on archaeological finds at the sites. It must be remembered that some occupational levels unattested or sparsely attested in the archaeological record are nevertheless named as active cities in contemporary literature (e.g., Hebron in Egyptian itineraries; Lachish in Amarna). Additionally, there are occasions where the archaeological remains fail to confirm the historical records. For instance,

Cities (Josh 2)	Site	Fate	Occupational record				Destruction			
			MB II/III	LB I	LB II	Iron I	MB II/III	LB I	LB II	Iron I
Jericho	Tell es-Sultan	burned	yes	sparse	sparse	no	yes	no	no	no

Table 3: Occupational and Destruction Data of Cities

Thutmose III (1479-1425) claims to have laid siege to a city at Megiddo, but no evidence of city walls is found in the LB city (Strata X-VIII; Gonen, 70; Ussishkin, 3.463). Sometimes all of the difficult issues converge. As an example, the site of Achshaph has not been positively identified, though guesses include Tell Keisan and Khirbet el-Harbaj. Neither of these sites has been extensively excavated, but both show indications of settlement in the LB and early Iron Ages. On the literary side, Achshaph is listed in the Egyptian Execration texts (MB), on the Karnak list of Thutmose III's conquests (LB I), in the Amarna letters (LB IIA) and in Papyrus Anastasi I (LB IIB). It should also be noted that at times cities change location. So, for instance, the lack of any pre-Iron

Age remains at Tell Arad opens the possibility that Arad at the time of Joshua was located at a nearby site, Tell Malhata. Two caveats about the table should be noted: (1) even when a city was occupied during a certain period, the archaeological data may not fit with the description in the Joshua account; (2) this table does not indicate places where the city in one period may have been occupied by a different group than in the previous period. For example, though the Iron Age column attests widespread settlement, a number of those sites were occupied by Israelites or the Philistines rather than Canaanites (Hebron, Gezer, Bethel, Aphek, Achshaph, Tirzah), so the occupational history is not as positive as it might look in the table. Finally, it should be noted

that the table could easily be extended to include the Transjordan cities that are mentioned and cities such as Gibeon, which allied themselves with the Israelites and are therefore not on the conquest list.

2.5.1. *Jericho.* Jericho is the most prominent city in the conquest account of the book of Joshua and therefore offers the most textual information describing the city. In contrast, the history of archaeological excavations at the site has produced a long and checkered history of conflicting interpretations. The only find of city walls resembling those described in the text belong to Stratum IV, which is commonly dated to the end of MB (c. 1550). Following the destruction of city IV, the site shows no significant evidence of occupation until well into the Iron Age, with the possible exception of a sparsely populated, unvalled village during parts of the LB II (for further discussion, see 3.2.3 below).

2.5.2. “Altar” on Mount Ebal. In the late 1980s A. Zertal discovered a site on Mount Ebal dated to the thirteenth to twelfth centuries B.C. He identified the complex there as the remains of a large altar surrounded by an enclosure wall creating two courtyards. He suggested that it was the altar used by Joshua in Joshua 8. Both his identification of the structure as an altar and his association of the site with Joshua 8 are disputed. If there is no association with Joshua 8, the structure contributes nothing to the discussion of the date of the exodus. If, on the other hand, Zertal is correct, the structure would offer strong support for a thirteenth-century date, unless it could be demonstrated that it was built later in the place where Joshua’s was.

2.5.3. *Walled Cities in the Late Bronze Age.* Rivkah Gonen’s extensive surveys in the region have led her to conclude that in LB, contrary to the implications of the biblical conquest texts, walled cities were notably lacking. One exception is Hazor’s MB fortifications, which were rebuilt and used during LB. Other exceptions have been identified at Ashdod, Tell Beit Mirsim and perhaps at Gezer. Gonen’s pioneering research has served as the foundation for more extensive settlement studies, such as those by S. Bunimovitz that develop data based on rank size distributions (cf. Bunimovitz, 322-24).

2.6. *Kadesh-barnea.* This location was the base of operations for much of the period that Israel was in the wilderness, so it might be expected that excavations there could help clarify

chronological questions. Unfortunately, there have been no archaeological remains in any of the periods that are under discussion in this article so, like Ai, it must simply be set to the side.

2.7. *Transjordan.* As the Israelites marched from the *wilderness to the Jordan to cross into the Promised *Land, they encountered resistance from Sihon of the Amorites and Og of Bashan (Deut 2–3). Deuteronomy 3:4-5 indicates that there were sixty cities taken and that they were fortified with walls and gates. The archaeological excavations and surveys in Transjordan have not yet turned up any fortified cities from LB. Most sites do not even show any occupation in this period. For example, a site such as Heshbon, thought to be Tell Hesban, was the center of Sihon’s kingdom. Yet there is no sign of LB occupation at Tell Hesban. Recent surveys have suggested that the biblical Heshbon may have been at a nearby site, either Tell el-‘Umeiri or Tell Jalul, which at least evidence some occupation (Chavalas and Adamthwaite). Once again, this lack of data proves equally frustrating to all of the proposed dates rather than favoring one over another.

3. Issues and Prospects.

3.1. *Bronze or Iron?* No matter what the date of the exodus, the most likely historical setting for the initial enslavement of the Israelites, as previously mentioned, is in the aftermath of the expulsion of the Hyksos. This indicates that the exodus would be at the earliest in the beginning of LB. If the exodus is considered to be a single, punctiliar event of biblical description, the evidence favors LB over the Iron Age. This is concluded not just because of the time parameters in the Bible but from the Merneptah Stela and the occupational history of sites, particularly Jericho.

3.2. *Middle Bronze or Late Bronze?* Even if the collapse of MB in Canaan could be placed in the time of Thutmose III (1479-1425) or a little after, the problem would not be solved. If Thutmose III is the earliest possible pharaoh of the oppression (building at Tell el-Dab^a), then the pharaoh of the exodus would have to be Amenhotep II (1427-1400), and the time of the conquest would be pushed into the time of Thutmose IV (1400-1390). There is no way that a conquest at that late date (c. 1400) could then be connected to the collapse of MB cities. Given the current information from Tell el-Dab^a, we must consider an exodus and conquest in the LB period as more likely than MB.

3.2.1. *Post-Amarna Late Bronze Age IIB*. Once we have located the event in LB, we must consider whether a pre-Amarna or post-Amarna date makes more sense. From the biblical standpoint, the most difficult problem with the post-Amarna thirteenth-century exodus is that the pharaoh of the oppression is represented as different from the pharaoh of the exodus (Ex 2:23; 4:19; cf. 2:15). That would mean that Ramesses II (1279-1213) could not fill both roles. The major strength of the thirteenth-century position has been that the city built by the Hebrew slaves was named Rameses (Heb Raamses in Ex 1:11). This would most logically make Ramesses II the pharaoh of the oppression. His successor, Merneptah (1213-1203), however, cannot be the pharaoh of the exodus because in his fifth year Israel is already in the land. If, alternatively, one suggests Ramesses II as the pharaoh of the exodus, the problem again arises of having the city Rameses named for a pharaoh who is not yet pharaoh—the advantage is lost. Certainly Seti I (1294-1279) did some building at Tell el Dab‘a, but he would not be naming the city Rameses. If the name *Rameses* is simply going to be judged an anachronistic reference, there is no advantage in positing a thirteenth-century connection rather than a fifteenth-century one. From the archaeological standpoint, it has been suggested that the thirteenth-century position is strengthened by the archaeological data concerning the cities of the conquest. In fact, however, the archaeological profile for post-Amarna LB IIB is no more advantageous than for pre-Amarna LB I. The absence of walled cities continues. The claim that the data on Jericho fit better for the thirteenth century is inadequate. Though there is evidence of occupation at Jericho in the thirteenth century, the evidence does not agree with the picture offered in the biblical text. In conclusion, then, if Ramesses II cannot be both the pharaoh of the oppression and the pharaoh of the exodus, he cannot productively be viewed as either one, and there is no other post-Amarna time slot that comes anywhere close to correlating with the biblical data.

3.2.2. *Amarna Late Bronze IIA*. The Amarna period itself is not a good candidate for the conquest primarily because of the absence of the cities of Jericho, Bethel, Ai and Gibeon from the Amarna correspondence. These are portrayed as strategic cities in the time of the conquest. In the same way, comparison of the smaller villages mentioned in the biblical text with those men-

tioned in Amarna shows no overlap.

3.2.3. *Pre-Amarna Late Bronze I*. This leaves the pre-Amarna LB I period for consideration. If the exodus and the conquest were in the pre-Amarna period, the pharaoh of the oppression would most likely have been Thutmose III (1479-1425), since he was the one who began building at Tell el Dab‘a, later known as Pi-Ramesse (or Piramesse). The biggest problem here is reconciling the biblical account with the archaeological data from the cities of the conquest. If the conquest was pre-Amarna, it must be associated with City IV at Jericho, usually identified as having been destroyed at the end of MB. By the archaeological data, Jericho City IV is linked with Megiddo Stratum X (MB), and Thutmose III is linked with the next later Megiddo Stratum IX (LB, see table 4).

Here is the problem succinctly stated. Archaeology places Jericho IV several decades before Thutmose III, while the Bible would want to place Thutmose III (oppression) several decades before Jericho IV (conquest). If Thutmose III is the pharaoh of the oppression, Amenhotep II is the pharaoh of the exodus and much of the wilderness period. For Jericho City IV to fit into this scheme, then, it has to be dated at the time of Thutmose IV, at the end of the fifteenth century or early in the fourteenth century (at the line between LB IB and LB IIA). Since most agree that the entire line between MB and LB cannot be shifted past Thutmose III, the only solutions open to those who support the fifteenth-century date require breaking one of the given equations. That is, if the fall of Jericho IV is to be dated after Thutmose III, either Jericho IV must be dissociated from Megiddo X, or Thutmose III must be dissociated from Megiddo IX. Each of these options will be explored below.

3.2.3.1. *Middle Bronze and Late Bronze Line*. The demarcation line between MB and LB grows increasingly controversial, and a historical explanation for the collapse of the large urban centers of MB remains elusive. Without an identified historical cause for the collapse of MB, the option remains that the transition from MB to LB may have taken place more gradually over a longer period or that the transition might take place regionally at different times. In such a scenario, even if Jericho IV and Megiddo X remain identified as the final layers of MB culture at their respective sites, there could conceivably be decades separating the end of Jericho IV from Megiddo

Divisions	Jericho	Megiddo	Pharaohs
Middle Bronze	IV ← → X		
Late Bronze IA	unoccupied	IX ← →	Thutmose III (1479-1425)
Late Bronze IB	unoccupied	VIII	Thutmose IV (1400-1390)

Table 4: Jericho, Megiddo and Pharaohs

X. Even given the identification of Jericho IV with the end of MB, how long after the end of MB at other sites (such as Megiddo) did the Jericho IV walls stand? This needs to be explored.

3.2.3.2. Jericho IV and Megiddo X. Is the connection between Jericho IV and Megiddo X based on what *is* found at Jericho IV or based on what is *not* found there? The absence of LB I diagnostic bichrome ware at Jericho is always mentioned prominently. But the massive erosion on the site means that even less can be inferred from the absence of evidence than is normally the case. Furthermore, it is difficult to date the fall of Jericho IV on the basis of the absence of bichrome pottery, since bichrome pottery is almost entirely absent from sites in the hill country—its distribution is found primarily along the trade routes. Note that Shiloh, for example, has some attestation of LB I occupation yet no bichrome. Shechem as well was occupied in LB I (as indicated by the continuation of Temple I), yet excavations produced no bichrome ware. Bichrome began to be attested at Tell el-‘Ajjul before the end of MB, yet Jericho is believed to continue through the end of MB (Bienkowski 1986, 128-29). The lack of bichrome at Jericho IV would then be explained just as its absence at the end of the MB period would be explained: Jericho’s distance from the trade routes limited the availability of this type of pottery.

3.2.3.3. Thutmose III and Megiddo IX. What about the connection between Thutmose III and Megiddo IX? The connection was originally made because Thutmose’s first Asiatic campaign included a seven-month siege of Megiddo and there was a destruction level that brought an end to stratum IX, the stratum attesting LB I diagnostics. Recent researchers have noted, as previously mentioned, that Thutmose III does not claim in his inscriptions to have destroyed the city. If further analysis shows that Jericho IV cannot be separated from Megiddo X and Thutmose III cannot be separated from Megiddo IX, the next question

to ask is whether it is possible that the building at Tell el-Dab‘a began under Thutmose I (continued under Thutmose II), making him the pharaoh of the oppression (and Hatshepsut as potentially the daughter who found *Moses, though pharaohs undoubtedly had no shortage of daughters) and making Thutmose III pharaoh of the exodus. This solution might open the way for a shorter period between the destruction of Jericho IV and Megiddo Stratum X.

3.2.4. Other Key Cities. Besides the need to resolve the very difficult issues traced above with regard to Jericho, many other sites remain problematic, not the least of which is Ai. The evidence at et-Tell cannot be reconciled with any proposed date for the exodus, so it has not been factored into the debate concerning the date in this article. Although to date no other candidate for Ai has offered a persuasive alternative, the question remains as to whether et-Tell is Ai, and further identifications must be explored and supported. Shechem also remains highly significant, and continuing work is needed to clarify all aspects of its settlement history.

3.2.5. Character of the Late Bronze Age. Absence of LB walled cities in both Cisjordan and Transjordan poses an ongoing problem. Archaeological work needs to continue to clarify the character of LB in Transjordan, such as that being conducted by Andrews University in the highly significant Madaba Plains project. In addition, lexical, sociological and political research must continue to define what constitutes a “fortified” city in LB. This should involve the ongoing evaluation of settlement patterns (e.g., that being done by Bunimovitz) against the data provided about LB Levantine cities by the Egyptian inscriptions.

4. Presuppositions, Priorities and Questioning the Assured Results.

From the above discussions it is evident that the complexity of this issue derives from the need to juxtapose biblical, historical and archaeological

data to one another. When the data are not easily reconciled, which data hold priority? The answer one gives to this question largely determines the conclusions that will be drawn. It is a mistake, however, to reduce the debate to a question of whether one “believes the Bible” or not. Commitment to the face value of the biblical text may still allow more flexibility at some points than has traditionally been maintained. Care must be exercised to assure that potentially naive interpretations are not given the status of biblical authority.

On the other side of the equation, interpretation also plays a significant role in assembling the historical and archaeological data. It is too simplistic to say that priority is to be given to the Bible or to archaeology; we must be willing to rank the level of certainty we have in particular data. For instance, the reference to Israel in Merneptah’s inscription offers far fewer options for alternative possibilities than the question concerning the role of bichrome ware for determining whether or not a site was occupied in LB I. Regarding the biblical data, an example would be that the mathematical precision of 1 Kings 6:1 might be judged less certain than the statement that a pharaoh died while Moses was in exile in Midian. We must be willing to trouble-shoot our interpretations.

With such an intention it is important to question some of the statements that various camps have at times accepted as “assured” results, such as the those outlined below.

4.1. Biblical Data.

Assured result: The pharaoh of the oppression must have reigned at least forty years because that is how long Moses was in exile in Midian. **Question:** Are we certain that forty is not schematic? On the biblical side of the equation, when we look at the way the books of Genesis through Judges deal with designating the passage of time, the statistics suggest an inclination toward schematization, especially regarding the use of the number forty. There are thirteen time periods assigned either forty days or forty years (*flood; end of flood; ages of *Isaac, *Esau and Joshua; wilderness wandering; Moses’ time on Sinai both times; spies exploring the land; peace after Othniel, Deborah and Gideon; Philistine oppression before Samson). This list could easily be extended by including the ruling periods of Eli, David and Solomon or by adopting the division of Moses’ 120 years into three periods of forty (Ex 7:7; Acts 7:23). If we compare this to the

time spans anywhere in the twenties through the fifties, we find a remarkable disparity. In the same books, there are only nine occurrences of all of those put together (i.e., 20-59). The number forty does not have near the frequency in Akkadian, Ugaritic or Egyptian texts, so this inclination remains uniquely Israelite.

Assured result: The exodus must be dated 480 years before the dedication of the temple.

Question: Are we certain that 480 is not schematic? If it is, we cannot simply “do the math” to ascertain the date. Yet the schematic would have little significance if the actual number were not in the same general range.

4.2. Archaeological Data.

Assured result: There is no evidence of a large population passing through Sinai, dying in the Sinai or settling in Canaan in LB. **Question:** What sort of evidence could archaeologists reasonably expect to find of the migratory travels of whatever size group was involved? Is it possible that we have misread the number of Israelites and that it is much smaller (*see* Historical Criticism §4.2.3)? If that is possible, we may not have to find the kind of evidence archaeologists have been looking for.

Assured result: There is almost a total absence of fortified cities in LB, casting doubt on the biblical account of the conquest. **Question:** Do “fortified” cities necessarily have walls? Thutmose III laid siege to Megiddo for seven months, yet there is no evidence of a wall at that time. Fortifications of the LB period might consist of perimeter buildings or earthen ramparts. The biblical text only specifically claims a wall for one city (Jericho; Ai has a gate, but LB cities with gates did not necessarily have walls). Thus the lack of walled cities in LB does not necessarily contradict the biblical account of fortified cities (e.g., Num 13:28; Josh 19:35), though there are perhaps some general references to walls (Deut 1:28, *bēšārōt*).

Assured result: Jericho was not occupied in LB I because the bichrome ware that is characteristic of LB I is absent. **Question:** Is it possible that the distribution of bichrome, as imported ware, is limited to the vicinity of the major trade route through the coastal areas and the northern valleys? If such were the case, would it not be possible that the walls of Jericho City IV identified as MB could have continued in use several decades into LB with no bichrome?

Assured result: There is very limited occupa-

tion of Jericho in LB I and no city wall. **Question:** How much is the impact of the absence of evidence mitigated because of significant erosion at the site?

Assured result: A number of the cities listed in Joshua's conquest account show no signs of occupation in LB. **Question:** How much is the impact of the absence of evidence mitigated in light of the fact that Egyptian itineraries of the period also name cities for which there is no archaeological evidence of occupation (Krahmalkov)? Granted that Egyptian sources can make unrealistic claims, the presence of the name in the lists cannot be anachronistic, and therefore the assumption can reasonably be made that the town existed, whether the Egyptians actually went through it or not.

Assured result: Archaeological data do not support an LB exodus because very few LB cities evidence destruction layers in the excavations. **Question:** The biblical text only claims that three cities were burned (Jericho, Ai, Hazor), so would we expect to find destruction levels anywhere else? Thutmose III conducted eighteen campaigns in Syro-Palestine, yet very few of those cities show related destruction levels.

4.3. *Egyptological Data.*

Assured result: The destruction of MB urban centers can be dated in relation to the expulsion of the Hyksos from Egypt in the mid-sixteenth century. **Question:** Is there sufficient evidence that the destruction of the fortified cities of Canaan that brought an end to MB can be associated with the expulsion of the Hyksos (Hoffmeier, 1989)? The identification of a clear line of demarcation between MB and LB has become increasingly controversial, and no solution is in sight (see a summary of problems in Bunimovitz, 330). This makes it quite difficult to reach conclusions regarding the role of the destruction of MB fortified cities in the question of the date of the exodus.

Assured result: The Eighteenth Dynasty and early Nineteenth Dynasty kings were very active in Syro-Palestine, but the biblical book of Judges never mentions them, so Israel must have come into the land after that time. **Question:** If the biblical authors were primarily interested in theological issues, is it not possible that they would ignore even important historical events if those events were not pertinent? For instance, even though Ahab was involved in the crucial battle of Qarqar in 853, the text makes no mention of it.

4.4. *Amarna Data.*

Assured result: The activities of the 'apiru in the Amarna texts cannot be taken as the activities of Israel because the 'apiru appear in times and locations that preclude identification with the Israelites. **Question:** Do we have to identify all 'apiru as Israelites to have the Israelites counted among the 'apiru?

Assured result: A pre-Amarna exodus cannot be reconciled with the Amarna data concerning Labayu of Shechem. **Question:** Is Shechem as central in the Amarna texts as it has been portrayed? Adamthwaite questions the connection between Shechem and Labayu, since he is never identified as its governor. Finkelstein refutes the logic of redrawing the administrative lines to make Peheh Labayu's center (Finkelstein, 235 n. 8), but the fact remains that Shechem is referred to only once in the letters (EA 289), and there simply as a territory that Labayu gave to the 'apiru. It seems odd that Labayu would give up his center of power to the 'apiru.

As a result of these questions, it may be admitted that neither the biblical nor the archaeological pictures are as clear as they have sometimes been portrayed. At the risk of oversimplifying the issue, table 5 offers a summary of what strength of support is offered each position concerning the date of the exodus by each of the categories of contributing data we have discussed above. Though it would admittedly be easy to contest a number of the judgment calls represented in various categories, a chart such as this demonstrates most importantly how mixed the results are when considering the claims of any position to offer a resolution.

5. *Conclusion.*

If Jericho city IV is the city conquered by Joshua (and it is the only one that comes close to the biblical description), the exodus must have been in the fifteenth century. But it remains far from clear how the destruction of City IV can be located in the fifteenth century and how it can be integrated with all of the other data that must be pieced together. There is still much to be done before this perennial controversy can begin to find resolution. With all of this potential research to pursue, the sad fact is that many archaeologists would never undertake such studies, for they have already concluded that there was no exodus and that Israel's origins in Canaan are to be found in the Iron Age.

EXODUS ROUTE AND WILDERNESS ITINERARY

Israel's departure from *Egypt commences in Exodus 12:37, but it is not until Joshua 3:17 that the *Israelites cross the Jordan, thus bringing their period of *wilderness wandering to a close. In the intervening chapters, Israel's desert trek—from Egypt, through the Red Sea and into the wilderness—is chronicled. This article will provide an overview of the main sites mentioned in the OT and recent scholarly discussions regarding the location of these sites.

On this second point, there is much that remains highly tentative. The precise locations of even some of the more central locations on Israel's journey out of Egypt (e.g., Red Sea and Mount Sinai) elude us and will remain perhaps ultimately unrecoverable. No attempt will be made here to arrive at firm conclusions where others have been rightly cautious. Readers wishing fuller discussions of some matters of detail are invited to consult the works cited in the bibliography. The article will conclude with observations on the theological significance of the Red Sea crossing and wilderness wandering in both the OT and NT. This is appropriate, since Israel's journey was not recorded simply for journalistic purposes but as a means of reminding generations of Israelites who God is and what he has done for his people. This very important aspect of Israel's history is picked up in the NT, both in Jesus' own life and in the church's daily existence.

1. Egypt
2. Red Sea
3. Wilderness Itinerary
4. The Red Sea and Wilderness as Theological Themes

1. Egypt.

Israel's journey to Egypt under *Joseph brought them to Goshen (Gen 46:28), a district on the eastern Nile Delta. In Genesis 47:11 the location is referred to as the "district of Rameses," which should probably not be specifically equated with one of the two cities built by Israelite slave labor, Pithom and Rameses (Ex 1:11; Heb Raamses). The name "Rameses" is fairly well-documented in Egyptian sources, but equating any of these with the biblical Rameses is not a straightforward task. A widely accepted position today is that the Rameses of the exodus is modern-day Qantir, referred to as Pi-Ramesses in Egyptian sources. This city flourished during the reigns of Ramesses II to Ramesses IV (early thirteenth to late twelfth centuries B.C.), which lends support to the later dating of the exodus during the thirteenth century B.C. (see Exodus, Date of). Also, Avaris (Tell el-Dab'a), the Hyksos capital, was located at the same site. The Hyksos were "Asiatic" peoples whose presence in Egypt has been much debated. Precise ethnic identification has not been made, but some have drawn a connection between an Israelite presence in Egypt from Joseph through *Moses and the Hyksos occupation of portions of Lower Egypt during the Fifteenth Dynasty (eighteenth to sixteenth centuries, the Second Intermediate Period).

Pithom is likely the Hebrew transliteration of the Egyptian *p(r)-itm* (house of Atum). Its location is unknown. Also, this site is not mentioned in the wilderness itinerary as a stop between Rameses and Succoth, which may indicate that Pithom and Rameses were not in close proximity to each other.

Succoth is Israel's first recorded stop after leaving Rameses. We are not told how long they stayed there, only that they camped (Num 33:5). Succoth is a name for both an Egyptian city and a city in Transjordan (e.g., Gen 33:17; Josh 13:27). As with Rameses, its precise location is difficult to determine, although it is certainly somewhere in the northeast Nile Delta. Hoffmeier argues that it may be identified with Tjeku (Egyptian *tkw*). At least one factor that has led to difficulties in identifying any of these Egyptian sites is topographical

changes due to changing water tables through the millennia. There is also ample evidence that Tjeku was a militarized area, suggesting that Succoth may not have been a stop on Israel's itinerary but merely a region through which they passed, keeping safe distance from any military engagement.

Israel next came to Etham and Pi-hahiroth. Neither of these sites can be confidently identified, nor can their names be traced with certainty to Egyptian names. The former is mentioned only in Exodus 13:20 and Numbers 33:6-8, the latter in Exodus 14:2, 9 and Numbers 33:7-8. What we know from these references is that they were located on the "edge of the desert" on the way to the Red Sea, likely in a southeasterly direction from Rameses. If the location of these sites could be determined with some confidence, it would provide helpful evidence for locating where the crossing of the Red Sea took place. Conversely, knowing the site of the crossing of the sea would aid in determining the locations of the sites just mentioned. Neither anchor is provided, however.

2. Red Sea.

The precise location of the body of water the Israelites crossed when leaving Egypt is not known. Various positions are argued, but at present no conclusion can claim universal support. The present day Red Sea is the large body of water that makes up the northwest arm of the Indian Ocean. This has obviously no bearing on the location of Israel's crossing, since Israel's wilderness wanderings were in the Sinai Peninsula.

It seems self-evident that in the OT different bodies of water are given the name *yam sūp*. For example, according to 1 Kings 9:26 (also Ex 23:31; Num 14:25; 21:4; Deut 1:40; 2:1; Judg 11:16; Jer 49:21), *yam sūp* is the Gulf of Aqabah (Elat), the body of water east of the Sinai Peninsula. According to Numbers 33:10-11 (perhaps also v. 8), *yam sūp* is the body of water reached later in Israel's wanderings, after leaving Elim. Hence, the Gulf of Suez (west of the Sinai Peninsula) is meant (unless one wishes to presume that a rather gross error has been made in reporting Israel's itinerary, but see Hoffmeier's thesis below). Finally, the sea of the exodus is referred to as *yam sūp* in Exodus 15:4, 22 and a number of other passages, including Joshua 2:10; 4:23 and Psalm 106:7, 9, 22. These passages do not specify whether the Gulf of Suez, the Gulf of Aqabah or some other body of water is meant. In any event, the phrase *yam sūp* seems

Exodus—Numbers		Numbers 33	
Ex 12:37	Rameses to Succoth	33:3-5	Rameses to Succoth (fifteenth day of the first month)
13:20	Etham	33:6	Etham
14:1-2	Pi-hahiroth (between Migdol and the sea, opposite Baal-zephon)	33:7	Pi-hahiroth (east of Baal-zephon, near Migdol)

Figure 1: Israel’s Wilderness Itinerary

to refer to more than one body of water.

The biblical narratives certainly indicate that Israel left the Nile Delta region, traveled along the edge of the desert and crossed a body of water called *yam sūp*. But which body of water did they cross? Can a precise identification be made? One matter that may help bring more clarity to this issue is the proper translation of *yam sūp*. Although the meaning of *sūp* has been debated, it is extremely unlikely that the word means anything other than “reeds,” since it seems to be derived from the Egyptian word for reeds or papyrus, *ṯwfy*. The common English translation “Red Sea” follows the Septuagint (LXX) and Vulgate, both of which translate *yam sūp* as Red Sea. It remains unclear why these an-

cient versions referred to the sea in this way. In ancient times, however, “Red Sea” included at least the Gulfs of Suez and Aqabah, as well as the Indian Ocean and also the Persian Gulf. The LXX “Red Sea” (*eruthra thalassē*) may not be a translation of the Hebrew *yam sūp* (or some other Hebrew phrase) but the Greek name for the general body of water, one part of which the Israelites crossed. The fact that our English translations adopt the term *Red Sea*, therefore, does not settle the question of which body of water the Israelites crossed when leaving Egypt: the term is too broad.

The widely held view, going back at least to targumic traditions (Hoffmeier), should be accepted: *sūp* means “reeds,” either referring to

the reeds or an area so designated. Hence, the marshy region in the vicinity of the Nile Delta is a likely candidate for Israel's departure from Egypt. But if this is the case, it could rightly be asked, as B. F. Batto has done, why bodies of water that are not marshy (i.e., the Gulfs of Suez and Aqabah) would be so designated in the OT. J. K. Hoffmeier has countered that salt-tolerant reeds and rushes could thrive in salt marsh areas such as the Gulf of Suez. Moreover, he argues that the Bitter Lakes, north of the Gulf of Suez, could have extended farther south in the second millennium B.C., perhaps even connecting with the Gulf of Suez. Although this would not provide the precise location of the crossing, the problem of referring to both the Gulf of Suez (Num 33:8-10) and the site of the crossing further north as the *yam sūp* would disappear: they would be one and the same body of water. Hoffmeier's view is well-argued, but it remains to be seen whether it will gain wide acceptance.

Another view is that *sūp* should be understood not as "reed" but as "end" (reading *sōp* instead of *sūp*, perhaps as a pun). Hence, the term *yam sūp* could be understood as the "sea at the end of the world." This approach is not necessarily in contradiction with what has been outlined above but rather may be a theologically motivated idea that capitalizes on the similarity between the two words in Hebrew. This view, popularized most recently by Batto, has sparked some debate and is by no means universally accepted, but it suggests a very helpful way of understanding perhaps not so much the location of the exodus sea as its theological significance.

To refer to the exodus sea as the "sea at the end of the world" introduces associations with *creation and the waters of chaos in Genesis 1 (see Cosmology). The "taming" of the waters of chaos at creation is a well-documented motif in the ancient world. Indeed, in Genesis 1:9-10, God collected the waters on the earth, allowing the dry land (*yabbašâ*) to appear. Similar language is used to describe the crossing of the sea in Exodus: the sea (called the "deep" [*tēhôm*]; Ex 15:5, 8; see also Gen 1:2) is divided and "dry land" (*yabbašâ*, Ex 14:16) appears. Israel's departure from Egypt is a new beginning, a new creation for God's people. The crossing of the sea is represented as a crossing of the waters of chaos, the "sea at the end of the world." Perhaps the symbolic significance of the name is an at-

tempt to drive the reader to ponder its ultimate theological significance in addition to its historical referent.

Although the precise historical identification of the exodus sea still eludes us, Lake Timsah and the Bitter Lakes region remain the most likely candidates. The former is located southeast of Pi-Ramesse and, hence, would have been in Israel's southeasterly path. It is unclear, however, whether either Lake Timsah or the Bitter Lakes (several miles south of Lake Timsah, closer to the Gulf of Suez) were marshy areas or larger bodies of water at the time of the exodus. It is plausible, even if they were marshy areas, that the Israelites crossed while the area was flooded, which occurred periodically.

3. Wilderness Itinerary.

As difficult as it is to identify the location of the Red Sea, the stops along Israel's wilderness itinerary are more difficult still. Most vexing perhaps is the location of Mount Sinai, an issue that has garnered much scholarly attention for hundreds of years.

The Bible presents us with a fairly lengthy list of sites associated with the wilderness trek, both throughout the narratives of Exodus through Deuteronomy, but also in more compact form in Numbers 33. In general, the two are in agreement, although details differ. The chart in Figure 1: Israel's Wilderness Itinerary compares Israel's complete itinerary from Egypt to the plains of Moab according to Numbers 33 (right column) and the sites mentioned in the narrative of Exodus through Numbers (left column). Here one can see at a glance where the two agree and where they differ.

It has been argued that the wilderness itinerary is really multiple itineraries, each stemming from different sources or traditions (Coats), and this may account for the differences between these lists. It should be seen, however, that these lists differ more in terms of detail than substance. To say so is not to minimize the differences, but when the dust clears, little is gained by posing hypothetical reconstructions of Israel's literary history to explain these differences. It also seems wisest to treat these lists as historical regardless of the fact that the location of these sites cannot be verified archaeologically. Moreover, as G. I. Davies (1974) argues, these are itineraries, meaning they are literary products in the category of a well-documented an-

cient Near Eastern genre. They are not prepared to settle questions of geography. Differences between these lists do not necessarily reflect differing traditions about where the Israelites actually went, but different compositional agenda, one in narrative, the other an itinerary.

What has attracted the most attention on this general topic is the location of Mount Sinai (also referred to as Horeb, mainly in a number of passages in Exodus and Deuteronomy, but see also Ps 106:19 and Mal 4:4). The search for the location of Mount Sinai has even been the subject of a recent popular book (Blum). The desire on the part of Christians and Jews to know the location of Sinai has obvious motivations. First, and perhaps most obvious, is the religious significance of the site. To walk where the Israelites were brought into God's presence and where Moses received the *law would be a moving religious experience. Second, to locate the site would be a powerful apologetic for the historicity of the exodus specifically and Israel's early history in general. It must be admitted, however, that no present-day mountain would be able to yield such definitive information. Third, related to the second, Sinai is the most significant site in Israel's wilderness trek. Hence, knowing its location would provide the major clue to reconstructing the route of the exodus from start to finish.

It is commonly accepted that Mount Sinai is located somewhere in the Sinai Peninsula. Opinions differ, however, when more precision is sought. Perhaps the most common view is to locate the mountain in southern Sinai (most often Jebel Musa or Jebel Serbal). The fact that Deuteronomy 1:2 refers to Kadesh-barnea as an eleven-day journey from Horeb by way of Mount Seir may be most amenable to a southern location for Sinai. But other candidates have been suggested, including northern Sinai, central Sinai and somewhere in or near Midian.

Each of these locations affects one's conclusions concerning the route of the exodus (See Figure 2: Possible Routes of the Exodus). Hence, the proposed routes include the following. (1) Some have suggested a northern Sinai route along the "way of the land of the Philistines." This theory has come under increasing criticism and can safely be dismissed as an extremely unlikely option, particularly in light of Exodus 13:17-18, which states explicitly that the Israelites did not go that way. (2) A bit further south is

the "way of Shur." It may have been the route the patriarchs took to go to Egypt, suggested by Genesis 16:7 and 25:18. (3) A central route along the way of Seir may be suggested by Deuteronomy 1:2, but by no means is this identification explicit or even implicit. (4) The southern route, with various proposed locations for Mount Sinai, including a turn northward, with Mount Sinai in Midian near the mouth of the Gulf of Aqabah, remains the most likely option. Another option is that of E. Ananti, who identifies Sinai with Har Karkom in the Negev highlands, but this has been strongly refuted by G. I. Davies (1990) and I. Beit-Arieh.

The precise location of Mount Sinai is still a mystery. The tradition that it is located somewhere in the central or southern Sinai Peninsula is a long one, dating back to at least the fourth century A.D. The specific designation of Saint Catherine's monastery, however, is likely not based on any historical evidence. It has been argued that a location near Midian, if not in Midian, is implied in Exodus 3:1, 12. Moses settled in Midian, according to Exodus 2. He led his flock into the desert, the Hebrew expression *'aḥar hammidbār* (3:1, lit. "behind the desert") indicating some trek into the wilderness. The Hebrew is not explicit that a significant distance into the Sinai Peninsula is meant, which could allow for a location for Mount Sinai in Midian (Cross; Blum). This view, however, has not gained wide acceptance to date.

What also contributes significantly to the difficulties in locating the route of Israel's wilderness journey is that the biblical names of these sites are not those of sites today, not to mention the fact that some or many of these sites may no longer exist at all. Moreover, similarities between some names then and now have no bearing on whether the sites themselves can be identified, since these identifications may be legendary. It is also the case that some biblical names are anecdotal. For example, Meribah and Massah mean quarreling and testing (see also Kibroth-hattaavah, Num 11:31-35; 33:17). These names seem to reflect the events of Exodus 17 rather than being the original names of the sites. This is not to say that the sites themselves or their events are fictitious, only that the names will not aid in helping us determine their location. (It is worth noting that the LXX explicitly translates these Hebrew place names as "rebellion" and "test" rather than transliterating

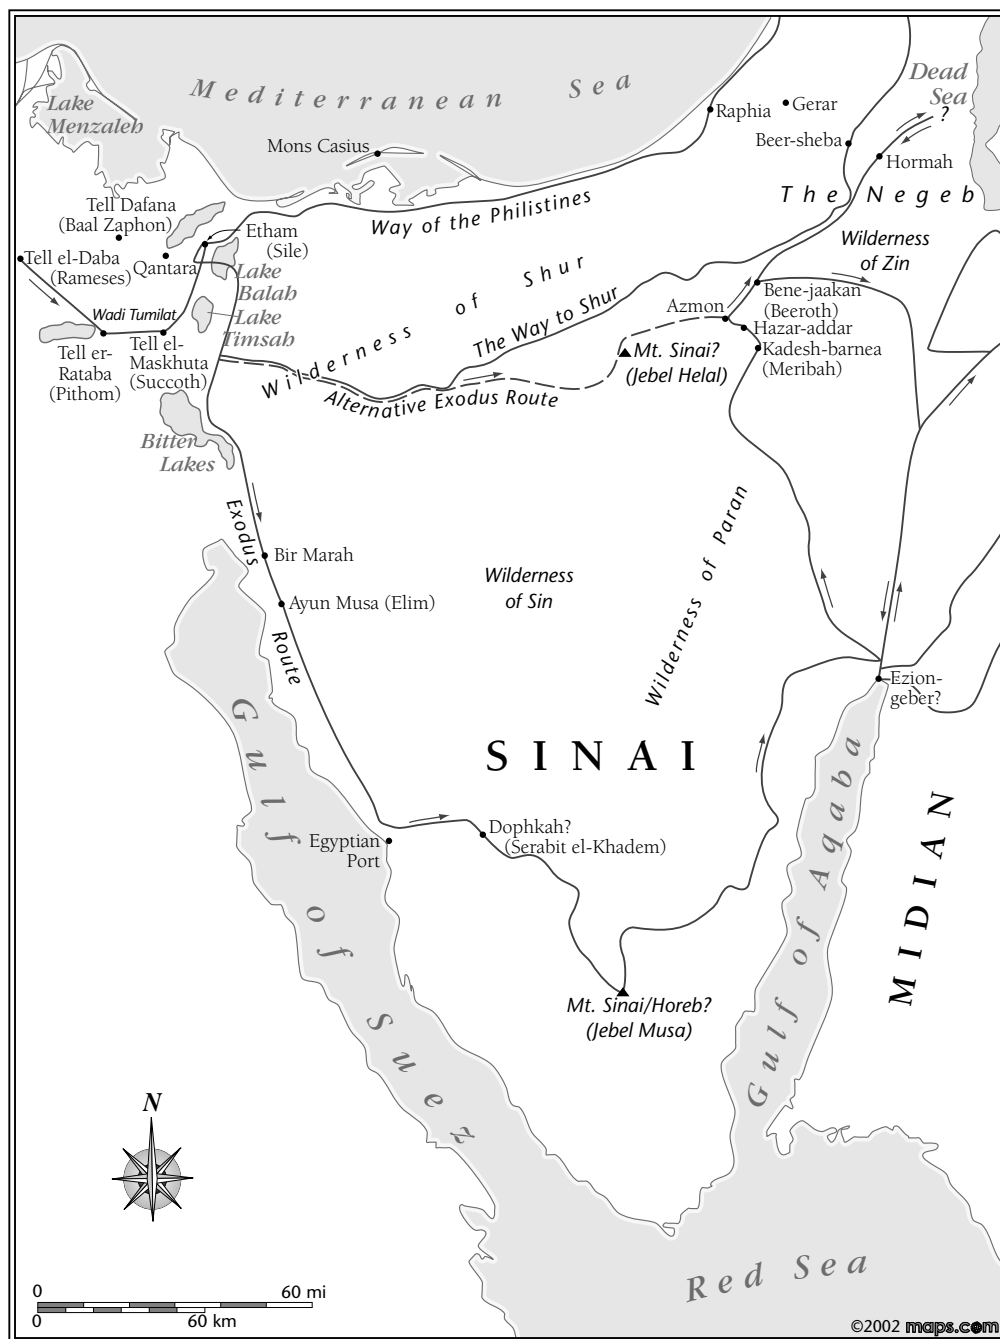

Figure 2: Possible Routes of the Exodus

“Meribah” and “Massah.”)

In the final analysis, precise identification of the geographic locations from the point at which the Israelites crossed the Red Sea and wandered throughout the wilderness remains sketchy at best, and in most cases unrecoverable. Suggested locations for individual sites depend in large part on what general route for the wilderness trek is adopted (northern, southern, etc.), which in turn depends on one’s view of the location of Sinai. The data are tentative; so, too, the conclusions.

4. The Red Sea and Wilderness as Theological Themes.

4.1. *Old Testament Reflexes.* The historicity of the crossing of the Red Sea, Mount Sinai and the wilderness wanderings remains a topic of scholarly attention, and for good reason. These are foundational events in Israel’s history, and thus, for Christian and Jew alike, the question of their historicity has significant implications. Despite the absence of secure geographical anchors, it is unwarranted to conclude that the biblical account is fictitious. A nation would likely have invented a more appealing national history than one that includes abject slavery and repeated moral and religious shortcomings (Sarna).

It should be kept in mind that the biblical accounts were not written to provide its readers with historical or geographic information, at least not what modern readers have come to expect. The biblical writer’s purpose was not only to recount what happened but to provide a means whereby the readers’ lives could connect to these past events. In other words, there is a hortatory purpose to these narratives.

That hortatory purpose is seen in the manner in which later biblical writers employed Israel’s past to provide a theological framework for understanding the present. The crossing of the sea is actually “revisited” in Joshua 3–4, which recounts the crossing of the Jordan. That this story is meant to be understood in light of the crossing of the Red Sea needs little elaboration. Here, too, the people are encamped by a body of water (Josh 3:1) that they are about to cross. They are led this time, however, not by pillars of cloud and fire but by another concrete manifestation of God’s presence, the ark of the *covenant (Josh 3:3). As Moses had done in Ex-

odus 14:13–14, *Joshua promises the people direct divine intervention in their imminent journey (Josh 3:5). The most obvious parallel, of course, is the parting of the water itself (Josh 3:13–17). One might even say that the crossing of the Jordan is a reenactment of the Red Sea crossing, an reenactment that allows those one generation removed from the exodus to participate in that event.

Of the other OT uses of the crossing of the Red Sea, the most explicit is found in Isaiah. A theme that recurs in this book is that the Israelites’ rescue from Babylon is to be understood as another exodus event. The God who made a way through the sea (exodus) is the same God now poised to bring his people out of another captivity (Babylon; Is 43:16–17). A similar use of the exodus with respect to God’s victory over the Assyrians may be seen in Micah 7:15–17 (cf. Zech 10:8–12).

Isaiah 51:9–10 introduces another factor. There, as in Isaiah 43, the argument concerns Israel’s deliverance from Babylon seen in the context of God’s past actions. But here the past event referred to is not only the parting of the Red Sea but the cutting of Rahab to pieces. According to ancient Near Eastern creation stories, the world was created out of conflict. Part of that conflict was the subduing of a god associated with water and depicted as a sea monster of some sort. This creature is known as Tiamat in the Babylonian creation story *Enuma Elish* and Yam in Canaanite sources. Rahab and Leviathan (Is 27:1) are thought to be biblical reflexes of these creation stories. Sea was a symbol of chaos, which had to be controlled for the order of the created world to exist. The particular god who won the struggle—that is, the creator of the inhabitable world—was elevated to supreme status in the pantheon. Although these specifics of the ancient Near Eastern story do not seem to come into play in the OT, the story as a whole is certainly called upon by a number of biblical writers such as Isaiah to serve their own theological purposes.

When seen in this light, the case made by B. F. Batto for understanding *yam sūp* as “sea to the end of the world” (see above) commends itself. This is not to say that this is what Red Sea means, but that this is how its theological function was understood. Israel’s crossing of the Red Sea, as well as her deliverance from Babylon

centuries later, are portrayed theologically as reflexes of an ancient cosmic battle.

Likewise, Israel's wilderness experience is reflected upon elsewhere in the OT. It is referred to as both a place of death and of life. Both are self-evident. It was in the desert that the exodus generation, those twenty-years old and older, died after the rebellion at Kadesh (Num 14:29; also Ps 106:14, 26). The purpose of the desert period was to kill off a rebellious generation. On the other hand, the desert also represents a place of life or, more accurately, a place of God's protection and provision for the new generation of Israelites living in the desert (Deut 8:15-16; 29:5; 32:10; Ps 136:16; Hos 13:5).

4.2. New Testament Reflexes. Both the crossing of the Red Sea and the wilderness wanderings become important theological themes in the NT. The exodus in particular is so pervasive in the NT that it is difficult to do justice to it (see the lengthy treatment by Plastaras): Christ leaving Egypt as a child is an exodus event (Mt 2:15); his death is referred to as an "exodus" (NRSV "departure") in Luke 9:31; the author of Hebrews provides an extended analogy between Moses' role as OT mediator and Christ as the final and better mediator (Heb 3:1—4:13); Israel's passage through the sea is analogous to Christian baptism (1 Cor 10:1-2).

The wilderness experience is likewise used as a theological theme. The episode of Christ's forty days in the wilderness is clearly meant to invoke images of Israel's forty-year desert tribulation (Mt 4:1-11; Mk 1:12-13; Lk 4:1-13), the difference being that Christ was obedient throughout his wilderness experience whereas the Israelites were not. Furthermore, as Christ lived out the wilderness experience, so does the church. This is the point made in the use of Psalm 95 in Hebrews 3 (Enns). As Moses delivered his people from slavery to the Promised Land via the wilderness, so too has Christ delivered his people from another form of slavery (to sin). He has gone ahead and entered the "new Canaan," the heavenly land that awaits his people if they remain faithful in their present wilderness wanderings. Hence, the warning of Psalm 95 not to "harden your hearts" as Israel did in the wilderness is applied to the church as it stands between its "Egypt and Canaan."

Such a theological rendering of the exodus and wilderness has no bearing on historical

matters, which have been discussed above. If anything, it is the theological reality to which the historical events point. The historical and geographic specifics of the Red Sea and wilderness itinerary promise to elude us for the foreseeable future. Nevertheless, the theology of these events, which is the reason they were recorded in the first place, transcends the quest for archaeological evidence.

F

FAITH

It is impossible to discuss faith in isolation, because it is associated with a cluster of ideas that have a focal point in *covenant. This cluster embraces trust, reliance, obedience and loyalty. These are illustrated in incidents in the story of God's interaction with Israel. Indeed, the OT's articulation of faith is characteristically embedded in stories, supplemented by responsive prayers in the Psalms. Discussions of faith as a theological concept belong in Pauline theology; they are not found in the OT. Missing from the OT too are creedal formulations of faith. The nearest to a faith formulation is a retrospective recital of the story of salvation such as we find in Deuteronomy 26:5-10. This recital accompanies worship, and it may be compared with Psalms 105, 106 and 107.

The story line of faith and its relational dynamics are the reasons that word studies will fail theology as a method for discussing faith in the Pentateuch. The hazards of word studies are well illustrated by the virtual absence of "trust" in the Pentateuch. "Trusting in the Lord" is clearly related to "faith" and is well represented in Psalms and Proverbs (*bāṭaḥ*, "to trust"). The idea of trusting or not trusting God is reflected in many of the pentateuchal stories and exhortations, but it is not reflected in the characteristic vocabulary of the Pentateuch. Hence, we need an approach to faith that is rooted in the life story of patriarchs and nation.

The retrospective of Hebrews 11 confirms this with its focus on faith in the unseen and faith in relation to promises that had not come to final fulfillment, for it manages to list a wide range of exploits and behavior under the rubric "by faith . . ." where the narratives themselves do not mention faith explicitly. With this holistic perspective in mind, we turn to the stories of the patriarchs and of Israel to discover how faith op-

erates in the Pentateuch.

1. Faith in the Abraham Cycle
2. Faith and Vow in the Jacob Stories
3. Faith in Yahweh and Covenant
4. Seeing and Believing
5. Faith and Its Fluctuations
6. Faith and the Rereading of the Old Testament

1. Faith in the Abraham Cycle.

Genesis 15:6, familiar from Paul's discussion of faith (Rom 4; Gal 3), is a good starting point because it highlights the two-way dynamic of the covenant relationship: "And he [Abraham] *believed* the LORD; and the LORD reckoned it to him as righteousness" (NRSV; *wēhe'ēmin bayhwh*, Hiphil of the verb *'mn*, "to believe, put trust in, rely on," with the preposition *bē*, "in"). The episode and immediate context of this exercise of trust and recognition of trust relates to God's specific promise of innumerable descendants, but the incident is embedded within a relationship between God and *Abraham that began back in Genesis 12. There the story started with a command and a promise: Abraham was to leave his homeland and would become a great nation (Gen 12:1-3). The promise in Genesis 15:5 echoes this previous promise of becoming a great nation. So at this point where faith as believing is signaled lexically, the narrator brings the context of promise, and the entire story line, as well as the concept of covenant, into play. The audience is expected to hold the whole story in mind.

In the Abraham cycle, we cannot separate the *promises from the commandments, faith from obedience, inward orientation from behavior or God's initiative from Abraham's response. The inner orientation is expressed in a variety of ways. Taking our cue from the story line, we should not separate attitudes from ac-

tions, the tangible from the intangible, blessings experienced from blessings previewed. In the story line these are all linked together within the relationship between God and Abraham. In Genesis 15 the sand beneath Abraham's feet and the stars in the sky function as symbols and physical reference points for the yet-unborn descendants. This episode is an example of the seen and the unseen, of present reality and future possibility, of visual symbol and divine guarantee, coupled together in the telling of the story. The rest of Genesis 15, with its futuristic perspective on Abraham's descendants in slavery, *exodus and Promised Land, is anchored in God's covenant making: "on that day, the LORD made a covenant with Abram, saying, 'To your descendants I give this land'" (Gen 15:18 NRSV). The covenant making is dramatized symbolically in the ritual. If the chapter begins and ends with divine initiative, it also encloses Abraham's responses and Abraham's questions. In other episodes our appreciation of Abraham's "faith" will have to stretch to encompass Abraham's skepticism and Abraham's dubious survival strategies as well.

Abraham's exercise of faith permeates the whole patriarchal cycle, though it may come to a focus at key points. Faith is implicit in the actions recorded in episodes where the narrator chooses to mention a different aspect of the human response. Thus, for Abraham to leave his homeland at the outset of the story was for him to exercise faith, though the narrator highlights his obedience at that point instead: "So Abram went, as the LORD had told him" (Gen 12:4 NRSV). We can attribute faith to the whole Abraham cycle and to the stories about *Isaac, *Jacob and *Joseph in turn because there is a thread of promise that begins with the promises made to Abraham of an heir, descendants, a nation, a land, material prosperity and *blessing to the nations. Faith in the narrower and more explicit sense is a response to these promises, believing that they will come true. Faith in a broader sense, or perhaps we should say in a more fundamental sense, is a response to God himself, especially to his invitation into a bonded relationship in which he would stand by the patriarchs: "I will establish my covenant between me and you . . . an everlasting covenant, to be God to you" (Gen 17:7 NRSV). If Genesis 12:1 is one end of the thread of explicit promise in the patriarchal stories, Joseph's words to his brothers before he dies is the other: "God

will surely come to you, and bring you up out of this land to the land that he swore to Abraham, to Isaac, and to Jacob" (Gen 50:24 NRSV). This faith utterance speaks of the specific promise of a land, linking back to Genesis 12:1. It also speaks more fundamentally of a God who stands by, who is committed and who steps in as protector-rescuer.

2. Faith and Vow in the Jacob Stories.

Just as there are composites of faith and obedience in the stories, there are other admixtures. We see composites of faith and survival strategies in none so clearly as Jacob. His moment of faith, removed from his family context, takes the form of a vow: "*If* God will be with me, and will keep me in this way that I go, and will give me bread to eat and clothing to wear, so that I come again to my father's house in peace, *then* the LORD *shall be* my God" (Gen 28:20-21 NRSV, italics mine; 'im . . . wēhāyā). This response by Jacob to God's enunciated promises (Gen 28:13-15) is positive but conditional. It is expressive of faith but requires additional evidence and adds a few specifics—food and clothing (Gen 28:20)—to the broad terms of God's promise just announced in the *theophany. Clearly, then, "faith" is not one single thing or of one single hue in the patriarchal stories. Jacob's faith response has the form of a vow: "Jacob vowed a vow" (Gen 28:20a; *neder* and the verb *nādar*). A vow oscillates between a devout promise and an attempt to strike a bargain. We have artifacts deposited in temples, as well as stories outside the Bible, that bear witness to this ancient Near Eastern custom of the votive offering, an offering sometimes made in advance to secure the request and sometimes made afterward acknowledging the request granted. Thus Jacob offered God a ten percent cut of all future profits (Gen 28:22). Jacob also offered allegiance and worship: "then the LORD shall be my God, and this stone, which I have set up for a pillar, shall be God's house" (Gen 28:21-22 NRSV). How much we emphasize Jacob's promise and how much we emphasize his bargain is to some degree determined by reader response.

When we read stories in ancient crosscultural contexts, we cannot pretend to be reading a character's mind, nor can we analyze the complex flow of a character's emotions over time. The narrator and the cultural gap preclude full access. We cannot remove all ambivalence from the text or from our understanding of it. This

will be true about stories of faith and unbelief or of mixed degrees of faith and doubt. Our reading of the story will often be reader-response based for want of access to the character's interior life. This said, the narrator of this Jacob story does seem to highlight for us the awesome quality of God's appearance and the magnitude of God's promises in contrast with Jacob's rather carefully weighted or bargaining response. In any case, we will need the rest of Jacob's story to evaluate whether the faith commitment that Jacob made at this point will further the metanarrative of Yahweh and the Israelites. By the end of Jacob's life story, we know that Jacob retained his faith commitment and even developed it through further encounters with God. Episodes within his life story will read more ambiguously and perhaps be truer to life for that. When we relate this to covenant, it reminds us that a bonded relationship, whether a political alliance or a covenant relationship with God, may undergo fluctuations: cancellation or the updating of the terms of the covenant and important occasions for the renewal of the oath of commitment.

We tend to take monotheism for granted as the only rational faith alternative to no faith at all, to atheism, but covenant with God in the OT has the backdrop of polytheism. The opposite of faith in the Pentateuch is not unbelief but reliance on other deities and powers. From an orthodox Yahwistic perspective, faith as it is expressed in the Pentateuch involves a choice between an exclusive allegiance to the God who reveals himself as Yahweh or trust in other powers instead of, or in addition to, Yahweh. Jacob's words "then Yahweh shall be my god" (Gen 28:21b) point to this choice of available gods, and Genesis 35 offers a sequel. There Jacob demands that his community "Put away the foreign gods that are among you" (Gen 35:2 NRSV) before the return pilgrimage to Bethel. However, we cannot be sure of the significance of Jacob's action on that occasion: "Jacob hid them [the foreign gods and earrings] under the oak that was near Shechem" (Gen 35:4 NRSV). Are they buried for later retrieval or permanently renounced for purification? Whether it is household images, golden earrings or a *golden calf, the symbols and attractions of alternative "faiths" appear within Israel's households and national life throughout the OT (*see* Idols, Idolatry, Teraphim, Household Gods).

3. Faith in Yahweh and Covenant.

3.1. Faith and Its Opposites. By linking faith with a choice of gods and with covenant relationship, and hence with covenant loyalty, we understand faith in terms of faithfulness, that is, of wholeheartedness, of loyalty, of unswerving allegiance, expressed by observing the stipulations of covenant. Faith for Israelites entails fidelity, "keeping faith with" Yahweh in the manner of a vassal remaining true to an overlord and not becoming embroiled in conspiracies. "Keeping faith with" is thus the opposite of double-mindedness, duplicity and deception, divided loyalties, or outright rebellion.

At the covenant-renewal occasion convened at Shechem several generations after Jacob, Joshua issued the challenge to Israel to "put away the foreign gods that your ancestors served" and to become instead the loyal vassals of Yahweh alone: "Serve him in sincerity and in faithfulness" (*bētāmim ûbē'emet*, Josh 24:14; cf. 24:19-24). This spirit of wholehearted and undivided allegiance is the counterpart to God's fidelity. God's commitment as overlord in the covenant is characterized as God's being "great in steadfast love and faithfulness" (*rahḥesed we'emet*), an utterance God makes in the personal revelation to Moses at the top of Sinai (Ex 34:6). These paired terms in Joshua 24:14 and Exodus 34:6 form a hendiadys. The second word in the hendiadys, *'emet*, conventionally translated "truth," means "fidelity" or "faithfulness" in this context. It has a semantic equivalent in Akkadian *kittu* (pl. *kinātu*, "steadiness," "reliability," "truth," "loyalty"), which is used in treaty vocabulary: "If you do not always offer them complete reliability [*kittu šal-imtu*]. . . if you do not support them with proper loyalty [*ina kināte tarṣāti*], speak to them with a true heart [*ina kitti ša libbikunu*]" (Vassal Treaties of Esarhaddon 8.96-99). There is a whole international vocabulary in treaties and covenants of terms for this wholehearted and unswerving allegiance to the partner. Keeping faith with God, Israel's covenant partner, is at the heart of OT faith. The whole ethos of Deuteronomy reflects this "keeping faith with" Yahweh in its exhortations to choose Yahweh, to cling to Yahweh, to love Yahweh, to fear Yahweh, to walk in his ways and to form no alliance with the Canaanites and their gods.

3.2. Faith and Its Correlates. Covenant acts as a theological sponge that sucks up all the drop-lets of varied human responses so that faith as a

distinct droplet, along with trust, love and obedience, is absorbed within the covenant relationship. Thus it is impossible to squeeze faith out of the sponge without other expressions for covenant allegiance, such as “the fear of the Lord,” “walking in the ways of Yahweh” and “loving the Lord” with all one’s heart and mind and soul and strength. All this range of human response to God in covenant relationship marks an Israelite spirituality. This faith of Israel also embraces obedience to the specifics of the Torah and participation in the cultic system. For OT theology, it is artificial to divorce the inward individual orientation from its outworkings in communal worship and behavior. In Genesis, the promises are prominent; in Exodus, the stipulations; in Leviticus, cultic maintenance; in Numbers, the community experience in the *wilderness; in Deuteronomy, the challenge to renewal of commitment. Yet the faith and varied responses of the ancestors and Israelites are best grasped in relation to covenant making, covenant breaking and renewals of covenant. The canonical presentation of the books of the Pentateuch expresses this coherence through a variety of genres, from stories to laws to cultic instructions to exhortation to poems.

One relational dimension of faith is trust. Faith as trusting God is intimately related to Israel’s response to God’s emissaries and representatives. In the Pentateuch, this means acceptance of the angel of the Lord, of *prophets and of *priests, but it especially involves the response to *Moses as covenant mediator. To believe Moses is to trust God, whom he represents. This is epitomized by the story in Exodus 3–4 where the issue turns around why the Israelites should believe Moses. The *signs God gives Moses will kindle faith: “so that they may *believe* that the LORD, the God of their ancestors . . . has appeared to you” (Ex 4:5 NRSV; Hiphil of *’mn*). After Moses’ demonstration to the enslaved people, Israel’s response is expressed in the words “The people *believed*; and when they heard that the LORD had given heed to the Israelites and that he had seen their misery, they bowed down and worshiped” (Ex 4:31 NRSV; Hiphil of *’mn*). This is a high point of trust in the story. Unfortunately, that trust breaks down repeatedly in the exodus and desert journey so that we can see that faith and trust fluctuate in the relationship, displaced by accusation and complaint (see Ex 14:11–12; 15:24; 16:3; 17:3;

Num 11:1; 14:1–4). After the demonstration of rescue at the Red (Reed) Sea, faith in Yahweh is paired with faith in Moses: “So the people feared the LORD and believed *in* the LORD *and in* his servant Moses” (Ex 14:31 NRSV; Hiphil of *’mn* and *bē* preposition with both Yahweh and Moses). The dual trust reappears as a motif at Sinai, where God says that he will manifest himself in his cloud theophany: “in order that the people may hear when I speak with you and so *trust you* ever after” (Ex 19:9 NRSV; Hiphil of *’mn* with *bē*). After the fear engendered by the theophany and the audible voice of God, the people request Moses to act as their intermediary (Ex 20:19). In this series of episodes and verses, the concepts of believing and trusting are coupled together, and the mediator and the God of covenant are closely associated. To trust God is to trust Moses; to trust Moses is to trust God.

4. Seeing and Believing.

Taking up the idea of faith, trust and demonstration, we need to consider the role of signs and miracles in relation to faith, a role replayed in the Gospel narratives. In Hebrews, faith is spoken of in relation to things unseen—which might skew our reading of the Pentateuch. Throughout the telling of the exodus story there is a powerful emphasis on seeing and believing that supports our contemporary idiom, “Seeing is believing.” For instance, at the seashore the Israelites are told: “Do not be afraid, stand firm, and *see* the deliverance that the LORD will accomplish for you today; for the Egyptians whom you *see* today you shall never *see* again. . . . Israel *saw* the Egyptians dead on the seashore. Israel *saw* the great work that the LORD did against the Egyptians. So the people . . . *believed*” (Ex 14:13, 30–31 NRSV; using the verbs *r’h* [“to see”] and the Hiphil of *’mn* [“to believe”]). “Standing firm” is the physical counterpart of faith and trust (Ex 14:13; Hithpael of *yšb* [“to take up one’s position, to stand, stand firm”]). The miracles—such as the parting and returning of the Reed Sea—are demonstrations. They are visual aids to faith. In biblical terminology, these miracles are spectacular “signs” (*’ôṭ* [“a sign”]; cf. Ex 4:8, 17, 28, 30; 7:3; 8:23 [MT 8:19]; 10:1–2; Num 14:11, 22; Deut 6:22; 7:19; 11:3; 26:8; 29:3 [MT 29:2]; 34:11). The “believing” the Israelites did was based on seeing a demonstration, not on propositions and concepts that are invisible or a God who is hidden.

Because of the miraculous demonstrations

and the seeing that should lead to believing, later episodes from the desert experience of the Israelites are presented as tests that are failed through unbelief. This is epitomized in God's comment in Numbers 14:11: "How long will this people despise me? And how long will they refuse to *believe in me* [Hiphil of *'mn* with *bē*], in spite of all the *signs* that I have done among them?" This comment is evoked by the mistrust and complaint in response to the news about Canaan brought back by the spies. Deuteronomy, dealing with the same episode, condemns the reaction of wanting to return to Egypt as a lack of trust and as a failure to accept the evidence of their own eyes: "the LORD your God . . . will fight for you, just as he did for you in Egypt *before your very eyes*. . . . But in spite of this, *you have no trust in the LORD your God*. . . . You rebelled against the command of the LORD your God, neither *trusting* him nor obeying him" (Deut 1:30, 32; 9:23 NRSV, using the Hiphil of *'mn*; on the experience "seeing with your eyes," see also Deut 3:21; 4:34, 6:22; 10:21; 11:7). Thus, seeing, believing and trusting are woven together, but this woven cord of Israelite faith frays and snaps under stress.

5. Faith and Its Fluctuations.

We cannot really think of Israel's faith as a progression from an elementary flowering of faith through to a steadfast maturity when the story line speaks otherwise. A "conversion model" of faith or a "victorious life model" do not fit the Hebrew story well. Rather, there are high points and low points of faith as the narrative unfolds. Thus, Exodus 4:31 is a high point of faith that is associated with thankfulness and worship, while Numbers 14:11 is a low point of unbelief. Exodus 19 and 24 represent high points of response in covenant making, while Exodus 32 represents a low point of covenant breaking. Even Moses, as well as Aaron, has his low points and is eventually excluded from the Promised Land: "Because you did not *trust in me* [Hiphil of *'mn*], to show my holiness before the eyes of the Israelites, therefore you shall not bring this assembly into the land that I have given them" (Num 20:12 NRSV).

6. Faith and the Rereading of the Old Testament.

Since NT writers found it illuminating to reflect on commitment to Christ and on unbelief in the light of the Pentateuch, this is an invitation for

us to engage in our own rereading exercises. How we should relate faith as we experience it in our contemporary situations to the stories in Israel's metanarrative is a much wider subject for inquiry, involving *hermeneutics, biblical theology, spirituality and *preaching. The alternatives to faith and loyal discipleship that we might choose only partially parallel Israel's inclinations and strategies. Our worlds, communities and life experience are radically different, though our human nature is much the same. God's faithful commitment and demonstration of supernatural signs that we have noted in the Pentateuch is updated in a new and radically different covenant relationship through Jesus that invites our faith response.

FALL

In theology, the term *Fall* is often used to describe the first act of disobedience of *Eve and *Adam. However, the Hebrew root *npl* ("to fall") is not so used in the Hebrew Bible. Instead, *npl* may be used to describe death, disaster or the coming of God's judgment. In a collection of antithetical proverbs contrasting the righteous and the wicked, Proverbs 11:5 uses *npl* to describe the disaster coming upon the wicked: "The righteousness of the blameless keeps their ways straight, but the wicked fall by their own wickedness." The nearest NT approximation to the idea of the Fall of humankind is Romans 5:12-21, where Paul speaks of the universal consequences of Adam's act of disobedience. Hence, it is better to describe the disobedience of Eve and Adam as one of defection, deviation or transgression. Us-

ing “Fall” language may lead to misconstruing the biblical data. We shall examine Genesis 2:4—3:24, since it is the foundation text describing the first act of human disobedience.

1. Structure and Plot
2. Two Trees
3. The Main Participants
4. Concluding Observations

1. Structure and Plot.

Genesis 3 should not be read by itself as a “Fall” story but together with Genesis 2 as an account of the *creation of the human and animal worlds in a state of original harmony, which was then breached by human disobedience. Unlike the creation account of Genesis 1, which ends with the shalom of the divine *sabbath, human disobedience destroys the joyous intimacy described at the end of Genesis 2, resulting in alienation in Genesis 3 and escalating violence in Genesis 4.

The focus of Genesis 1:1—2:3 is on God and his work as Creator, culminating in the creation of humans in the divine *image, whereby they are given authority over the creation. That account is made complete by God’s sabbath rest. In Genesis 2:4-25 the focus shifts to the creation of man, who is to be steward of the garden, followed by the creation of woman as an appropriate companion. Abundant provision is made for their needs. This account emphasizes that humans are under divine authority and in a network of relationships. Their intimate relationship with each other and their environment is completed by their relationship with their Creator, whom they are called to obey. The frequent use of the compound name Yahweh Elohim emphasizes that God is not only the Creator but also the covenant God who enters into relationship with his creatures.

Genesis 3:1-24 describes the act of disobedience that leads to a breach with the Creator, alienation between humans and discord with their environment. Nonetheless, God is not content to leave humans to their own devices but makes continuing provision for their well-being and seeks to maintain relationship with humans in salvific ways despite the blighting effects of their disobedience.

In Genesis 4:1-26 we have a hopeful moment in the birth of *Cain and *Abel, but Cain’s envy leads to the first fratricide. Lest this be thought to be just an aberration, the story then reports the foundations of civilization amidst escalating

violence. Unlike the first creation account, which ends in sabbath rest, human sinfulness leads to increasing unrest and dysfunction in society. Yet as in Genesis 3, so also Genesis 4 ends with a note of hope with the birth of *Seth and the report that people began to invoke the name of Yahweh, which leads on to the establishment of another, more righteous lineage.

The chiasmic pattern of Genesis 2—3 noted by J. T. Walsh and followed by many others (e.g., Blocher 1984, Wenham 1987, Mathews, Hartley) makes the eating of the fruit the pivotal feature of the symmetric structure and thus its turning point. Prior to this act there is harmony in the garden, but the offense results in alienation and judgment.

2. Two Trees.

Genesis 2:9 reports that in the midst of the garden of Eden there were two trees: the tree of life and the tree of the knowledge of good and *evil. The first tree offered the possibility of eternal life (Gen 3:22), but the couple were no longer permitted to eat from it after eating from the tree of the knowledge of good and evil. There is no suggestion at Genesis 2:9 that it was prohibited to the humans prior to this. We shall not concern ourselves here as to whether the trees are to be taken as literal or symbolic (for the suggestion that the trees, while literal, had sacramental significance, see Keil, 84-85; Kidner, 62; contra Blocher 1984, 124; *see* Eden, Garden of).

Scholars have offered various explanations of the expression “knowledge of good and evil” (for discussion, see Blocher 1984, 146-50; Westermann, 211-16; Wenham 1987, 62-64; Walton, 170-72, 213-17). (1) A view of antiquity, still followed by some moderns, is that the phrase refers to sexual knowledge. Yet Genesis 1:27-31 suggests that sexual differentiation was part of God’s good creation, and Genesis 2:18-25 reveals that marriage was instituted by God. (2) Some writers suggest that “good and evil” is a merismus for everything (i.e., eating from this tree would give omniscience). However, this is not confirmed by the outcome. While the *serpent possibly wished to suggest such a nuance when he commented that consuming it would make the humans godlike, eating proved a disappointment and resulted only in shame and recognition of their nakedness.

(3) H. Blocher (1984, 121-34) proposes, with some merit, that “the knowledge of good and

evil” refers to moral autonomy. By eating, the human couple acquired the ability to determine good and evil without reference or obligation to God. Yet it is hard to imagine that God would delegate this prerogative to human beings. (4) A closely related view is proposed by G. J. Wenham, who suggests that the tree of the knowledge of good and evil gave wisdom: “The latter was forbidden for human consumption because the wisdom acquired through eating it leads to independence from God, whereas true wisdom begins with the ‘fear of the Lord’ (Pr. 1:7)” (Wenham 1994, 62).

We should note that in a sense the man and the woman already had knowledge of what was right and wrong before they ate, since it was implicit in the command. On the other hand, Hebrew thought recognized the experiential and relational dimensions of knowledge. To eat from the forbidden tree was an act that gave knowledge based on experience but also established autonomy from God inappropriate for humanity. We know only too well that the very nature of temptation, especially a new form of temptation, begs to be experienced for the knowledge it is thought to offer. Such knowledge inevitably proves disappointing, if not illusory, but it is the attraction that gives temptation its power. The irony is that true wisdom, and the right knowledge of good and evil, lies in rejecting the experience.

Some recent treatments of Genesis 2–3 interpret it as a story about human maturation (see Bechtel), but preferable is the older view of Keil suggesting that the tree was to give the human couple moral discernment by their abstention from it (Keil, 86). The suggestion that experience of evil gives greater discernment is completely fallacious. The doing of evil tends always to corrupt: a thief does not increase in moral discernment by stealing and, conversely, Jesus did not become less discerning for having refused Satan’s temptation.

The prohibition relating to the tree of the knowledge of good and evil, mentioned first in Genesis 2:9, comes in 2:17. As T. E. Fretheim observes, “The permission establishes an incredible range of freedom for the creatures; hence, the command that follows certainly does not seem repressive. The command may appear surprising, but it indicates the important role law has to play as a creational, pre-sin reality; command inheres as an integral part of the created order. To be truly a creature entails limits; to

honor limits becomes necessary if the creation will develop as God intends” (Fretheim, 351).

3. The Main Participants.

Genesis 2 gives special attention to the creation of the man and the woman. Having permitted the man to name the animals, a process through which the man recognized the unsuitability of any to be his partner, God created woman and, like a celestial matchmaker, introduced her to the man. This section describes the man’s delighted recognition of the woman as his true companion. The passage ends with the statement that they were naked (*‘ārūmmīm*) but not ashamed. The point is not to idealize nudity but rather to emphasize their innocence. As Sarna (23) puts it, “So long as the harmony with God remains undisturbed, the pristine innocence and dignity of sexuality was not despoiled.”

In contrast to the innocent couple, the serpent is described as “crafty” (*‘ārūm*, Gen 3:1), an obvious wordplay. By seeing the serpent described as shrewd—wisdom is normally desirable, but here it is of the wily kind—we are warned to be cautious in accepting anything it says.

Eve’s response was inadequate; she magnified God’s strictness. Once the serpent had Eve in dialogue, it then directly contradicted God’s word concerning the consequences of disobedience and misrepresented God by suggesting that he was keeping something from them. The serpent claimed that if the humans ate the fruit they would not die but become as God, knowing good and evil. This temptation, to be as God, was a direct denial of all that it meant to be in the image of God. The image was not lost but was under major attack because the couple misrepresented the God whose representatives they were on earth. Moreover, the creation order was inverted: humans were given dominion over snakes, but by obeying the serpent’s advice they ceded that dominion.

The woman saw that the fruit was desirable—*sin has a false attraction and seems to offer wisdom (cf. 1 Jn 2:16)—so she did the dire deed: “She took . . . and ate: so simple the act, so hard its undoing. God will taste poverty and death before ‘take and eat’ become verbs of salvation” (Kidner, 68). The man did no better. Sarna rightly notes that the Hebrew plainly says that the man was there with her, showing “he was a full participant in the sin” (Sarna, 25; cf. 1 Tim 2:13-15).

Their eyes were opened, but they discovered that they were nude, not shrewd. The knowledge was not liberating; instead, it produced such shame that they attempted the first “coverup.” They now experienced estrangement from the source of all life and goodness. Genesis 3:8 functions as a hinge between verses 6-7 and 9-19. They had already tried to cover up (Gen 3:7). Now the realization of their nakedness and their guilt led them to hide from God.

Although there is no indication in the account of how long the man and woman continued in a state of innocence, the use of the Hithpael participle *mithallēk* (“walking to and fro”) suggests a repetitive or habitual type of action. Thus it is likely that the man and the woman were accustomed to experiencing daily the blessed presence of the living God. Their offense now caused them to hide from the One whom they had previously welcomed.

God in his mercy questioned the rebellious couple instead of leaving them to their own devices. God’s call to Adam, “Where are you?” is to be understood as a rhetorical question inviting them “to make admission of their faults” (Chrysostom *Hom. Gen.* 17.22, cited in Louth, 85). “God’s questions were designed to elicit confessions, not information; he knew perfectly well what they had done” (Wenham 1994, 63). Wenham compares them to children playing hide-and-seek: “Just as a parent who sees where his children are hiding may shout out, ‘Where are you?’, in effect inciting them to come out, so does God. And, with Cassuto, we presume that this is what happened here: the couple emerge shame-faced from the trees. Their reply to God’s inquiry shows that they understood the question as an invitation to come out and explain their behavior” (Wenham 1987, 77).

When Adam explained that he had hid because of his fear concerning his nakedness, he did not perceive “that his very excuse provides evidence of his misdeed” (Cassuto, 156). Considering the fact that the couple had already taken steps to cover their genitals, the “motif of nakedness . . . obviously stands for more than a lack of covering, in view of the shame and fear that was generated over it. From this point on, all sinners will fear the Lord God when their guilt is uncovered” (Ross, 144). This led to God’s next question as to who had told them about their nakedness—was their new awareness the result of a guilty conscience?

When a coverup would no longer do, the guilty couple both shifted the blame (Fewell and Gunn, 22-38). The man answered, “The woman whom you gave to be with me, she gave me fruit from the tree, and I ate” (Gen 3:12). There was an irony about the answer: first the man blamed the woman; then he blamed God for giving him the woman. Previously he had delighted in the woman, but now we see that guilt produces alienation. “Here the divisive effects of sin, setting man against his dearest companion (cf. 2:23) and alienating him from his all-caring creator, are splendidly portrayed” (Wenham 1987, 77). When challenged, the woman blamed the serpent. As Dorotheus of Gaza said, noting the failure of the pair to humble themselves and accept their guilt, and particularly Adam’s attempt to blame God for giving him the woman, “when a man has not the guts to accuse himself, he does not scruple to accuse God himself” (*Spiritual Instruction* 1, cited in Louth, 87).

Luther observed that the Fall resulted in humanity turning inward. The alienation that resulted affects all our relations: divine to human, man to woman, human to human, human to the environment (see Hauser). Jonathan Edwards described something of this when he said that at “the fall, the mind of man shrank from its primitive greatness and expandedness, to an exceeding smallness and contractedness. . . . Before, his soul was under the government of the noble principle of divine love, whereby it was enlarged to the comprehensiveness of all his fellow creatures and their welfare. . . . [But] sin, like some powerful astringent, contracted his soul to the very small dimensions of selfishness, and God was forsaken, and man retired within himself, and became totally governed by narrow and selfish principles and feelings” (cited in Van Dyke, 164).

Prior to this, God had only blessed his creation, but now the serpent was degraded for its treachery. Just as the serpent was *‘ārūm mikkōl* (“more crafty than all”) other animals (Gen 3:1), now it was *‘ārūr mikkol* (“cursed above all,” Gen 3:14). As V. P. Hamilton observes, talk of crawling and eating dust are “expressions of humiliation and subjugation (as in Ps 72:9; Isa 49:23; Mic 7:17)” (Hamilton, 197). Since serpents do not literally “eat dust,” the expression is clearly a metaphor.

Many scholars see God’s curse of the serpent as an etiology explaining the hostility between

snakes and humans (Gunkel, 20-21; von Rad, 92-93; Sarna, 24, 27; Westermann, 258-59). This type of interpretation plays down the idea that we have here an etiology of the origin of evil and instead puts emphasis on the description of the serpent merely as one of the animals created by Yahweh God. Others see it as more than an etiology (Cassuto; Hamilton; Wenham 1987). W. Eichrodt notes that the serpent's apparent "superhuman" access to information "about the tree of knowledge and the demonic hostility toward God, which burst out in the serpent's words, are an unmistakable sign that a deliberate anti-God power is here at work" (Eichrodt, 2.405). So although biblical teaching about Satan does not appear until later, the church's identification of the serpent with Satan "was an absolutely correct intuition of its real character" (Eichrodt, 2.405). In veiled and enigmatic fashion, the animal features of the serpent "suggest a power inimical to God which helps to bring about man's apostasy from God and which presents a deadly threat to the life of man in every age" (Fichtner, 574). Wenham says, "Once admitted that the serpent symbolizes sin, death, and the power of evil, it becomes much more likely that the curse envisages a long struggle between good and evil, with mankind eventually triumphing" (Wenham 1987, 80).

Genesis 3:15 has long been understood as the first announcement of the gospel. However, a majority of modern critical scholars fail to see this as a protoevangelium (see Skinner; von Rad; Westermann). Many, including some conservatives, see the seed of the woman as collective, yet as Wenham observes:

The oldest Jewish interpretation found in the third century B.C. Septuagint, the Palestinian targums (*Ps.-J.*, *Neof.*, *Frg.*), and possibly the Onqelos targum takes the serpent as symbolic of Satan and look for a victory over him in the days of King Messiah. The NT also alludes to this passage, understanding it in a broadly messianic sense (Rom 16:20; Heb 2:14; Rev 12). . . . Later Christian commentators, beginning with Justin (*ca.* A.D. 160) and Irenaeus (*ca.* 180), have regarded 3:15 as the Protoevangelium, the first messianic prophecy in the OT. While a messianic interpretation may be justified in the light of subsequent revelation, a *sensus plenior*, it would perhaps be wrong to suggest this was the narrator's own understanding. (Wenham 1987, 80-81)

But in the light of seed imagery in Genesis as a whole, a case can be made for seeing 3:15 as messianic. According to T. D. Alexander, Genesis 3:15 "anticipates the creation of a royal line through which the terrible consequences of the disobedience of the man and the woman in the Garden of Eden will be reversed" (Alexander, 31; cf. Collins).

God's judgment on the woman strikes two important aspects of her being. First, she will experience intense pain in childbearing (Gen 3:16), which should be an area of personal fulfillment. Second, God states, "Your urge will be to your husband, but he will rule over you" (lit. trans.). The term *těšûqâ* ("urge, desire") is rare; it is found elsewhere in Genesis 4:7 and Song of Songs 7:11. N. Sarna lists three possible interpretations of this statement: "Rashi understood this, together with the next clause, to refer to the satisfaction of female *sexuality being traditionally dependent on the husband's initiative. Rambam took it to mean that despite the discomforts and pain attendant upon child-bearing, the woman still longs for the sexual act that brings about this condition." Third, it may describe a "social reality" in which "the woman was wholly dependent for her sustenance upon what her husband could eke out of the soil, in striking contrast to the situation in Eden," where food was bountiful (Sarna, 28).

Another view has been argued by S. T. Foh (summarized in Wenham 1987, 81-82), noting the parallel with Genesis 4:7, where sin seeks control over Cain but he must master it. Hence she argues that the urge is not a desire for sexual intimacy but a desire to be independent of or to dominate her husband, but he will rule her. Against this view Walton notes that in each of the three texts where *těšûqâ* appears there is no common object desired, so it is better to regard it as referring to a basic or inherent instinct. Whichever view one accepts, the comment of D. Kidner is apt: " 'To love and to cherish' becomes 'To desire and to dominate' " (Kidner, 71). Consequently, it "is hard to see how discussions of 'male headship' as an 'ordinance of creation' can be sustained by an appeal to this chapter. This chapter describes how things should not be; this is the broken world" (Atkinson, 94).

The judgment against the man strikes at the area of greatest significance for him, his work. Work is not the curse, but it is marred and frustrated by the Fall. As G. von Rad comments,

"Work was ordained for man even in Paradise (ch. 2:15). But . . . it is so threatened by failures and wastes of time and often enough comes to nothing" (von Rad, 92). Because the man sinned at the point of eating, now he will be judged by having difficulty in producing food. His work is now turned into back-breaking toil: "By the sweat of your face you shall eat bread" (Gen 3:19). Finally death will end man's labor: "Man is the loser in the struggle with the ground, for, as it were, the ground will at last overcome him" (Young, 139).

On the broader implications of God's judgments, Fretheim comments, "The sentences touch every aspect of human life: marriage and sexuality; birth and death; work and food; human and non-human. In all these areas, one could speak of death encroaching on life. Disharmony reigns supreme" (Fretheim, 363)

What sort of death is meant in Genesis 3:19? God's judgment for disobedience was death, but Adam lived 930 years before dying (Gen 5:5). Chrysostom pointed out that God in his mercy delayed punishment so that he might "display his characteristic love in regard to sinners, even despite their fall" (Chrysostom *Hom. Gen.* 17.13). Hamilton suggests that the punishment here was not death but expulsion to the uncertainty of life outside the garden. Wenham's comment is more apt: "The consequences of his actions are both physical—toil, pain, and death—and spiritual—alienation from God. The spiritual consequences follow the act of disobedience immediately, but the physical penalties—pain, suffering, and death—may take longer to become evident" (Wenham 1987, 90).

The man called his wife *ḥawwā* ("Eve"), which is explained as being due to the fact that she was (or would become) the mother of all living. The giving of the name Eve was a recognition of the importance of the woman's procreative role. Despite the judgment, the command to be fruitful and multiply had not been withdrawn, and hence this act of name-giving may have been an act of faith on the part of Adam: death would be countered by life. The fact that she was to be the mother of all living affirms the unity of the human race.

Sin introduced a gangrenous element into God's good creation. Death and decay only mirror the inner decay and fractured relationships. Shame, fear and self-justification become the norm in our relationships with others and with

God. Sin has enslaved humankind. The outworking of the sin principle is seen in Genesis 4—11, in the violence of Cain, Lamech, the pre-flood culture and the assault on heaven (see Babel).

4. Concluding Observations.

Historically, is this story myth or history or something in between? Some critics treat the story simply as etiological myths explaining some of the vagaries of human existence. Various elements do point to a paradigmatic interpretation. For instance, the names Adam and Eve function as both personal names and representations. In addition, one must consider the universal themes in the story such as the foundations of marriage and the alienating effect of sin. Wenham points to the "symbolic dimensions of the story linking the garden with the later sanctuaries" as another support for a symbolic reading (see Wenham 1987, 90-91). Yet there are also elements that suggest a historical dimension. The heading linking this story to the historical narratives of the patriarchs, the geographical features that seem to suggest real places and the genealogies that follow all point in a historical direction.

Hence there are grounds for accepting the moderate proposal put forward by Wenham that takes Genesis 2—3 as

both paradigmatic and protohistorical. It is paradigmatic in that it offers a clear and simple analysis of the nature of sin and its consequences, albeit in rich and symbolic language. Disobedience to the law of God brings physical pain and suffering and alienation from him. This is indeed the experience of every man. In this sense the story is paradigmatic. But in all societies, and especially the rightly knit family society of ancient Israel, the behavior of parents has great impact on their children for good or ill. It therefore follows that the disobedience of the first couple from whom Genesis traces the descent of the whole human race must have had grave consequences for all humankind. In this sense, then, the story offers a proto-historical account of man's origins and his sin. (Wenham 1987, 91)

Finally, we should ask whether it is appropriate to call this the story of "the Fall." We have noted that the account nowhere uses the term *Fall*, and in fact nowhere in the Bible is the term

used to describe the events of Genesis 2—3. Jesus speaks of the *fall* of Satan from heaven (Lk 10:18) but says nothing of the Fall of humans.

Paul is the first to develop the Adam-Christ typology. Paul shows that through the first Adam “sin came into the world . . . and death came through sin”; by contrast, the second Adam brought grace, justification and resurrection life (Rom 5:12-21; 1 Cor 15:21-23). Paul does not use Fall language but describes the offense in terms of trespass and disobedience.

The so-called classic view of the Fall did not receive adumbration until the time of Augustine. In view of this, it is better to use terms such as *defection*, *deviation* or *transgression* to describe the actions of the man and the woman. Genesis 2—3 shows the essential nature of sin as disobedience to God and its consequences leading to suffering and death. Worst of all, sin produces alienation between God and humans, between humans and their environment, between human and human, and even in the depths of their own being, the alienated self.

FAMILIES. See FAMILY RELATIONSHIPS; SOCIAL STRUCTURE.

FAMILY RELATIONSHIPS

Blood kinship played an important role in the

determination of personal identity and the distribution of power in the villages of early Israel. No blood relationship was taken for granted. However, despite the fact that members of households, clans, villages and tribes in early Israel may have been physically related, the critical requirement for membership was not kinship but *covenant (Meyers 1988, 127). The Israelites were not just households with the same biological parents but households with the same sociological experience and a shared legal commitment to one another. As a result, their understanding of membership in a covenantal community placed social obligations on them to uphold the honor of their individual households while also providing support to the larger community and sustaining the needs of a set of protected classes (*widows, *orphans, and *aliens or strangers; Fensham).

In ancient Israel there existed a patrilineal, segmentary lineage system in which each of its households (*bêt 'ābôt*) belonged to a lineage (*mīspāhā*). These lineages, in which membership and inheritance were based on the father, made up a clan. The clans formed several phratries, and the phratries made up the tribe. Its lineages were also, once the Israelites entered Canaan, described as localized, having their own designated territories (Josh 13–19). These social groupings are not necessarily evolutionary. They all continued to exist and served as the basis of personal identity even after the monarchy was established.

Social custom and law, as it developed in the village culture and was transmitted and transformed in the urban setting, was defined by the people's sense of *honor and shame. These two concepts revolve around both a sense of self-performance as well as a recognition of proper and improper behavior by others, and they provide the basis for social reward and social control. Those who obeyed the covenant with Yahweh upheld the rights and obligations of their households and set an example of hard work and devotion to family. They were designated as honorable and looked to for advice. Shame resulted from antisocial behavior (Lev 18:6-29; Deut 21:18-21), violations of the religious code (Ex 22:20; Deut 16:21-22) and physical deformity or illness (Lev 14:1-20; Deut 23:1). The threshing floor (Gen 50:10-11), the village-gate court (Deut 22:15) and later the royal court system (2 Sam 15:2-4; Jer 36:21) provided the le-

gal setting for dealing with shameful and antisocial behavior.

1. Clan and Kinship Responsibilities
2. Patriarchy
3. Marriage Customs and Acceptable Behavior
4. Inheritance and Sexual Relations
5. Incest and Antisocial Behavior Practiced Against Blood Kin
6. Conclusion

1. Clan and Kinship Responsibilities.

The *bêt 'ābôt*, the Israelite households, were part of a remarkably sophisticated political system for distributing power. The Bible describes early Israel's political system in terms of kinship ties, as with many traditional societies. One place in which these patterns of kinship in the Bible are preserved is in *genealogies (Edelman; Wilson). Linear genealogies, such as the one that begins with the creation of *Adam, have a clear end point (*Noah and the *flood), and their intent is to bridge a gap between major events in the narrative. Vertical genealogies trace the descendants of a single family (*Esau in Gen 36:1-5, 9-43), and they focus on establishing legitimacy for membership in the family or tribe (Gen 46:8-27). Genealogies describe not only blood relationships but also economic relationships, social status, financial worth and the power that a household can exercise in the community as a whole (Malina, 25-93). To understand a genealogy it is necessary to understand the particular social system it reflects and the language that it uses (Steinberg, 44).

It is generally assumed that the culture of ancient Israel was a traditional society and as such very clan-based and kin-oriented. However, textual evidence on kinship ties, clan or ethnic identity, and loyalties to peoples rather than to a king or city-state is not always consistent. In general it can be said that members of family groups and clans would be expected to come to each other's aid (financial and otherwise; see Abram's rescue of *Lot in Gen 14:1-16), but it is not clear how far this obligation actually went. To be sure, since many extended families lived in close proximity to each other within the villages, one would expect them to work together to cultivate and harvest fields that were owned jointly by the related households. However, despite this need to cooperate to maintain the viability of the community, the individual family

unit, the *bêṭ ʿāb*, would still quite rigidly identify with its own members so that there was a clear differentiation between “brothers” and “strangers” (van der Toorn 1996, 18-20).

In the light of this social attitude, the legal principle of *lex talionis*, “an eye for an eye,” also could be seen as an expression of corporate responsibility. A person was responsible in equal measure for his or her actions, both civil and criminal, that might affect others (see Ex 21:18-19, 26-27; cf. CH §§206-207). Thus a person who dug a pit and left it uncovered was liable for the value of a neighbor’s ox or donkey that fell into it (Ex 21:33-34). According to this principle, reward for proper behavior (see Noah in Gen 6:9) and the punishment for injurious actions might also affect members of the family as the principle of reciprocity was brought into play (see the stoning of Achan’s family in Josh 7:24-26; cf., however, the prohibition against executing children for the sins of their parents in Deut 24:16). In addition, each member of the community had responsibility for the protection of each other’s property. It was not permitted to allow animals to stray or lie injured in a ditch or for a neighbor’s garment to lay abandoned (Deut 22:1-4). Each person was therefore held accountable for the maintenance of the economy and personal well-being of the extended family of the covenantal community. This more encompassing responsibility also applied to such matters as hospitality with strangers (Gen 18:1-8) and the humane treatment of day laborers (Ex 22:26-27) and those cast into years of debt slavery (Ex 21:1-11; Deut 15:12-18).

2. Patriarchy.

The weight of evidence indicates male dominance was the rule and patriarchal lineage and inheritance systems were the norm in the ancient Near East. One of the clearest indications of this situation is found in the mandated devotion of a woman to worship the personal or household god of her male partner. Thus, initially, a woman would worship the god of her father, and then, once her marriage contract had been arranged and she had officially joined the new household of her husband, she would transfer her allegiance and her worship to the god of her husband (van der Toorn 1995, 1-2). This practice is echoed in the story of Rebekah’s betrothal to *Isaac and her quick decision to leave her father’s household once the marriage

contract was concluded (Gen 24:50-60).

The head of household, or *paterfamilias*, whether the father (the eldest male) or the eldest son (see Laban in Gen 24:28-33), had complete charge of the household’s property, represented the household in court, and was responsible for maintaining its prosperity and credibility within the community (van der Toorn 1996, 21). He determined which children would inherit the household’s property, and in this he was not bound by the tradition of primogeniture (Paul, 178). As a result, his dignity had to be upheld, even if it required him to exercise summary judgment over members of his family. No father could tolerate the public humiliation associated with a disrespectful or criminal son.

This may explain the extremely harsh punishments prescribed in ancient Near Eastern law for the child who struck or cursed his parents. In the Code of Hammurabi, the mandated punishment requires that the offending hand be cut off (CH §195; Roth 1995, 120), and the Sumerian Law Code orders a son who “disowns the father or mother of his household” to be sold as a slave (Matthews and Benjamin 1997, 99). There is no evidence that such a harsh punishment was ever actually carried out. However, it does indicate how seriously respect for parental authority was taken in the ancient world.

The biblical legal codes express a similar attitude (Ex 21:15; Deut 27:16). To bear the label of “son of a household” was an honor. While still alive, fathers and mothers turned their land over to grown sons, who accepted responsibility for them. Heirs were not only expected to show deference to the elderly; they were responsible for honoring their fathers and mothers by feeding and clothing and sheltering them. Once fathers and mothers probated their wills, they were totally dependent on their heirs for their physical care. In the story of the “stubborn and rebellious son” in Deuteronomy 21:18-21, the heir is described as eating and drinking while the father and mother of the household are left to starve. The “stubborn and rebellious” label implies a breach of contract, not just childish petulance (Num 20:10; Ps 78:5-8; Hos 9:15).

Since designating an heir was a legal process, it could be reversed in a public, legal ceremony. For this to have legal effect, however, labels of shame such as “stubborn and rebellious” could only be imposed after due process. The son was to be brought before the assembly at the gate

court, where the parents identified him as their son and laid out the charges against him. In so doing, they had to spell out his case history to support their statements and to convince the elders and the entire village of his pattern of deviant behavior (Bellefontaine).

Once these steps had been taken, the responsibility of the community was to officially label the son as “stubborn and rebellious.” His actions jeopardized the values that the village considered to be universal and correct. There was no appeal, and the elders did not even cite the law that parents were to be honored by their children (Ex 20:12). In order to purge this evil from their midst, the legal requirement was death by stoning, an appropriate sentence since it required every villager to participate while allowing for the legal fiction that his death was not caused by any one person (Matthews and Benjamin 1993, 149-50).

3. Marriage Customs and Acceptable Behavior.

Marriage customs fit under the rubric of “honor and shame” since they also involve “proper” behavior. In ancient Syro-Palestine, as in the modern Mediterranean region, they encompassed an emphasis on exchange between households, the desirability of premarital virginity, the maintenance of female chastity after marriage and the production of an heir for the household. While wives were entrusted with the management of the domestic aspects of the household, they ordinarily did not own property, could not testify in court and were required to uphold the honor of the household through their chaste behavior and social correctness (*see* Sexuality, Sexual Ethics).

Marriage is often thought of as an orchestrated event, and in some societies it is a long, drawn-out process with several stages. Certain protocols were to be followed that would establish the alliance between families and spell out the contract in exact terms. Within the structure of a patriarchal household, it would be expected that the father or the eldest brother would negotiate the arrangement of marriages with the bride’s parents or “guardians” (Gen 24:52-54; Greengus, 59). There were some exceptions to this rule, in which a socially unattached male arranged his own marriage with the bride’s family (*see* *Jacob in Gen 29 and *Moses in Ex 2:21), but these were rare.

The various factors in a marriage to be

weighed in the negotiations involved social parity, economic advantage and expansion of the kinship network. Social parity was always a minimum goal. No family wanted to marry “down” socially, at least when arranging the contract for the first wife. Thus the participants had to be at least of the same social class and have approximately the same economic standing. In this way marriages served not only to produce children and a new generation to inherit property, but they also established social ties, economic connections and a network of association that was designed to benefit both parties. Other considerations included kinship obligations (Gen 24:3-4), political advancement (*see* David’s marriages to Michal in 1 Sam 18:17-28 and to Ahinoam in 1 Sam 25:43) and, occasionally, personal desire (Ex 22:16; Judg 14:3; 2 Sam 11:27).

Within the ancestral narrative in Genesis, the one criterion for selection of a marriage partner that surfaces most often is endogamy, marriage within a tribe or kinship unit. Authority for this position, which establishes a preferential pool of eligible marriage partners, is presented in the ancestral narratives where solemn oaths are taken to ensure this practice (Gen 24:2-6; Abraham and his servant). Family tensions are created when the principle is violated (Gen 26:34-35; Esau’s wives). The basis for the maintenance of endogamy in these foundational stories of the Hebrews seems to be preservation of family values and religious practices. The danger of assimilation is too great in the first few generations of immigrants, and thus a policy of “marrying in” provides a measure of cultural insurance.

The contractual arrangement consisted of several parts in addition to the mutual agreement for the couple to wed. These included the giving of a bride-price (in Akkadian, the *terhatum*, and prenuptial agreements regarding potential divorce by either party. There could also be stipulations on the need for polygamous marriage (usually due to illness or infertility), obligations regarding debts or other obligations during the betrothal period, and, depending on the social status of the bride, the exact inheritance rights of their children.

While several ancient laws mention the condition of the prospective bride (widow or divorcee), Mesopotamian documents, at least prior to the Neo-Babylonian era, do not categorically indicate that the young woman was to be a

virgin prior to the arrangement of her betrothal in marriage (Malul, 73). This is a curious omission considering the importance placed on virginity prior to marriage in biblical law (e.g., Deut 22:13-21). In most traditional societies the honor of the household is bound up in its guarantee that the bride is a virgin at the time of marriage and thus brings a “clean slate” to her husband’s bed (Tapper, 391).

The concluding of a marriage contract between families was a sacred compact, comparable to the covenant agreement made with Yahweh (see Ezek 16:8). The “pledge” agreement set a bride-price as well as the amount of the dowry (Ex 22:16-17), guaranteed that the bride would be a virgin at the time of marriage (Deut 22:13-21) and required complete fidelity of the parties. Marriage was such an important economic and social factor in the ancient Near East that it is the basis of a huge amount of legislation. For instance, the Laws of Eshnunna §§28-29 and the Code of Hammurabi §128 explain the importance of having an official marriage contract for both parties.

In these Akkadian texts it is made clear that it was to the advantage of the bridegroom’s family immediately to take the next step and to deliver the bride-price (*terhatum*) to the bride’s household. This ensured the bridegroom’s right to the marriage and also protected the bride from sexual advance or abuse during the betrothal period (Westbrook, 36). Acceptance of the gift or payment was tantamount to marriage under the law (see Gen 24:48-53, in which Abraham’s servant gives gifts to Rebekah and her family to complete the negotiations that will make her Isaac’s bride), whether the physical consummation was to occur within days or was to be delayed for months or even years. Thus the laws of adultery in Mesopotamian legal codes were in full force even before the actual ceremony and consummation of the marriage (cf. Deut 22:23-27). The disparity in age between bride and groom in these Mesopotamian texts (possibly ages twelve to fourteen versus ages twenty-five to thirty, respectively) may have governed how soon the bride was actually taken from her father’s house (Roth 1987).

The final step in completing the marriage ritual in ancient Mesopotamia was the physical consummation. The groom brought witnesses, his “friends,” who would have accompanied him to the house of his father-in-law. At that point a

ritual marked the moment when the bride submitted fully to her husband. The phrase used in the text is to “unfasten the pin of her virginity,” and it most likely refers to the unpinning of an undergarment (*šillūm*) arrayed around the waist that was the preliminary to sexual intercourse (Malul, 70).

Having been physically joined in marriage, the legal status of both parties was also transformed or at least further clarified. Since the moment when her betrothal had been solemnized by her father/guardian and the groom’s representative, the bride was referred to as an *aššatu*, “wife.” However, her rights to compensation in the event of divorce, her rights to property as a widow and, for that matter, her right to marry the man with whom she had originally been contracted were not officially set until intercourse had taken place (Roth 1991; Nemat-Nejet, 134-35). By consummating the marriage, both parties fulfilled the oral arrangements and legal technicalities that had been set by their representatives. They had therefore changed their legal status and their social standing within the community. In addition, the wife now lived under her husband’s name and benefited from his protection and social standing (van der Toorn 1996, 47).

Although this level of detail is not available in the biblical text, Isaiah’s description of the new couple’s wedding garments (Is 61:10) and the “joy of the groom for his bride” (Is 62:5) indicates that similar celebrations were found in ancient Israel as well.

4. Inheritance and Sexual Relations.

The primary purpose of a marriage in biblical times, aside from the possible monetary gain involved in marrying into a rich or influential family, was to produce an heir. Failure to produce an heir was a major calamity for a family in the ancient Near East because it meant a disruption in the generational inheritance pattern that left no one to care for the couple in their old age. In addition, the concept of inheritance was an integral part of the system of marriage customs, especially with regard to the ability of the male to transmit his goods and property to a son and the ability of the female to produce an heir for her husband. This sometimes required creative legal strategies: adoption (Gen 15:2) or surrogacy (Gen 16:1-4), the law of levirate obligation for a man who died without an heir (Gen 38; Deut

25:5-10) or the compromise involving the daughters of *Zelophehad, in which daughters and their husbands were temporary custodians of the household's property until a grandson could officially inherit their land (Num 36:2-12; Josh 17:3-6).

Given this obligation of one generation to the next, it is not surprising that traditions favoring premarital virginity as well as legislation requiring marital fidelity are common in the ancient Near East (Frymer-Kensky 1998). The purpose of the legislation was to protect the husband's name by assuring him that his children would be his own progeny. The law did not ensure marital fidelity on his part; its focus was paternity, not sexual ethics. The integrity of the family was protected rather than the integrity of the marriage. Promiscuous behavior was not acceptable (Deut 22:21; 23:2) but was not called adultery if the woman was not married. In ancient Israel, the wife was an extension of the husband, and her infidelity damaged his name and weakened the household within the community.

The Egyptian Tale of Two Brothers, echoing the sentiments expressed by Joseph to Potiphar's wife (Gen 39:8-9), calls adultery a "great crime," which is not even to be considered by an honest man or woman (Matthews and Benjamin 1997, 63-64). This was an attack on a man's household, stealing his rights to procreate and endangering the orderly transmission of his estate to his heirs (see Ex 20:14). The act itself defiled both participants (Lev 18:20; Num 5:13). Since it was not only an attack on the sanctity of the household, but also a source of general contamination, adultery served as a reason for God to expel the people from the land (Lev 18:24-25).

Numbers 5:11-31 details a legal situation that illustrates the ways in which even the suspicion of infidelity undermined the balance of proper family relations. In this case a wife was assumed by her husband to have been unfaithful and to have had illicit intercourse, even though there were no witnesses. His right to punish her and to bring her to trial were based on the marriage contract and the obligations that this document laid on her to remain loyal to his household (Phillips, 7). Defilement based on adulterous behavior was considered a breach of faith with God as well as a crime against the household (Frymer-Kensky 1984, 17-18). Therefore a protocol was established for restitution and decon-

tamination, which required (1) confession of sin and (2) full restitution, plus one-fifth more to the person wronged, or to God and the priests, if the person wronged had no next of kin. The actions taken by the husband in this instance were based on his unsubstantiated suspicions, described here as a "spirit of jealousy" (Num 5:14; McKane, 474). It seems unlikely that these suspicions were simply another ploy, as in Deuteronomy 22:13-14, for a man to set aside a wife who did not please him. More likely, there had been accusations made to him privately, and rumor (represented by the statement in Num 5:12-13) was beginning to bring public shame to his household. If a household could not protect its women, then it was declared insolvent or shamed and unable to fulfill its responsibilities to the community as a whole (Giovannini, 68). Thus any hint of infidelity, however unsubstantiated, could have dangerous consequences for the entire household and its ability to survive.

Promiscuity in the world of the Bible was not simply a lack of sexual discretion but a symptom of the risks that a household was taking with its land and children. Husbands and fathers were responsible for the honor of their women, which was associated with sexual purity. Their own honor derived in large measure from the way they discharged this responsibility (Pitt-Rivers, 78). If fathers and husbands protected the women of their household, then they were known to have the ability to protect all its members.

The legal remedy in this case, which centered on a lack of eye-witnesses (Milgrom 1981, 74), was to resort to the use of a third-party mediator, the priest, and a trial by ordeal. The ordeal was a judicial institution designed to resolve conflicts between households that could not be resolved by the elders in a village assembly and to reestablish harmony within the village. Crimes that carried the death penalty, such as adultery, required that the plaintiff's charge be supported by the testimony of two eye-witnesses. Without two eye-witnesses, the plaintiff had no case to present to the village assembly, and the potential threat to the entire community could not be resolved without divine intervention (Num 35:30; Deut 19:15). The village assembly simply could not function when there were no witnesses (Benjamin, 297-98). Since harmony in the village was essential for its economy to pros-

per, the intention of the ordeal was to help break a stalemate and to allow God to make a decision between the households involved.

In the protocol for an ordeal, the defendant was exposed to a strenuous, potentially life-threatening experience, since it involved taking an oath before the deity (Ex 22:10-11; CH §§2, 9, 20, 23; Frymer-Kensky 1977, 11-16). If the woman in this case survived, then the divine assembly had cleared her of the charges made against her, and the honor of her household was reaffirmed. If she did not, then her household was shamed. An ordeal was thus a legally constructed "day of judgment" (Deut 32:34-36; Job 21:30; Ps 18:6; 32:6).

The somewhat peculiar procedure of the ordeal in Numbers 5:16-28 hinged on a potion that invoked God's judgment on the woman (Milgrom 1981, 71). It was not a poison and most likely did not contain any drug that would induce an abortion. It functioned almost as a prop to empower the ritual of execration and was coupled with an oath first spoken by the priest and then repeated by the woman. Certainly, there was an element of shaming involved in having to participate in this ritual and in speaking these words. However, such a public ritual, like a purgative oath, had a positive function as well, to remove all doubt of guilt or suspicion (Frymer-Kensky 1984, 24). The fact that it involved elements of the ordeal rather than just a formal oath "before God" suggests a blending of judicial procedures to satisfy a case that otherwise could not be proven and would continue to damage a household's reputation.

The postordeal fine suggests that even the charge against her still required restitution. The false accuser was obligated, as in the case in Numbers 5:5-10, to make restitution to the wronged party, the woman's husband. The doubt placed against his honor was satisfied by the ordeal, but full payment also had to be made by the false accuser in order to prevent rampant use of slander or malicious speech as a means of injuring a household's reputation (see Deut 19:16-19 for punishment of false accusers; Laws of Ur-Nammu §§10-11).

The sense of guilt and the need to clear away a blot on her husband's reputation may also have been the basis for the actions in Numbers 5:15. Although the required offerings that the husband brought to the priest are said to be for the wife, it appears that it also served to help re-

lieve the husband's anxiety by bringing the shame (iniquity) forward, rather than letting it mentally consume him and undermine the honor and effectiveness of his household.

The statement at the end of the legal passage (Num 5:31), which exonerates the husband from any "iniquity" for having brought his wife to trial, speaks again to the issue of the husband's marital rights. Certainly it would have been better if he had not had to participate in a public demonstration. H. C. Brichto (67) suggests this may even have been the element of protection for the wife in this drama, since it required the husband to "put up or shut up." However, the balancing act between upholding the honor of the household and the public embarrassment occasioned by the trial may have forced the issue in much the same way as it did in the case of the "rebellious son" in Deuteronomy 21:18-21. It also provided some measure of protection for the woman from mob violence or some unsanctioned "kangaroo court" (Milgrom 1981, 74-75). The community was thus restrained from direct action since the woman's punishment would come directly from God (Milgrom 1990, 43).

5. Incest and Antisocial Behavior Practiced Against Blood Kin.

Although kinship ties are designed to provide the basis for personal identity and some assurance of protection as part of a group, there are instances in the biblical text where it appears that kinship/blood ties were not enough. The classic example is the murder of *Abel by his brother *Cain (Gen 4:2-16), but this simply serves as the first of many fratricides that represent power struggles, jealousy and unrestrained emotion (Judg 9:5; 2 Sam 13:23-29). The story of how *Joseph's brothers sold him into *slavery (Gen 37:12-28) and how he eventually gained a strong measure of psychological revenge before reconciling with them (Gen 42:1—45:15) also serves to demonstrate that family dynamics are complex and not determined exclusively by the rules of kinship.

One final instance in which individuals fail to uphold the honor of their households and endanger their survival by violating normal sexual customs is through incestuous relations with close relatives. Every society develops sexual taboos to regulate marriage customs, adultery and unacceptable sexual practices. These restrictions, which are based on the principle of ex-

change and alliance between families, vary from one culture to another, but they are all designed to reflect the economic and moral values of their society (Levi-Strauss, 138). The laws in Leviticus 18 and 20 systematically define consanguineal membership within the individual household using the term *šē'er* ("flesh relations"), while forbidding sexual contact between them (Levine, 117). These statutes, addressed to the male head of the household, who had control and responsibility over sexual relations within his immediate family, were framed as apodictic or command laws, bluntly stating without any comment that these practices defiled the people. This legislation (also found in Deut 27:20-23) views such practices as "antithetical to the maintenance of the orderly kinship structures and genealogies" necessary for the determination of inheritance and social status (Avalos, 629).

In the case of incest (Lev 18:6-18), primary concern was over relations with immediate blood kin (father, mother, sister, brother, son, daughter) and affinal relations (wife, husband, uncle, aunt). The only exception was in the case of Levirate obligation (Deut 25:5-10), when a man's brother was required to have sexual relations with his sister-in-law. Incest was equally abhorrent in most other ancient Near Eastern societies (e.g., the prohibitions in the Hittite laws, §§187-200). In fact, in the Code of Hammurabi §154, the father who sexually violated his own daughter was to be banished from his city. The exception was Egypt, where it was a common practice in the royal family (but little attested elsewhere) as a means of strengthening or consolidating royal authority (Pinch, 371-72). This concept was also practiced among Elamite kings (Brentjes, 1029).

In the ancestral narratives, which predate the levitical prohibitions, there are instances in which close kin marriage does occur, but this seems to be based on the concept of endogamy and the maintenance of cultural and property rights. Thus Abram married his half-sister Sarai (Gen 20:2, 12), a match that was "incorrect" and was marked by a long period of barrenness. Jacob married two sisters who were his "cross-cousins" (Gen 29:23-29). Marrying one would have been acceptable, but marrying both sisters infringed on the principle of exchange and was therefore incorrect (Donaldson, 81-84). The result was Rachel's barren condition. The narra-

tive deals with the problem of "too close" marriage through the intervention of God to end the women's barrenness and to give them a child who will be the heir of the covenant. It could be argued, therefore, that no reference is made in the levitical material to the incestuous marriages in the ancestral narratives because of this divine action.

Curiously missing from the list of forbidden sexual liaisons in Leviticus is father-daughter incest, an injunction found even in Egyptian texts. Some suggest that this omission is based on the patriarch's control over the sexuality of his daughter prior to marriage and would simply constitute a misuse of this power (Falk, 164). However, if a father had sexual relations with a daughter, he would be damaging her economic value to the household and could be subject to a charge of fraud if her lack of virginity were discovered (Deut 22:13-21). In fact, there is only one biblical narrative in which father-daughter incest occurs, the story of Lot and his daughters in Genesis 19:30-38. But this is a polemical episode, casting a shameful label on the founders of the nations of Moab and Ammon and is not to be considered a model of acceptable sexual behavior in the ancestral stories (Meacham, 257-58).

6. Conclusion.

Throughout this review of legislation and customary practice dealing with family relations in the pentateuchal materials, it is made clear that the ancestors and the tribal peoples of ancient Israel were concerned over matters of proper behavior and the acquisition of honor and the avoidance of shame for their households. As the primary social unit, the household protected itself by educating its members in proper and improper behavior and speech. It arranged marriages to benefit itself economically, policed itself in cases of antisocial activities by members of the household and defined the roles, privileges and restrictions on its membership. In addition, each household functioned as a part of the larger covenantal community, taking on responsibilities designed to strengthen the overall economy, prevent erosion of social control and protect those members of the group who had lost, either temporarily (debt slavery) or permanently (widows), their ability to cope with social and economic forces.

FESTIVALS AND FEASTS

Feasting is a feature of life in any society, and Israel was no exception (for a survey of secular feasts, see Pedersen, 2.376-82.). The focus of pentateuchal material about feasts is on the times and ceremonies related to the nation's faith and practice. These included periodic religious observances in homes and at local shrines, but most prominent in the pentateuchal narrative are Israel's three great annual "Pilgrimage Feasts," when the entire nation was called to celebrate before Yahweh in the place the Lord would choose for his name to dwell. In many ways, the regular local fetes (a weekly sabbath, monthly New Moon, etc.) prepared the *covenant community for the great gatherings that defined Israel's cultic life before its covenant God. This article will attempt to explore these celebrations, with a survey of the language used, together with the background, development and meaning of each festival. Where critical questions affect interpretation, the issues will be examined. The focus will be on events and instructions that feature prominently in the so-called books of Moses. A few feasts (e.g., Purim) do not feature directly in the Pentateuch, but where pentateuchal material carries implications for these feasts, this will be briefly noted.

Following the introduction to vocabulary, attention will focus on the three pilgrimage feasts, plus New Moon and Trumpets, with material drawn from the major religious or cultic calendars (Ex 23; 34; Lev 23; Deut 16), together with the rules for sacrifice found in Numbers 28—29. Where historical narrative may shed light, either on the agricultural importance of such feasts or their unfolding in Israel's national life, the pentateuchal information will be incorporated, together with some of the most important narrative from later books of the OT. Finally, the

theological meaning of each feast will be considered.

1. Critical Questions
2. General Vocabulary
3. Specific Nomenclature
4. Sources for Feasts and Their Distinctives
5. Theology of the Three Pilgrimage Feasts (*ḥaggîm*)
6. Summary

1. Critical Questions.

1.1. Biblical Sources and Their Dating. The origins of Israel's feasts and their history in pentateuchal and other biblical literature formed one of the foundations of Wellhausenian critical theory; as such, due consideration must be given to the present state of historical-critical scholarship (*see* Pentateuchal Criticism, History of; Source Criticism). Although interest in the Documentary Hypothesis has waned in comparison to other methodologies, there is little doubt that the scheme retains its authority with regard to dating the major sections of the Pentateuch, including the various religious calendars. Although now more than forty years old, the scheme described by R. de Vaux is still assumed by many contemporary scholars, as applied to the specific passages to be dealt with (de Vaux, 470-73). Following the Wellhausenian dating, the earliest calendar is found in Exodus 34:18-23 (the Yahwistic, or J, code of the covenant), generally understood to have arisen in the early monarchy. Exodus 23:14-17, to be dated a bit later in the monarchy, is labeled the Elohist (E) code of the covenant. Third in the series is Deuteronomy 16 (D), from the late seventh century and associated with Josiah's reformation, while Leviticus 23 represents the Priestly calendar (P), placed in or after the exile, though it is often argued that Leviticus 17—26 form part of a Holiness Code, completed slightly earlier than P. Another important peg on which much higher-critical theory rested was the prophecy of Ezekiel, datable to the early sixth century B.C. and thus predating the P material. Inasmuch as Ezekiel 45 contains an important, but selective, survey of festivals in the projected postexilic temple, it must inevitably be compared with the other codes. Finally, there is a list of sacrifices and rules for their offering in Numbers 28—29, also considered to be from priestly sources.

Traditional conservative Jewish and Christian understanding of the Pentateuch attributes

all of the books to Moses, in either the fifteenth or the thirteenth century B.C. (the two traditional dates given for the exodus; see Exodus, Date of). Followers of this scheme will naturally attribute the differences in the various calendars to the purpose and nature of the literary context in which each calendar is embedded. A *via media* may exist, wherein the reader remains agnostic about the actual dating of the documents but acknowledges that there are significant differences in the settings and even style of the various parts of the Pentateuch (for a modified theory which takes all these factors into account, see Armerding). A close reading of individual texts may lead to the discovery of unique features, but the search is for a literary and theological setting and style rather than a date and provenance for ancient documents for which early copies are wanting. Applied to the present study, each calendar would be examined in its literary and theological context, with historical questions introduced as appropriate. Turning to narrative sources, questions of the presence or absence of the feasts in the Hebrews' "story" will also form part of the discussion, as appropriate, as will references to feasts in the prophets and their response to them.

1.2. Ancient Near Eastern Origins. Because some of Israel's feasts are at least partially rooted in agricultural cycles common to Israel and the surrounding cultures, it is appropriate to look for analogies in these cultures and their festive traditions. It will be clear from such cultures, as it is from Israelite religion, that the agricultural cycles and their fruitfulness or failure are commonly seen as tied to the respective religious cult. Inasmuch as many of the cultures surrounding Israel worshiped their gods through various forms of sympathetic magic and ritual, and since this understanding was an integral part of their agricultural practice, potential areas of comparison and contrast must be noted. The extent to which average Israelites shared the mythological understandings of their neighbors remains an open question, but we should not be surprised to discover in an Israelite agricultural society many of the same rites and practices followed by others whose livelihood revolved around seasonal rhythms of nature. The cycle of planting and harvesting determined not only what various months were called, as evidenced by a rude agricultural calendar discovered at Gezer from the tenth century (cf. Talmon, 177-

87; *COS* 2.85:222), but also what feasts and rituals accompanied the seasons. Celebrating the "month of harvest" or "the month of planting" is probably universal, but neither the Gezer Calendar nor any other source supplies answers to the larger and more debated questions of Israel's acceptance or rejection of the mythological basis of much Canaanite and, in later times, Babylonian *cosmology and cosmogony.

What answers there are come from studies of the biblical texts themselves, with most theories arising not from pentateuchal festal calendars but from various poetic passages in which nature or the pagan rituals of nature are detected behind the language of the Hebrew bard (e.g., Ps 74:14 or Is 51:9, with their reference to a battle with Leviathan or Rahab). Biblical scholarship has divided sharply on these questions, with some scholars acknowledging that biblical writers use mythological patterns of speech in a context largely devoid of ancient Near Eastern mythological realities (e.g., Childs 1960), while others posit a much greater dependence on mythological mindsets (see esp. the extensive work on the Psalms, particularly Mowinckel's studies relating to the proposed mythical background to the Feast of Tabernacles; creation accounts have also received major attention from the "myth and ritual" school). In the following comments, some attention will be given to the arguments for analogies between Israel's feasts and Canaanite or Babylonian models, but in light of the highly speculative nature of much scholarship in this area, the article will concentrate on the biblical texts themselves.

2. General Vocabulary.

The Hebrew Bible contains a variety of expressions describing feasts of all kinds. The following survey, while comprehensive, will indicate which terms have technical significance for the religious feasts and festivals of Israel.

2.1. Feast (*mīsteh*). This word describes the simple, secular drinking-party kind of feast, mentioned forty-three times in the OT. *Abraham, *Isaac, Laban, *Pharaoh, Samson and David all hosted this kind of feast, but pride of place must be given to the Persian court with its week-long revelries dominating virtually every chapter of the book of Esther. Esther 8 and 9 employ the same terminology, but the reference is to Jewish celebrations that were the precursors of Purim, one of the later feasts of Judaism.

2.2. Feast or Festival (*ḥag*). The noun, and its corresponding verb, constitute the most important word group for a study such as this, in light of its close identification with the great pilgrimage feasts. The word's semantic range is clearly a bit wider, though in each case something more than secular eating and drinking is implied. A frequent verbal combination is *ḥag layhwh*, "a festival to Yahweh," sometimes applied with no more specific identity, as in the case of *Moses' projected celebration in the *wilderness (Ex 10:9) or Aaron's feast with the golden calf (Ex 32:5). At other times either specifically or by inference *ḥag layhwh* refers to one of the three pilgrimage feasts or a particular day during the feast period (Ex 12:14; 13:6). Another common combination (thirty-two times) for *ḥag* is in construct with the name of one of the three pilgrimage festivals, especially Tabernacles. Standing by itself (e.g., Lev 23:39, 41; Num 29:12; Judg 21:19; Hos 9:5) the word may refer to any feast but most probably functioned as an elliptical reference to Tabernacles. Etymologically the word is related to Arabic *hagg*, today signifying the pilgrimage to Mecca.

2.3. Sacred Assembly (*miqrā' qōdeš*). This expression is commonly used for the first or last day (see 2.6 below) of a week's period of feasting (Ex 12:16; Lev 23:7, 8, 36; Num 28:18, 25, 26; 29:12) but is also used for any day specially set apart as holy to Yahweh (i.e., the Sabbath [Lev 23:3] or a festival such as Trumpets or *Atonement [Lev 23:24, 27; Num 29:1, 7]).

2.4. Appointed Times or Appointed Places (*mô'ādīm*). This common word points to any appointed place, time or season (e.g., Gen 1:14; 17:21; 18:14; 21:2). Used in connection with feasts, the word takes on religious significance, for Yahweh's specific festivals are also his "appointed times." With regard to feasts, the word is clearly less restricted than *ḥag* and often refers to the time when a *ḥag* will be celebrated (e.g., Ex 13:10; 23:15), but it may be used to describe the feast itself (e.g., sabbath or New Moon), especially when the text might be reticent to use *ḥag* because of its pilgrimage association. In the singular, combined with "tent" (*'ōhel mô'ēd*), the expression "tent of meeting" results.

2.5. Cultic Feast or Funeral Meal (*marzēaḥ*). This word is not employed in the Pentateuch but in later Hebrew (Amos 6:7; cf. Jer 16:5) and in Ugaritic contexts. It is associated with funerary feasts, especially among wealthy mourners and

those who observed the cult of the dead (see Burial and Mourning).

2.6. Festive Assembly (*'āšārā*). In the Pentateuch and the historical sections of the OT, including the religious calendars, this word generally refers to the final, or closing, day of an extended feast (Lev 23:36; Num 29:35; Deut 16:8; cf. also 2 Chron 7:9; Neh 8:18), though elsewhere it may simply designate a religious assembly, whether approved by Yahweh or not (cf. 2 Kings 10:20; Amos 5:21). Semantically the word ranges from simply a pious assembly of any sort to something approximating the *miqrā' qōdeš* that brought a period of feasting to an end.

2.7. Day of Rest (*šabbātôn*). This expression is used four times (Ex 16:23; 31:15; 35:2; Lev 23:3) almost as a synonym for *šabbāt*. The remaining six are translated by NIV as "sabbath of rest," and, like the sabbath itself (see 3.12 below), the word derives from a verb meaning to "stop, cease," especially from work. In addition to the seventh day, other "sabbath of rest" days include the Day of Atonement, Trumpets, the first and last days of Tabernacles (Lev 16:31; 23:24, 32, 39) and the seventh year (Lev 25:4, 5), when the land was to lie fallow.

3. Specific Nomenclature.

In addition to the general terminology of feasts and feasting, there exist a variety of proper names for specific Israelite feasts. The nomenclature has been at the forefront of critical debate, particularly in light of the fact that the religious calendars appear to know some of Israel's feasts by different names. This has led to various theories, although the real reasons for variant nomenclature remain elusive. The following will be a brief alphabetically ordered survey, in preparation for a more in-depth examination of the three great pilgrimage feasts. Where a particular feast is not covered in a later section, more explanation is given here.

3.1. Ingathering, Feast of Ingathering (*'āsīp, ḥag hā'āsīp*). This noun occurs only three times in the OT, twice (Ex 23:16; 34:22) in religious calendars, both referring to the feast at the close of the agricultural year. That the noun is closely related to the agricultural function of the feast is evidenced by the common occurrence of the same verb meaning "to gather in" in harvest settings, an association reinforced by the Gezer Calendar's "two months of ingathering" (*yrḥw*

³*sp*), which appears to refer to the gathering of summer fruit in the autumn (see *ANET*, 320; Cornelius, Hill and Rogers 1.468). Because “Ingathering” is called a *ḥag* in both places where the name occurs, it must be seen as an alternate name for the Feast of Tabernacles (see 3.1 and 5.3 below).

3.2. Firstfruits (bikkûrîm). This noun occurs only in the plural and is never clearly understood as the name of a specific feast, though the small pericope in Leviticus 23:9-14, which sets out a formula for determining the beginning of the Feast of Weeks, is called in the NIV heading *Firstfruits. Specifically, the term refers to the first products of various harvests, the leading portion of which was dedicated to Yahweh (Ex 23:19; 2 Kings 4:42; Neh 10:36). Although never a feast in its own right, “firstfruits” is clearly identified with the major harvest festivals, particularly Weeks, or “Harvest” (*qāšîr*; cf. Ex 23:16; 34:22), sometimes referring to a particular day in that festival (Num 28:26). The harvesting of the firstfruits of any crop was an occasion for great rejoicing and a time when godly Israelites rededicated their crops and lives to Yahweh. The concept provides a rich metaphor for NT theology as well, variously applied to the Holy Spirit (Rom 8:23), the Jewish root of the tree (Rom 11:16), Christ as the first to be raised from the dead (1 Cor 15:20, 23), Christians as the new creation (Jas 1:18) and the 144,000 remnant in Revelation 14:4.

3.3. Day of Atonement (yôm kippurîm). This feast is covered elsewhere (see Atonement, Day of), but in any list of pentateuchal feasts it requires mention. Although only appearing, as such, three times (Lev 23:27, 28; 25:9), the name clearly refers to the important rite exercised by the priests on the tenth day of the seventh month (cf. Lev 16:29-34), through which Israel’s annual expiation was achieved, undergirding the sacrificial theology of the NT as well.

3.4. Unleavened Bread, Feast of Unleavened Bread (maššôt, ḥag hammaššôt). As a feast, Unleavened Bread will be extensively discussed below, but here mention must be made of the nomenclature. Unleavened bread (*maššâ*) was frequently served in the ancient Near East, especially when haste was required (Gen 19:3). It was also common in sacrificial contexts in the OT (Ex 29:2, 23; Lev 2:4-5), but it gains feast status only in connection with the hasty departure from Egypt that marked the Passover event.

Called a *ḥag* in all four of the major religious calendars (Ex 23:15; 34:18; Lev 23:6; Deut 16:16), as well as in the five historical references found in the Chronicler (2 Chron 8:13; 30:13, 21; 35:17; Ezra 6:22), *maššôt* frequently stands for the spring feast in its entirety. Its relationship to Passover will be discussed below.

3.5. Tabernacles, Feast of Tabernacles (sukkôt, ḥag hassukkôt). This major autumn festival marked the ingathering of the grape and vine harvest. As one of the pilgrimage feasts, it will be treated below. The term *sukkâ* occurs altogether thirty times in the Hebrew Bible, generally referring to a rude shelter or booth: the kind built for livestock (Gen 33:17), a night watchman (Job 27:18), a distraught prophet (Jon 4:5) or soldiers in the field (1 Kings 20:12, 16). In Israel’s recollections of the desert wanderings, it is assumed that the people lived in tents or shelters, thus providing the historical rationale for creating these memorial experiences each autumn (Lev 23:42, 43). The term *Feast of Tabernacles* occurs in two of the pentateuchal religious calendars (Lev 23:34; Deut 16:13, 16), apparently interchangeable with Feast of Ingathering (*’āsîp*, see above) in the remaining two. Clearly, as time went on, the autumn festival was remembered as Tabernacles (cf. 2 Chron 8:13; Ezra 3:4), and it is by this name that the feast became a symbol of the great eschatological hope of the nations (Zech 14:16, 18, 19).

3.6. Purim (pûrîm). Inasmuch as reference to this feast occurs entirely within the book of Esther, only brief mention will be made. The name probably comes from an Akkadian root (de Vaux, 515) and is explained in Esther 9:26-32 as related to the Persian word *pûr* (“lot”), though the story itself says relatively little about the lot. This feast, which is still celebrated on the thirteenth and fourteen of Adar (twelfth month, February-March), is connected to the Pentateuch by themes of deliverance from enemies and also perhaps by virtue of the wicked Haman’s status as an Agagite, being traced back to the Amalekites of 1 Samuel 15, thus coming under the curse of Exodus 17:8-16 (cf. also Deut 25:17-19).

3.7. Passover, Feast of Passover (pesah, ḥag pesah). The common name of Israel’s spring festival was drawn etymologically and historically from the events of the departure from Egypt, specifically called a *ḥag* only in Exodus 34:25 and Ezekiel 45:21. Whether in biblical times this

feast was considered a pilgrimage feast or not, its later identification and even merger with the Feast of Unleavened Bread is not in question. The Hebrew name of the feast, *pesah*, is a noun derived from the verb *pāsaḥ* and can refer to both the feast itself (Ex 12:48) and the lamb sacrificed at the feast (Ex 12:21). The verb, commonly translated “to pass over,” probably in the sense of “hovering to protect” rather than “passing by,” occurs only four times in the Hebrew Bible, unless one relates it to an equally rare verb of identical spelling meaning “to limp” (2 Sam 4:4; 1 Kings 18:21, 26).

3.8. Harvest, Feast of Harvest (qāṣīr, ḥag haqqāṣīr). This alternative name for the Feast of Weeks (*šābu‘ōt*) is called a *ḥag* in Exodus 23:16 (but cf. Ex 34:22, where the word “harvest” occurs in explanation of the Feast of Weeks). The Hebrew *qāṣīr* can apply to the entire range of harvests, but in the specific context of Exodus 23:16 it must refer to the wheat harvest, as does its cognate *qsr* in the Gezer Calendar (COS 2.85:222; Cornelius, 3.967).

3.9. New Moon (rō’s ḥōdes). The Hebrew *ḥōdes* is the common word for “month,” but when combined with “head” or “first,” it comes to signify the nonpilgrimage (though called a *ḥag* in Ps 81:3 [MT 81:4]) feast of the New Moon (Num 29:6, etc.). Although the only legislation concerning the New Moon in the OT is in the prescribed burnt offering of Numbers 28:14 (cf. Ezek 46:6), its prominence as a religious festival is not in doubt. Often listed as parallel to the sabbath as one of Israel’s “appointed feasts” (*mō‘ādīm*; 2 Kings 4:23; 1 Chron 23:31; Neh 10:33; Is 66:23; Ezek 46:1; Amos 8:5), New Moon appears in various narrative sections as a time of great rejoicing and special feasting (Num 10:10; 1 Sam 20:5, 18, 24; 2 Kings 4:23; Ps 81:1-3). Like the sabbath, New Moon celebrations are condemned by the prophets as a feature of insincere religion (Is 1:14; Hos 5:7; Amos 8:5), but the eschatological hope for a renewal of the purity and joy of Israel’s New Moon is kept alive in two important prophetic passages. Ezekiel 46:1-6 describes the new temple, in which the eastern gate will be opened on both sabbath and New Moon for the people to worship Yahweh, as the prince offers the special burnt offering for the occasion. A yet more exalted setting is found in the closing words of Isaiah’s prophecy (Is 66:22-24), with a new heavens and a new earth, where “from one New Moon to another and from one

sabbath to another all humanity will come and bow down to me.” Finally, the apostle Paul reminds his readers that the New Moon, like the sabbath and other religious festivals, is simply “a shadow of things to come,” the reality of which is to be found in Christ (Col 2:16).

3.10. New Year (rō’s ḥaššānā). The Hebrew term occurs only in Ezekiel 40:1, where it appears to coincide with the Day of Atonement and clearly differs from the later Jewish New Year celebration on the first day of Tishri, for which see the reference to “blowing of trumpets” (Lev 23:24; cf. Num 29:1-6). Although much has been made of a putative New Year’s Festival in Israel, this debate concerns not Trumpets but the Feast of Tabernacles. A separate debate surrounds the question of whether Israel celebrated a spring (Nisan) new year, commemorating the Exodus (cf. Ex 12:2), or an autumn new year, a festival perhaps lying behind the references to Trumpets on the first of Tishri. In later times this festival would assume new importance within Judaism, with the blowing of the shofar and emphases on both penitence and remembrance (de Vaux, 502; Bosman, 3.1022-23).

3.11. Weeks, Feast of Weeks (šābu‘ōt, ḥag šābu‘ōt). The name is drawn from the common noun *šebu‘ā*, meaning “week” or period of seven days. In the three OT passages where the full term “Feast of Weeks” occurs (Ex 34:22; Deut 16:10-16; 2 Chron 8:13), only Deuteronomy 16 (but cf. Lev 23:15-21) indicates the basis for the nomenclature, namely, counting off seven weeks from the opening of the (barley) harvest. “Weeks” (for which also see 3.2 and 3.8, above), was associated with the beginning of the wheat harvest. Later, because of the fifty days specified by Leviticus 23:16 from beginning the count to beginning of the festival, Weeks, under the influence of the Septuagint, came to be known as Pentecost (Gk: *pentēkonta*, “fifty”).

3.12. Sabbath (šabbāṭōn). (See 2.7 above) Derived from a verb meaning “to cease, stop,” especially from work, the sabbath day was patterned on the divine rest from labor at the termination of creation. It was a day of rejoicing and feasting, related particularly to creation (Ex 20:8-11), but both Exodus 16 and Deuteronomy 5:12-15 supply a reminder that God’s covenant people, unlike *slaves, were now free to spend one day a week, or one year in seven, enjoying the fruit of their labors.

4. Sources for Feasts and Their Distinctives.

4.1. The Primary Pentateuchal Sources: Israel's Religious Calendars and Regulations for Sacrifice.

4.1.1. *Exodus 23:14-17*. This small pericope, regarded by some scholars as the Elohist's code of the covenant (see 1.1 above), has been widely understood as part of an independent collection of early laws (Ex 20:22—23:33) called by scholars the *book of the covenant and embedded only later in the E tradition (cf. Noth, 13). The entire section connects the giving of the law (Ex 20:1-21) with the confirmation of the covenant (Ex 24) and consists (Ex 21—22) of case laws and moral imperatives regulating human social behavior, liability in property and personal injury cases, and the like, followed by a succinct resume (Ex 23) of the times and seasons for rest, worship and celebration before Yahweh. The brief calendar section (Ex 23:14-19) is structured as a series of second-person singular commands; it begins and ends with the "three times a year" formula, which, with the expression "to the house of Yahweh your God" (Ex 23:19), reminds the reader that the instructions provide for a scattered agricultural people some minimal observances to recall their communal allegiance to Yahweh and his covenant.

In this context, the feasts have a distinct agricultural feel, although they are hardly devoid of historical ties to the exodus. Unleavened Bread recalls Exodus 12:17-20 with its seven days of eating *maṣṣā*. The two remaining feasts (Harvest, *qāṣîr*; Ingathering, *ʿāsîp*) are purely agricultural and with *maṣṣôt* (Unleavened Bread) are labeled *ḥaggîm*. The date of each is fixed according to either the monthly calendar (in the month Abib) or the actual time of harvest, in one case the appearance of the firstfruits and the other the ingathering at the end of the year. Scholars, especially those suggesting a New Year's Festival behind Tabernacles, frequently take the Exodus 34:22 reference to the "turning" or "end" of the year (*tēqūpat ḥaṣṣānā*) together with the "going out of the year" (*bēṣēʾt ḥaṣṣānā*) in Exodus 23:16 as evidence that in earlier times Israel observed an autumn (Tishri) new year, in contrast to Exodus 12:1-2, where the importance given to the Passover event brings about a change to a spring (Nisan) new year (de Vaux, 190-91). The month Abib, corresponding to the later Nisan, or first month, recalls the dating of the exodus itself (Ex 13:4) and is one of only four Canaanite month names known from

Scripture. Regulations concerning firstfruits, *blood, yeast and fat round out this simple list of covenant regulations, all designed for a people about to undertake a journey to an unknown but Promised *Land.

4.1.2. *Exodus 34:18-23*. The second calendar is likewise difficult to separate from its present context (Ex 32—34), a section on which traditional criticism has often foundered. Critics have traditionally found here a mixture of E and J, with redactional elements (see Childs 1974, 604-8). It forms part of a small collection of laws (Ex 34:17-26), often called by some critical scholars Israel's "Ritual Decalogue" in contrast to Exodus 20's "Ethical Decalogue," but that in context functions as a reminder of what is required for Israel to avoid the mistakes of the *golden calf incident. The larger context is the renewal of the *covenant following the broken tablets of Exodus 32, and the chapter is full of covenant language admonishing the nation to faithfulness, with vivid reminders that Yahweh is both glorious and jealous. To covenant with such a God is to forsake compromise with the surrounding nations. In this setting, the so-called Yahwistic calendar (Ex 34:18-24) is not really a calendar at all but a simple restatement of the basic acts of worship and celebration that must be observed by a faithful people, whether still in the desert or later in the land.

Although pride of place may be given to the three pilgrimage (*ḥag*) feasts, the list is broken by regulations for both the dedication of the firstborn and the sabbath, while the commandment to appear before Yahweh "three times in the year" comes only at the end of the section (Ex 34:23-24), where its observance guarantees that Yahweh will drive out the nations and give secure and expanded *borders. As in Exodus 23, the spring feast is called Unleavened Bread (*maṣṣôt*), though it shows up again at the end of the section (Ex 34:25) as the Passover Feast (*ḥag happāsaḥ*), a rare instance of Passover labeled a *ḥag*. In other respects the two passages also diverge. Exodus 34 calls the second feast "Weeks" (*ṣābūʿôt*), in contrast to Exodus 23 (*qāṣîr*), though both allude to firstfruits, here specifically tied to the wheat harvest (*qēṣîr ḥiṭṭîm*). The section concludes (Ex 34:27-28) with Yahweh's command that Moses write down the words of the (renewed) covenant, words that in addition to the Ten Commandments must surely include faithful observance of Israel's feasts. No refer-

ence to *priests, central sanctuary or even specific offerings is required at this stage. The faithful covenant keeper will “not come before [Yahweh] empty-handed” (Ex 34:20), but the how, when and where is left to subsequent legislation.

4.1.3. *Leviticus 23*. With Leviticus 23 we come to the first comprehensive calendar in our survey. In addition to the three pilgrimage feasts, mention is made of the weekly sabbath (Lev 23:3), Trumpets (Lev 23:23-25) and the Day of Atonement (Lev 23:26-32). The chapter is marked by special vocabulary (appointed feasts, sacred assemblies, etc.; for detail on these terms, see Wenham 300-301) and sets out an annual cycle based on the major spring and autumn feasts. Only Unleavened Bread (also called Passover) and Tabernacles are actually labeled *ḥag* feasts, and perhaps surprisingly there is no reference to all males appearing “before Yahweh” three times in the year, as in the previous calendars. The vocabulary of sacrifice exceeds anything observed in the previous accounts, with the term “offering made by fire” (*’išseh*) serving as something of a recurrent theme (this translation, which assumes a derivation from the Hebrew *’ēš* [“fire”], is itself questionable, and the term may relate more to a general food offering than to how it is consumed; a complete survey may be found in Averbeck, 540-49). Little in the instruction relates to the priest (only Lev 23:10, 11, 20) and nothing to any central sanctuary. A central priesthood and offerings in Jerusalem are undoubtedly anticipated, given the context of levitical law, but the instruction here is consistent with Yahweh’s command to Moses: “Speak to the Israelites” (Lev 23:1).

The Passover section (Lev 23:4-8), with its exact dating to the fourteenth day of the first month, appears conscious of the Exodus 12 narrative but makes no explicit reference to the historical events lying behind the Passover. Following reference to Unleavened Bread and Passover comes an extended section (Lev 23:9-14) outlining in some detail the regulations for offerings connected with harvest of the first-fruits of the grain. Although we may assume this to be part of the spring festival noted above, what appears in the passage reminds us that even historical feasts retained a strong agricultural element.

The Feast of Weeks (Lev 23:15-21) likewise depends for its annual inception on the appear-

ance of the first harvest (Lev 23:9-14; cf. Deut 16), from which fifty days (Gk *pentēkonta*) were counted (the reference in Lev 23:15 to “the day after the sabbath” is ambiguous; see the commentaries, e.g., Wenham) to the beginning of the second feast, here neither specifically named Weeks (*sābu’ôt*) nor designated a *ḥag*. The text says merely that the counting must be “seven full weeks” after the sabbath in question. The concern of the chapter is with the exact nature of the sacrifices for what is to be a “sacred assembly.” An interesting humanitarian note (Lev 23:22) closes the section on reaping, presumably referring to the end of wheat harvest.

The chapter concludes (Lev 23:33-44) with an extended instruction for Tabernacles (though interrupted by short summary notes in Lev 23:37-38, 44). Set in the context of the two other autumn feasts, Tabernacles is an eight-day *ḥag* that is dated by month and day, the first and last of which are sacred assemblies, with the entire feast tied to the recollection of living in booths during the flight from Egypt (Lev 23:43). Like the desert pilgrimage Moses requested from Pharaoh (Ex 10:9) and the autumn feast at Shiloh (Judg 21:19), Tabernacles is called a *ḥag layhwh*, a “feast to Yahweh” (Lev 23:41; cf. 23:34). Nothing is said about the venue for this feast, and while it is difficult to imagine all Israelites living in tabernacles while on pilgrimage, the offerings by fire, in contrast to the setting up of the family shelter, tie the instruction more closely to the priestly regulations for a central sanctuary.

4.1.4. *Numbers 28—29*. These two chapters, though not really a calendar, add daily and monthly offerings to the liturgical directions of Leviticus 23 and stipulate the specific sacrifices for each of the same list of feasts, together with instructions for actual preparation of each offering. A comparison with the offerings in Ezekiel 45:18-25 for Passover and Tabernacles will show considerable variety, especially in the numbers and kind of burnt offering animals to be sacrificed. If we may conclude that Ezekiel is describing a different vision from either preexilic or postexilic worship, we are left with only Numbers for a complete list of the sacrifices offered for the major feasts. This of course assumes a more traditional dating of Numbers. For many (e.g., de Vaux, 473) the priestly list in Numbers 28—29 is postexilic. Numbers, then, is best understood as a supplement to Leviticus 23. The

calendar is the same, but the concern in the text is with the choice of sacrifice for each feast, together with its preparation and delivery. For the levitical priesthood, this was the only instruction available.

4.1.5. *Deuteronomy 16:1-17*. The specific concerns of Deuteronomy—faithfulness to Yahweh’s covenant, including worship at a central sanctuary—dominate this chapter as they do the surrounding context. In other ways Deuteronomy 16 is not unique: it records instructions for the three pilgrimage feasts only and concludes (Deut 16:16-17) with a summary in which each feast is called a *ḥag*. In the body of the text (Deut 16:1-15) the feasts are listed as Passover, Weeks and Tabernacles, with the seven days of Unleavened Bread forming part of the instruction for keeping the Passover. By contrast, in the summary Unleavened Bread (*ḥag hammaṣṣôt*) takes the place of Passover as the designated spring feast. Passover (Deut 16:1-8) is firmly tied to the month Abib and the tradition of Israel’s departure from Egypt, although no specific day in the month is specified. Passover/Unleavened Bread instructions contain no agricultural elements, though the two remaining feasts are dated to events connected with the harvest. Weeks begins seven weeks after the first sickle is put to the standing grain (*qāmā*), with the seven-week interval presumably allowing for the completion of the wheat harvest, while Tabernacles commences immediately after the ingathering of produce for both threshing floor and winepress. Neither is tied to a historical event, though humanitarian notes in Deuteronomy 16:12, 14, which call for sharing the family celebration with *Levites, *aliens, *orphans and *widows, are rooted in the recollection of Israel’s own bitter slavery in Egypt, when presumably those who rejoiced in the harvest did not share it with their slaves.

The major difference in Deuteronomy’s account, however, is the repeated reminder (Deut 16:2, 6, 11, 15) that these feasts are to be celebrated only in the special place chosen by Yahweh, tying the concept of a *pilgrimage* feast to a specific shrine. Another feature, consistent with the covenant nature of Deuteronomy, is the focus on voluntary sharing with the less fortunate, an act seen as fundamental to the celebration of Yahweh’s *blessing (Deut 16:10, 14-15, 17). Feasting, for Deuteronomy, is part of the freedom of all God’s covenant people in the land, in

stark contrast to their earlier plight as slaves. As in the two Exodus passages, there are no regulations for the offerings themselves and indeed no mention of priests or an elaborate cultic ritual. The emphasis is entirely on the quality of the worship; true covenant celebration is to be done joyfully (Deut 16:14) as a voluntary response to God’s abundant blessing (Deut 16:10, 17) and in the company of the covenant people gathered around the sacred Name in the place of Yahweh’s choosing. Those who worship are to remember their former bondage (Deut 16:12) and to include those marginalized by contemporary conditions (Deut 16:14). Above all, as we have already observed in Exodus, no one is to appear before Yahweh empty-handed.

4.1.6. *Ezekiel 45:18-25*. Another short liturgical calendar, though outside the Pentateuch, deserves mention, especially in light of the tendency of traditional higher critics to date the Priestly material sometime after Ezekiel’s writing. Ezekiel’s concerns expand the liturgy to include the contributions of the eschatological prince, together with the traditional priest and Levites. Only Passover and Tabernacles make it into the prince’s new order, the former by name and the latter simply as “the Feast that begins in the seventh month on the fifteenth day.” Each is understood to be a *ḥag*, which to some explains why Weeks is excluded (e.g., Milgrom, 245). Weeks, which is mentioned in Leviticus 23 but not given *ḥag* status, did not meet the criteria used by Ezekiel. Another reason may pertain to the purpose of Ezekiel, which is to list the prince’s required offerings for the seven-day feasts. Since Weeks occupied but a single day, it may not have been worthy of mention.

Much has been made of Ezekiel as a bridge between the J, E and D materials on the one hand and the later Priestly instructions, particularly as found in Numbers, on the other. But Ezekiel 45 is a very different genre from either Leviticus 23 or Numbers 28–29. It looks forward to a future day when the dry bones of Israel will have taken on flesh and been filled with “spirit” (Ezek 37), in a renewed kingdom ruled over by a Davidic prince (Ezek 37:25) under a new, unbreakable covenant of peace. In that day Jacob will be brought back from captivity (Ezek 39:25), and a new and largely symbolic temple will rise in the midst of a redistributed land, ruled by God through his prince, with blessing flowing from the Jerusalem temple to

all the nations (Ezek 47). Only a small pericope is devoted to the feasts (Ezek 45:18-25), the purpose of which is to apportion the responsibilities of people and prince in the gathering of sacrifice (Ezek 45:13-17). The focus is on the spring and autumn pilgrimage feasts, when restored Israel will gather to celebrate the triumph of the rule of God. Attention is devoted to what the prince, not the people, contribute, and the reader feels that the worshipers, as in the great battle of Revelation 19, are swept up in the triumphal activities of the prince upon whom the narrative focuses. Although the feasts themselves stand in some continuity with those in the Pentateuch and the eschatological offerings provide for atonement and fellowship in Yahweh's covenant, there is more that is new than old.

4.1.7. *Later Feasts.* Later prophets, as well as postbiblical Jewish literature, include references to an expanded calendar marking both feasts and fasts (Zech 7:3-11; 8:18-19). The most important of these, Purim (Esther 9:18-19) on the thirteenth and fourteenth of Adar (twelfth month; February-March), and Hanukkah (1 Macc 4:41-59; 2 Macc 10:1-8) for eight days beginning on the twenty-fifth of Kislev (ninth month; November-December) are still celebrated within Judaism, each one, like Passover, marking a significant milestone in God's preservation of the nation (for a survey of other feasts, e.g., Feast of the Wood and Feast of Nicanor, see de Vaux, 473).

4.2. *The Secondary Sources: Narrative References to the Feasts in the Pentateuch and Historical Books.* As might be expected, given the heavily legislative agenda of pentateuchal narrative and its role in preparing the people of God for their entry into the land, we discover in the books of Moses themselves few instances where the feasts were actually celebrated. We certainly expect more when we turn to the stories of Israel in the land. That such evidence is both scattered and scant has buttressed an entire reconstruction of Israel's cultic history, held by some but by no means all scholars, arguing from the relative silence of the historical texts to the conclusion that the feasts themselves were, in some form, a later insertion in the Pentateuch.

4.2.1. *Passover/Unleavened Bread.* While the evidence is certainly not as full as might be wished, the picture does not lack consistency, and in at least two places (2 Kings 23:9; Neh

8:17) the text is quite candid about the absence of celebration in the years when we might most expect Israel to have kept these rituals. Apart from its institution in the exodus itself (Ex 12-13), the only other pentateuchal reference to Passover is to be found in Numbers 9:1-14, in the second year after Israel's departure from Egypt, while the escapees were still camped in the Desert of Sinai. The chronology is not always clear, but the Passover (first month, second year [Num 9:1]) appears to predate the census (first day, second month, second year [Num 1:1]) and the departure to the Desert of Paran (twentieth day, second month, second year [Num 10:11]). The incident is important to Israel's story for two reasons. First, it represents the institution of the memorial feast, following the departure. Second, a significant interpretive point is added when some, through no fault of their own, were ritually unable to celebrate at the appropriate time and thus were allowed to keep the Passover on the same day a month later. One is tempted to wonder whether even this Passover might have been omitted in the legal text were it not for the important point of practice it elucidated.

The so-called Deuteronomistic historical books (Joshua, Judges, Samuel, Kings) carry only two somewhat abbreviated notices of Passover or Unleavened Bread observance, together with a third less-specific note (1 Kings 9:25) about Solomon's three unnamed annual celebrations. The first occurs immediately upon Israel's entry into the land during the Gilgal encampment (Josh 5:10-11), when the nation had survived the desert wanderings and finally escaped the "reproach of Egypt" (Josh 5:9). As in Numbers, there is a didactic point in the text's reference: arriving in the land represents the fulfillment of the promise of the exodus itself. Following Gilgal, Passover is not mentioned again until the eighteenth year of the reign of Josiah (2 Kings 23:21-23), at the very close of Israel's history in the land, providing with Gilgal something of a bookend effect in the story. As in Joshua, the note is brief, at least in comparison with the Chronicler's account. Keeping the Passover is part of Josiah's response to the discovery of the book of the covenant (2 Kings 23:21), and the text seems at pains to note that "not since the days of the judges . . . nor throughout the days of the kings of Israel and the kings of Judah had any such Passover been observed." Whether

that meant there was no tradition of observance or merely that Josiah's celebration exceeded that of his predecessors is not evident.

The Chronicler agrees generally with the picture drawn in the Deuteronomistic History, though there are interesting points of difference. First, 2 Chronicles 8:12-13 expands 1 Kings 9:25, showing Solomon undertaking burnt offerings on the altar "according to the daily requirement . . . commanded by Moses for sabbaths, New Moons and the three annual feasts: the Feast of Unleavened Bread, the Feast of Weeks and the Feast of Tabernacles," but there is no narrative record of king or people having actually kept Passover or Unleavened Bread in the days of Solomon. However, in an event about which 2 Kings is silent, the Chronicler records a magnificent Passover celebration in the reign of Hezekiah (2 Chron 30). Significantly, the text again points out the failure of the earlier kings to keep the Passover (2 Chron 30:26), noting that "since the days of Solomon . . . there had been nothing like this in Jerusalem." Then, as in 2 Kings, Josiah's Passover is brought into the story (2 Chron 35:1-19), again with the added note: "the Passover had not been observed like this in Israel since the days of the prophet Samuel, and none of the kings of Israel had ever celebrated such a Passover as did Josiah" (2 Chron 35:18).

A final reference to keeping the Passover and Unleavened Bread is recorded from the postexilic period (Ezra 6:19-22) when, as in the desert (Num 9), at Gilgal (Josh 5) and in the reforms of Hezekiah and Josiah, there is a time of new beginnings under Zerubbabel and his companions.

4.2.2. Weeks/Tabernacles. A similar paucity of historical reference surrounds the other feasts as well. Weeks is mentioned, along with Passover and Tabernacles, only in 2 Chronicles 8:13 (see 4.2.1 above), while Tabernacles finds no place in the text until the postexilic period, apart from three texts where Tabernacles can only be assumed by inference. First, in Judges 21:19 (cf. 1 Sam 1:3) there is an "annual festival [*hag*] of Yahweh in Shiloh," with dancing in the vicinity of the vineyards, which seems to imply an autumn feast. Second, in connection with the dedication of the temple, all Israel gathers in Jerusalem in the seventh month, "at the time of the festival" (*hag*, 1 Kings 8:2); comparing that with 1 Kings 8:65-66 we may safely assume that

Tabernacles was intended. The third reference again must draw on reasonable inference from Jeroboam's creation of a less-than-orthodox feast in the eighth month (1 Kings 12:32-33), in a narrative that only makes sense if there was a more orthodox expression of the same feast practiced in Jerusalem at another time. All of this points to the fact that Tabernacles, if not Weeks, was at least known and occasionally celebrated in preexilic Israel. After the exile, the situation is equally ambiguous. A Tabernacles celebration was one of the first cultic activities of the returnees (Ezra 3:4), even prior to the rebuilding of the temple. But some years later, even that seems to have been forgotten when, through Ezra's reading of the law (Neh 8:14-18), the people discovered they had been commanded by Moses to live in tabernacles, or booths, during the seventh month, a project they then attacked with joy and abandon. The text in Nehemiah 8 closes with yet another of those "not since" notes, indicating that "from the days of Joshua son of Nun until that day, the Israelites had not celebrated it like this" (Neh 8:17).

We can conclude that (1) during the period, for reasons only hinted at in the text but related to general ignorance and unfaithfulness, the pilgrimage feasts were not much observed, and (2) the notice given to these feasts, both in the Deuteronomistic History and the Chronicler, show keeping the feasts as one of the signs of spiritual renewal. What this reveals about the pentateuchal instructions is not always evident, but it is certainly possible that from the beginning of Israel's history these instructions were extant but generally unobserved, at least in orthodox form, a point repeatedly supported in the text.

5. Theology of the Three Pilgrimage Feasts (*haggim*).

While other feasts (e.g., sabbath) were highly significant, much of Israel's festive life as a covenant people was defined by the three great feasts that brought the whole people together. These were the times when every male was to appear with full hands before God. These were times when both *creation and redemption were highlighted as fundamental to Israel's life. It was on the basis of the people's keeping faith with God's acts, as symbolized by these feasts, that Yahweh promised long life and prosperity in the land. That the record indicates only sporadic and partial observance of all three feasts

goes a long way toward explaining why the prophetic historians who wrote Israel's history considered the exile inevitable.

5.1. *Passover/Unleavened Bread.* Passover and Unleavened Bread, like other Israelite institutions, had deep roots in both creation and redemption theology. Although of all Israel's festivals the spring feast was most consistently tied to Israel's salvation history, the covenant context was a constant reminder of Yahweh as Creator and Provider. The command not to appear empty-handed (Ex 23:15; Deut 16:16), that all were to give "as you are able, according to the blessing of Yahweh your God that he has given you" (Deut 16:17), transformed the spring feast from merely a remembrance of salvation to a celebration of the harvest. Yahweh's actions in the exodus and conquest prepared the way for his activity in creation and his providential dispensation of rain and fertility in the land. To the Israelite in the land, the "bread of affliction" had given way to "bread and wine," in the security of one's own home, under one's own vine and fig tree. This was indeed cause for celebration, as every spring harvest would reveal anew. As we have observed, given the communal nature of the people of God, no true celebration of Yahweh's goodness could exist for an individual alone. The goodness of creation reflects the goodness of Yahweh, and that goodness is, from the beginning, intended to benefit the whole people. Celebrations such as Passover and Unleavened Bread, like other feasts, provided such an opportunity.

But among the three feast times in the annual cycle, Passover and Unleavened Bread remained the celebration of Yahweh's redemption par excellence. The modern Seder begins with thanksgiving for daily bread but goes on to recall through bitter herbs and the death of a victim the cost of redemption; in the same way, the people of God in antiquity recalled their origins as slaves in Egypt, oppressed by Pharaoh. The background of abundant prosperity in the land only highlighted the goodness of Yahweh, who not only came down to "bring them out" but who also had "brought them into" the land. The children still ask, Why do we, on this evening, eat unleavened bread? or Why do we, on this evening, eat bitter herbs? The answer comes in the story of God's deliverance from oppression and slavery. The Passover is all about freedom through sacrifice, and as such is the fundamen-

tal OT type on which Christian freedom in Christ, our "paschal lamb," is built.

Much speculation has taken place over the significance of unleavened bread. Unleavened bread was eaten in a variety of circumstances that required hasty preparation (e.g., Gen 19:3; cf. Ex 12:39; 13:6-10), while in other contexts the requirement for unleavened bread appears related to a cultic concern, as in the common levitical offering instructions (Lev 2:4-5; 6:16; 7:12, etc.) or in the narrative scene of Gideon's ritual presentation to the visiting angel (Judg 6:19-22). Why bread without leaven seems to be preferred in sacrificial settings is not made clear in the texts, but no such ambiguity survives in the tradition of unleavened bread as part of the spring feast. The reasons are historical, not agricultural. In fact, the point has been made that there is nothing in a typical agricultural harvest festival that demands unleavened bread (see the reference to articles by Halbe and Wambacq and bibliography in Hartley, 1067, 1069). Theories that see leaven as representing evil and create an apotropaic element connected with the prohibition lack any textual support. By contrast, the idea of "eating in haste" is deeply rooted in all the traditions and must remain the favored explanation.

5.2. *Weeks/Harvest/Pentecost.* Weeks is the most straightforwardly agricultural feast in Israel's calendar and the one about which there is the least controversy. The covenant calendars, though reflecting a variety of nomenclature, all describe Weeks in some fashion as "the first-fruits of (wheat) harvest." The barley harvest had already come in; now with the more important wheat harvest came the culmination of the grain harvest and the full celebration of Yahweh's goodness. Questions of how and when the date of Weeks was established, given that the onset of wheat harvest might have varied considerably from one part of Israel to another, are reflected in the texts. But the basic meaning does not change: When Yahweh gives prosperity, it is time to celebrate.

Questions of the prominence of Weeks have been raised, and while it is true that little is written about its observance, its theological and liturgical significance plus the need for Weeks to round out the "three times in a year" formula confirm that the wheat harvest fete was deeply rooted in Israel's cultic life. Various reasons have been given for its relative obscurity, from

the fact that it occupies only a single day (seven days of celebration in the middle of harvest time is hardly practical in any case), to its lack of a salvation-historical rationale, but all ignore the fact that Israel's covenant life was fundamentally tied to the agricultural cycle. Israel, as a people whose prosperity depended not on fertility rites (as in Canaan) nor the flooding of the Nile (as in Egypt), had every reason to pause and remember who sent the rains and from whose bounty they could reap. All this was expressed by the elevation (waving) of the two loaves of bread symbolizing the firstfruits of harvest (Lev 23:17). Just as the burnt offerings of Passover evoked the sense of divine deliverance through sacrificial death, the fellowship offerings of Weeks evoked the sense of thanksgiving and gratitude for God's activity in creation (cf. Ps 19; 104; etc.). The emphasis throughout on "firstfruits" was a reminder of that glorious moment when the first bud appeared, followed by the first flower or the first ripe ear. The observer knew there was more coming, but nothing that followed would produce the joy of the first new growth. This, the people were reminded in Weeks, had come from God and could be given joyfully back to God in the elevation of the loaves.

Another lovely note is added with humanitarian addenda in Leviticus 23:22 and Deuteronomy 16:10-12. According to the levitical law, when the fields were reaped, the edges were to be left for gleaning by the poor and the resident alien. For the well off to rejoice without considering the widow, the orphan and the alien would have been unthinkable and a denial of all that covenant blessing involved. In Deuteronomy 16 (cf. Deut 26:1-15) the emphasis on giving back is even stronger. The worshiper brought a freewill offering (literally, "the sufficiency of what your hand can afford") according to the measure of God's blessing. He rejoiced before Yahweh, together with all his extended family, sons and daughters, male servants and female servants, the Levite (to whom no inheritance of land had been given), the resident alien, the orphan and the widow. Lest they assumed too much, the worshipers were reminded (Deut 16:12), as in the Passover, that they had been slaves in Egypt.

The concept of divine abundance flowing in firstfruits, with the promise of much more to come, is an equally apt symbol for the NT fulfill-

ment of the Pentecost reality. Acts 2:1—"when the Day of Pentecost had fully come"—reminds the reader that OT blessing awaits an even greater fulfillment in Christ. In the sending of the Holy Spirit as the firstfruits (Rom 8:23), there is a reminder of the "not yet" side of Christian hope as believers wait for full adoption. Although the metaphor has shifted, the hope and joy generated by the first ear of grain has its counterpart in the fullness of spiritual life promised when Pentecost came in reality.

5.3. *Tabernacles/Ingathering.* Because there is evidence that *sukkôt* has both an agricultural and a historical base, the usual questions regarding its provenance and meaning have arisen. As we have seen, both Exodus 23:16 and 34:22 call Tabernacles the Feast of Ingathering (*'āsîp*) and tie its observance to the turn, or end, of the year (see 3.1 above for the Hebrew expressions). Considerable debate has attached to the idea that Tabernacles was not only the end of the old but also the beginning of a new year and thus an appropriate basis for the New Year's Festival (see below). These expressions, however, can equally apply to the end and beginning of the agricultural cycle, with little reference to whether Israel actually observed a Nisan or Tishri year, even less that it was the scene of an established mythical reenactment.

The most obvious "turning" of the year related to the completion of Israel's agricultural cycle, not only pointing to an agricultural basis for the feast but providing a basis for perhaps the most widely debated critical question pertaining to the study of Israel's feasts. Tabernacles, so it has been argued, was far more of an event than the pentateuchal texts reveal. In fact, it developed into a major New Year's Festival, drawing on Babylonian analogies (the *Akitu*), and in its most developed form drew both king and people into the myth of a dying and rising god. The best-known proponent of this view was S. Mowinkel. The strength of this proposal came not from pentateuchal sources but from the Psalms, many of which were interpreted as ritual texts accompanying the myth of a dying and rising god. Elaborate theories incorporated the theme of royal renewal as the ark was brought into the temple and the covenant of kingship was renewed. (A sympathetic summary of the argument is provided by Day, 67-87; see also the summary and bibliography in Bosman, 3.249-51.)

The arguments for an elaborate myth and ritual New Year's Festival continue to be debated, and because there is a strong element of subjectivism, it will probably never be fully resolved. In a study of pentateuchal themes, it must be noted that what evidence exists is from the Psalms, and most of it is subject to other interpretations. Israel's cultic calendars, as we have seen, provide no evidence for an elaborate autumn kingly ritual. Quite the contrary, in both the simple "end/turn of the year" feast of Exodus 23 and 34 and the slightly more formal Feast of Tabernacles in Leviticus 23 and Deuteronomy 16, the emphasis is on the harvest and the rejoicing that attended it. In both the Exodus passages and Deuteronomy the agricultural element clearly predominates, together with the memories of living in tabernacles (huts) in the desert that take center stage in Leviticus 23:40-44. The ingathering of the autumn harvest gave hope to those who had seen Yahweh's covenant love reward their labors, just as living for seven days in a tabernacle (hut) gave perspective on their humble past and how Yahweh had preserved them through the desert years. The poor and rich together went out to find leafy trees, even as they enjoyed the fruits of the harvest just ended. And because it was the "turn" of the year, they were reminded to look forward as well as back.

Finally, we note the importance of Tabernacles in later times. Under the return with Zerubbabel, Tabernacles was the first ritual celebration of the exiles (Ezra 3:4) and seemed to function as a reinauguration of the sacrificial system in the city. Some years later, though the chronology is confusing, Ezra the priest returned to Jerusalem, and through reading in the book of the law it was discovered that the people of Israel were called upon to dwell in booths, or tabernacles, for a week in the seventh month (Neh 8:14-18). What followed was a remarkable rediscovery of the national dream, as the people went out into the fields and forest, gathered the branches, created the booths and rejoiced in their God. It was clearly a centralized feast, as Jerusalem had now become almost the totality of the little city-state. The law was read daily, and the rejoicing of the exiles was overwhelming. Those who remembered such things decided that there had been no celebration of its equal since the days of Joshua. For many, the spirit of Tabernacles represents nothing less

than the rebirth of life in the city of God.

The association of Tabernacles with coming into the abundant new life of God's covenant community may also lie behind the remarkable apocalyptic passage in Zechariah 14:15-19. The setting (Zech 14:1-13) is the final victory of Yahweh over the nations, a battle in which Jerusalem is set apart and protected from the general carnage. When it all ends, Jerusalem reigns supreme, living water flows from its midst, and Yahweh is "king over the whole earth." What follows is nothing less than the fulfillment of God's promise to Abraham (Gen 12:1-3; 18:18-19): the blessing of all the nations. Those from all nations who survive the final apocalypse join in an annual pilgrimage, which now becomes the event by which every nation on earth participates in the worship of Israel's God and the celebration of his goodness. Tabernacles has become the feast to end all feasts and represents the full flowering of God's promises, through Israel, to all the nations.

6. Summary.

The idea of feasting is as old as humanity, but for many the subject has become simply "meat and drink" or a means to ease the harsh realities of life. Israel's life of feasting could not have been further removed from this idea. The feasts of Israel were the ritual expression of its life as a community of God's people. Through the feasts, Yahweh's faithfulness in the past became the ritual basis for the hope they held for the future. Communal acts such as shared sacrifices, festive meals, prayers, singing and dancing renewed their sense of belonging. The three times in a year when all males (and most everyone else) went up to Jerusalem were times when God reminded them of the unity and rhythm of their life in his covenant. Because the feasts, or at least two of them, had historical associations, Israel never had reason to drift into what we would today call existentialism. Equally, because each of the feasts also had an agricultural base and Israel was an agricultural people, they never forgot the covenant with Yahweh, through which he blessed them and the land and through which they, in turn, were to bless all peoples and all lands. Joyful solidarity with Yahweh and his people, in tune with the rhythms of creation, combined with concern for the poor and needy and ultimately all the nations of the world.

Each of Israel's feasts told a part of that story. The weekly sabbath, the monthly New Moon, the great Day of Atonement, and even the solemn blowing of trumpets—all of these brought the worshiper into the cycle of God's creative and redemptive love. Add to that the three special occasions when the whole people met together in festive mood with Yahweh as King in their midst, and it becomes possible to see why this people could, with the psalmist, affirm in joy and triumph, "Blessed is that nation whose God is Yahweh" (Ps 33:12).

FIRSTFRUITS

The word *firstfruits* is used in two ways in the English Bible. First, it simply describes the first portion of the produce of the land. Second, it refers to specific ceremonies related to the first portion of the harvest. Two Hebrew words are translated "firstfruits" in English Bibles. The first Hebrew term is *bikkūrim*, which is translated "firstfruits" eight times in the Pentateuch (Ex 23:16, 19; 34:22, 26; Lev 23:17; 23:20; Num 8:13; 28:26). The same term is also translated "early ripened things" (Lev 2:14, twice) and "first ripe" (Num 13:20). It refers to first-ripe *agricultural products, including fruits, grains and grain products such as flour and bread. The second Hebrew term is *rē'šît*, which is translated "firstfruits" four times in the Pentateuch (Lev 2:12; 23:10; Num 18:12; Deut 18:4). Additionally, it is translated "choice" (Ex 23:19) and "first" (Ex 34:26; Lev 2:12; 23:10; Num 15:20, 21; 18:12; 24:20; Deut 18:4 [twice]; 26:2, 10; 33:21). It refers to grain, wine, oil and even the wool from the first shearing of the sheep (Deut 18:4).

1. Firstfruits as Israel's Responsibility
2. The Wave Offerings
3. Individual First Fruits Offerings
4. The Meaning of First Fruits

1. Firstfruits as Israel's Responsibility.

As the sovereign Creator, God owns all things. In response to this and as a token of stewardship, Israel acknowledged that the first issue of human, beast and soil belonged to Yahweh and as such require redemption. Additionally, the firstborn of human and animals needed to be redeemed for a second reason. In delivering Israel from bondage, God had inflicted great plagues upon the *Egyptians, culminating in the death of the firstborn. Israel's firstborn sons and animals were spared; therefore they became God's special property (Ex 13:2-16). Provision was made for the tribe of *Levi to be substituted for them (Num 3:12-16). To redeem the harvest,

the first-ripe fruits were brought to God. These offerings provided a portion of the stipend of the *priests and Levites (*re'šit*: Lev 2:12; 23:10; Num 18:12; *bikkûrim*: Num 18:13). They received all of the firstfruits except for the cereal offering described in Leviticus 2:14-16.

2. The Wave Offerings.

2.1. The Wave Sheaf of Barley. Two distinct wave offerings, offered at different times and in different ways, are associated with firstfruits. One is the wave sheaf of immature barley offered during the Feast of Unleavened Bread on the first Sunday after Passover, which occurs on the fourteenth day of the month of Abib. During Abib, barley continues its development through a germinal phase of growth that begins the final ripening process. The wave sheaf offering begins a lengthy, hazardous time that is relieved only after a period of fifty days of uncertainty and apprehension (Lev 23:9-14 and probably Lev 2:12; Num 18:13).

2.2. The Wave Loaves of Wheat. After these fifty days, on the Day of Pentecost, the second firstfruits wave offering occurs. This uses the wave loaves of the newly ripe wheat (Ex 23:16, 19; 34:22, 26; Lev 23:17, 20; Num 28:26). The occasion of each of these two firstfruits wave offerings is called the Day of the First Fruits. (In Lev 23:10-11 we find "the day" when the firstfruits of the early barley harvest is waved before the LORD during Passover season.)

2.3. Firstfruits and the "Days of Trepidation." In its first division (*Zeraim* or "Seeds"), the Mishnah has an entire section called *Bikkurim*. It specifies that the *bikkûrim* offerings must come from the "seven varieties" listed in Deuteronomy 8:7-10: wheat, barley, vines, fig trees, pomegranates, olive oil and (date) honey. All seven of these products are closely related to the two wave offerings of firstfruits. The success of the harvest is determined during the fifty days between Passover and Pentecost. The blossoms of the grape, pomegranate, olive and date open and develop, and the undeveloped figs continue to mature. During that same time period, the kernels of grain—the barley and the wheat—fill with starch. Except during the dry season, Israel's weather is unpredictable at best, but during this particular fifty days it is most unpredictable of all. It is so characterized by contrasts that one cannot anticipate whether the days will be wet or dry, cold or hot, windy or calm. The first part

of this period requires northern winds, cold and rain for proper development of barley, wheat and figs. Rain in the latter portion of this period, however, is disastrous (see 1 Sam 12:17-19, where rain is a harbinger of death!). The seven varieties thus typify the unique agricultural challenges of the land of Israel, and they demonstrate the necessity of faith in order to live there. This period of fifty days between the wave sheaf of barley and the wave loaves of wheat is called the "seven weeks of trepidation and prayer." This seems to be the reason that the *bikkûrim* offerings were to be given only from the seven varieties, as contrasted with the "choice products" listed in Genesis 43:11 (balm, [bee] honey, aromatic gum, myrrh, pistachio nuts and almonds). The yield from these products is not threatened by the special agricultural problems of the land of Israel.

3. Individual Firstfruits Offerings.

In addition to the wave sheaf of barley offered at Passover and the wave loaves of new wheat offered at the Feast of Weeks (Pentecost), the Pentateuch discusses the individual offerings of the "first of all the produce of the ground." The procedure for such offerings is given in Deuteronomy 26:1-11. The head of each family would place the offering into a basket and go to a designated place and say to the officiating priest: "Today I declare to the LORD your God that I have come into the land that the LORD swore to our ancestors to give us." As the priest accepted the basket and placed it before the *altar of Yahweh, the worshiper avowed:

A wandering Aramean was my father; he went down into Egypt and lived there as an alien, few in number, and there he became a great nation, mighty and populous. When the Egyptians treated us harshly and afflicted us, by imposing hard labor on us, we cried to the LORD, the God of our ancestors; the LORD heard our voice and saw our affliction, our toil, and our oppression. The LORD brought us out of Egypt with a mighty hand and an outstretched arm, with a terrifying display of power, and with signs and wonders; and he brought us into the place and gave us this land, a land flowing with milk and honey. So now I bring the first of the fruit of the ground that you, O LORD, have given me.

The offerer, who had regained possession of the basket, placed it before the altar and wor-

shipped. How appropriate that his gifts (of the seven varieties) demonstrated the hazards of living in the land of Israel and the necessity of trusting Yahweh for subsistence!

4. The Meaning of Firstfruits.

The offerings of firstfruits acknowledged God's sovereignty and ownership of all things. They represented the stewardship of Israel living in the *land. The firstfruits offering at the Day of Pentecost was a celebration indeed.

FLOOD

Comparisons between the biblical and ancient Near Eastern accounts of the flood can be made on several different levels. First, one could compare individual features such as the dimensions of the boat or the length of the flood. Second, one might examine the conceptual worldview concerning the cosmos and its devastation at the hands of deity. Third, comparisons could be made regarding the nature of the literary preservation of flood traditions and the relationships between those traditions. After summarizing the source material available, the following article will attempt comparison on each of these three levels between the cultures of Mesopotamia and Israel. The importance of engaging in such comparative study is that it provides the basis for understanding the cultural background of the Israelites. The theological message of the Bible was communicated to people who lived in the ancient Near Eastern world. If we desire to understand the theological message of the text, we will benefit by positioning it within the worldview of the ancient cultures rather than simply

applying our own cultural perspectives.

1. Ancient Near Eastern Sources
2. Individual Features
3. Conceptual Worldview
4. Literary Features
5. Archaeology and the Flood
6. Apologetics and the Flood

1. Ancient Near Eastern Sources.

There are three major documents from Mesopotamia that offer an account of the flood. The earliest, a Sumerian fragment of about seventy lines, was found at Nippur and is generally dated to the seventeenth century B.C. (published by M. Civil in Lambert and Millard). It was combined by Jacobsen with two other fragments into a hypothetical composition he entitled "The Eridu Genesis" (Hess and Tsumura, 129-42; *COS* 1.158.513-15). A roughly contemporary account in Akkadian, the Atrahasis Epic, contains an account of the *creation of humankind as well as the flood (*COS* 1.130.450-52; Lambert and Millard). The third account of the flood is found in tablet 11 of the Gilgamesh Epic. The initial discovery of this epic was in Ashurbanipal's library at Nineveh. This copy dates to the seventh century B.C. Subsequent discoveries and analyses have allowed the origins of the Gilgamesh Epic to be traced through the various sources from which it was compiled. Though the epic as a piece did not come together until early in the first millennium, some of the Gilgamesh sources that it incorporates date to the second half of the third millennium (Tigay). The flood segment is generally considered to have been adapted from Atrahasis. Neither Egypt nor Syria preserve independent flood traditions, though a small fragment of the Atrahasis Epic was found at Ugarit (Lambert and Millard, 131-33). A fragment of the Gilgamesh Epic was found at Megiddo, but it is not from the section that contained the flood story.

2. Individual Features.

2.1. Divine Decision. In the Mesopotamian accounts the decision was made in the assembly of the gods to have a flood wash over the land to destroy the human population. The high gods An and Enlil are seen as the driving force behind the decision, with the other gods agreeing, apparently with some reluctance. In all accounts the intention was to wipe out all of humanity, flooding as much of the land as was necessary to

accomplish that purpose. The biblical account likewise has the destruction of the human race in view but differs in that there is no divine assembly in operation, with cross-purposes festering beneath the surface. Consequently, the decision to save the hero in Genesis is part of the divine plan rather than subterfuge against the decision of the council, as in Mesopotamia.

2.2. Hero. Ziusudra (“long life,” Sumerian account), Atrahasis (“exceedingly wise”) and Utnapishtim (“finder of life,” Gilgamesh Epic) are three titles for the king of Shuruppak, who is the hero of the flood story in the ancient Near Eastern traditions. In each of these Mesopotamian accounts his patron god, Enki/Ea, informs the hero covertly. The king is informed of the coming flood and instructed on how to escape by means of a boat. In Genesis, *Noah is given no official position as king or priest, though he is portrayed as a faithful worshiper of God, just as the Shuruppak king is portrayed as a devout worshiper and favorite of Enki/Ea. Noah’s name does not indicate a personal quality or something he achieves for himself. Instead, it is given as indicative of his father’s hopes for him (Gen 5:29) that were not entirely realized (Gen 8:21-22). Perhaps a subtle theological difference between the traditions is that Noah’s ark is seen as the means by which God will deliver him and his family, whereas in Mesopotamian traditions the boat is seen as a means of escape. Thus, instead of one god helping the hero to escape the wrath of the other gods, Yahweh provides safety for Noah from the punishment that Yahweh is bringing on the rest of humankind.

2.3. Dealing with the Population. In Genesis itself there is no reference to Noah’s interaction with the population. The preaching of Noah is referred to in passing in 2 Peter 2:5 but finds much more elaborate antecedents in intertestamental and early Christian literature. Josephus (*Ant.* 1.3.1 §72-74) makes similar claims, as do other early Jewish compositions (e.g., *Jub.* 7:20-39, c. 100 B.C.). In the *Sibylline Oracles* Noah makes a long speech (1:175-233) condemning his neighbors and warning them that a flood threatens their lives. Early Christian literature follows this same line of thinking. Though the NT refers to Noah as a proclaimer or herald of righteousness, it offers little detail to support the elaborate speculations of the extrabiblical sources. We could easily imagine that Noah would have been involved all of his life in trying

to make an impact on his world for righteousness. Usually the tradition today, however, implies that Noah was trying to persuade them to join him in the ark and gain deliverance. The evidence of the text would argue against that possibility. Noah was told exactly whom to bring in the ark, and space was made for these eight passengers. Even if others had wanted to gain sanctuary in the ark, it is not a given that such an option would have been available.

It is interesting to compare the mentality reflected in Gilgamesh on this issue. There it is assumed that if the general population were told that a flood was coming, they would all readily believe and want to be delivered. In the Mesopotamian versions, since no humans were supposed to be saved at all, widespread alarm would have been disastrous. Consequently, Utnapishtim and his god, Ea, have to devise a half-truth to deceive the population of Shuruppak so that they will not become suspicious of the building activity. They contrive a story that Utnapishtim is out of favor with Enlil, so he must build a boat to go to the great sea to live with Ea, his patron god, lest his presence bring Enlil’s wrath on the city. He claims that once he is gone, Enlil “will send you rain of plenty” (Gilg 11.43). Certainly we would not attribute such deception to Noah, but this section illustrates well how different the ancient world was from our modern thinking. Skepticism about the punitive intentions of the gods was far more rare in the ancient world than it is today. People back then would have found it intrinsically credible that deity would send a flood to wipe out life. It is far more likely that people would have clamored to get on board than that they would ridicule Noah for his undertaking.

2.4. Boat. In the Mesopotamian traditions the boat is made from the reeds of the hero’s house (e.g., Gilg 11.23-24). In Gilgamesh, the palace is given to the one who sealed up the boat (11.94-95), so that is not what the boat was built from. Ziusudra was a priest as well as a king and presumably received his instructions in the shrine, but the instructions concerning the boat are missing in the broken parts of the tablet. If we put all of the texts together, we might surmise that the shrine where Enki delivered the warning was demolished to make the boat. If so, the result would be a floating shrine. This would coincide with the conjecture that the shape of the boat in the Mesopotamian tradition was similar

to that of a ziggurat (Holloway). Like many ziggurats, there were seven stories, and the breadth, length and height are all the same (120 cubits; Gilg 11.29-30, 57-58). In Genesis, the dimensions were 300 cubits by 50 cubits by 30 cubits. In both Israelite and Mesopotamian accounts, the completed boat was covered with pitch for waterproofing.

2.5. Occupants. In Genesis the survivors were Noah and his family accompanied by animals by twos (unclean) and sevens (clean). The intention was species survival. The Mesopotamian traditions go much further than that, as there is an attempt made to save not only the race but also civilization. As a result, guild members of various sorts, possessing specialized knowledge of the technology of their trades, are taken on the boat (Gilg 11.85) in addition to all of Utnapishtim's relatives. The texts are less clear about the animals. The Sumerian version mentions small animals. Atrahasis, in a badly broken section, lists several categories of animals (birds, cattle, creatures of the steppe), perhaps including clean animals (Atrahasis 3.2.32-37, though some consider these to be used for sacrifices rather than taken on the boat). In the Gilgamesh Epic the beasts and wild animals of the steppe are loaded into the boat. Genesis has, by far, the most extensive list of animals, enumerating every kind of bird, every kind of animal and every kind of creature that moves along the ground. The text also specifies that these animals will come to Noah. In one recension Atrahasis catches the animals (3.2.34), but in another recension Ea sends him the animals (Lambert and Millard, 129). The other versions do not say how the animals were collected.

2.6. Event. Just as the biblical account generally includes more narrative detail, it also presents a more extensive event. Atrahasis speaks of heavy clouds, thunder, savage winds, darkness and noise. In Gilgamesh the gale and the lightning are so frightening that even the gods are terrified. Interestingly, neither mentions rain specifically. Although certainly rain would be included in a storm, the focus is more on the storm than on the rain or even on the water of the flood. Gilgamesh indicates that the deluge flattened the land, but none of the ancient Near Eastern accounts makes reference to the water rising and covering. Instead it is described as sweeping through (Sumerian account, lines 202-203). In Atrahasis and Gilgamesh the storm lasts

seven days. The Genesis account features rain for forty days with little emphasis on the storm elements of wind, thunder, lightning and darkness. Instead, the focus of the narrative is on the floodgates that pour out rain and the surging waters that cover everything. In addition to the forty days of rain, there is a much longer period over which the water is rising as well as a much longer wait for the waters to subside, resulting in the inhabitants occupying the ark for about a year.

The Hebrew word for Noah's flood, used twelve times in Genesis 6—11, is *mabbûl*. Outside of this section it occurs only once (Ps 29:10) in the OT. The word is very similar to the Akkadian word for the cosmic deluge, *abubu*. In Akkadian it refers to a devastating flood of cosmic proportions that is seen as a destructive weapon of the gods. Just as Psalm 29:10 depicts Yahweh as enthroned on the flood, Akkadian texts depict gods such as Nergal as "king of the battle, lord of strength and might, lord of the Deluge" and Ninurta as the "exalted lord who rides upon the Deluge." It is true that Noah's flood is the only *mabbûl* that the Bible acknowledges, but it is likely that the word had broader currency as a cosmic water weapon wielded by deity.

2.7. Sevens. In Atrahasis, the warning comes seven days before the flood (2.2.37). All the building takes place and the arrangements are made, then the storm comes and lasts seven days (3.4.24). There may be more periods of seven, but the text is too broken to know. In Gilgamesh, the boat is built in seven days (11.76, according to Foster, *COS* 1.132.459), the storm lasts seven days (11.129-130), and then they wait seven days before sending out the birds (11.146). In Genesis, there are seven days between entering the ark and the beginning of the rain (Gen 7:4, 10). There are seven more between the first and second sending of the dove, and again between the second and third sending of the dove (Gen 8:10-12).

2.8. Birds. The use of birds for determining whether it is safe to exit the ark does not occur in the Sumerian account, and that part of the story is missing in Atrahasis. In Gilgamesh, Utnapishtim waits seven days after the storm has ended and the boat has lodged against a mountain (Nisir or Nimush in Kurdistan). Then he releases a dove, which returns, and then a swallow, which also returns. Finally, a raven is

sent, and it finds food and does not return. In the biblical account, once the ark has lodged in the mountains of Ararat (Armenia), Noah sends a raven first, which acts similarly to the raven in Gilgamesh. Then Noah sends a dove out three times. The first time it simply returns. The second time it brings back a freshly plucked olive branch (which, by the way, does not grow in Mesopotamia), and the third time it does not return.

2.9. Sacrifice. Noah builds an altar and offers some of the clean animals and birds as a burnt offering. The purpose of Noah's *sacrifice is not stated. Burnt offerings serve a broad function in the sacrificial system. It may be more important to note what the text does not call the sacrifice. It is not a sin offering nor specifically designated a thank offering. The burnt offerings are usually associated with petitions or entreaties set before God. In contrast, the sacrifice offered after the flood in the ancient Near Eastern accounts feature incense offerings (Gilgamesh) and grain offerings as well as meat sacrifices in order to provide a feast for the gods (Sumerian). The general purpose for sacrifice in the ancient world was to appease the anger of the gods by the gifts of food and drink, and it is likely that that is the intention of the flood hero in the Mesopotamian accounts. In both Genesis and Gilgamesh, deity smells the sweet savor of the sacrifice and is pleased (Gen 8:21; Gilg 11.160-161).

2.10. End Result. In the Sumerian version, Ziusudra is given eternal life and settles on the Island of Dilmun. In the unbroken part of Atrahasis there is a censure of Enlil for bringing the flood so thoughtlessly and a sign of remembrance given in the lapis on the neck of Nintu. The most complete description is preserved in Gilgamesh. Belet-ili gives a sign of remembrance in the beads of her lapis necklace, and Enlil is censured as in Atrahasis. When Enlil becomes furious that someone has survived, Ea lectures him on the fine points of justice. As in the Sumerian account, Utnapishtim and his wife are granted immortality and given a place to dwell that is beyond the natural borders of human occupation. In Genesis the *rainbow is given as a sign of remembrance (the Hebrew word for rainbow, *qeshet*, sounds similar to the Akkadian word for necklace, *kišadu*), and Yahweh commits himself to maintain the regular routines of order in the cosmos (Gen 8:22).

Rather than being granted eternal life, Noah is *blessed and procedures are put in place for humanity to be self-governed (Gen 9:5-6).

3. Conceptual Worldview.

3.1. Role and Status of Deity. The gods are first resolute when the decree is made, then terrified when the storm is raging, then bitter and full of regret at the result, and finally indignant at Enlil, who is blamed as the responsible party and made a scapegoat for the debacle. Enlil is portrayed as a shortsighted bully who is easily outwitted. He blusters so predictably that he is an easy target for the cagey Ea (Enki). The latter is so shrewd and glib that he can talk circles around Enlil, turning what begins as his own trial for circumventing the oath of silence into a challenging denunciation against Enlil for incompetence in one of his principal areas of responsibility. Despite Ea's role as the champion of humanity who engineers the preservation of civilization, none of the gods come out of this episode looking particularly attractive. Their limitations are debilitating and their character flaws evident. They are driven by selfish motives and have little concern for people. These qualities are no different from those that characterize the gods generally in the ancient Near East and offer a consistent contrast to the depiction of the God of the Bible.

Most striking in the flood account is the clarity with which the gods' dependence on humanity is shown. The impact of the loss of sacrifices that nourished the gods had apparently not been anticipated when the decision was made to bring the flood, and the reality of that loss is poignantly portrayed in the desperation of the gods as they swarm about the sacrifice that the flood survivor offers. In contrast, Yahweh's absolute autonomy and consistently elevated character leave little room for the critical assessment that his actions are mindless or rash. The Genesis account abounds in justice, in sovereignty and, perhaps a bit surprisingly, in *grace. The picture of God offered in the Genesis narrative of the flood shows him to be distressed over injustice and violence, and even while he is responding to this situation with dramatic punitive action, his grace and mercy are evident. The human race has always struggled with the question of *why* huge natural disasters take place, and especially what divine purpose there might be in these events that we still refer to as "acts of

God.” What is one to think of a God who could do or even allow such mayhem? Extrabiblical accounts have little to offer in response. The best they can do is to suggest that capricious anger motivated the gods to their destructive behavior.

3.2. Reason for the Flood. Among the ancient Near Eastern accounts, only Atrahasis offers an explanation for why the gods sent the flood. There the complaint of Enlil concerns the “noise” (*rigmu*) and “uproar” (*huburu*) of humanity, along with the explanation that the land was “bellowing like a bull” (2.1.3-8). The result of this tumult is that Enlil is deprived of sleep. The nature of this noise has been the subject of much discussion. Some of the options are as follows: (1) the commotion of violence (e.g., battle cries); (2) the screams and cries of victims; (3) the clamor of petitions for justice; (4) the turmoil of rebellion against the gods (e.g., protests); and (5) the cacophony resulting from overpopulation. Any or all of these could conceivably give definition to the “noise” or “uproar,” since the two are fairly general terms. Even the “bellowing like a bull” description retains a certain ambiguity. In 3.3.15 the same expression is used for the flood. The verb generally reflects a swelling or fluctuating sound and thus is appropriate for the billowing sounds of a flood as well as the fluctuating pitch of a bull’s bellowing. The question that is most important is whether this noise represents an offense of the population (1 or 4 above), a byproduct of the offense (2 or 3 above) or simply an inconvenience to the gods. In the ancient world this would perhaps have been a distinction without a difference, since anything that inconvenienced the gods, however trivial it might be, could potentially be an offense against them. The comparison of the Hebrew reference to the outcry of Sodom (Gen 18:20) may be apropos, but it is difficult to be certain (Moran 1987, 255 n. 45). In the biblical flood account it is humanity’s wickedness (Gen 6:5) and violence (Gen 6:13) that provoke God to judgment. In the biblical view, there is no question that the flood is a response to a moral problem. In the ancient Near Eastern accounts it is difficult to prove that the flood was a response to moral degeneration, but it cannot be entirely ruled out either. We can only observe that moral indignation is not a common reflex among the gods of Mesopotamia, whereas they are often inclined to act on a whim. Additionally, since all were to be destroyed, it makes no sense that the gods were

simply trying to come to the rescue of innocent victims.

3.3. Purpose of the Flood. In Atrahasis, several remedies to the noise of humankind are attempted prior to resorting to the drastic extremity represented in the flood. From these we can infer that the original intention of the gods was to decimate the numbers of humankind so as to reduce the noise level (whatever the noise represents). When those strategies fail to produce the desired result, the flood is sent to destroy humanity completely. In both the Bible and the ancient Near East it is clear that the flood targets the human population, not specifically the animals or the natural world as a whole. The decision implies that humankind has become more trouble than it is worth. In Ea’s speech in the Gilgamesh Epic, however, he implies that the flood was a clumsy effort to carry out justice: “On him who transgresses, inflict his crime! On him who does wrong, inflict his wrongdoing!” (11.184-185). In the Genesis account, God has already assessed who is righteous and who is not. The flood targets the wicked, while the ark preserves the righteous. Nevertheless, there is a level of similarity that exists on this point. Ea’s speech advises Enlil that divine justice should target those who have committed offense rather than humanity as a whole. This is comparable to the idea in Genesis that God will no longer wipe out all of humanity. Presumably this does not mean that he will no longer punish sin, only that he will punish sin on a case-by-case basis. The differences, however, are also of great significance. Enlil’s act of destruction was, in hindsight, viewed as a foolishly shortsighted act that was unjust because it lacked any attempt to discern whether each individual deserved the punishment or not. Enlil’s flood is therefore portrayed as an act of injustice that should not be repeated because there is no justification for such action. Yahweh’s flood is portrayed as an act of justice (bringing fully deserved punishment) that will not be repeated because grace will prevail even though there will undoubtedly be future situations that call for such extensive judgment. Enlil is warned to refrain from universal judgment because it does not promote justice. Yahweh determines not to engage in universal judgment because humanity could not survive justice. What for Enlil was intended to be a warning against future rash behavior represents for Yahweh the triumph of grace.

3.4. Extent of the Flood.

3.4.1. *Ancient Near East.* When the storm subsides in the Gilgamesh Epic there is some land still visible (11.139-140). The text is somewhat ambiguous when it says that land was visible at twelve (variant, fourteen) *beru*. A *beru* can be either a measure of distance or a fraction division of one-twelfth (e.g., the twelfth part of the day or a twelfth part of a circle; CAD B.208-11). Interpretations of this passage vary, with A. George following the latter and translating “in fourteen places there rose an island,” while B. Foster follows the former and translates “at twelve times sixty leagues a mountain rose up” (COS 1.132.459). The word translated “island/mountain” is *nagû*. The Late Babylonian Map of the World diagram depicts five triangular regions labeled as *nagû* that fringe the known world. Some texts describe them as “in the sea,” thus suggesting islands. Others have interpreted their triangular shape as representing mountains from a frontal view (Horowitz, 30-33). In a Nebuchadnezzar inscription they are listed parallel to the faraway mountains and described as in the Upper and Lower Sea. In his attempt to relate the *nagû* to other cosmic regions, Horowitz suggests that “a traveler crossing over the sides of the *nagû* beyond the cosmic ocean might fall directly into the Apsu or netherworld” (Horowitz, 32).

In the Mesopotamian worldview, the known world was made up of a single continent fringed with mountains (such as the Zagros Mountains in the east and the mountains of Ararat in the north) and ringed by the cosmic sea. It is this fringe that may be referred to when the Gilgamesh Epic says that Utnapishtim beheld the edges of the world (Foster’s translation of 11.139; COS 1.132.459). The fringe mountains were believed to hold up the heavens and have roots in the netherworld. In the east, the mountain primarily associated with this role was Mount Mašû. Gilgamesh travels there on his way to find Utnapishtim. In the north is Mount Simirriya. Sargon, king of Akkad, describes this mountain in his eighth campaign to Urartu (Ararat) as the dwelling of Belet-ili and one on whose peak the heavens lean. In a text known as the Sargon Geography, the source of the Euphrates (in the mountains of Ararat) is marked by mountains that are considered part of the Cedar Mountain. These are considered the fringes of the world surrounded in turn by the cosmic ocean (Horowitz, 93).

If we put all of this information together we could postulate that the deluge in Gilgamesh entails a mighty storm that results in the cosmic waters flooding their world to the extent that everything in the inhabited region is covered. The *nagû* could be considered the fringe mountains that Utnapishtim sees rimming the horizon like the sides of a bathtub. It is against one of these, Mount Nimush, that the boat eventually comes to rest. This would be a universal flood, but it would be misleading to call it a global flood since the people of that time knew nothing of a globe and would not see things in those terms. More important, they believed that the only ones who survived the flood were those aboard the boat. As the Gilgamesh Epic assesses the situation, “All mankind had turned to clay” (11.134).

3.4.2. *Biblical Flood.* How should we assess the extent of the biblical flood? We first must understand that we have to deal with a text, specifically a text that is not only nonscientific but that also communicates within a prescientific worldview. Science is not in a position to make demands on the text, nor are interpreters in a position to import scientific concerns and perspectives into the text to satisfy their own worldviews. We must take the text on its own terms and be willing to accept it at face value. We want neither to dismiss the text nor to create an artificial construct to put in place of the text. Some feel that they are protecting the reputation of the Bible by devising scientific theories that account for the details of the traditional interpretation of the text. Too often, however, these theories prove to be implausible and are easily discredited by the scientific thinkers whom they intend to win over.

The options concerning the extent of the flood are not just “universal” and “local.” It is preferable to identify four alternatives as follows:

Global: This position is the most extreme. It represents the belief that the floodwaters covered the entire globe to a height that was higher than the highest mountains.

Known World: This position believes that the flood was universal relative to the world known to the ancient audience. This is a massive flood, but it would not include other continents or areas of the world such as China.

Regional: This position would hold to a very extensive regional flood centered in the Tigris-

Euphrates Valley, the Mediterranean basin or the area of the Black Sea.

Local: In this view the flood was the kind that may have wiped out several towns along the river.

3.4.2.1. Logistical Considerations. The debate in evangelical circles has been framed as a debate between the Bible and science. More precisely, however, it is a debate between a traditional reading of the text and logistics. That is, there are a number of logistical problems that raise questions about the traditional (global flood) reading of the text. For example, raising the sea level 17,000 feet (to cover Mount Ararat) would require by some estimates 630 million cubic miles of additional water weighing three quintillion tons. It has been calculated that this much water vapor would increase the atmospheric pressure 840 times its current levels, which would in turn prevent sunlight from reaching the surface and eradicate life as we know it (Best, 39-40).

In addition, the care of the animals would be a daunting task if every species worldwide were included. Estimates of 21,000 species would mean 42,000 creatures that had to be fed and whose crates and stalls had to be maintained. Simple math shows this to be a mammoth task for only eight people. Likewise, one would need enough fresh water on the ark for all of these animals for almost a year after the rain stopped providing a natural supply. Moreover, it is difficult to explain how there could still be some freshwater lakes and seas if salt water had mixed with all the bodies of water, not to mention how the freshwater fish survived. One must also explain how the animals today found only in Australia could have gotten to that continent. In addition, for the sea level to rise 17,000 feet in 150 days, it would have to average almost five feet per hour. That kind of rise sustained over five months would create such strong currents that survival on the ark would have been unlikely even if the boat itself could survive.

Still even more logistical problems arise. Those searching for the ark in modern times have had to use very sophisticated mountain-climbing equipment to scale the heights of Mount Ararat and at times have had to abandon the effort. How would Noah and his family and animals such as elephants and hippopotami make the trek down the mountain? Finally, if the ark ran aground on the still-submerged summit

of Mount Ararat on the seventeenth day of the seventh month (Gen 8:4) and the tops of the mountains became visible on the first day of the tenth month (Gen 8:5), the water receded only fifteen feet in seventy-five days. Yet it would have had to recede seventeen thousand feet in the next seventy-five days because by the first day of the first month, the earth was dry (Gen 8:13).

We must take logistical problems seriously. At the same time we must be committed to taking the text seriously. In addition, we must also be willing to look beyond our own worldview and traditions to see the text in ways that the original author and audience may have seen it. It is a weak interpretation that has to invent all sorts of miracles that the text says nothing about in order to compensate for the logistical problems. It is necessary, therefore, to revisit the language of the text, to determine what it unequivocally demands of us as interpreters.

3.4.2.2. Text. Four textual issues contribute to the discussion of the extent of the flood and require investigation: (1) the universal scope of the language describing the flood (Gen 7:21-23); (2) the covering of the mountains (Gen 7:19); (3) the reference to the waters being fifteen cubits above (Gen 7:20); and (4) the report of the tops of the mountains becoming visible (Gen 8:5).

With regard to the universal scope of the language, passages such as Genesis 41:57 and Deuteronomy 2:25 make it clear that when the text uses the word "all," it is not always in an absolute sense. Similar relative use can be seen in Akkadian texts. Most instructive is a text called the Sargon Geography, which names the lands of the known world one by one and concludes, "Sargon, King of the Universe, conquered the totality of the land under heaven" (Horowitz, 71). Based on examples such as these, it becomes clear that it was perfectly acceptable, and not at all deceptive, to use the word "all" in reference to a relatively delineated area. Since this relative usage is within the legitimate range of the word "all," we cannot conclude that the use of the word demanded an absolute universal interpretation.

Likewise, when Genesis 7:19 refers to the mountains being covered, it uses the Pual form of the verb *ksh*. The verb is used for a wide variety of "covering" possibilities. When water is the subject, the covering can express submerging (e.g., Ex 14:28; 15:5), but other alternatives also exist. In three passages (Job 38:34; Jer 46:8; Mal

2:13) it appears that the water does not cover by submerging as much as by drenching. If Genesis 7:19 were taken the same way, it would suggest that the mountains were drenched with water or coursing with flash floods but not demand that they were totally submerged under water.

In Genesis 7:20 the phrase “fifteen cubits above” is difficult to decipher, largely due to the word that NRSV renders “deep.” The Hebrew text says, “Fifteen cubits *from above* [*milma‘lā*] rose the waters, and the mountains were covered.” It is therefore not at all clear that it is suggesting the waters rose fifteen cubits higher than the mountains. When the word under discussion is used as an adverb without a preposition to relate it to another noun, translations such as “upward” (Ezek 1:11, “spread upward”) or “upstream” (Josh 3:13, 16) are better choices. It is to this category that Genesis 7:20 belongs. By using *milma‘lā* as an adverb modifying the verb “rose,” the text may only suggest that the water reached fifteen cubits upward from the plain.

Finally, the report of the tops of the mountains becoming visible is the most difficult statement to explain for those arguing that the text does not require a global flood. The ark stops moving in Genesis 8:4 on the seventeenth day of the seventh month, and the tops of the mountains do not become visible until two and a half months later, the first day of the tenth month. Most interpreters have inferred that the ark became lodged on the tops of one of these mountains that was still under water and that it did not become visible for ten more weeks. If this were a proper inference, the observation in the text would be a matter of experience, not perception. Noah did not just assume that all the mountains were under water; he was *in* the mountains and they *were* under water. If it were not for Genesis 8:3-5, it would be easy to claim that the face value of the text does not demand a geographically global flood. All of the other statements can be compatible with a flood of the known populated world. Given the apparent clarity of Genesis 8:3-5, however, it is difficult to see how the flood could be less than global if the waters reached a height of seventeen thousand feet. So how do we reconcile the apparent clarity of the text with the extremely difficult logistics? We must still consider whether Genesis 8:3-5 strikes us the way it does because we are thinking in terms of our understanding of the world. Would this text mean something different if we could

read it with an ancient Near Eastern mindset?

Revelation had not altered the Israelite view of cosmic geography from the typical ancient Near Eastern view. There is no reason to doubt that they too thought of the world as a single continent surrounded by fringe mountains on which the sky rested. Though all the mountains in the inhabitable region of the world may have been covered, the waters of the flood would not necessarily have been thought to include the fringe mountains. As we have seen above, the Ararat Mountains were considered to be part of those fringe mountains. Noah’s ark could be understood as having come to rest against (Heb *‘al*) the mountains of Ararat, and from there Noah would have watched the tops of the mountains in the inhabitable world become visible. The logic of not including the fringe mountains would be that they were believed to support the heavens, and the waters would not be seen as encroaching on or encountering the heavens. Such a hypothesis would yield a geographically limited flood, yet it still could be anthropologically universal if the population had not yet spread beyond this region. One of the advantages of seeking out views such as this is that they allow us to affirm the truth of the text without getting all tied up in complicated logistical and scientific discussions. All agree on the theological teaching and significance of the passage, regardless of the geographical extent of the flood.

3.5. Symbolism of the Flood and Ark. It has already been suggested that the boat in the Mesopotamian accounts may have served as a floating shrine. In its dimensions, the Genesis ark is much more realistic for a boat, though conceptually it may also represent a sanctuary where order is maintained floating on a sea of resurgent chaos. In this sense the Mesopotamian ark appears as a physical representation of a sanctuary, while the Genesis ark appears as a functional representation of a sanctuary. Creation both in the Bible and in the ancient Near East entailed deity bringing order while pushing back chaos (see Creation §3.1). The forces of chaos were most consistently represented in the cosmic waters. In this sense, the flood represents a reversal of creation. This is more the case in the biblical account than in the ancient Near Eastern accounts, for in the latter there is no textual representation of re-creation (to be discussed below).

4. Literary Features.

4.1. *Function of the Literary Accounts.*

4.1.1. *Role of the Flood in Atrahasis.* The broad structure of Atrahasis has been identified as parallel to Genesis in that it contains accounts of creation, population growth and the flood. In Atrahasis, the flood serves as the finale in the gods' attempt to deal with the "human problem." It is a last resort after several other attempts have been made to solve the problem. As we have seen, it is difficult to determine with confidence whether that problem is overpopulation or moral turpitude. If it is the former, Genesis takes exactly the opposite view, since population growth is considered the result of God's blessing rather than a problem. If it is the latter, Atrahasis could be seen as tracking side by side with Genesis.

Why does the narrator record the Atrahasis Epic? Several possibilities exist, but there is no clear consensus and confidence is undermined by the fragmentary nature of the extant text. There are tales in Sumerian and Akkadian that highlight the craftiness of Enki/Ea. A case could be made that Atrahasis falls into that category as well. A second possibility is that this is a hero tale of the famous sage Atrahasis. A third possibility is derived from the last lines of the composition. There the gods put in place some measures designed to limit population growth, including barrenness, infant mortality and cultic personnel who forego childbearing. In this case the account has been given an etiological function.

4.1.2. *Role of the Flood in Gilgamesh.* The Gilgamesh Epic confronts the reality of death by exploring various strategies for negating its sting. Considering philosophical rather than narrative issues, it can be seen in some general ways to move in reverse order from Genesis 1—11. Gilgamesh begins with the idea that achievements of various sorts can establish an immortal name for himself. In this he can be equated with the builders of *Babel. He next pursues the possibility of gaining immortality as a gift. His acquaintance with the flood hero eliminates that possibility. His final attempt involves the plant that counteracts aging. This is where the biblical narrative begins with the tree of life. All of these narratives, including the story of the flood, are imbedded in this quest for coping with mortality.

Jacobsen considers the older version of the Gilgamesh Epic (without the flood narrative) as

a tragic vision of human despair in the face of the reality of death. He believes that the author of the later version that included the flood narrative has transformed the tragedy into a romantic piece in which the quest for immortality becomes an adventure discovering strange lands and hidden wisdom. As a result, neither the epic nor the flood episode concerns primarily the gods and their behavior. Utnapishtim and Gilgamesh are the focus of the narrative's attention.

4.1.3. *Role of the Flood in Genesis.* The flood account in Genesis should be understood in terms of its development of the themes that drive the book (Walton 2001). The overall purpose of the book of Genesis is to chronicle the history of the development of the *covenant. Whereas Genesis 12—50 documents the obstacles that were overcome in the early stages of the covenant and the advance of the covenant blessings, Genesis 1—11 offers the reader an understanding of why a covenant was needed. If the covenant is seen as representing God's revelatory program, Genesis 1—11 shows the progress of *sin and the concomitant dwindling and corruption of the knowledge of God. On a parallel track, these chapters also show the continual extension of God's blessing and grace (traced from the blessings of Gen 1:28-30). The flood narrative plays a major role in this sequence as it shows God dealing with the sin of humanity and preserving the blessings promised to them. In this way we can see that the flood story is about God, not about Noah or even about humanity. It is intended to reveal the character of God, which requires it to take a very different course than the ancient Near Eastern accounts.

In addition to this role, the flood narrative serves a more specific role as a parallel account to creation and the Fall. The flood returns the cosmos to the watery chaos that was described in Genesis 1:2. The waters of the flood are acted upon by a wind sent from God (Gen 8:1), as are the initial waters (Gen 1:2). After the waters recede and the dry land appears, God brings out Noah and his family and the animals just as he brought forth living creatures in creation. God uses the waters of chaos to eliminate social chaos. He then overcomes the cosmic chaos of the floodwaters and brings a new creation out of them. The waters return to their boundaries, and cosmic equilibrium is not only restored but is given a new permanence (Gen 8:22). Then

God pronounces the blessing in Genesis 9 just as he did in Genesis 1. Noah's drunkenness stands as a second fall, as he is unaware of his nakedness and pronounces a curse. There is more here, but it takes us beyond the scope of this article.

4.2. *Interrelatedness of the Literary Accounts.*

Many of the narrative elements that the ancient Near Eastern accounts have in common with the biblical account are elements that would be logical to include in such a story. So, for instance, it is no surprise that both feature a boat. Consequently, the fact that these elements are held in common would fail to persuade that the accounts were in some way related. It is the episode of the birds (see 2.8 above) that compels us to believe that the biblical account and the ancient Near Eastern accounts cannot be considered as totally unrelated.

Given the relatively sparse amount of literary information we possess, it is fruitless to discuss which account came first. It is true that Mesopotamian culture preceded Israelite culture and that generally the flow of culture was from the former to the latter. But it is also true that *Abraham came out of Mesopotamia. It is true that the literary documents we have from Mesopotamia are older than the book of Genesis as a work of *Moses. But it is also true that even Moses would likely have used older literary sources when compiling the book (see Source Criticism). If the book of Genesis is arguing against some of the points in the ancient Near Eastern material or trying to set the record straight, it would have had to come after them in time. But the possibility cannot be ruled out that the Genesis account is a pristine record of the event as passed down from Noah that suffered corruption when transmitted in the hands of other cultures. Such decisions cannot be made on the basis of current evidence but rather only on the basis of presupposition. There would be value in viewing the narrative as a corrective reaction to the corrupt accounts circulating about the ancient world, rather than as a pristine and unadulterated tradition preserved from antiquity, though the latter cannot be ruled out *prima facie*.

It is really time, however, to set aside all the discussion about borrowing. First, literary data are insufficient, given the current extant texts, to sustain a case directly from that data. Comparing Atrahasis and Gilgamesh, one can easily see the telltale signs of wholesale borrowing from

one literary piece to the next. There are whole lines that are carried over with little alteration. Dependence can be established on purely literary criteria. This is far from the case when comparing the biblical account to the Mesopotamian versions. Second, an important distinction must be drawn between borrowing from literature and reacting to literature. If the biblical account is loaded with polemic, it must have a level of awareness of the Mesopotamian traditions. But the intention of the biblical narrator is not simply to offer a recension or, as is more often suggested, to convert the story to a Yahwistic perspective. Polemic is far more aggressive than simple conversion. While conversion may border on plagiarism, polemic is interactive and critical. Third, as is evident from the brief studies above of the literary setting of each account, the biblical author utilizes the flood story in significantly different ways from his Mesopotamian counterparts. For instance, it would be nonsense to analyze the play *Rosencrantz and Guildenstern Are Dead* as a careless plagiarism of Hamlet. Of course, it incorporates the well-known story of Hamlet, but its purpose is to set that well-known play into a striking existential context and so draw out certain philosophical elements from it. It is not a conversion of Hamlet to an existential perspective; it is a retelling of selected portions of Hamlet to drive home an existential lesson. We need not see the flood accounts in exactly this same relationship, but by now some literary realism and sophistication should allow us to leave the simplistic discussions of borrowing behind us.

5. *Archaeology and the Flood.*

There is presently no convincing archaeological evidence of the biblical flood. The examination of silt levels at the Sumerian cities of Ur, Kish, Shuruppak, Lagash and Uruk (all of which have occupation levels at least as early as 2800 B.C.) are from different periods and do not reflect a single massive flood that inundated them all at the same time. Similarly, the city of Jericho, which was continuously occupied from 7000 B.C. into the OT period, has no flood deposits whatsoever. Climatological studies have indicated that the period from 4500 to 3500 B.C. was significantly wetter in this region, but that offers little to go on. The search for the remains of Noah's ark has centered on the Turkish peak of Agri Dag (17,000 feet) near Lake Van. However, no

one mountain within the Ararat range is mentioned in the biblical account, and carbon-14 dating of fragments of wood from this mountain indicate that they come from no earlier than the fifth century A.D. Despite repeated claims and ongoing quests, then, firm evidence of the continued existence of the ark has not yet been forthcoming.

Other suggestions have come from oceanographers who have identified a number of different occasions on which there was massive flooding in the Near East. These include a flooding of the Mediterranean and a flooding of the Black Sea. In a theory proposed by G. Morton, a variety of geological data show that until 5.5 million years ago the Mediterranean was not a sea at all. The water was dammed up at Gibraltar. Morton's evidence suggests a fairly sudden collapse causing a break more than three thousand feet deep and fifteen miles wide, filling the Mediterranean basin in less than nine months. This rapid flow of water would have resulted in the formation of heavy clouds that would result in torrential rains over the region. If the reader finds it difficult to put the flood 5.5 million years ago, the Black Sea theory may be more palatable. In the mid-1990s geologists and oceanographers began investigating a huge, catastrophic flood in the region of the Black Sea. Their findings indicated that in about 5500 B.C. there was a sudden rise in water level in the Mediterranean that brought a thunderous waterfall through the Bosphorus and into the Black Sea. Over the course of a year it flooded out sixty thousand square miles of land and raised the water level of the Black Sea approximately five hundred feet. Prior to this time the Black Sea had been a freshwater sea, as the fossils at the original beach level indicate. W. B. F. Ryan and W. C. Pittman speculate that the flow of water would have been four hundred times greater than Niagara Falls and that the water level in the Black Sea would have risen a foot a day for several months.

Both of these theories would fit into the "regional" category. They are examples of theories that attempt to identify some geologically known natural catastrophe with the biblical flood instead of trying to come up with possible scientific explanations of how a global flood could have theoretically occurred (as, e.g., Whitcomb and Morris do). Both approaches typically fall short of offering satisfying reconciliation of the biblical account with the scientific record.

6. Apologetics and the Flood.

Apologetic approaches to the flood by definition seek to demonstrate that the biblical account is true. Apologists are therefore interested in proving: (1) that the flood actually occurred, against those who would consider the account simply another piece of ancient mythology; and (2) that the flood was actually of the magnitude reported by the text, against those who would consider it exaggerated or hyperbolic. The first is approached by arguing against a relationship with the ancient Near Eastern texts, by claiming the support of flood traditions in many unrelated cultures around the world and by seeking scientific evidence for the flood, whether in observations of geological strata or in documentation of catastrophic events. The second approach usually concludes that the flood was global and approaches the apologetic task by offering explanations of things such as where the water came from and where it went, how the animals could have fit on the ark and survived on the ark, and so forth. It is believed that both cases could be strengthened if the ark were found on the upper reaches of Agri Dag. As we have seen in the above analysis, however, both of these issues are far more complex than they are usually made out to be, and it is therefore possible that in at least some cases we have been defending traditions or presuppositions rather than text. Yet even if it were agreed that Genesis could be shown to be inconclusive about the magnitude of the flood, some would claim that the NT is not at all ambiguous.

The NT refers to the flood a few times in passing but does not offer any unequivocal statements about the extent of the flood. In Luke 17:27 Christ describes the indifferent routine of the people of Noah's times, then notes that the flood came and destroyed them all anyway. To this he likens the day when the Son of Man is revealed. Here the point is that people were unprepared for the disaster that was to strike. It refers only to people who were destroyed, not to land that was covered. Likewise 2 Peter 2:5 indicates that God did not spare the ancient world but preserved Noah, referring to people rather than land. Finally, 2 Peter 3:5-6 declares that the "earth was formed out of water and by means of water, through which the world of that time was deluged with water and destroyed." These passages speak respectively about being prepared, about God's willingness

and ability to rescue the righteous and about God's ability to bring destructive judgment. One can find support here for the anthropological universality of the flood, but little that can be conclusively inferred about the geographical extent of the flood.

FOODS, CLEAN AND UNCLEAR

The restrictions governing the diet of the Jews have since ancient times been among the handful of observances most obviously marking them out as different from others and guarding against their assimilation into other cultures. All of the rules originate in the Pentateuch and are understood by observant Jews as divine commands, but the relation between written rule and practical observance varies.

This article describes all the restrictions on diet in the text of the Pentateuch, notes the way each has been interpreted in practice and, where possible, attempts to place it in one or more frameworks of explanation. Each section of this article will first try to understand what the *texts* say, then show how they were observed in practice (*application*) and finally offer one or more *explanations*. The explanation stage begins by trying to understand the motivation of the rule in the text, the religious symbolism that it expresses, though the underlying reasons for the custom expressed in the rule may be different. Dietary restrictions of different kinds are widespread among the peoples of the world. Consequently, some comparative observations about them, as gained by social anthropologists, may help us to understand the meaning and origin of those in the Bible.

1. Background

2. Forbidden Kinds
3. Forbidden Parts
4. Forbidden Conditions
5. A Forbidden Combination: Kid in Mother's Milk
6. General Significance

1. Background.

The food rules in the Pentateuch are concerned only with food derived from animals, mostly with flesh meat, with the exception of other food made unclean by contact (see 4.2 below; the prohibition of leaven during the Feast of Unleavened Bread is not dealt with here). This is true of food rules in most cultures. Meat is eaten relatively rarely in poor agrarian societies. Those who possess flocks have their yearly increase eaten mostly at *festivals and on special occasions; the poor might pick up the odd carcass or bring in the occasional extra supply through hunting. This is generally the only occasion (except in famine) on which any unusual food is likely to appear, so rules about forbidden *kinds* of food are only likely to affect animals. Further, at the Israelite festivals when domestic animals were killed and eaten, they were in early times normally *sacrificed, involving a ritual act that had its own rules (the permission given for secular slaughter in Deut 12 is presented as an innovation; see 6.2 below).

2. Forbidden Kinds.

The law distinguishing between animals that may be eaten and those that are forbidden is the most significant in marking out Israel as distinctive.

2.1. Texts. Leviticus 11 is the most complete treatment in the Pentateuch of the distinction between animals permitted and forbidden for food (Lev 11:2-23, 41-43). These restrictions are partially repeated in a more concise form in Deuteronomy 14:4-20. The relation between the two versions is disputed (see Milgrom 1991, 698-704; Houston, 63-65). Each is placed in an interpretive context (see 2.3, 6.1-2 below; see also Gen 7:2-3; Lev 20:25-26).

The texts are addressed to all Israelites and are applicable at all times. Leviticus 11:2-23 and Deuteronomy 14:4-20 each treat successively "beasts," or larger land animals; creatures of the water; and creatures of the air. Leviticus 11:29-37, 41-43 adds a fourth classification: swarming things of the ground—small land animals that

run or crawl close to the ground (Houston, 33-35), such as mice, lizards, insects and the like. Between them, these categories exhaust all animal life. Thus both texts, and the Leviticus text in particular, give a systematic treatment.

2.1.1. Beasts. Those that may be eaten are distinguished by three criteria: they have hooves (translated incorrectly in many versions [Milgrom 1991, 646; Houston, 36 n. 1]); the hooves are cloven in two; and they chew the cud (Lev 11:3; Deut 14:6). This group of criteria defines a zoological suborder, the ruminants, which includes among others all the mammals bred for food by Israelites: cattle, sheep and goats. Deuteronomy 14:5 lists these as permitted along with seven wild species, including deer and gazelle. All other larger mammals are implicitly forbidden; the list that follows (Lev 11:4-8; Deut 14:7-8) removes any ambiguity by specifically forbidding certain animals (including the pig), which are said either to chew the cud or to have cloven hooves, but not both. If the expression "chew the cud" implies that these animals have multiple stomachs, this is inaccurate for the rock badger and the hare (Houston, 37-38; Milgrom 1991, 648-49). Like ruminants, however, these latter animals give the appearance of chewing their food for a long time.

2.1.2. Water Creatures. Those that are permitted (Lev 11:9-12; Deut 14:9-10) are distinguished by the possession of fins and scales. This covers most but not all fish and excludes all mollusks and crustaceans ("shellfish").

2.1.3. Creatures of the Air. Birds (or larger flying creatures, bats included) and insects are treated separately. In contrast to the previous two sections, no criteria are given for birds, but only a list of forbidden kinds (twenty in Lev 11:13-19; twenty-one in Deut 14:12-18, but one is possibly a textual error [see *BHS* on Deut 14:13]). There is uncertainty about the identification of many of these, but it is generally agreed that the majority are birds of prey or carrion-eaters (Driver; Houston, 43-46). All birds not in this list may be presumed to be permitted (but see 2.3 below).

The insects produce the only substantial discrepancy between the two texts (Lev 11:20-23; Deut 14:19). All flying insects are prohibited in Deuteronomy; Leviticus uses the criterion of the possession of hind legs for hopping to permit four sorts of locust (which we cannot precisely identify).

2.1.4. “*Swarming Creatures of the Ground.*” In Leviticus 11:41-43 all swarming creatures are forbidden without exception. Deuteronomy does not mention them, but according to J. Milgrom Deuteronomy 14:21a implicitly includes them. W. J. Houston rejects this and argues that the author did not think it necessary to mention them, since they are “unconsciously tabooed” (Houston, 183; cf. Leach, 32), as reflected in Leviticus 11:41-43.

2.2. *Application.* The precision of the texts for the most part eliminates dispute about their meaning. The prohibition of the flesh of the pig has since Hellenistic times been a recognized symbol of the distinctness of the Jewish people among their neighbors, and in the time of Antiochus IV Epiphanes a cause for martyrdom (2 Macc 7). Peter’s vision in Acts 10:9-16 employs the symbolism of unclean animals in the same way as Leviticus 20:24-26: the distinction of clean and unclean parallels, symbolizes and enforces the separation of Israel from the nations; and the command to Peter to kill and eat unclean animals symbolizes the acceptance of Gentiles as members of God’s people.

The only uncertainty in the law concerns the birds, in that it gives no criteria for the identification of permitted species, and already in antiquity the reference of some of the names of forbidden birds was uncertain. The Mishnah gives some criteria for forbidden birds (*m. Hul.* 3:6): these, broadly speaking, identify flesh-eating birds. But the later discussion in the Talmud (*b. Hul.* 61a-65a) makes it clear that some birds were regarded as unclean although they are not birds of prey and are not mentioned in the pentateuchal lists (e.g., some kinds of swallow and the starling).

2.3. *Explanations.*

2.3.1. *Biblical.* On the level of the text, the meaning of the law is clear. The interpretive context of each text relates to the holiness of the people of Israel. According to Leviticus 11:44-45 (cf. 6.1 below), in order to be *holy as Yahweh is holy, Israel should avoid making themselves unclean with “swarming things”; although this is linked with Leviticus 11:41-43, it is probably implied that the aim of holiness is served also by observing the foregoing prohibitions. But how are holiness and purity connected with diet? According to Deuteronomy 14:3, Yahweh’s holy people are not to eat disgusting things (see 6.2 below), but this implies some preexisting sense

of what is disgusting to eat.

Both texts thus affirm similar religious meanings of the prohibitions and raise similar questions. If the observance of rules of diet leads or conforms to holiness and symbolizes Israel’s dedication to their God, what gives the rules that meaning, and why these rules rather than any other?

Houston (68-123) divides existing explanations into two broad categories: “traditional” and “comparative.” While the former apply a priori ideas to the biblical rules taken on their own, the latter are based on general understandings of human culture, including the awareness that systems of food avoidance are found in many societies.

2.3.2. *Traditional Explanations.* There are three primary explanations in this category. *Hygienic* theories go back at least to Maimonides (*Guide for the Perplexed* 3.48). In their modern form they point to the dangers of inadequately cooked pork and shellfish and occasionally attempt to extend the idea systematically to the many other unclean species (Macht). But such theories must come to grief on the fact that *all* animal species may carry parasites that make their flesh dangerous when not properly cooked as well as on the absence of any idea of public health in ancient Israel.

Cult-polemic theories, which maintain that the forbidden species were those prominent in pagan cults (see, e.g., Noth, 92), are as old as Origen (*Cont. Cels.* 4.93). However, in reality the most common animals sacrificed in Canaanite and Egyptian cults were the same as those sacrificed by Israelites. It is, however, probable that pigs were sacrificed in certain rites carried out in honor of underworld deities, which would have been particularly repugnant to Yahwism (de Vaux; Houston, 161-68; Milgrom 1991, 650-52). But such evidence cannot be found for all the dozens of unclean species. Besides, were pigs unclean because they were sacrificed to underworld deities, or were they sacrificed to underworld deities because they were unclean (see 2.3.3.3 below)?

Moral theories find a moral purpose in the rules. For example, Philo (*Spec.* 4.103) held that it was to restrain luxury that pork was forbidden, because it is the most delicious of flesh meats. Milgrom sees the dietary laws in general as teaching respect for life (Milgrom 1991, 704-42), in this case by severely limiting the number of

species permitted (Milgrom 1991, 735). But he does not adequately reply to the criticism (e.g., by Firmage, 195 n. 24) that the law places no restriction on the *quantity* of meat eaten. M. Douglas in her more recent work (Douglas 1993; 1999, 152-75) understands the prohibition of swarming things in Leviticus as teaching justice by protecting the weak.

2.3.3. Comparative Theories. Theories within this category may have a materialist, a structuralist or a contextual basis, or they may include elements of all three (see Social-Scientific Approaches; Keesing and Strathern, 302-21).

2.3.3.1. Materialistic Approaches. M. Harris's cultural materialism (Harris 1977; 1985) examines the dietary customs of various cultures in the light of the local ecology and argues that the tabooed species are those that would impose high costs on society as a whole if generally eaten but that might be profitable to individual breeders, who must therefore be religiously restrained. In the case of Israel, the animals permitted to be eaten are those that make most efficient use of dry grassland. The pig, on the other hand, can be raised only by costly investment in grain and water.

It is true that any dietary system must operate under the basic ecological constraints of the environment, but negative constraints have no creative power in human society: they "never produce cultural forms" (Keesing and Strathern, 127). Moreover, since customs are frequently maladaptive rather than adaptive (Keesing and Strathern, 125-26), it cannot be shown that their adaptive character is the reason for their adoption.

2.3.3.2. Structuralist Approaches. Structuralism finds the roots of ritual, myth and symbolism in fundamental structures of the human mind, which tends to set ideas in patterns of opposition (cf. Kunin, 1-11). The leading exponent of structuralist theory as applied to the forbidden animals is M. Douglas (1966; 1973; 1975a; 1975b; 1999). For Douglas, the patterns of opposition, especially of inclusion and exclusion—seen in the social structures of a society, its cult, its view of the body and its classification of animals—may be expected to correspond to and confirm one another. Thus in the Pentateuch there is a close correspondence of hierarchical patterns between the classification of animals, the division of sacred space and the ordering of people. Thus only unblemished, clean domestic animals

are acceptable on the *altar and correspond to the *priests who alone may ascend it; all clean animals are acceptable on the table as food for Israel, who in a clean condition may enter the court of the *tabernacle; unclean animals are excluded from Israel's table as Israelites in an unclean state are excluded from the court (Douglas 1975a; cf. Milgrom 1991, 721-25).

But what accounts for the way in which permitted and forbidden animals are distinguished? All classification gives rise to anomalies, and in Douglas's earlier thought (1966; 1973; 1975a; 1975b) the anomalies are the key to understanding the pentateuchal system. For each of the three spheres of life (land, water and air) the system propounds a model that expresses the mode of life (usually of movement) proper to that sphere, while the criteria of cleanliness in beasts are derived from the animals that the Israelites actually kept for food and sacrifice (Douglas 1966, 54). Animals that fail to conform to the model are rejected, and the most emphatic rejection applies to the species that threaten the classification system by overlapping its boundaries (the four animals of Lev 11:4-8) or defy the classification altogether (the swarming creatures that are found in each sphere but in no way conform to its mode of life). The strict rejection of anomalous animals contrasts with the honor given by the Lele of the Congo to the pangolin, which is highly anomalous in their system. Douglas suggests (1975b) that this corresponds to the difference in kinship systems. That is, the Lele are organized in exogamous clans, always marrying "strangers," while endogamy is the rule in Israel: the strange son-in-law, the strange animal and the strange god are all rejected.

However, as Douglas later came to recognize, there is nothing to indicate any special degree of abhorrence for the groups she had singled out as anomalous or for the forbidden animals in general. Moreover, to find the source of the concept of unclean or unacceptable animals in the system of classification itself is circular. There is, for example, no reason why water creatures should have scales except that others are defined as unacceptable—but that is just what we are trying to explain (Houston, 101-11). Wherever classifying criteria are given in the law, they serve to identify animals *already* regarded as acceptable. This is shown by the case of birds, where the task of finding criteria is left

to the rabbinic period (see 2.2 above) even though the biblical text is already able to identify unclean birds.

Recently Douglas (1999, 134-75) has offered a new interpretation of the Leviticus text (not applicable to Deuteronomy). The two main principles that it expresses are those of "creation and covenant" (Douglas 1999, 168). Among the land animals the domestic flocks and herds are within the covenant; whenever Israel eats meat, in the priestly system, it is in the Lord's house (Lev 17:3-4; see 6.1 below), and to have touched an animal outside the covenant, which is unclean, is an insult to the Lord's honor. Among air and water animals, which do not convey uncleanness (see 6.1 below), it is the "swarmers" that are "to be shunned," and these represent the principle of fertility, which is to be revered and protected but at the same time is opposed to that of the cult. While this view is thought-provoking, it appears to ignore important features of the text: the game animals permitted on the grounds of their physical resemblance to the flocks and herds; the birds to be avoided (not swarmers); and the fact that swarming creatures of the water include both those permitted and those forbidden (Lev 11:10).

2.3.3.3. Contextual Theories. F. J. Simoons shows that the pig tended to be avoided over a wide area of the Near East. Houston (124-80) goes on to examine the archaeological evidence for diet in the area. It can be shown that the overwhelming majority of animal food eaten in Palestine and the surrounding areas in the Bronze and Iron Ages came from creatures regarded as acceptable in the pentateuchal law. A notable exception is the pig, which was eaten in modest but declining quantities. However, it is also clear that throughout this period the pig was not acceptable for sacrifice in normal circumstances (but see 2.3.2 below). E. B. Firmage suggests that the clean beasts in Israel were based on the paradigm of sacrificial animals, the table being an image of the altar. The evidence collected by Houston shows that the peoples of the area all shared, with slight variations, the same set of normal sacrificial animals, with the pig excluded from the altar even if it was eaten. He thus suggests that the source of the distinction among animals, thus shown to be older than the OT, lies in a pattern of association between human and animal life that opposes the

tame and peaceful creatures identified with the order and justice of the human community to the bloodthirsty creatures of the wild (Houston, 181-217). Among domestic creatures, however, dogs fell on the wrong side of the line because of their scavenging habits, and pigs either because they were fed on waste food or because they perhaps were kept by women. This would give them a low status compared to the flocks and herds generally kept by men (cf. Campbell, 26-31; Parkes). The donkey, on the other hand, was unacceptable for food for a different reason, because it shared human labors. The three criteria for edible beasts (see 2.1.1 above) successively exclude the dog, the donkey and the pig. Animals such as deer and gazelle were sufficiently like domestic cattle to be accepted for eating (but not sacrifice) as honorary cattle, as it were (cf. the similar rule among the Maasai). The unclean birds, mostly birds of prey and carrion-eaters, were taken as representative of the wild. The rules concerning water creatures and insects were probably based on custom, as was the unacceptability of swarming creatures.

3. Forbidden Parts.

Even of animals permitted to be eaten, certain parts were prohibited, either of all animals or of some.

3.1. Blood. By far the most stringent of all the pentateuchal dietary rules is that prohibiting the consumption of blood (for general treatment of the subject, *see* Blood; here the focus is on dietary regulations).

3.1.1. Texts. In Genesis 9:4 the prohibition against ingesting blood is given to *Noah as the sole restriction on the control of the animal kingdom granted to him and his heirs. It is thus defined as binding on the whole human race, unlike all the other dietary laws, which serve to distinguish Israel from the nations. It is repeated for Israel in the context of the sacrificial rituals (Lev 3:17; 7:26-27) and for Israel and resident *aliens (Lev 17:10-14). This latter passage applies the rule to game as well as domestic animals, including birds (Lev 17:13), and offers explanations (see 3.1.3 below). Leviticus 7:27 and 17:10, 14 ordain a sanction: Yahweh will "cut off anyone who eats blood." Leviticus 19:26 is frequently read as speaking of "eating with the blood," but the literal translation is "on the blood," and a different practice may be in view (cf. 1 Sam 14:31-34; Ezek 33:25; Grintz). The rule

is also found in Deuteronomy 12:16, 23-25; 15:23, where permission is given (as against Lev 17) for the secular slaughter of animals. In sacrificial slaughter the blood would have been poured against the altar as the divine portion; its mention here ensures that in the less-controlled secular environment the animal's blood still does not pass human lips. The texts all speak of *eating* blood, not drinking it; this probably shows that the issue is one of eating blood as part of the meat.

3.1.2. Application. This law applies to all land animals and birds and is the basis of Jewish kosher slaughtering practice (*šēhitā*, or “ritual slaughter”). It has never been applied to fish, because fish are not slaughtered. It differs from other dietary rules in that it is held to be binding on Gentiles as well as Israelites; hence in Acts 15:20, 29 it is regarded as the bare minimum for table fellowship between Jews and Christians in the Christian community. The normal ancient method of slaughter, used by Greeks as well as Jews and retained today by Jews and Muslims, was to cut the throat, including the carotid arteries, with a clean stroke so that the blood gushed out as the heart continued to beat for a few seconds. This drains the body of the greater part of its blood; in modern Jewish practice soaking and salting draw out what is left.

3.1.3. Explanations. This central dietary rule arises from the practice of *sacrifice. Most sacrifices were in effect meals shared between the deity and the worshipers (or the priests). The invariable rule was to present the blood and fat to God, burning the fat, while the flesh remained to be cooked for the sacrificial meal. Any consumption of blood or fat in this situation would be sacrilege. But the structures of meaning set up in this way affect all eating of flesh. The blood must be drained not only when animals are sacrificed but in the secular slaughter of game or of domestic animals. Though there is no suggestion that in these cases the blood is being offered to God, it remains forbidden to humans.

What accounts for the special position given to blood? The texts argue consistently that the blood is “the life of the flesh” (or “of the body” or “of all living things”: Gen 9:4; Lev 17:11, 14; Deut 12:23). The sense appears to be that the blood represents God's gift of life, which in the appropriate circumstances is to be given back to its giver, who may graciously use it for human

benefit (Lev 17:11). However, it is never to be appropriated by human beings (Milgrom 1991, 706).

Milgrom goes on to argue that the rule has an ethical significance, namely, to signify that “life is inviolable. . . . Mankind has a right to nourishment, not to life” (Milgrom 1991, 713; see further 706-13). However, the roots of the practice are likely to lie in ritual rather than morals. To understand this, we need to ask what the danger is that is being guarded against by this law. As we have seen, the offense is eating undrained meat, yet the normal slaughtering procedure would always obviate this. It may be concluded that the offense of eating blood occurs only where there is a deliberate intention to eat blood and therefore a deliberate use of an incorrect slaughtering method. Note how in Deuteronomy 21:4 the calf's neck is broken when it is not to be offered or eaten; in Isaiah 66:3 the same method appears in a series of revolting and idolatrous practices. The use of blood in ritual is widespread, and in the Eastern Mediterranean area, rituals offering blood to the powers of the underworld are common (Grintz, 84-90). Likewise, J. E. Hartley notes “the number of laws against misappropriating sacred objects to the worship of demonic spirits in [Leviticus] chaps. 17—20” (Hartley, 277). He suggests that a major reason for the prohibition is “to prevent any attempt to ingest divine power into one's body.” This must remain uncertain, but the possibility is there that “eating blood” was a specific magical rite. The law asserts the absolute rights of Yahweh, as against humans and all rival powers, to the effective symbol of life.

3.2. Fat. The prohibition of fat is closely related to that of blood.

3.2.1. Texts. Leviticus 3:17 and 7:22-26 link with the blood prohibition the command that no fat may be eaten. The more detailed Leviticus 7:23-25 limits this to the fat of cattle, sheep and goats, those animals that may be sacrificed. Unlike the blood prohibition, it is not extended to game animals or birds. The text assumes, in line with Leviticus 17:3-4, that domestic animals will only be slaughtered in sacrifice. The fat of carrion of cattle, sheep and goats may be used for other purposes but not eaten (Lev 7:24). There is no mention of this ban at Deuteronomy 12:16, 23, where it might have been expected, and it appears that Deuteronomy does not see it as necessary in secular slaughter.

3.2.2. *Application.* Since rabbinic times the rule has been applied to all domestic animals slaughtered for food. The fat to which the ban applies is the fat beneath the skin and the fat enclosing the abdomen and its organs (Milgrom 1991, 205); not the fat entwined in the lean meat (muscle), which cannot be stripped away.

3.2.3. *Explanations.* This prohibition is even more closely related to sacrifice than that of blood. The abdominal fat or suet of a shared offering is to be burnt upon the altar for God (Lev 3:3-5, 9-11, 14-16), a widespread sacrificial practice in the Eastern Mediterranean area (Milgrom 1991, 205-6). Douglas (1999, 71-86) argues that the animal's body, read from front to rear, is an analogue to the holy mountain and to the tabernacle. The abdomen at the rear of the animal would correspond to the holy place or the top of the mountain, and the suet, which covers the abdominal organs, to the barrier preventing lay access to the holy place or to the higher parts of Sinai.

3.3. The Sciatic Nerve.

3.3.1. *Texts.* According to Genesis 32:32 it was an Israelite custom not to eat the sciatic nerve (Heb *gid hannāseh*). Most versions translate this phrase incorrectly (e.g., NRSV, "the thigh muscle"). The correct meaning is shown by the continuity of Jewish practice as well as by the Arabic cognate of *nāseh* (HALOT 2.729). The Genesis text, which offers an explanation for the practice, is not formulated as a law, unlike all the other food restrictions dealt with in this article, but simply reports a custom that the text explains by Jacob's experience.

3.3.2. *Application.* Mishnah declares this custom binding on all Israelites under pain of a flogging (*m. Hul.* 7; see also Josephus *Ant.* 1.20.2 §334). It applies to all domestic beasts and mammalian game. If their hindquarters were to be eaten, the sciatic nerves had to be excised before eating. Historically, because of the difficulty of excising the nerve, the hindquarters of kosher animals have generally been sold to non-Jews. In Israel today the different conditions have led to a revival of the practice of excision.

3.3.3. *Explanation.* No satisfactory explanation of the practice has been offered, and it does not appear to be related to other food restrictions. But analogous customs are said to be followed by bedouin Arabs in modern times (Wellhausen, 168 n. 3; Dalman 6.75: excision of the main blood vessels in the thigh).

4. Forbidden Conditions.

4.1. *Carion.* Where, on the one hand, ordinary people eat meat only rarely and general levels of nutrition are low and, on the other hand, flocks and herds are subject to frequent fatalities, it would be natural to take advantage of meat from animals that had died of natural causes or been killed by wild beasts to provide a useful supplement to the daily diet. But this is forbidden in some texts.

4.1.1. *Texts.* Exodus 22:31 (MT 22:30) and Deuteronomy 14:21a forbid the eating of carrion; Leviticus 11:40 and 17:15-16 make it an occasion of personal uncleanness that requires purification but apparently did not forbid it (cf. also Lev 7:24), but Leviticus 22:8 forbids it to priests. On the other hand, while Deuteronomy tells Israelites to make a gift of carrion to resident aliens, Leviticus 17 makes the law apply equally to "citizens or aliens."

The terms used for carrion should also be noted. Exodus 22:31 refers to *ṭērēpā* "something torn by wild beasts." Deuteronomy 14:21a uses *nēbēlā*, "a carcass," as does Leviticus 11:40 (along with other verses in that chapter). Leviticus 7:24; 17:15-16 and 22:8 use both together. The Hebrew word *nēbēlā* is, taken strictly, what has died of itself but is almost certainly intended to include *ṭērēpā* by the Deuteronomic author to broaden the application of the Exodus text. Leviticus's use of both makes the application clearly inclusive.

4.1.2. *Application.* Jewish practice defines as *ṭērēpā* not only carrion, but any animal that has suffered injury that is likely to be fatal (the signs are detailed in *m. Hul.* 3), since one cannot be certain that it was the slaughterer's knife that killed it. Some such signs may be discovered only after the animal has been slaughtered, but they render the meat impermissible to eat.

4.1.3. *Explanations.* The texts that forbid carrion link it with the holiness of the people. In every case the implication is that carrion is a contemptible form of nourishment ("abominable" in Deut 14:3) that is unworthy of the status of the people who are set apart as Yahweh's own. This is underlined sharply in Exodus 22:31: it is only fit for dogs. Dogs are unclean animals (see 2.3.3.3 above), and their uncleanness is shown by their readiness to eat carrion. Deuteronomy shows its concern for aliens by recommending the meat should be given to them, though this is at the same time a means of un-

derlining Israel's distinctive position.

It is generally held (e.g., Hartley, 277) that the problem with carrion is that it contains undrained blood, so that eating it is a transgression of the blood prohibition. The position of Leviticus 17:15-16 would suggest this, but it is unclear in that case why it is not in itself an offense in the Leviticus texts. It was suggested above (3.1.3) that the real concern of the blood law is with the deliberate eating of undrained meat as an end in itself. Milgrom (2000, 1487) suggests that the text assumes that blood was drained also from carrion (but how?) and that there is a concern for the poor expressed here, that a useful source of food should not be denied them, while at the same time the fact that this is frowned on is emphasized by making it a purifiable impurity.

4.2. Food Unclean by Contact. What the texts say about carrion is paralleled by their words about food that has been made ritually unclean by what it has come into contact with. Leviticus 11:29-38 identifies eight "swarming creatures" as unclean in the strict sense (contact with their dead bodies is defiling, see 6 below) and declares that they can convey uncleanness not only to people but also to utensils and, at a further remove, to food (Lev 11:33-34). Uncleannesses from other sources are referred to as a threat to utensils at Leviticus 15:12 and Numbers 19:15. While the eating of unclean food is not directly forbidden, it is clearly seen as undesirable on the analogy of Leviticus 11:40. It places on the eaters the responsibility to purify themselves lest they threaten the purity of the sanctuary (Lev 15:31).

5. A Forbidden Combination: Kid in Mother's Milk.

5.1. Texts. The prohibition "You shall not boil a kid in its mother's milk" appears in identical wording in Exodus 23:19b; 34:26b and Deuteronomy 14:21b. The context is similar in Exodus 23 and 34: the commandment concludes a series of ritual prescriptions (Ex 23:14-19; 34:18-26) relating to the three major festivals of the year. The offering of the firstborn of animals (Ex 22:30; 34:19) would take place at those festivals. Goats were by far the most common domestic animals among the peasants (Haran, 32-33). Thus the commandment restricted the way in which the firstborn offered as a shared offering might be cooked. Meat cooked in soured milk has always been a delicacy among the semino-

mads of Palestine (Knauf, 163-65). C. J. Labuschagne (14) points out that at the festival the most readily available milk would have been that of the animal's own mother (cf. Ex 22:30; strictly speaking the milk of the mothers of the flock in general, since few worshipers would be offering a single firstborn)—and this is what is prohibited.

In Deuteronomy, on the other hand, the prohibition concludes the series of dietary laws (Deut 14:3-21) that begins with the command not to eat "anything abominable." It seems Deuteronomy has taken over the probably earlier Exodus law and placed it in a new context. The cultic prescription has become a general food law where eating meat outside the ritual situation had become the norm (cf. Deut 12).

5.2. Application. This commandment is of immense significance in the development of kosher cooking. The Mishnah (*m. Hul.* 8) teaches that not only the cooking but the consumption of any flesh meat, other than fish and locusts, at the same time as any milk product is forbidden. Even poultry falls under this ban. An Orthodox Jewish kitchen is equipped with two sets of utensils—one for milk and one for meat respectively—to eliminate the possibility of the two coming into contact. We do not know anything about the development of this interpretation or the reasons for it. It may be due to the general rabbinic tendency to "fence the Torah," extending the scope of commandments to guard against the danger of their being broken accidentally or carelessly.

5.3. Explanations. Many explanations have been offered for this commandment, and they tend to parallel those of the forbidden kinds.

5.3.1. Moral. By those who observe the law, it has tended to be understood in a humanitarian sense, as Philo did (*Virt.* 144). For him, all the laws were training in virtue, and this one trained the soul in humanity (for a modern Jewish interpretation of this kind, see Haran, 29).

5.3.2. Cultic-Polemic. Maimonides (*Guide to the Perplexed* 3.48) speculated that the strange custom of cooking a kid in its mother's milk must have been an idolatrous rite of the pagans. This idea has had many supporters in modern times (see, e.g., Mayes) and was thought to have been confirmed by an Ugaritic text (*CTA* 23:14). However, more careful study of this text has shown that it probably does not speak of cooking a kid or any other animal (Craigie; Milgrom 1991,

738). The idea remains speculation.

5.3.3. Contextual. The contextual associations of the relationship between the suckling mother and her offspring are explored by O. Keel, who shows from an array of pictorial evidence from the ancient Near East that the mother animal (cow or goat) with sucking calf or kid is a constant iconographic motif. Its associations suggest that it is the symbol of a goddess who grants fertility. As it is common for such an animal symbol of a deity to be taboo, Keel argues (43-44) that the ultimate origin of the rule lies in the cult of such a mother goddess, at the offering of firstlings (see 5.1 above). Israelites may not have realized the associations of the taboo and may have understood it more generally as “a symbol of divinely granted fertility and divine care and love” (Keel, 44). It evolves into “an expression of respect for a particularly prominent order of creation, the relationship between mother and child” (Keel, 45). From here it is a short step to Philo’s interpretation.

Keel’s evidence is impressive. However, it is difficult to understand the evolution from a taboo associated with the worship of a Canaanite goddess to a prohibition in texts that require a sharp separation from polytheistic worship (see, e.g., Ex 23:13, 24; Deut 13).

5.3.4. Structuralist. Pentateuchal ritual is full of binary oppositions: blood and flesh; clean and unclean; laws against the mixture of textiles in a garment, seeds in a field or species in mating. The rabbinic application of this commandment falls easily into this pattern. It is less apparent in the biblical formulation, but Milgrom argues that this reflects a very similar structure of thought (1991, 741, following Carmichael). The dead animal is not to be brought into contact with that which sustained it in life. This is not so different from Keel’s interpretation of the meaning of the rule in Israelite practice.

6. General Significance.

These rules are not isolated but are interpreted by the text as parts of systems with broad significance (see Houston, 218-58).

6.1. Leviticus. Leviticus relates the food prohibitions to ritual. Leviticus 17:3-4 forbids the slaughter of domestic animals to be carried out except in sacrifice at “the door of the tent of meeting,” and no other text in the book suggests the possibility of secular slaughter as explicitly

allowed for in Deuteronomy 12. Thus, most meat eating, except for game, is assumed to be ritual: the meat itself is holy, and the eaters must be free of ritual impurity.

In the levitical system there are two main types of ritual offense. What is holy, dedicated to God, may be contaminated by the unclean (Lev 15:31) or may be used improperly by human beings, which is sacrilege (Lev 5:15). Blood and fat belong to Yahweh, so to eat them is sacrilege (Lev 3:16-17). The dead bodies of beasts (unless properly slaughtered) and some swarming land animals may make a person unclean by touch (Lev 11:24-40) and thereby unfit to eat holy things. Consequently, forbidden land animals are described as “unclean” (*tāmē*’; Deuteronomy uses the expression more loosely; see Milgrom 1991, 656-59), but forbidden water and air animals, which do not convey uncleanness, are described as “abhorrent” or “to be shunned” (*šeqes*, Douglas 1999, 166-67).

However, in the hortatory conclusion to the chapter on animal kinds (Lev 11:43-45), the ritual language is used more loosely and is extended into the secular sphere with the idea that the Israelites themselves are called to holiness as Yahweh is holy. Israel is thought of as an object holy to Yahweh, and just as unclean things may defile the holiness of the tabernacle, so they may defile Yahweh’s holy people. Thus they are to avoid all unclean or forbidden food at all times in order to maintain their own holiness. In Leviticus 20:25-26 it is rather the separation of Israel from the Gentiles that is emphasized.

6.2. Deuteronomy. Deuteronomy separates most meat eating from the ritual context (Deut 12:15, 20-22). Yet in the context where most of its food rules are gathered (Deut 14:3-21), it relates them in a similar way to the holiness of Israel as Yahweh’s peculiar people (Deut 14:2, 21), for Deuteronomy’s attribution of holiness to Israel goes beyond ritual. What is forbidden is described as “anything abominable” (*kol tō’ēbā*, Deut 14:3). This expression basically means “disgusting.” It has been interpreted as referring to things unacceptable in the worship of Yahweh (Mayes, 239; cf. Deut 7:26; 13:14, etc.). But since not all the “abominable things” can be associated with idolatry, it is best to take it as meaning things disgusting in themselves, things that self-respecting people do not eat (Houston, 60, following Weinfeld, 226). Thus Israel’s dedication to Yahweh imposes on them the obliga-

tions of people of quality. The theme is developed by Deuteronomy from the probably older Exodus 22:31 (see 4.1 above).

6.3. The Pentateuch as a Whole. The pentateuchal framework narrative, usually seen as Priestly, begins with God's *creation intention that all creatures should be vegetarian (Gen 1:29-30) and goes on after the *flood to his concession to the "violence of all flesh" (Gen 6:11-12). Later, human beings are allowed to eat any kind of animal flesh (Gen 9:3), with the restriction that they must not eat the blood. At Sinai, this prohibition is repeated to Israel, and to it is added the law of forbidden kinds. Houston (253-58) argues that this story presents in narrative form the solution to a theological dilemma: the ideal of a totally peaceful creation over against the creaturely reality of greed and violence. The dilemma is resolved first, inadequately, by the covenant with Noah, in which the use of blood is banned, but finally and more adequately by the mediating solution of the law of forbidden kinds, which channels human violence much more strictly. At the level of the Pentateuch as a whole, then, Milgrom's perception of an ethical purpose to the dietary laws is justified (Milgrom, 1991, 704-41).

6.4. Toward a Christian Understanding. Earliest Jewish Christianity must have taken the dietary laws for granted. Mark 7:19b is an authorial comment on Jesus' words interpreted in light of later Christian experience. In the Gentile mission, under Paul's influence, the dietary laws were abandoned except for the blood prohibition, which was seen as applying to Gentiles and was in any case no hardship (Acts 15:20, 29; see 3.1.2 above). In this way the "middle wall of partition" (Eph 2:14-15) represented especially by the law of forbidden kinds (Lev 20:24-26), was symbolically overthrown (Acts 10:9-16), and the church could be a body binding in one both Jews and Gentiles. However, the church after A.D. 70 rapidly came to see itself as set over against Judaism and the ritual laws as distinctive of Jews as against Christians (except in Ethiopia, where an already semi-Judaized population continued to observe them [Ullendorff, 100-103]). Christians came to believe that they had a positive duty not to obey them as the Jews did. However, as Scripture, the laws must have been intended to have some meaning. The *Epistle of Barnabas* (second century) therefore interprets them as giving moral teaching allegorically. The

blood prohibition lingered but was eventually lost sight of.

FORM CRITICISM

Form criticism is an approach to the study of biblical literature that seeks to identify the various genres of that literature and their function in ancient religious life. By isolating and analyzing the particular forms found in biblical literature, form criticism seeks to discover their preliterary history, life setting and function,

thereby shedding light on the meaning of the biblical texts in which these forms are found.

This essay will discuss the following areas related to form criticism of the Pentateuch: historical background; major forms in the Pentateuch; the practice of form criticism and evaluation of the method.

1. Historical Background
2. Major Forms in the Pentateuch
3. The Practice of Form Criticism
4. Evaluation of the Method

1. Historical Background.

The discipline of form criticism is inseparably linked to the name of the German scholar Hermann Gunkel (1862-1932), one of the most influential biblical scholars of the past century. L. A. Schökel goes so far as to say that "Gunkel quite possibly was the most revolutionary moment for biblical exegesis in this century" (Schökel, 7). Although earlier students of the Bible certainly gave some attention to the forms of biblical literature, form criticism in the proper sense had its beginnings in the late nineteenth century. It was Gunkel who blazed the trail in the discipline of form criticism for biblical studies. Admittedly there were other bright lights as well, such as Gunkel's friend Hugo Gressmann (1877-1927). But none of these outshone Gunkel in terms of insight and lasting innovation, although it must be admitted that Gunkel's views were sometimes expressed in a frustratingly imprecise fashion (on this point see esp. Rogerson, 57-65).

Gunkel produced influential works in both NT and OT studies. His early career shift from NT to OT studies was due in part to strong opposition raised against his sometimes-novel views. It was his dissatisfaction with the results of Wellhausen's source criticism of the Pentateuch that led him to seek new avenues for addressing issues concerning the preliterary transmission of biblical materials. His approach spawned an entirely new discipline, one that utilized source-critical methods but moved beyond them in important ways. That discipline is now known as form criticism, after the German term *Formgeschichte*. The word was actually first used in this technical sense by Martin Dibelius (1919), although the plural term *Formengeschichte* had been used in a similar way by earlier scholars such as Franz Overbeck (1882) and Eduard Norden (1913). Other related labels sometimes used

in connection with this approach to biblical studies are *Gattungsgeschichte*, *Formkritik* and *Gattungskritik*.

Form-critical research has been characterized by slightly different emphases that are indicative of the evolving nature of this approach. M. J. Buss has distinguished four phases within form-critical research as it developed over the first half or so of the twentieth century (Buss 1999, 357-406). First, there is “form history,” which attempts to recover a literature’s history by the examination of its forms. In Buss’s view this attempt is flawed in principle, since it is based on certain assumptions for which there is insufficient corroborating evidence. Second, there is “history of form(s),” which attempts a sequential examination of literary forms once their temporal and spatial locations have been determined by objectively verifiable means. Third, there is “analysis of form,” which attempts the identification and recognition of form so as to clarify various linguistic or literary patterns. Fourth, there is “theory of form,” which attempts a transtemporal articulation of those factors that influence texts. Especially important in this regard is the *Sitz im Leben*, or life situation, that has played a role in the creation and use of texts.

2. Major Forms in the Pentateuch.

Due to limitations of space we can summarize here only some of the major forms that scholars have isolated in the narratives of the Pentateuch. In addition to those mentioned here are many other important but perhaps less prominent forms. In his treatment of Exodus 1–18, G. W. Coats isolates some eighty-nine different genres found in narrative, including: accusation (e.g., Ex 18:14-23); appeal (e.g., Ex 32:12-13); commission (e.g., Ex 3:1-4:18); complaint (e.g., Ex 5:22-23); death report (e.g., Ex 1:6); disputation (e.g., Ex 1:15-21); genealogy (e.g., Ex 6:14-25); list (e.g., Ex 1:1-6); oracle (e.g., Ex 11:4b-8a); and theophany report (e.g., Ex 3:1-6). In the present discussion we will discuss only the following: myth, folktale, saga, legend, novella, historical credo, law and covenant. Furthermore, the forms are not necessarily pure or unmixed; often in one form we find elements of other forms as well.

2.1. Myth. Myths are stories that purport to describe the activities of the gods, who are perceived in a polytheistic setting. The purpose of

myths is to offer an explanation for human curiosity about such things as the origin of the world. Since the OT is a monotheistic document, it does not really contain myth except in a very muted sense. However, many form critics see mythological elements preserved especially in Genesis 1–11 in such accounts as the *creation story of Genesis 1 and the actions of “the sons of the gods” in Genesis 6:1-4 (see Sons of God, Daughters of Man). However, the myths supposed to underlie these accounts are usually understood to originate not in Israel but in neighboring cultures (especially Canaan and Mesopotamia), from which the Israelites borrowed them. Gunkel’s *Schöpfung und Chaos*, for example, attempts to trace the myth of a creator god slaying a chaos god from its origins in Babylon to its use in Genesis 1 and Revelation 12. Early on Gunkel agreed with the brothers Grimm in supposing that in all cultures the oldest narratives were those that described the activities of the gods, but later (partly through the influence of Wilhelm Wundt) he came to think that folktale often preceded myth in developmental history. More recent discussions of the nature of myth have sometimes focused less on its topic, somewhat narrowly conceived as activities of the gods, and more on its broader emphasis on things beyond the boundaries of normal history or time and space (so, e.g., Otzen, 7-8).

2.2. Folktale (Märchen). Folktales are creative accounts of fictional characters who appear in settings that are imagined and not real. Gunkel used as a modern example of folktale the story of Hansel and Gretel. While he admitted that the Bible does not really contain folktale as such, Gunkel believed that the folktale played an important role in the preliterate stages of biblical literature and that folktale-like motifs do persist in biblical literature. The folktale is characterized by an element of fantasy; it bestows upon animals such human qualities as speech and rational behavior. The motif of the tree of life (Gen 2:9) and in fact the concept of paradise itself (i.e., the garden of *Eden) derive from folktale, according to Gunkel. *Balaam’s talking donkey (Num 22:21-33) and the notion of a land flowing with milk and honey are also for him folktale motifs. In his view, *Jacob’s struggle with the angel at Penuel (Gen 32:23-32) contains “the after-effect of an ancient goblin tale on Israelite tradition” (Gunkel, 1987, 83), and Yahweh’s attack on Moses (Ex 4:24-26) is based on a

folktale concerning a demon's attack on a newlywed couple. Gunkel also concluded that some of the theophanies in Genesis were previously folktales describing various deities.

2.3. *Saga*. Unlike myth, which focuses on alleged activities of the gods, saga reports the activities of important human beings. With this distinction in mind, a large portion of Genesis may be said to consist of sagas describing the lives of famous figures. Although such reports resemble historical accounts, Gunkel maintained that saga differs from history in at least five areas: *origin* (saga originates in oral tradition, while history originates in written records); *topic* (saga is occupied with personal details of the lives of individuals, whereas history is concerned with events attracting public attention); *attestation* (saga contains reports of extraordinary happenings that lack eyewitnesses, such as the events of creation, whereas history is characterized by believable and verifiable accounts); *credibility* (saga reports things that are incredible because they seem impossible, whereas history deals with things believable); and *style* (saga is more poetic in its manner of presentation, whereas history is prose). The patriarchal sagas of Genesis vary in type, according to Gunkel. Some are *historical*, describing such things as tribal migrations, while others are *ethnographic*, describing tribes under the aegis of certain individuals. Still others are *etiological*, explaining the origin of certain names, conditions, ceremonies, localities and the like. Since the term *saga* was first used in connection with medieval Icelandic and Nordic literary traditions, the propriety of its use in biblical studies has been questioned by some scholars.

2.4. *Legend*. Legend is similar to saga, except that in legend there is a more decidedly religious quality to the account. Legends deal with holy people (e.g., priests, prophets), holy places (e.g., sanctuaries) or holy events (e.g., religious festivals). Their purpose is to edify the listener or reader. Legends are centered on things that are alleged to transpire within the experience of human beings, and it is that quality that sets them apart from myths, which focus on what transpires within the realm of the gods. The bronze serpent of Numbers 21:4-9 is thus considered to be legend, as is the explanation of *circumcision (Gen 17). Gunkel likened biblical legend to the stories told of Roman Catholic saints, where one finds an emphasis on spiritu-

ality. However, the distinction between saga and legend is often not clear in some later discussions of this topic, and terminological confusion can be found in the secondary literature. In fact, Gunkel's own discussion of saga appeared in English translation with the rather confusing title *The Legends of Genesis: The Biblical Saga and History*.

2.5. *Novella*. Sometimes a number of sagas are brought together in a connected string of episodes concerning a particular person, in which case the result may be thought of as a novella, or short story. Such novellas often incorporate elements of the folktale, as may be seen in the *Joseph story found in Genesis 37-49. The novella may have a timeless quality, depicting events that are known to occur repeatedly in human life.

2.6. *Historical Credo*. Gerhard von Rad explained the overarching structure of the Hexateuch as consisting of the elaboration of a historical credo, or creed, that summarized the core elements of Yahweh's redemptive acts on behalf of his people. This historical creed is most clearly presented in brief form in Deuteronomy 26:5-9, which recalls Israel's sojourn in *Egypt, the *exodus and the subsequent settlement in Canaan. The rest of the Hexateuch, according to von Rad, is to a large degree a theological exposition of this redemptive activity on Yahweh's part. Although von Rad's articulation of historical credo was influential, his views also met with opposition in some scholarly circles.

2.7. *Law*. There are in the Pentateuch five major collections of legal material: the *book of the covenant (Ex 20:22-23:19); the *Decalogue (Ex 20:2-17; Deut 5:6-21); the Deuteronomic Code (Deut 12-26); the Holiness Code (Lev 17-26); and the Priestly Code (Ex 25-31; 34:29-Lev 16; parts of Numbers). While source criticism focused on the isolation and identification of these literary units, form criticism has sought to explain the nature of the legal material itself, not only in its collected, written form but in its earlier preliterate history as well.

Form-critical analysis of OT legal literature received significant impetus from the research of Albrecht Alt (1883-1956), who articulated two distinct forms of Israelite law having very distinct origins. These forms of OT legal material are now known as casuistic law and apodictic law. Although their earliest histories were quite distinct, according to Alt, in the present shape of

the Pentateuch these two types of laws are often juxtaposed and sometimes even intermingled (see Law).

2.7.1. *Casuistic Law.* Casuistic (or case) law deals with specific matters such as would have been handled in the secular courts of the day: slavery, murder, bodily injury claims, personal property losses and marriage. According to Alt these laws were not distinct to Israel but were commonplace in other ancient Near Eastern cultures, from which Israel in fact borrowed many of the laws of the Pentateuch. A statement of casuistic law typically begins with a conditional clause in its protasis to set out a potential situation ("If [such and such happens]"). The following apodosis then presents a penalty to be exacted in that case ("he shall [be required to do such and such]"). The parties are normally described in the third (not second) person. Such laws usually deal with repeated offenses of human behavior that may arise in a society and that therefore require acceptable guidelines for adjudication. About half of the book of the covenant consists of casuistic laws. An example of casuistic law is found in Exodus 21:18-19: "If men quarrel and one hits the other . . . and he does not die, . . . the one who struck the blow will not be held responsible; . . . however, he must pay the injured man for the loss of his time and see that he is completely healed" (NIV).

As a result of form-critical research, the older view that such laws originated within Israel in response to the need for legal decisions regarding particular cases has been largely replaced by the conclusion that such laws were actually already in place in non-Israelite neighboring cultures. In that case the Israelites simply borrowed and adapted existing laws to suit their own needs starting with their settlement in the land of Canaan. This conclusion is supported, Alt maintained, not only by the common characteristics shared by Israelite and non-Israelite casuistic law, but also by the relative absence of religious elements in Israelite casuistic laws and their generally secular orientation.

2.7.2. *Apodictic Law.* In contrast to casuistic law, apodictic law deals with categorical and unconditional matters of Israelite religion that were perceived as an expression of Yahweh's will. Apodictic law differs from casuistic law in important ways: its subject matter is religious rather than secular; its wording utilizes short and simple clauses that are expressed in em-

phatic language; and it is by nature more categorical than casuistic law. Alt situated apodictic law in a *covenant-renewal festival that, he claimed, was celebrated every seven years at Shechem, although the evidence on which he based this conclusion is slight. In its expression in the Hebrew Bible, apodictic law is characterized by several forms: it sometimes begins with a negated second-person verb ("you shall not [do such and such]"); it sometimes begins with a participial construction ("whoever does [such and such]"); it sometimes contains a curse ("cursed be the one who [does such and such]"). Exodus 21:12, for example, is apodictic in nature: "Anyone who strikes a man and kills him shall surely be put to death" (NIV). Examples of apodictic law may also be found in the curses of Deuteronomy 27:15-26 and in the original form of the commands and prohibitions of the Decalogue (Ex 20:2-17; Deut 5:6-21).

The distinction between casuistic and apodictic law is not always clear in the OT. The reason for this, Alt believed, is that as Israelite culture came up against neighboring cultures there sometimes occurred an integration of the two types of law that affected their forms (see, e.g., Ex 21:23-25). As a result, some mixture of forms has occurred in the text of the Pentateuch that has come down to us. Alt's view that these laws were not derivative from Israel's neighboring cultures but originated within Israel has been called into question by many subsequent scholars. Furthermore, certain refinements to Alt's categories have been suggested. E. Gerstenberger, for example, divides apodictic law into two categories: addressed commandments and capital crimes. In a similar manner, D. Patrick divides casuistic law into two categories: casuistic primary law, which emphasizes the privileges and responsibilities of the participants in a legal relationship, and casuistic remedial law, which sets forth the stipulated legal penalty for violation (Patrick, 23-24). Still other scholars have adopted approaches very different from that of Alt both in terms of the number of categories suggested and the terminology utilized (Sonsino 1992, 4:252-53).

2.8. *Covenant.* The *covenant form expresses a mutual relationship between two parties who enter into an agreement based upon faithful and loyal discharge of specified responsibilities. In OT idiom to make a covenant is to "cut" a covenant (*kārat bērit*), an expression that calls to

mind acts of animal sacrifice that were normally a part of such solemn occasions. The covenant is also characterized by, and in fact in biblical idiom can even be called, an “oath” (*ʿālā*). In biblical literature covenants take place between human parties, such as Isaac and Abimelech (Gen 26:28-30), and also between Yahweh and human beings (e.g., Gen 22:16; Deut 29:13). According to Weinfeld, OT covenants may be of two types: the *obligatory* (e.g., the Sinai covenant) and the *promissory* (e.g., the Abrahamic and Davidic covenants) (1970, 184-203; cf. Tucker 1965, 491-92).

The promissory covenant has much in common with ancient Near Eastern land-grant treaties in which a master rewarded the faithful service of a subordinate by bestowing upon him a gift of land and dynasty, thereby rewarding the subordinate’s proven loyalty. Yahweh’s promise to give the land to *Abraham and his descendants fits this pattern in terms of both its phraseology and its structure (Gen 15:1-9; 22:15-18; 26:1-6). The obligatory covenant, on the other hand, can be compared to the ancient Near Eastern suzerain treaty, which appears to be the organizing principle for a large portion of the Pentateuch. G. E. Mendenhall maintained that the book of Deuteronomy in its organizational structure and form is very similar to certain suzerain-vassal treaties common in the ancient Near East. In its arrangement Deuteronomy may thus be viewed as reflecting the same core sections, appearing in roughly the same order, as are found in ancient Hittite suzerain-vassal treaties. These sections are as follows: preamble (Deut 1:1-5); historical prologue (Deut 1:6—4:40); general stipulations (Deut 5:1—11:32); specific stipulations (Deut 12:1—26:15); blessings and curses (Deut 27:1—28:68); witnesses (Deut 30:19; 31:19; 32:1-43). When viewed in this light, the structure of Deuteronomy is a mirror reflection of a treaty form borrowed from a neighboring Near Eastern culture. This understanding of Deuteronomy, however, has not met with universal acceptance among scholars.

3. The Practice of Form Criticism.

Tucker conveniently arranges the steps of form-critical analysis of biblical texts under four headings: (1) analysis of structure; (2) description of genre; (3) definition of setting(s); and (4) statement of intention (Tucker 1971, 11-17). These steps call to mind the major goals of form-criti-

cal research with regard to specific texts. The same four steps appropriately comprise the backbone of form-critical discussions of biblical texts in the various volumes of the series entitled “The Forms of the Old Testament Literature” (FOTL). Even though the process of form-critical research is not nearly as mechanical as these compartmentalized steps might seem at first to suggest, they are nonetheless a helpful way of thinking about the manner in which the method proceeds.

3.1. Structure. The determination of structure may operate at a macro level, by considering a sizable portion of material (as, for example, von Rad’s overall analysis of the Hexateuch), or it may operate at a micro level, by dealing with smaller units of material embedded within a larger composition. It is usually these smaller units that are the focus of form-critical endeavor. The analysis begins by establishing both the beginning and the end of the discrete unit that is under study. Often particular genres are characterized by certain formulaic introductions or conclusions that help to demarcate the unit, and when such formulas are present the form critic will take them into consideration in defining the parameters of a passage. Such formulas include the following: the accusation formula (“Why have you done this thing?”); the blessing formula (“may Yahweh keep you”); and the introduction formula (“it came about in those days”). In the absence of such physical features the critic will rely upon other things such as stylistic features or grammatical characteristics in the passage that set it off from the surrounding context. Sometimes, due to the way in which forms have been incorporated into the larger corpus of biblical literature, the original limits of a particular unit are difficult to discern. But once the unit is identified, the critic then carefully outlines the passage. In doing so the form critic identifies the subunits of the passage and their logical interrelationships, noting how the particular structure under consideration compares with stereotypical structural features previously determined from comparative analysis of other examples of the genre under consideration.

3.2. Genre. Defining genre is often difficult, partly because of mixture that may occur in some passages and partly because scholars sometimes differ in how a certain genre should be defined. Differences between narrative and

law, for example, will tend to be rather obvious. But separating legend from saga and profiling the precise nature of each are areas of disagreement among some scholars, as is the issue of how precisely to define myth (cf. Barr). Normally the process of defining the genre for a particular passage will involve not only relating that passage to other biblical examples of the same genre but also relating the biblical examples of its genre to examples of that genre found in ancient extrabiblical literature. Identification of genre has major implications for the interpretation of a particular passage, since different genres will imply different assumptions and expectations on the part of the reader.

3.3. Setting. Since one of the goals of form criticism is to reconstruct the preliterary history of biblical literature, it is important to ascertain the life setting of each of the genres. Gunkel coined a term for this setting, namely, *Sitz im Leben*, or “situation in life.” Use of this German term, which lacks an entirely adequate English equivalent, has since become a standard way of referring to the particular social or religious setting that prompted the rise and use of the various genres that we find in biblical literature. As Gunkel used this expression, it refers to the life setting not so much of a specific text as of a particular genre. Form criticism seeks to discover this setting in order to understand how specific forms of literature originally functioned in the life of their communities. The recovery of this life setting in turn often sheds light on the interpretation of the passage in question.

3.4. Intention. The forms of biblical literature originally served a very specific purpose. By asking what the intention of a particular form might have been, the form critic seeks to relate the content of biblical literature to the purposes of those who first used that material in the preliterary stage, the purposes of those who later collected that material and the purposes of those who subsequently utilized these writings in various personal or liturgical contexts. Biblical materials were intended to serve a particular need and to fulfill a particular function. It is this intention that form criticism seeks to elucidate.

4. Evaluation of the Method.

As a tool for prying into the preliterary stages of the transmission of the biblical text, form criticism has made major contributions to biblical scholarship in the twentieth century. But a prob-

lem that has sometimes been present in form-critical work is its tendency to focus on small units of material at the expense of broader issues of literary cohesiveness and theology. By emphasizing the forms and their preliterary history, form criticism runs the risk of becoming myopic and atomistic in its outlook with regard to the final shape of the text. It is clear that the biblical writers were not clumsy editors who merely patched together previously existing material in a somewhat mechanical fashion. Rather, they were by and large skilled creators of literary products that have for their underpinning carefully conceived theological purposes. The biblical scholar must therefore take care to avoid missing the larger picture while looking at the constituent parts. Furthermore, the recovery of data concerning the preliterary history of biblical material is beset with problems arising from limitations in our ability to ascertain such information. Form criticism is unable fully to overcome these limitations.

Form criticism is not by itself a comprehensive tool nor one that can be used exclusively without recourse to other equally important methods. Modern critical biblical research is actually an amalgam of many critical methods rather than an exclusive use of a single method, no matter how helpful that single method might be (see, e.g., Steck, esp. 95-119). Form criticism should therefore be supplemented by other critical tools that address concerns that lie outside its self-defined domain—tools such as *text criticism, *source criticism, redaction criticism, rhetorical criticism, *literary criticism, and the like. But in spite of certain inherent limitations in the method itself and in spite of certain excesses on the part of some of its advocates, form-critical research has provided many fresh insights into the early history of OT literature.

G

GAD

In the Pentateuch the Hebrew word *gād* (Gad) refers to one of the twelve sons of *Jacob, to the Transjordanian Israelite tribe that descended from him and to a West Semitic deity whose name forms the part of a number of OT personal and place names.

1. Birth and Name
2. Gad's Role in the Pentateuch
3. Tribal Boundaries
4. Subsequent History

1. Birth and Name.

Gad was the seventh son of Jacob and the ancestor of the Israelite tribe of the same name. He was Jacob's first son by Zilpah, the maid Leah had given to Jacob as a concubine (Gen 30:9-11). According to Genesis 30:11, the name Gad (*gād*) means "good fortune" and reflects Leah's exclamation, "What good fortune!" (*hēgād*, Gen 30:11 NIV, following the Kethib; the Qere reads *bā' gād*, "fortune has come") at his birth. Gad's only full brother was *Asher, whose own name, which means "happy," complements Gad's (Gen 30:12-13).

Gad (or "Fortune"), also the name of a West Semitic deity, is usually considered to be a theophoric element in geographical names (Baal-gad, Josh 11:17; Migdal-gad, Josh 15:37) and personal names (Gaddi, Num 13:11; Gadi, 2 Kings 15:14, 17; Gaddiel, Num 13:10; Azgad, Ezra 2:12). Attempts to connect the tribe of Gad with this deity are unconvincing inasmuch as the deity is attested only in late texts (Punic and Nabatean, as well as texts from Palmyra and Hatra, but cf. Is 65:11 NASB).

A personal name Gadu ("male goat kid") appears in late Babylonian texts and may suggest a second possible etymology for the name Gad (note the tribe's connections with pastoralism in Num 32:1-5).

2. Gad's Role in the Pentateuch.

Gad plays no real role in the Pentateuch either as a son of Jacob or as a tribe until Israel's final approach to Canaan via Transjordan.

2.1. Standard Formulas. Typically Gad appears in the Pentateuch only in standard genealogical or census-related formulas common to each of the sons of Jacob or tribes. When listed as a son of Jacob, Gad is closely associated with his full brother Asher, as would be expected (Gen 35:26; 46:16-17; 49:19-20; Ex 1:4). Gad also appears with Asher in the lists of men chosen by *Moses to number the people of Israel (Num 1:13-14) and to spy out the land (Num 13:13-15). As a tribe, however, Gad is usually associated with *Reuben and either *Simeon (Num 1:20-25; 2:10-16; 7:30-47; 10:18-21; 26:5-18) or the half-tribe Manasseh (Num 32:1-42; 34:14; Deut 3:12-17; 4:43; 29:8), tribes that, like Gad, settled on the periphery of Canaan. Gad was one of the smaller tribes of Israel, listed as eighth and tenth in size, respectively, in the two censuses taken by Moses (Num 1:24-25; 26:15-18).

2.2. Settlement in the Land. After Moses conquered the Amorite kingdom of Sihon and the kingdom of Og in Bashan (Num 21:21-35; Deut 2:24—3:17), he allowed the tribes of Reuben and Gad and a portion of Manasseh to settle in areas in Transjordan not already considered part of the homelands of Ammon, Moab or Edom (Num 32:1-42; 34:13-14; Deut 3:12-17; 29:7-8). According to Numbers 32:1-5, Moses did so because these lands were particularly suitable for raising cattle and flocks of sheep and goats, the primary economic basis of these tribes (cf. Num 32:34-36; 1 Chron 5:9).

3. Tribal Boundaries.

The exact borders of the land allotted by Moses to the tribe of Gad are difficult to determine, in part because the territorial descriptions differ at

key areas (Num 32:2-3, 34-36; Deut 3:16-17; Josh 13:24-28) and in part because the identification of certain towns assigned to the tribe is in doubt. Among the latter are Jazer (possibly Khirbet es-Sar), Atroth-shophan (possibly Rujm 'Atarus), and Ramath-mizpeh (possibly 'Iraql el-Emir). The area settled by Gad was north of that given to Reuben and south of the inheritance of the half-tribe of Manasseh, that is, essentially the same as the geographical region of Gilead between the city of Heshbon (Tell Hesban) and the Jabbok River (Wadi Zerqa).

Some of the cities given to Reuben, namely Dibon (Dhiban) and Aroer (Khirbet Ara'ir) on the Arnon River (Wadi el-Mojib) and Ataroth (Khirbet 'Attarus) just to the north, were claimed by Gad (Num 32:34; cf. Num 33:45-46; Josh 13:15-23). This is consistent with the assertion of Mesha, king of Moab, that "the man [i.e., tribe] of Gad dwelt in the land of Ataroth from of old and the king of Israel [i.e., Omri or Ahab] built Ataroth for him [i.e., the Gadites]" (Moabite Stone, lines 10-11). There is no textual or geographical justification for locating the actual border of Gad on the Arnon, as some have argued. To the northeast the territory of Gad pushed along the Jordan Valley (the biblical Arabah) past the Jabbok as far as the shore of the Sea of Galilee (Deut 3:16-17; Josh 13:27), a region of Canaanite city states such as Succoth and Zaphon.

4. Subsequent History.

Gad, like Reuben, was wedged between hostile powers that proved a threat to its existence as a distinct tribal entity. Israel typically had trouble occupying the valleys that were home to Canaanite city-states (cf. Judg 1:19, 27-34), and it can be assumed that Gad faced similar difficulties in the Jordan Valley. The biblical record, however, shows that unlike Reuben the tribe of Gad was eventually able to expand throughout its allotted territory and thrive. This situation was anticipated by the blessings of Jacob and Moses. Jacob foresaw that, "As for Gad, raiders shall raid him, but he shall raid at their heels" (Gen 49:19), and Moses compared Gad to a lion that tears its prey to enlarge its territory (Deut 33:20-21; cf. 1 Chron 12:8-15).

Gad's position in the Jordan Valley actually aided this process, for control of the east bank of the Jordan by Israel was critical for later Israelite expansion into Transjordan (e.g., Judg 7:22-23; 1

Kings 4:19; 12:25; cf. Obad 19). Moreover, the rugged hills of Gilead provided a natural and friendly area of refuge for Israelites who had to flee their homeland west of the Jordan (e.g., 1 Sam 13:6-7; 2 Sam 2:8-10; 17:24). Together, these factors ensured that Gad's fortunes were closely tied to the tribes west of the Jordan River. Gad's position in the Transjordan, however, remained under the threat of Syrian and Ammonite incursions. In the late ninth century B.C. the Syrian king Hazael overran Gad, Reuben and the half-tribe of Manasseh (2 Kings 10:32-33). While it can be assumed that these regions were restored to Israelite control by Jeroboam II in the mid-eighth century B.C. (cf. 2 Kings 14:25), they were finally lost to Israel in 733 B.C. when Tiglath-pileser III deported the Transjordanian tribes to Assyria (1 Chron 5:26). In the wake of this defeat, the Ammonites, Gad's hostile neighbor to the east, evidently occupied their land (Jer 49:1).

GENEALOGIES

Contemporary readers often skim over the genealogical passages of the Pentateuch as uninteresting or insignificant. Western liberal-democratic societies understand genealogies as

possessing private, not public, significance. Yet genealogical records in traditional societies, oral and written, possess extreme importance in defining everyday social interactions. It is not surprising, therefore, to discover that genealogies are significant within the Pentateuch. Following general and background considerations, this article will focus particularly on the *tôlēdôt* (generation) structure that literarily unifies the book of Genesis and functions differently in the rest of the Pentateuch.

1. General Considerations
2. Social and Historical Background
3. Genealogies and Torah
4. Conclusion

1. General Considerations.

Genealogies are oral or written lists of kinship relationships between persons or groups. A genealogy must possess certain characteristics. Genealogies must have breadth: How many members/siblings does the genealogy list within a particular generation? They also must possess depth: How many generations back into the family's history does the genealogy reach? While biblical scholars usually consider only lists to be "genealogies," genealogies can take narrative form, and narrative-like expansions do appear within the biblical genealogies. Variations within these characteristics have led biblical scholars to demarcate different types of genealogies.

1.1. Linear Versus Segmented Genealogies. Biblical scholars regularly differentiate between linear and segmented genealogies. Linear genealogies list names that connect an individual to one specific kin in a previous generation. While the depth of linear genealogies may vary, their breadth remains limited to one person per generation. A segmented genealogy has both generational breadth—more than one person per generation—and depth. A segmented genealogy depicts relationships both within a specific generation (i.e., brother to brother, sister and even cousins) as well as from one generation to another (i.e., mother to daughter). Segmented genealogies compose what Western culture commonly knows as the "family tree." The Pentateuch contains both linear (Gen 5:3-31) and segmented (Gen 10:1-32) genealogies. The distinction between a linear and segmented genealogy should not be pushed too far—both can and do appear within an extended genealogical list. When this happens, the transition from a linear to segment-

ed genealogy (and vice versa) marks the relative significance (or insignificance) of a particular generation. As a general rule, linear genealogies in the Pentateuch *tend* to connect characters at the center of the unfolding of the plot; segmented genealogies tend to fill out the families of characters who no longer will play a central role in the pentateuchal story.

1.2. Patrilinear Versus Matrilinear Genealogies.

Another helpful distinction is whether a genealogy is patrilinear or matrilinear. Patrilinear genealogies trace descent through the father, matrilinear through the mother. Again, this distinction should not be pushed too far, since men can appear in matrilinear genealogies and vice versa. In the Pentateuch genealogies are fundamentally patrilinear, though women occasionally—and significantly—appear within them (e.g., Gen 11:29-31; Ex 6:23, 25).

2. Social and Historical Background.

Even today genealogies play significant roles in some non-European cultures. In antiquity genealogies bore tremendous importance. In the Roman era, one would often find a family's genealogy on the wall of the entryway into a home of someone from the senatorial class. A whole group of "genealogists" in the Hellenistic world developed the genre into a type of Greek historiography. Simply stated, genealogies provided a means of social identification. As G. N. Knoppers summarizes, "Genealogies, whether from Israel, Egypt, Mesopotamia, Phoenicia, or Greece, are not simply compilations of traditional material, but are assertions about identity, territory, and relationships. The names of ancestors, towns, and groups were of special relevance to ancient writers, because their genealogical connections defined the ancestor's, town's, or group's position in relation to others" (Knoppers, 18). Genealogies "located" a person, family, city or wider group in relationship to others within their world. Genealogies mapped out the political, economic and social allegiances that individuals and groups possessed to each other and other groups.

2.1. Genealogies in the Ancient Near East. Extensive genealogies were not a prominent feature of the ancient Near Eastern literary culture (Wilson 1977, 72). Unlike the Pentateuch, ancient Near Eastern genealogies generally appear within broader literary contexts as brief insertions rather than as an integral part of a larger

narrative. Mesopotamian king lists, however, parallel in several respects features of some genealogies found in Genesis 1–11: their fundamental linear structure, listing seven generations and a standardization of the lists at ten (Malamat). Particularly interesting in this regard is Enoch's seventh position following *Adam, a position paralleled by Enmerduranki, who usually appears seventh in Mesopotamian antediluvian king lists (VanderKam, 33-52). Nonetheless, despite some indications of relationship, Mesopotamian genealogies are more unlike than like the genealogies in the Pentateuch (Hess).

2.2. Genealogies in Oral Cultures. Scholarship has turned to comparative material found in contemporary oral cultures for background material on biblical genealogies (Wilson 1977). Such anthropological approaches have discovered that oral genealogies are characterized by fluidity and have limits on their length and depth. Oral genealogies are preserved and transmitted largely for their contemporary social function rather than their antiquarian or historical reasons.

2.3. Genealogies Within the History of Israel. Perhaps the most significant background for the genealogies of the Pentateuch is found within ancient and postexilic Israel/Judah. Current archaeological evidence suggests that ancient Israel, especially Judah, was not heavily urbanized but highly agrarian. Oral genealogies would have been significant in relating the concentric circles of kinship of the nuclear family, the clan and the tribe to each other and to neighboring families and villages. In royal circles, claimants for legitimacy would have had obvious reasons for preserving genealogies. In the postexilic period, genealogies helped reconstruct and maintain the Judean social order in the repatriation of exiles back to their homeland from Babylon (see Ezra 2; 8). Given the importance of genealogies, oral and written, throughout the history of Israel and Judah, it is not surprising to find their presence—and structural significance—within the Pentateuch.

3. Genealogies and Torah.

Brief genealogical notices commonly identify figures throughout the Torah, much as last names are used in Western cultures. In the Torah, genealogies themselves can have a fundamentally linear structure (Gen 5:1–6:8) or be strictly segmented (Ex 1:1-6). Extended genealogies occur in the books of Genesis and Num-

bers, with only two others occurring in Exodus (Ex 1:1-6; 6:14-26) and none in Leviticus or Deuteronomy. In Exodus and Numbers genealogies have a vastly different function than in Genesis.

3.1. Genealogies in Genesis. Genealogies play an important role in structuring *Genesis. Most significant are sections that begin with the Hebrew phrase, *ʿelleh tōlēdōt* (“These are the generations”). This formula (or a close variant) occurs eleven times in ten different genealogies in Genesis: five times in five “genealogies” in the primeval history of Genesis 1:1–11:26 and six times in five different genealogies in the Israelite ancestral history of Genesis 11:27–50:26 (the phrase occurs twice in the genealogy of Esau [Gen 36:1, 9]). While the Hebrew phrase clearly and consistently structurally marks the beginning of new sections, the word *tōlēdōt* becomes difficult to translate into English consistently. The term *tōlēdōt* comes from the Hebrew root *yld*, which means “to bear a child.” Yet its usage also has wider connotations. Its use can branch out from its strict “generation” denotation to describe an “account” or “history” that goes beyond what Western cultures generally think of strict genealogical forms.

As a result of the difficulty of translating from Hebrew into English, the manner in which *ʿelleh tōlēdōt* provides structure to Genesis can become obscured in English translations. In the primeval history, *ʿelleh tōlēdōt* occurs in Genesis 2:4 (“These are the generations of the heavens and the earth”); 5:1 (the formula varies here: “This is the book of the generations of Adam”); 6:9 (“These are the generations of Noah”); 10:1 (“These are the generations of the sons of Noah”); and 11:10 (“These are the generations of Shem”). The narrative progresses linearly according to its genealogical structure: from heaven and earth to Adam to *Noah to the sons of Noah to *Shem. The narratives that occur in between the genealogical formula “fill out” the genealogies. The book begins with narrative expansions within its fundamental genealogical structure.

Yet the structure does not merely progress linearly. The formulas emphasize the first, third and fifth *tōlēdōt*: the “descendants” of the heavens and earth, Noah and Shem; the second and fourth “lines,” Adam and the sons of Noah, present storylines that lead to judgment. The direct plot line of the “descendants of heaven and earth” goes through Noah and Shem. The genealogy of “Adam” leads to the debacle of the

*flood. That of the “sons of Noah” leads to the division of humanity “in the earth after the flood” (Gen 10:32), a separation by God’s judgment depicted immediately in the story of the tower of *Babel (Gen 11:1-9). In contrast, the “heavens and earth” continues through Noah, who “found grace in the eyes of the Lord” (Gen 6:8), and moves on through the descendants of Shem, through whom *Abraham ultimately comes.

One final important implication arises out of this genealogical structure provided by the *’elleh tōlēdōt* formula in Genesis 1–11: how Genesis 2:4 structures the creation narrative(s). Modern interpreters, influenced by the Documentary Hypothesis (see Source Criticism), have tended to interpret Genesis 2:4a with Genesis 1—almost as a misplaced introduction/conclusion to creation after the fact. Yet if the *tōlēdōt* formula structures the narrative progression of Genesis 1:1–11:26, Genesis 2:4 serves to introduce the narrative that follows: the story of the creation of the human (*’ādām*) from the soil (*’ādamā*) and the subsequent disobedience in the garden of *Eden. Rather than being part of the narrative progression per se or an alternative *creation story to Genesis 2–3, Genesis 1:1–2:3 stands as a theological prologue to the whole Torah. As K. Barth aptly noticed, Genesis 1:1–2:3 represents “The External Presupposition of the Covenant,” while Genesis 2:4–3:24 represents the “The Internal Presupposition of Creation” (Barth). There is a narrative order and development in the two stories. Genesis 1:1–2:3 presents a created, harmonious world in which God can assign humanity a special role as made in God’s image; the passage provides the setting, a creation other than God, necessary for God to make a covenant with something “not-God.” Genesis 2:4–3:24, however, tells why the covenant is necessary. God must restore creation to its primeval harmony and sinlessness following its concrete story of human disobedience to the divine command. Understanding Genesis 1:1–2:3 as a prologue corresponds well with recent discourse analysis of Genesis 2:4-7 that argues that 2:4 introduces the narrative that follows it rather than concludes that which precedes it (Collins).

As the fivefold *tōlēdōt* formula structures the presentation of Genesis 1:1–11:26, a similar “pentad” structures Genesis 11:27–50:26. Here we find the *tōlēdōt* of *Terah (Gen 11:27), *Ishmael (Gen 25:12), *Isaac (Gen 25:19), *Esau (Gen 36:1, 9) and *Jacob (Gen 37:2). These ge-

nealogies provide a linear progression of the narrative: Ishmael is the older brother of Isaac, as is Esau that of Jacob. The *tōlēdōt* structure, however, also shows that the biblical narrative does not progress in a simple linear direction. As in Genesis 1:1–11:26, the formula forms a literary structure that emphasizes the first, third and fifth *tōlēdōt*: the “descendants” of Terah (which leads to Abram/Abraham), of Isaac (which leads to Jacob) and of Jacob (which leads to Joseph and the sons of Israel surviving famine and dwelling in Egypt). The second and fourth “lines,” Ishmael and Esau, only take the narrative so far—with the establishment of specific groups of people who live in a distant kinship to Israel. The direct plot line of the Pentateuch will not flow through them but bypass them to feed into the lines of the younger brothers Isaac and Jacob. The story of the people of God amidst the nations of all creation will progress through the first, third and fifth *tōlēdōt*.

The narrative signals such genealogical replacements by inserting a new *tōlēdōt* immediately following the previous genealogy. The *tōlēdōt* of Isaac (Gen 25:19) immediately follows Ishmael (Gen 25:12-18), and Jacob (Gen 37:2) immediately follows Esau (Gen 36:1–37:1). In these cases, literally no narrative space remains to develop the previous genealogies into extending the narrative. The storyline must switch to the succeeding genealogy. The plot of the book moves forward in a “hopscotch” fashion, noting Ishmael and Esau, as it bypasses them into the stories of the families of Isaac and Jacob.

The genealogical structure of the *tōlēdōt* formula gives Genesis its distinct nature as the story of a particular family amidst all the families of the world. Even as the narrative develops linearly, the genealogical structure brings the readers’ attention back to this particular family, the family of Jacob/Israel, as it heads into the future. Yet this family stands in particular relationships with other families, indeed, all other families of the earth, and thus continues the “*tōlēdōt* of the heavens and earth” with which the story began.

The *tōlēdōt* formula does not exhaust all the genealogies in Genesis. Other genealogies are preserved outside the *tōlēdōt* lists (see Gen 4:17-26; 9:18-19; 22:20-24; 25:1-6; 35:22b-29; 46:8-27). In these cases, the genealogies provide either a means to develop the narrative further or narrative summaries or pauses within the broader units.

The book of Genesis is unique in the Torah for both the number of genealogies within it and their structural significance within the book. They reveal that Genesis is unique among the books of the Pentateuch in its nature as the story of God's calling of a particular family amidst God's good creation, now gone bad.

3.2. Genealogies in Exodus and Numbers. The function of genealogies in the books of Exodus and Numbers differ vastly from their role in Genesis. The *tôlêdôt* formula only occurs once (Num 3:1-4). In these books, however, the chronology and locality of Israel in relationship to the escape from *Egypt, not the *tôlêdôt* formula, structures the narrative (Ex 16:1; 19:1; Num 10:11; Deut 1:3). Genealogies place Israel amidst the nations in Genesis; Exodus through Deuteronomy tell the particular story as this family moves toward the *promise that God had granted their ancestors and, thereby, themselves.

Yet the function of the genealogies is evident from their placement in the wider narrative of the Torah. Genealogies serve in these contexts to "gather" the people of Israel along their way as new stages of their journey unfold before them. Exodus begins with a brief segmented genealogy to place the Israelites in Egypt (Ex 1:1-7). A partial genealogy of Israel places the lineage of *Moses and *Aaron within Israel (Ex 6:14-27). The genealogy divides the renewal of the call of Moses (Ex 6:1-13) from God's instruction for Aaron to function as Moses' spokesperson (Ex 6:28-7:7).

In Numbers, genealogies take the form of census lists in preparation for Israel to depart for the Promised *Land (Num 1:5-16; 4:34-49), in their setting out (Num 13:1-16), in their approach to the land following their various misadventures (Num 26:1-63) and, finally, in the distribution of land for the various families once they enter the land (Num 34:16-29). Genealogies also place the *priests (Num 3:1-4) and the *Levites (Num 3:14-39) within this large people in their distinct roles in preparation for their journey. Rather than defining the trajectory of divine activity amidst God's good, though fallen, creation and Israel (Gen 1:1-11:26) and Israel's place amidst the nations (Gen 11:27-50:26), genealogies in Exodus and Numbers define inner-Israelite relationships at crucial transition points in the narrative as they move to the next stage of their divinely ordered journey. The journey itself, rather than the gathering of a

people amidst the nations, moves to center stage within the narrative.

4. Conclusion.

Genealogies, both in the background material and in the particular narrative of the Torah, map relationships: relationships within familial groups, relationships between familial groups, relationships of familial groups to all humanity. Genealogies fundamentally structure the narrative development of Genesis as God gathers specific lines of descendants amidst a particular family as a response to the debacle of God's good creation gone bad. One could almost say that Genesis is a narrative that is written out of one large genealogy that, even in its particularity, encompasses all humanity. In Exodus and Numbers, however, genealogies play a much less significant narrative role. God has already chosen God's people; now genealogies mark relationships within Israel as they prepare to move to the next stage in their journey within God's promise.

GENESIS, BOOK OF

As the first book of the OT, Genesis provides the foundation for the Pentateuch and for the rest of Scripture. Its significance for Judaism and Christianity is reflected in the enormous amount of scholarly endeavor expended on it. This article surveys the essential nature of the book under three headings.

1. Structure
2. Plot
3. Theology

1. Structure.

It is generally agreed that Genesis is composed of two distinct blocks of unequal size, though opinions differ as to where exactly the dividing line should be drawn. The majority position (e.g., Westermann, Wenham) is that the first section, the primeval history, which begins with *creation (Gen 1:1—2:4a), concludes with the *genealogy of *Shem (Gen 11:10-26). Others have suggested that it terminates with the story of *Babel in Genesis 11:1-9 (e.g., Coats), the genealogy of *Terah in Genesis 11:27-32 (e.g., Whybray) or *Abraham's departure in Genesis 12:4-9 (e.g., von Rad). Such disagreements do not fundamentally affect assessments of the overall emphasis of the first section. It deals with issues concerning the world and humanity in general, transcending national particularism and inhabiting a world beyond the experience of the reader. The rest of the book comprises the ancestral history, which begins by introducing Terah and his family (Gen 11:27-32) and announcing God's call of Abraham in *Haran (Gen 12:1-3). It concludes with the deaths of *Jacob (Gen 49:29-33) and *Joseph in *Egypt (Gen 50:24-26). Compared to the primeval history, this section has greater geographical and historical definition, and while the storyline traverses the ancient Near East, it is concerned primarily with the ancestors of Israel. Its main sections are the Abraham story (Gen 11:27—25:18), the Jacob story (Gen 25:19—37:1) and the story of Jacob's family (Gen 37:2—50:26). Although Genesis falls into

various sections, they are clearly interrelated.

1.1. The Role of *tôlêdôt*. The division between the book's two main sections is marked by genealogies (*tôlêdôt*), with Shem's concluding the first (Gen 11:10-26) and Terah's introducing the second (Gen 11:27-32). Each section is in turn punctuated by *tôlêdôt* formulas. With the exception of Genesis 5:1, which reads, "This is the book of the descendants of . . ." (*zêh sêper tôlêdôt*), all *tôlêdôt* formulas follow the pattern, "[now] these are the descendants of . . ." (*[wê]’êlleh tôlêdôt*) (NRSV). The *tôlêdôt* pattern occurs five times each in the primeval history (Gen 2:4a; 5:1; 6:9; 10:1; 11:10) and the ancestral history (Gen 11:27; 25:12, 19; 36:1; 37:2) and provide each with its basic structure (though see, e.g., Whybray). Additional uses of the formula or equivalent occur, which summarize (Gen 10:32) or reiterate (Gen 25:13; 36:9) a *tôlêdôt* already introduced, but these do not have a structuring function. Those that do operate as structural markers either conclude (Gen 2:4a, see below) or introduce an extensive genealogy (Gen 5:1; 10:1; 11:10; 25:12; 36:1) or introduce a narrative with an initial summary genealogy of at least two generations (Gen 6:9; 11:27; 25:19). The exception is Genesis 37:2, which introduces a narrative with no proper genealogy. Even here, however, the relationship between Jacob and all of his sons is summarized at the outset (Gen 37:2-4). The overall function of *tôlêdôt* formulas, therefore, is to juxtapose narrative and genealogical blocks, a feature that has a significant impact on the theology of the book as a whole (see 3 below).

The first *tôlêdôt* formula (Gen 2:4a) deserves a brief additional note. It has produced an enormous bibliography on whether it is retrospective, summarizing the preceding creation account (Gen 1:1—2:3) and referring to how the heavens and earth came into existence (e.g., Westermann, Whybray), or prospective, introducing what the heavens and earth generated in the following creation account (Gen 2:4b-25), a position given classical expression by J. Skinner (see also, e.g., Hamilton, Stordalen). While this issue is widely debated, the present article sides with those who argue that contextually, Genesis 2:4a concludes the preceding section (Gen 1:1—2:3), summing up its nature as a *tôlêdôt* (see Turner 2000 for a fuller discussion).

In sum, therefore, the *tôlêdôt* formulas have different functions, acting as a conclusion in Genesis 2:4a and as introductions elsewhere,

initiating genealogical lists (e.g., Gen 5:1; 11:10) or narratives (e.g., Gen 37:2), and governing larger (e.g., Gen 25:19–35:29) or smaller sections (e.g., Gen 25:12–18) of the book. Their function and content is flexible, but essentially they serve to divide the text into blocks, while providing reminders of the genealogical succession essential to the continuation of the plot of the book as a whole.

1.2. Formal Structures for the Book. There have been few attempts to go beyond this rudimentary structure and to suggest an integrated formal design for the entire book (though see Garrett, Prewitt). However, partly as a reaction to the fragmentation of the text inherent to traditional historical-critical methodologies, recent scholarship has seen a number of attempts to demonstrate the structural coherence of large sections. Many proposals suggest parallel or chiasmic structures, some of bewildering complexity and many mutually exclusive.

1.2.1. Primeval History (Gen 1:1–11:26). In Genesis 1–11 there has been more success in showing the shaping of individual episodes, such as the parallel correspondences within Genesis 1:1–2:4a (Wenham; Turner 2000) or the palistrophic structure of the flood narrative, Genesis 6:9–9:19 (e.g., Anderson), than in demonstrating an overall structure for the primeval history as a whole. I. M. Kikawada and A. Quinn postulate six narrative elements arranged in the simple pattern A-B-C-C'-D-E, each followed by a genealogical section. G. A. Rendsburg suggests a more complex structure of five repeated elements A-B-C-D-E-A'-B'-C'-E'-D', with the inversion of the last two elements in the second sequence preventing absolute symmetry. T. E. Fretheim too sees the narratives structured in five “parallel panels,” but these differ from Rendsburg’s suggestions, his midpoint concluding at Genesis 8:19 and Rendsburg’s at Genesis 6:8, to give just one example. J. Blenkinsopp and D. A. Garrett also suggest a fivefold pattern, but Blenkinsopp’s is a unitary structure, not paralleled within the primeval history but by a fivefold patterning of the ancestral history. His structural midpoint concludes in Genesis 9:29. Garrett’s suggestion is inspired by supposed structural links with ancient Near Eastern texts. Building on the work of Kikawada and Quinn, he argues that Genesis 1–11 reflects the structure of the Atrahasis Epic, with an introduction (Gen 2:1–3; cf. Atrahasis

Epic 1.1–351), three threats (Gen 2:4–3:24; 4:23–24; 6:11–9:29; cf. Atrahasis Epic 1.352–415; 2.1.1–5.21; 2.5.22–3.6.4) and a conclusion (Gen 11:1–32; cf. Atrahasis Epic 3.6.5–8.18), a sequence that he calls the “ancestor epic pattern.” The fact that so many incompatible structures, predominantly fivefold, can be made for something as basic as the design of a block of text suggests that while these chapters might have an internal coherence they do not necessarily have a symmetrical, balanced or repetitive structure.

1.2.2. Abraham Story (Gen 11:27–25:18). Much the same can be said about the Abraham story. Here a large number of concentric structures have been suggested. Their central element is usually deemed to be of great importance, providing the central point of the narrative or at least the fulcrum around which the first and second halves match each other as mirrored pairs. Once again no consensus emerges, as the following examples illustrate. G. A. Rendsburg’s influential work has the structural center as two paired passages emphasizing God’s covenant with Abraham (Gen 15:1–16:16; 17:1–18:15), as does G. W. Coats’s in his more convoluted suggestion. J. Rosenberg’s palistrophe centers on the dismissal and return of *Hagar (Gen 16:1–16). J. P. Fokkelman utilizes references to time, in particular the precise ages given to characters in a structure focusing on Genesis 17:17, “Can a child be born to a man who is a hundred years old? Can *Sarah, who is ninety years old, bear a child?” (NRSV). Once again, the fact that concentric structures can be suggested that center on different passages and posit different matching pairs does not inspire confidence, especially when parts of the narrative have to be omitted, either at the end (e.g., Rendsburg) or, more critically, within (e.g., Rosenberg), in order to achieve the suggested symmetry. The “doubling” of many episodes, such as the wife-sister stories (Gen 12:10–20; 20:1–18) and major sections on covenant (Gen 15; 17), might well be important (see section 2 below) but do not form part of a consistent structuring device of matching pairs.

1.2.3. Jacob Story (Gen 25:19–37:1). Since M. Fishbane’s landmark study, however, it has been generally accepted that the Jacob story is one narrative block of Genesis that does have a clearly defined concentric structure.

A Oracle sought; Rebekah struggles in childbirth; birthright; birth; strife, deception and fertility (Gen 25:19-34)

B Interlude; strife; deception; blessing; covenant with foreigner (Gen 26)

C Deception; blessing stolen; fear of Esau; flight from land (Gen 27:1—28:9)

D Evening encounter with divine beings at sacred site near border; blessing (Gen 28:10-22)

E Internal cycle opens; arrival; kisses; Laban at border; wages; deception (Gen 29)

F Rachel barren; Leah fertile; Rachel fertile; Jacob breeds herds (Gen 30)

E' Internal cycle closes; departure; kisses; Laban at border; wages; deception (Gen 31)

D' Evening encounter with divine beings at sacred sites near border; blessing (Gen 32)

C' Deception planned; fear of Esau; blessing-gift returned; return to land (Gen 33)

B' Interlude; strife; deception; covenant with foreigner (Gen 34)

A' Oracle fulfilled; Rachel struggles in childbirth; blessing; death; resolutions (Gen 35:1-22)

Fishbane's general structure is compelling, even though some individual points are disputable, and it requires treating Genesis 35:23—36:43 as a postlude standing outside the main composition (see also Rendsburg). Though one might be surprised to find that the central element is concerned with fertility, in a narrative concerned largely with strife, service and deception, it underlines the fundamental significance of *blessing in the narrative (see 3 below).

1.2.4. *Story of Jacob's Family* (Gen 37:2—50:26).

It has been argued that Genesis 37—50 is also arranged palistrophically. Yet differences of opinion are just as frequent here as in the primeval history and Abraham story. For example, Rendsburg sees the center as Joseph's testing of his brothers and *Judah's reply (Gen 44:1-34), while Garrett has the whole narrative hinging on the genealogy of Genesis 46:8-27. G. J. Wenham suggests that Genesis 39—47 is structured as A-B-C-A'-B'-C', but there is only a general correspondence of episodes building "to a peak" rather than precise connections of content, and of course it does not cover the whole Joseph

story. Once again, the mutually exclusive suggestions simply demonstrate that this structuring device cannot be applied universally throughout the book and also show the need for more methodological rigor.

1.2.5. *Conclusion.* From the foregoing summary of representative attempts to discern formal structures for major blocks of Genesis, it can be seen that in most cases the text resists such analyses. The book can be read as a coherent whole, with detailed correspondences between its parts, but in the main this is achieved through a detailed study of its plot development and repeated themes and motifs rather than through occasional parallel or concentric structures that might occur.

2. Plot.

Given the fact that Genesis is a narrative text, it is surprising that its plot has been relatively ignored in scholarship. *Historical-critical methodologies, with their emphasis on reconstructing sources, positing historical contexts and mapping the text's evolution, fragment the book. Thus, even in compendious treatments of Genesis the plot of relatively small units, let alone of the book as a whole, has not even been attempted (e.g., Westermann). Even investigations of the plot of individual hypothetical sources have been rare (e.g., Hendel). Yet it is precisely the book's overarching plot that provides its coherence, revealing a work that is far more than a miscellaneous collection of loosely connected stories.

2.1. *Progressive Complexity of Genesis.* As Cohn has demonstrated, the main narrative blocks of Genesis become increasingly complex at the levels of plot, characterization and theology.

2.1.1. *Primeval History* (Gen 1:1—11:26). While the primeval history is certainly more than an assemblage of unrelated narratives, its individual episodes are relatively self-contained. Just as its genealogies move steadily from one generation to the next, so too do the narratives. Thematic connections bind the episodes together, but individual characters do not spend enough time on the narrative stage to allow for complex characterization or sophisticated plot elaboration. Apart from God, *Noah has more narrative space than any other character, yet even he remains a bland individual, contributing little depth to his narrative. However, the very lack of complex plot and characterization complements the subject matter of Genesis 1—

11, which sets out broad foundational aspects of cosmic origins and the divine-human relationship.

2.1.2. Abraham Story (Gen 11:27–25:18). In comparison, the Abraham story is dominated by its main character, who appears in almost every episode. He provides both continuity and complexity to a section founded on divine promises and blessings (Gen 12:1-3). To a greater degree than in Genesis 1–11, the story progresses by human initiatives rather than by divine decree. As human characters become more autonomous and God becomes less anthropomorphic, they each become more rounded. Human actions are more morally ambiguous, necessitating that readers be less passive than they were in the black-and-white world of Genesis 1–11. Its plot is more integrated and less straightforward than that of Genesis 1–11, containing numerous complications, such as Sarah's barrenness, Ishmael's rejection and the command to sacrifice Isaac.

2.1.3. Jacob Story (Gen 25:19–37:1). The Jacob story has even greater complexity. It is clearly less episodic and even more integrated than the Abraham story. Episodes are grouped together into larger interrelated sections, such as Jacob's conflicts with *Esau (Gen 27–28; 32–33) and with Laban (Gen 29–31). Abraham is clearly not one-dimensional, but Jacob is more complex, even enigmatic, no more so than on the issue of his moral integrity. God is less dominant in the Abraham story than in the primeval history, and that trend continues in the Jacob story, where God appears less frequently and more transcendently.

2.1.4. Story of Jacob's Family (Gen 37:2–50:26). The story of Jacob's family brings the increasingly sophisticated narrative of Genesis to its consummation with a masterful integration of plot and characterization. More than any other block in Genesis, this is a continuous story, emphasizing its human dimensions. Joseph is the central character, eclipsing God as an active participant. Yet paradoxically, even though Joseph is the most acutely portrayed of all the characters in Genesis, he is in the end the most baffling of all. Thus in many ways the Joseph story is a mirror image of the primeval history, replacing its divine omnipresence and morally unambiguous characters with divine reticence and human ambivalence.

2.2. Promises and Blessings. Genesis is too

complex for its overall plot to be analyzed in a brief span. Nevertheless, the scholarly consensus that the book's central core is found in its divine promises and blessings is undoubtedly correct. It is significant that the foundational passages of blessing and promise are stated at the outset of the primeval history and also of the stories of Abraham, Jacob and Jacob's family. Remove these elements, and the coherence of the book as a whole disappears. Thus, an investigation of the book's plot that places these elements in the foreground will take us to the heart of its narrative world.

2.2.1. Primeval History (Gen 1:1–11:26). The main issues that will dominate the plot of the primeval history are summarized in Genesis 1:28, with the divine blessings/commands concerning human multiplication, subjugation of the earth and dominion over the animals. One or more of these elements is present in every episode in Genesis 1–11. On the one hand, the success of human multiplication is emphasized throughout, with formal *tôlêdôt* (Gen 5:1; 6:9; 10:1; 11:10) and other subsidiary information (Gen 4:17-26) witnessing to universal human fruitfulness. Yet, because Genesis is a plotted story, complications attend this human task. For example, the curse on the woman that announces painful childbirth introduces a disincentive to reproduction (Gen 3:16a), yet one that the intensity of human sexual attraction will overcome (Gen 3:16b). Similarly, the goal of human reproduction, to fill the earth, will clearly not be achieved quickly, given the genealogical refrain "and he died" (Gen 5:5, 8, etc.), the reduction of the human population to eight at the deluge (Gen 8:18) and simple human refusal to comply (Gen 11:4b).

Likewise, subduing the earth is made more difficult by divine curses on the ground (Gen 3:17-19), resulting in toil and sweat for the man. Indeed, the announcement that the man will return to the dust of the earth in death (Gen 3:19) suggests that the earth will subdue the man as much as vice versa. The deluge demonstrates convincingly that the earth is anything but a docile environment in which humans will exercise dominion. God's renewal of his creation edict after the deluge (Gen 8:21–9:7), which otherwise develops his previous creation blessing, tellingly omits any mention of subduing the earth.

The development of the third blessing/com-

mand, to have dominion over the animals, is just as complicated as the other two. The *serpent is the first animal to have an independent role in the story, and quite clearly the humans do not master *him* (Gen 3:1-15). That possibility is held out as future hope rather than a present reality (Gen 3:15). On the wider front, the original command to have dominion over the animals was given originally in a vegetarian context (Gen 1:29-30), clearly limiting aspects of the dominion envisaged. Yet accelerating human depravity and divine judgment brutalize human-animal relations to the point where God announces that all animals may serve as human food (Gen 9:3).

Taken as a whole, therefore, the plot of the primeval history develops in complicated and surprising directions. In doing so, it sets the tone for the rest of the book.

2.2.2. *Abraham Story* (Gen 11:27–25:18). The initial divine speech to Abraham concerning nationhood, land and blessing (Gen 12:1-3) develops some of the plot elements seen already in Genesis 1–11. The general multiplication motif is transformed into a promise of nationhood (Gen 12:2a), and subjugation of the earth is transformed into the promise of land possession (as it is eventually defined). A feature of the Abraham story is that the broad intent of the initial divine speech only becomes clear gradually as the plot unfolds. The knowledge that Sarah is barren (Gen 11:30) does not present an insuperable problem for the nationhood promise, for that is addressed to Abraham alone (Gen 12:1), and there are, possibly, a number of ways to fulfill it. The plot unfolds by first hinting that Abraham might see nationhood coming to him vicariously through his nephew *Lot. While leaving his father in Haran as commanded (according to the MT chronology), Abraham nevertheless takes his fatherless nephew with him. In addition, he seems to be more concerned about Lot's welfare (Gen 14) than he is about his wife's (Gen 12:10-20). Lot fades from the scene by Genesis 15, where Abraham is informed for the first time that he must father the promised heir (Gen 15:4). The birth of *Ishmael to the Egyptian Hagar fulfills the condition of Abraham's paternity, but God then eliminates Ishmael by revealing one further condition: Sarah is to be the mother of the promised child (Gen 17:16). This is a turn of events that neither Abraham nor Sarah finds easy to believe (Gen 17:17-18;

18:12-15). Even when Isaac is born, his life is threatened by the seemingly bizarre divine command to offer him as a sacrifice (Gen 22:2), and he is rescued just in time. Thus the central promise of the Abraham story, which at first seems achievable in several ways, is then circumscribed by conditions that render its fulfillment, from a human point of view, extremely unlikely. Then, when finally Isaac is born, his very existence is threatened by God himself. By the end of the Abraham story, therefore, the promise of nationhood remains viable, but only by the slenderest of threads.

Like the progeny promise, the full significance of the land promise is not evident at the outset, where Abraham is simply told to go to the land that God will show him (Gen 12:1). Even by the time of his death Abraham has only the promise that the land of Canaan will be given *to his descendants* (e.g., Gen 15:18; 24:7), and his only personal possessions in it are a well he has dug (Gen 21:30) and a grave he has purchased (Gen 23:17-19). Possession of land remains as precarious as potential nationhood.

Rather than announcing what he shall become, God commands Abraham to be a blessing (Gen 12:2), ultimately for the benefit of "all the families of the earth" (Gen 12:3). (For a discussion of the Hebrew, see Turner 1990; Alexander 1994). Without denying that Abraham has a number of sterling qualities and is capable on occasions of demonstrating great faith (Gen 15:6; 22:12), he is clearly not a blessing to most of those he meets. His journey to Egypt and his lies concerning his "sister" might bring blessings to Abraham (Gen 12:16), but they lead to plagues on Pharaoh's house (Gen 12:17). This experience is shared by *Abimelech, who is told by God, "you are about to die" (Gen 20:3) when Abraham repeats the ploy. While Sodom receives some blessing from Abraham's hand, this is purely incidental to his main aim of rescuing Lot, which necessitates routing several foreign kings (Gen 14:15). To give but one more example, no matter how much the Canaanites deserve to be dispossessed of their land (Gen 15:16), neither Abraham nor his descendants will be blessing these particular foreigners (Gen 15:18-21).

When the progress of the Abrahamic blessings/promises within the plot of the book as a whole is considered, it is clear that the resolution of numerous complications lies beyond

Genesis. As late as Genesis 46:27 the embryonic “nation” numbers only seventy. The final words of the book, “in Egypt” (Gen 50:20), underline that the promise of possessing Canaan has been deferred (cf. Gen 15:13, 16). And while Joseph might have saved Egypt from starvation, it is done at the price of enslaving the populace (Gen 47:21) and confiscating their land (Gen 47:20). Thus, the nations still await their Abrahamic blessing. This is just one area in which Genesis anticipates the trajectory of the rest of the Pentateuch.

2.2.3. *Jacob Story (Gen 25:19—37:1)*. The conflict between rival claimants to the line of promise is a subtheme in the Abraham story, but it becomes more prominent in the Jacob story. Indeed, conflict begins before the birth of the main antagonists, in the intra-uterine struggle between Jacob and Esau. The divine oracle to Rebekah announces that this presages division between her offspring, with the elder serving the younger, and projects beyond the individual brothers to include the nations that will arise from them (Gen 25:23). The blessing that Jacob later tricks Isaac into giving him confirms the reversal of primogeniture (Gen 27:29) and bestows fertility and prosperity on Jacob (Gen 27:28). As a result, Isaac can only announce to Esau the result of Jacob’s deceit: Jacob is Esau’s lord, Esau will serve him, and he will be deprived of fertility and prosperity (Gen 27:37, 39-40).

However, the plot of this story confirms none of these pronouncements. In the rest of the narrative, it is Jacob who does all of the serving (*‘abad*). He not only serves his uncle Laban for his wives (Gen 29:20, 30) but is also hired by Leah to fulfill her maternal longings (Gen 30:16). Yet it is his reunion with Esau that produces the most surprising outcome of all. He tells his entourage to inform Esau that the herds of animals he is sending ahead of him “belong to your servant Jacob; they are a present sent to my lord Esau” (Gen 32:18 NRSV). Isaac’s blessing had predicted that Jacob’s brother would bow down to him (Gen 27:29), yet the only bowing done in the whole story is done by Jacob and his family before Esau (Gen 33:3, 6-7). Given Jacob’s record of deceit in the plot up to this point, one might well question how genuine he is here, but his words and actions form a graphic inversion of the predictions of service and obeisance found in both the divine oracle and Isaac’s blessing.

Other expectations raised at the outset of the story are similarly complicated as the plot develops. The contrast between Isaac’s two blessings on his sons should result in fertility and prosperity for Jacob and deprivation for Esau. While Jacob certainly is blessed in these areas, one should not forget that Rachel experiences infertility (Gen 29:31; 30:2). But Esau’s fate counters predictions. He can afford to refuse Jacob’s initial offer of the gift of flocks with the words, “I have enough, my brother; keep what you have for yourself” (Gen 33:9 NRSV). And afterwards, the two brothers part company because each has too many possessions for them to live together (Gen 36:7). So against all the forecasts, there is nothing to choose between the brothers as far as material prosperity is concerned.

The third element of division between the brothers also develops in a surprising direction. Jacob’s initial flight from Esau’s murderous designs (Gen 27:41) results in the two brothers being separated for a large part of the story. When they do meet again, contrary to expectations the two are reconciled (Gen 33:4). When they separate again at the end of the story, this is not caused by animosity (the reader’s expectation) but by the need for each to find space to accommodate his prosperity (Gen 36:6-8). Taken as a whole, therefore, the plot of the Jacob story inverts initial expectations.

2.2.4. *Story of Jacob’s Family (Gen 37:2—50:26)*. The story of Jacob’s family is prefaced by two dreams (Gen 37:6-11). These predict future relationships within the family and produce the strife central to the story’s development. While similar, each dream has a precise focus. Assuming that the interpretations provided by Joseph’s brothers and father are correct, the first predicts that his brothers will bow down to him and the second that his brothers, father and mother will do so. In keeping with the trend of the book as a whole, it should come as no surprise that actual events are more complicated than that. While the first dream is fulfilled partially by ten brothers in Genesis 42:6 and then by all eleven in Genesis 43:26, 28; 44:14, the second dream, taken as a whole, is unfulfilled. While his brothers bow before him, his father never does. In fact, it is Joseph who bows before his father (Gen 48:12). And his mother never gets the opportunity, for she had already died giving birth to Benjamin (Gen 35:18). At the very least, therefore, the journey taken by the plot of the Joseph

story is not as straightforward as the reader was initially led to believe.

2.2.5. Conclusion. The individual narrative blocks of Genesis have a coherent plot development. The fact that the reader's expectations are rarely fulfilled in a straightforward way is not evidence of a lack of literary finesse, but rather the reverse. The outcome of individual episodes, and of the book as a whole, depends on the complex interplay between divine actions and pronouncements on the one hand, and human initiatives on the other. This is hardly ever straightforward, but never less than interesting (see 3 below).

3. Theology.

Genesis is a narrative book, and its theology is conveyed through features such as its structure, plot and characterization, rather than through set pieces of divine promulgation, as in legal or prophetic texts.

3.1. Theological Implications of the Book's Structure. The basic structural division of Genesis into primeval (Gen 1:1—11:26) and ancestral (Gen 11:27—50:26) histories shows the book's overarching theological interests. The primeval history, which takes the reader from the creation of the universe (Gen 1:1) and humanity (Gen 1:26-27; 2:7, 21-22), by way of a universal *flood (e.g., Gen 6:17; 7:19), through to the dispersal of the nations at Babel (Gen 11:9), indicates its universalistic preoccupations. It asserts divine concern for the whole of creation in general and for humanity in particular. This global focus in Genesis 1—11 provides a significant theological preface to the call of Abraham (Gen 12:1-3), which governs the ancestral history. The universalism of the primeval history is adopted as the subtext of the ancestral history, in which the one family in focus will be the agent for blessing "all the families of the earth" (Gen 12:3).

The structural device of alternating *tôledôt* and other genealogical information on the one hand with narratives on the other (see 1 above) has theological implications, producing two perspectives on divine-human relationships. The summary genealogies are characterized by an orderly progression from one generation to the next. In many cases, however, particularly in the primeval history, they are also schematic and predictable. For example, individual genealogies often structure each generation in virtually

identical ways (e.g., Gen 1:1—2:4a; 5:1-32; 11:10-26) or conform to a simple catalogue of sons born to fathers, with occasional brief comment (e.g., Gen 10:1-32; 25:12-18; 36:1-30; 46:8-27).

Many also show a preoccupation with the number seven. The account of the "generations of the heavens and the earth" (Gen 1:1—2:4a), which depicts creation as occurring in six days, culminates in a climactic, highlighted and unique seventh day (Gen 2:1-3). Genesis 4:17-24 sketches human descent from Cain down to Lamech, the seventh generation from Adam. Lamech's entry is expanded, uniquely including a speech in which he refers to "sevenfold" and "seventy-sevenfold" vengeance (Gen 5:24). Note that his namesake in the genealogy in the next chapter dies at the age of 777 (Gen 5:31). The genealogy of Genesis 5 moves through ten generations from Adam to Noah, but the seventh generation of Enoch is highlighted. In a passage reluctant to divulge anything other than bald genealogical data, it is mentioned twice that "Enoch walked with God" (Gen 5:22, 24), and his entry alone disturbs the refrain "and he died" appended to all other generations (see Gen 5:5, 8, etc.; cf. 9:29), with the enigmatic "then he was no more, because God took him" (Gen 5:24 NRSV). The table of nations in Genesis 10 contains seventy (seven times ten) elements, if the parenthetical comment concerning Nimrod (Gen 10:8) is omitted. One might also note that the final verse of Shem's genealogy, and of the primeval history as a whole, registers Terah fathering Abram, Nahor and Haran at the providential age of seventy (Gen 11:26). Such interests are not confined to the primeval history. Genesis 46:8-27 lists the sons and grandsons of Jacob, in which the seventh son, Gad, himself has seven sons. The numerical value of his name is seven. And the entire family numbers seventy (Gen 46:27) (see Turner 2000; Sasson). Such schematic genealogical elements convey the impression that there is an overriding divine scheme to human history; the broad sweep of the generations is understandable and to some extent predictable. Moreover, through the genealogies attention is focused on a particular family line that is central to God's purposes, a theme developed in the "seed" motif found in the narratives (Alexander 1993).

Unlike the genealogies, the narratives are neither schematic nor predictable. They are open-ended, contingent on all kinds of details.

Characters are free to act in unpredictable ways and with ambiguous motivations. For example, a reader who observes Abraham showing great faith (Gen 15:6) yet objecting to God's plans (Gen 17:18), or trying to persuade God not to exterminate Sodom (Gen 18:22-33) but obeying his command to sacrifice his son (Gen 22:1-10), would be hard pressed to forecast Abraham's next move and what might motivate it.

These two contrasting perspectives produce a significant theological paradox regarding the relationship between divine sovereignty (as exemplified in the genealogies) and human free will (as demonstrated in the narratives). Genesis does not choose between either option but affirms the necessity of holding both in a theological tension. God's sovereignty cannot be nullified by human freedom or vice versa. The paradox is not explained, but merely asserted through the book's structure (see Robinson; Fretheim).

3.2. Theological Role of Genesis 1—11. The primeval history provides a significant theological backdrop for understanding the blessings and promises that dominate the ancestral history. The major theme of Genesis 1—11 is arguably that of order-disorder, which works at two levels. The creation account commences with a picture of the earth in a state of disorder (*tōhū wābōhū*, Gen 1:2). From this unpromising beginning the ordered universe is brought into existence by God in a thoroughly systematic manner, with the environments created on each of the first three days being matched on each of the next three days by "creatures" to live in or rule those environments. The initial disorder is balanced by the final rest of sanctified time on the seventh day.

Disorder (Gen 1:2)

Day 1. Light (Gen 1:3-5)	Day 4. Light bearers (Gen 1:14-19)
Day 2. Firmament (Gen 1:6-8)	Day 5. Flying creatures (Gen 1:20-23)
Waters	Water creatures
Day 3. Dry land (Gen 1:9-13)	Day 6. Land animals (Gen 1:24-31)
Vegetation	Humans

Day 7. Rest (Gen 2:1-4a)

Creation, therefore, moves from disorder to order. This dynamic is reworked in the narrative of the flood, where the earth returns to its pri-

mordial disorder, once again covered by water (Gen 7:17-24), before it is once again transformed to an ordered new world, where creation mandates are repeated (Gen 9:1-7; Turner 2000).

Yet the order-disorder motif is not limited to the physical sphere but also operates in the moral-spiritual arena of the human-divine relationship. Genesis 3 marks a transition from the initial harmonious relationship that humans have with God (Gen 1:31; 2:15-17) and with each other (Gen 2:23-25) to a situation of disorder in which they accuse each other and God (Gen 3:12) and are in conflict with the rest of creation (Gen 3:15, 17-19) and where their personal relationships include pain and domination (Gen 3:16). The disorder of human existence is exemplified in Cain's murder (Gen 4:8), in his exclusion to a life of aimless wandering (Gen 4:12-16) and in Lamech's chilling exultation (Gen 4:23-24). The trend climaxes in the judgment on universal human depravity that introduces the flood (Gen 6:5). It is recapitulated in Genesis 11:1-9, the final narrative of the primeval history. Here humanity resists God's desire to fill the earth (Gen 1:28; cf. 11:4) and is judged, receiving the name of "Babel," explained by word-play with the verb *bālal*, "to confuse or disorder" (Gen 11:9).

The primeval history is thus bounded by disorder. But the physical disorder with which it started was easily reversed by divine command at creation. The moral-spiritual disorder of Babel still looks for a solution as the primeval history concludes. The solution to the human dilemma is provided by the call of Abraham and its programmatic blessings that govern the ancestral history. The ultimate beneficiaries will be "all the families of the earth," the very ones affected by the crisis of Babel (Gen 12:3; cf. 11:1, 9).

3.3. Theological Implications of the Promises and Blessings. While almost everything that happens in the ancestral history can be related in some way to the divine will outlined in Genesis 12:1-3, the narrative clearly does not present the inexorable outworking of a preordained plan in every particular (see 2 above). On the one hand, human attempts to enforce the blessings, or to further them through purely human initiatives, tend to frustrate them. For example, Abraham's decision to take Lot despite being told to leave his kindred (Gen 12:1, 4), passing off Sarah as

his sister (Gen 12:10-20; 20:1-18) and fathering Ishmael (Gen 16:1-4) might all be defensible human actions given Abraham's knowledge of the nationhood promise revealed to him up to that point. However, each action complicates the eventual fulfillment of the promise as finally defined by God (Gen 17:15; 18:10). The failure of Jacob's initiatives to fulfill the hopes of divine oracle and paternal blessing (Gen 25:23; 27:27-29; cf. 33:3-8) that he should be Esau's lord and that his brother would bow down before him conforms to the same pattern. A complementary relationship also seems to be present: human attempts to frustrate the blessings tend to fulfill them. For example, Joseph's brothers act against him for the explicit purpose of overturning his dreams (Gen 37:20). Yet that very motivation, which results in his exile to Egypt and elevation to power, produces the situation where the first dream can be fulfilled (Gen 42:6; 43:26, 28; 44:14). Thus the dynamic governing the relationship between divine sovereignty and human free will observed in the general juxtaposition of genealogies and narratives (see 1 above) is complemented by the human involvement with the blessings presented by the narratives alone. It also passes comment on the nature of human faith. Faith is never in a state of equilibrium but is always developing, sometimes accepting divine initiatives, sometimes questioning and occasionally straining to understand what that might be.

The blessings and promises are presented as being radically theocentric but not predestinarian. The blessings contain elements that from a human point of view are beyond expectation: for example, the promise that from Abraham will come a great nation (Gen 12:2). That general hope is remarkable in itself without being complicated, as it is, by subsequent divine revelations that it will be achieved by transforming barrenness to fertility (Gen 17:16) and reversing the rights of primogeniture (Gen 17:18-19), to say nothing of its being threatened by a divine command to dispatch the sole child of promise (Gen 22:2). The initiative throughout rests with God, without whom there would not even be a story. But the direction the story takes is just as often decided by human initiative, which makes the story yet more complicated. By the end of the book none of the blessings or promises has been fulfilled. They are inherited by the rest of the Pentateuch, developed by Scripture as a

whole, but can only be properly understood when read against the background provided by Genesis.

3.4. Conclusions. It can be seen from the dynamics of the text outlined above that a simple synthesis of the way in which the divine-human relationship operates in Genesis is not possible. However, a coherent development is suggested by the narrative thrust of Genesis. It begins with the ever-present, anthropomorphic God of the primeval history and moves on to Abraham, in whose story God appears and acts in the majority of episodes, with Abraham acknowledging God's presence and actions at regular intervals. In the Jacob story, God's involvement with Jacob and the latter's response is less frequent and more enigmatic. In the Joseph story God hardly ever speaks or acts explicitly, and his involvement is conveyed largely through the infrequent reflections of Joseph (Cohn). Thus Genesis does not present a static theology of God's involvement with humanity, but regardless of his mode of engagement, God is present and active, if sometimes only to the eye of faith. As such Genesis provides an appropriate theological introduction to the rest of the Pentateuch, in which God's freedom to interact with his creation is amply demonstrated and where God's commitment to the world cannot be negated by humanity's ambivalent attitude to him.

GOD, NAMES OF

In the Pentateuch, narrator and narrative indicate understandings of aspects of Israel's God. Their genres include narrative, law and list, rather than theological treatise or philosophical discussion. Therefore, understandings often appear more obliquely, through story or statute rather than through a systematic analysis. We thus will try here to systematize some of the diverse information available.

Three main independent forms and numerous compounded ones in the Pentateuch designate God. The first of these encountered in the text is *ʾēlōhīm* and the related singular forms *ʾēl* and *ʾēlōah*, the common noun "God, god, gods" (Gen 1:1 and 811 additional times in the Pentateuch; 2,600 total in the OT; cf. *DCH* 1.277-86; Schmidt 1997b, 1.116). The second is *yhwh*, the proper noun "Yahweh, the LORD" (Gen 2:4 and 1,827 additional times in the Pentateuch; 6,828 times in the OT; cf. *DCH* 4.122-50; Jenni 1997c, 2.523-24). The third is *ʾādōnay*, a combination plural common noun plus pronominal suffix, literally meaning "my lord(s)" (Gen 15:2 and seventeen additional times in the Pentateuch; 439 times in the OT; cf. *DCH* 1.133-35; Jenni 1997b, 1.24). These divergent designations have given rise to much discussion regarding not only the nature of Israel's God but also the nature of its religious documents.

In English, names are usually chosen for such reasons as having been in the family previously, the way they sound in themselves or in combination with the surname, or due to some

parental whim. Any meaning of a name is generally unknown and irrelevant in its choice. Hebrew names, on the other hand, are readily “readable” by those who hear or see them: David means “beloved”; Nabal, “fool”; and Ishbaal, “man of the lord.” They can actually carry some meaning instead of just being an arbitrary symbol for the one who bears them. This is evident from the numerous naming episodes in the Bible in which the reason for the name is explained. For example, Dan (“he vindicated”) is so named because “God has vindicated me” (Gen 30:6). This is not always the case, however, since sometimes names were chosen for reasons other than their meaning, or at least no significance is attached to the name within the extant texts. Names that do have a meaning might be chosen just because of the intrinsic meaning, not because the meaning has anything to do with the child itself. For example, neither Absalom (“father of peace”) nor his father David had a peaceful life, even though the name has pleasant connotations.

1. The Noun *ʿēlōhīm* and Related Forms
2. The Personal Name Yahweh
3. The Epithet *ʿādōn/ʿādōnay*
4. Other Forms
5. Pentateuchal Source Documents and the Designations of God

1. The Noun *ʿēlōhīm* and Related Forms.

Cognates of *ʿēl* indicate the divine in most Semitic languages throughout the different periods of language development (*ilu* in Akkadian [CAD I/J.91-103]; *il* in Ugaritic [UT 357-58, cf. 163]; *ʾl* in Aramaic, Palmyrene, Phoenician and Punic [DNWSI 1.53-55]; *ʾlh* in Aramaic, Hatra, Nabatean, Palmyrene and Samal [DNWSI 1.57-60]; Ethiopic is the only exception [cf. Murtonen, 24]). The derivation or etymology of *ʿēl* and its related forms is unclear. There is even debate whether *ʿēlōah* and *ʿēlōhīm*, which are clearly related, are from the same root as *ʿēl* (BDB, 41-42; Schmidt 1998a, 1.107). Most likely the term has to do with power (Murtonen; Eichrodt, 1.179; see DCH 1.259-60, which lists a homonym meaning “power”).

In numerous texts reflecting the Ugaritic Canaanite culture, El was the proper name of the titular head of the hierarchy of deities (as in numerous other Semitic cultures). In Ugarit, Baal’s power overshadowed that of El (Pope). It was also used as the name of a deity in some

early texts in Old Akkadian (AHw 1.373; Gelb 1957, 28; 1961, 140) and Amorite (Cross, TDOT 1.243-44; Huffmon, 162-65). In spite of Israel’s geographical proximity to Canaanite religious influences, there is debate as to whether the Israelites ever used *ʿēl* in relation to their own deity as a proper noun, which is defined as “a name or noun used to designate a particular individual” (OED, 1469; cf. Judg 9:46; Ezek 28:2, where it probably refers to the Canaanite El [Cross 1974, 1.254-55]), rather than as a simple noun. Since Israel was theologically monotheistic, if not always so in practice, the term, when applied to Israel’s own God, would for all practical purposes be viewed as a proper noun.

The term *ʿēlōah* is rarer among the Semitic languages (occurring in Ugaritic, Aramaic dialects [DNWSI 1.57-60], Old South Arabic and Arabic [*allāh*; HALOT]), as it is in Hebrew (fifty-eight times in the OT, of which two are in Deut 32:15, 17). Its derivation and meaning are even more unsure (Murtonen [39-41] gives five suggestions, favoring it being a vocative form). That it, in contrast to *ʿēl*, does not occur in any place names or personal names might suggest that in the minds of native speakers there was a distinction between the two forms that we are yet unable to ascertain. The grammatically plural form *ʿēlōhīm* is best seen to derive from this form, due to the included *h* and also the existence of a separate, distinct plural form of *ʿēl*, namely, *ʿelim* (Ex 15:11, of pagan gods).

In the Pentateuch, *ʿēlōah* occurs only in the poetic Song of Moses (Deut 32:15, 17). It is synonymous both with “Rock” (*šûr*; see below; Deut 32:15, 18) and *ʿēl* (Deut 32:18), referring to the uniqueness of Israel’s Creator God (cf. Ps 18:31 [MT 32]; Is 44:8) and contrasts with pagan, idolatrous nongods. That *ʿēlōah* refers twice in the OT to pagan deities (Dan 11:37, 39) indicates that it is a general designation of the divine rather than being reserved only for Israel’s God.

The word *ʿēl* as a freestanding form in the Pentateuch is most frequently encountered in the *Balaam prophecy. In this context *ʿēl* is contrasted to fickle and changeable humanity (*ʾîš* and *ben ʾādām*, Num 23:19). God speaks (Num 24:4, 16) and acts in power (Num 24:23) and is not negatively affected by magical practices (Num 23:23) but is able to deliver his people from Egyptian captivity (Num 23:22; 24:8). Even God’s lack of action precludes Balaam from taking action (Num 23:8). The biblical writer places

all of these descriptions of the character and role of God in the mouth of a non-Israelite prophet (cf. Rom 1:20).

The three other uses of *ʿēl* are found in Moses' mouth: he pleads to God to heal *Miriam, who was made leprous from speaking against Moses (Num 12:13); sings of the birthing God (Deut 32:18); and, in the sole use of the singular form in reference to a pagan god, declares Yahweh's incomparability much as Balaam had done (Deut 3:24).

The designation *ʿēl* rarely occurs by itself. It more commonly appears either in relation to an adjective (e.g., "the great God") or in a genitive construction with another noun that further modifies it (e.g., "the God of X"). The first such combination is *ʿēl ʿelyōn* ("God Most High"), which in the Pentateuch is found only in the *Melchizedek story, where it is used by the narrator (Gen 14:18), Melchizedek himself (Gen 14:19, 20) and Abram, who links it with Yahweh (Gen 14:22; see further below). Another foreigner, Balaam, uses the adjective *ʿelyōn* in parallel with the noun and also with *šadday*, which will be discussed later (Num 24:16). This could indicate that the phrase had a foreign origin, since numerous ancient Near Eastern deities were associated with mountain heights (cf. the Ugaritic high god El, who was associated with a height, the mountain of the north; *UT* 19.2185; Whitaker, 54). The metaphorical use of the adjective is also appropriate for an important, lofty deity (cf. Deut 26:19). In one case (Deut 32:8) the noun has elided and the adjective alone serves as the subject: he who allotted territory to all nations, paralleling Yahweh, whose allotment is his people (Deut 32:9).

Other phrases describe God's attributes and actions. He is a great, awesome God (*gādōl wēnōraʾ*, Deut 7:21), whose might and valor (*haggibbōr*) raise him above comparison (Deut 10:17), destroying pagan gods from his seat above the clouds (Deut 33:26-27). His uniqueness makes understandable his jealousy, not allowing worship given to others (*qannāʾ*, Ex 20:5; 34:14; Deut 4:24; 5:9; 6:15). He is not only merciful (*rahūm*, Deut 4:31) but also gracious (*rahūm wēhannūn*, Ex 34:6), a god who is approachable, not horrible. In contrast to his fickle, perfidious creatures, God is faithful, righteous and true (*ʿēmūnā, šaddiq, yāšar*, Deut 32:4-5), characterized by being a covenant keeper (Deut 7:9). This is augmented by his eternality (*ʾōlām*, Gen

21:33; perhaps with the connotation of his ancient venerability; Cross 1973, 50; de Pury 552) and the fact that he lives (*hayyīm*, Deut 5:26). This awesome God is also one who sees the predicament of a foreign slave-girl (*rōʾi*, Gen 16:13), who answers one in need (Gen 35:3) and whose intimacy is such that a songwriter is able to call him "my God" (*ʿēli*, Ex 15:2).

God exhibits a special association with and control over places (Bethel, Gen 31:13), people ("your fathers," Gen 49:25 [cf. 46:3]; Israel, Gen 33:20) and other entities (e.g., the wind, Num 16:22). After all, he is also designated as "El Elyon, creator [*qnh*] of heaven and earth" (Gen 14:19, 22; cf. also the later name Elkanah [1 Sam 1:1] and the eighth-century B.C. Phoenician text in *KAI* 26 A III 18).

The meaning of one description of God is particularly debated. The compound *ʿēl šadday* occurs six times in the Pentateuch (and one further time in Ezek 10:5). The word *šadday* has been variously interpreted as "strength" ("Almighty" in KJV, NIV, NRSV), "mountains" (cf. Akkadian *šadū*; Albright 1990, 108 n. 140; *HALOT*), possibly relating to the mountain dwelling of the Canaanite El as well as other deities, or even "God of the breasts," based on the Hebrew *šad* or *šōd* ("breast"; *HALOT*). Goddesses do supply nourishment for royalty and other gods in Ugaritic (Athirat and Anat, *COS* 1.102.337; Chisholm, 4.47) and Egyptian (Keel, 201-2, 253, and fig. 277) mythology, and a tie between Israel's God, nourishment and breasts is brought out by wordplay in Genesis 49:25. The compound *ʿēl šadday* is used in relation to God in the patriarchal stories (Gen 17:1; 28:3; 35:11; 43:14; 48:3), and in Exodus 6:3 it seems to be the regular designation from that period. Balaam uses the term *šadday* in parallel with *ʿēl* (Num 24:4, 16, where it also parallels *ʿēl ʿelyōn*; cf. Ps 91:1) rather than in apposition, as do the other occurrences. None of these connotations of the term can be definitively ruled out, since each one points to characteristics of the God portrayed in the OT.

The plural form *ʿēlim* occurs only once in the Pentateuch, referring to pagan gods in contrast to the God of Israel (Ex 15:11).

The form *ʿēlōhim* occurs 225 times in the Pentateuch and refers to pagan gods (e.g., Ex 20:3; 23:13; 32:1; Deut 4:7, 28; 5:7 and eighteen further times in Deuteronomy) as well as to the God of Israel. Though morphologically plural, the word is regularly used as a singular when re-

ferring to Israel's God. This is shown by the regular use of singular verbs and adjectives in conjunction with the term (GKC §124g; *IBHS* §7.4.3b and n. 16). The purpose and meaning of the plural form is debated, with some seeing it as a plural of majesty, or royal plural (GKC §124g), as an intensification or claim to exclusivity (Ringgren, *TDOT* 1.273; Fretheim, *NIDOTTE* 1.405), or as an honorific (*IBHS* §7.4.3b).

Through these numerous occurrences, the writers show many attributes and actions of *ʾēlōhīm*. He is first presented as a creator (*ʿbr* ["create"], Gen 1:1, 27; 2:3, 4; 5:1; Deut 4:32) or maker (*ʿśh* ["make"], Gen 1:7, 25; 2:2; 3:1, 21), creating by oral command (Gen 1:3, 6, 9, 11, 14, 16, 20-21, 24), by differentiating between different elements (Gen 1:4, 7), by setting in place (Gen 1:17) and by molding and shaping material (Gen 2:7, 21-22). He also is a discerning God, evaluating his creation (Gen 1:4, 12, 18, 21, 25, 31; 2:18; 6:12; cf. 30:6) and also categorizing it by giving names to its different elements (Gen 1:5, 8, 10; cf. 35:10). God is specifically said to *bless or provide benefit for parts of his original creation (Gen 1:22, 28; 2:3; cf. 9:1) as well as those with whom he is pleased (Gen 25:11). On the other hand, he also judges (Gen 31:53; Deut 1:17), curses (Gen 3:14; 12:3; Deut 27:15-26; cf. Ex 22:28) and punishes (Gen 3:23; 6:13; 19:29) those who oppose him.

Humanity, from among all the rest of *creation, has a special relationship with God by bearing his *image and likeness (see Gen 1:26-27; 5:1; 9:6; 41:38), without being equal to God, who is incomparable (cf. Michael ["who is like God?"], Num 13:13). God is with humanity (Gen 21:20, 22; 28:20; 48:21; Ex 18:19); knows about them (Gen 3:5); reveals things, including himself (Ex 3:14-15; 6:2), to them (Gen 21:19; 35:9; 41:39; 48:11); speaks with them (Gen 8:15; 9:8, 12, 17; 17:3, 23; 21:2; 35:15; 46:2; Ex 20:1; cf. Ex 20:19), including with foreigners (Gen 20:3; Num 22:9, 12, 20; 23:4-5; Deut 4:33; 5:24); listens to them (Gen 21:17; 30:17, 22; Ex 2:24); and even calls them when they are separated from him (Gen 3:9; cf. Ex 3:4). God has a special place and provisions for people (Gen 1:29; 2:8-9, 15; 4:25; 9:27; 22:8; 28:4; 30:18, 20) and makes *promises (Gen 17:19) and a *covenant with them (Gen 9:16). They also have obligations to God, since he gives them commands (Gen 2:16; 3:1, 3; 6:22; 7:9, 16; 17:9, 16; 21:4, 12; 31:16, 24; 35:1, 11; Ex 18:23). While an appropriate re-

sponse to God is reverential awe (*yir'â* ["fear"], Gen 20:11; 22:12; Ex 9:30; 18:21; cf. Gen 35:5), he is also characterized by graciousness (Gen 33:5, 11; 43:29), doing good (Gen 50:20; Ex 1:20), healing (Gen 20:17), protecting (Gen 31:7, 9, 16; 45:5, 7) and walking with his people (Gen 3:8). In the midst of troubles, even if the result of their own inappropriate actions, God remembers humanity (Gen 8:1; 19:29; 30:22; Ex 2:24).

2. The Personal Name Yahweh.

The most common designation for God in the Pentateuch, and in fact the most common Hebrew noun in the Bible, is Yahweh. It is made up of the Hebrew consonants *yhw*, called the Tetragrammaton, the "four-letter" word par excellence. The precise pronunciation is uncertain, since during the Second Temple period the name dropped from active use and was replaced by other forms (for a discussion, see 3 below). It is a proper noun comprised of a third-person masculine singular prefix verb from the root *hwh/hyh*, "be, happen, become" (*HALOT* 2.502, 511-40). Depending on the stem of the verb, which is uncertain due to the lack of original vocalization, the name could be understood as "he is/becomes/will be(come)" (Qal) or "he causes to be/become" (Hiphil; BDB, 218; cf. detailed discussions of the several meaning options in van der Toorn, 1717-23). The latter seems preferable based on its rendition in Greek (e.g., *Ia ouai/e* [Clement of Alexandria, *Strom.* 5.6.34]; *Iabe* [Hexapla on Ex 6:3; *HALOT*; van der Toorn, 1711]; *Iaw* [Baudissin, 2.193-215]) and Akkadian (Tallqvist, 90-92; Murtonen, 44) and in some biblical names in which forms of it occur (e.g., *yěša'yāhû*, Isaiah ["Yahweh saves"]), though problems remain in the explanation of the name in Exodus 3:13-15 (see below).

The earliest extant occurrence of the name is in the Moabite Stone (ninth century; *COS* 2.23.138; van der Toorn, 1713), and it also occurs in controversial eighth-century texts from Kuntillet 'Ajrud (*COS* 2.47.171-72) and Khirbet el-Qom (*COS* 2.52.180), on seventh-century potsherds from Arad (Aharoni, 30, 35, 42) and in sixth-century texts from Khirbet Beit Lei (*COS* 2.53.180) and Lachish (*ANET*, 322; for the use of the name in early Israel, see further Miller, 41-43; for inscriptional use, Davies, 366-67).

The name occurs also in several shortened forms. *Yhw* occurs in names from Hebrew inscriptions from the eighth century on (Davies,

269-70, 273, 365-69 and *passim*) and is the form of choice in the fifth-century papyri from Elephantine (e.g., Porten and Yardeni, 1.30, 58, 71; on an ostrakon, 4.114), while the ostraca from there generally use *yhh* (Porten and Yardeni, 4.168, 170, 172, 180). *Yhh* and *yh* also occur outside the Bible (Jenni 1997c, 2.522; Davies, 269, 333, 364 and *passim*). The name *yāh* occurs twice in Exodus (Ex 15:2; 17:16). Names with possible shortened forms include *yēhōšūa*^c (*Joshua ["Yahweh is salvation"], e.g., Ex 17:9; *HALOT*) and *yōkebed* (Jochebed ["Yahweh is glory"], Ex 6:20; Num 26:59). Much more doubtful are *ʾozni* ("Yahweh has heard," Num 26:16, possibly a shortened form of *ʾāzanyā*, Neh 10:9 [MT 10:10]; *HALOT*), *ʾayyā* ("Where is Yahweh"; *DCH* 4.149), *buqqi* ("proven of Yahweh," Num 34:22, possibly a shortened form of *buqqiyyāhū*, 1 Chron 25:4), *gēmali* ("Yahweh has rewarded," Num 13:12, perhaps a shortened form of *gēmalyāhū*, *DCH* 2.365) and *zikri* ("Yahweh remembers," Ex 6:21, possibly a shortened form of *zēkaryā*, 2 Kings 14:29, itself a bi-form of *zēkaryāhū*, Zechariah; for discussions of Yahweh used in personal names, see Tigay 1986, 1987; Fowler). In earlier Ugaritic literature, the name *yw* in a fragmentary text (*KTU* 1.1.4.14) has been suggested as being related but probably is not (van der Toorn, 1713). Other shortened forms from Ebla and Mesopotamia have also been suggested (Houtman, 96, 99), though the matter is still under discussion (van der Toorn, 1712-14).

The personal name Yahweh seems to be native to Hebrew, since there are no certain occurrences of it outside of Israel prior to the time of Moses (cf. the Egyptian "Shasu-land of Yhw" from the fourteenth-century text of Amenophis III [Giv'eon, 26-28]; if this is an earlier use of *Yahweh*, it would be the self-designation of the peoples in the area settled by Israel and later associated directly with Yahweh [cf. de Moor, 111-13]; the occurrence of the name in Genesis, a pre-Mosaic context, will be discussed in 5 below). Its origin is unclear, though ties with Sinai and Midian have suggested that it arose in the south (e.g. Ex 3, 6; Mettinger, 24-28, 39; cf. de Moor). The biblical text gives the name divine recognition, if not divine origin (Ex 6:3). Its sole explanation occurs in Exodus 3:13-15, where God reveals his name to Moses. He is the one who exists (Ex 3:14); he is with the people (Ex 3:12) and wants to be known by them (Ex 3:15). Continued, active presence and relationship,

not some existential concept of being, is the message here (de Vaux, 71-72). This passage does not seem to involve a concept of causing being, an argument against a Hiphil (causative) stem of the verb, which does not occur elsewhere in Hebrew (*DCH* 2.511-40; contra Albright 1957, 259).

A full exploration of the nature of the God identified as Yahweh is beyond the scope of this article, but important elements of his character can be derived from Exodus 20:2, the introductory verse to the *Decalogue: "I am the LORD [Yahweh] your God, who brought you out of the land of Egypt, out of the house of slavery." Yahweh has a personal relationship with his people, as shown by the personal pronouns employed. This is in an "I-thou" relationship of person with person; Yahweh is not some impersonal, cosmic force. Israel is particularly mentioned as having this relationship with him (e.g. Ex 3:18; 5:1; 6:7; Deut 1:6).

Second, Yahweh is a God of *grace (cf. Ex 33:19; 34:6), starting Exodus 20 with a promise of his relationship even before giving any of the expected responses. His commitment ("I am . . .") precedes his commandment. This gracious commitment also exists in spite of the people's condition. The Bible presents the scene of Moses meeting with Yahweh on Sinai while at the same time the people worship a *golden calf at the foot of the mountain (Ex 32), in effect already breaking the first covenant stipulation (Ex 20:3).

Third, the Hebrew grammar of Exodus 20:2 suggests that the commitment is fixed and immutable, at least from the side of Yahweh. A verbless clause indicating identification ("I = Yahweh"; cf. *IBHS* §8.4.1) is used rather than a conditional clause (e.g., "I might be Yahweh, your God, if you would only . . .").

Fourth, Yahweh is also shown as a jealous God (Ex 20:5; 34:14), claiming a unique, monogamous relationship with his people: "I, and no other, am your God" (e.g., Deut 4:24; 5:9). This desire for exclusivity between Yahweh and other persons leaves him open to suffering, not only *along with* those whom he created (Ex 3:7-8) but also *because of* them (Gen 6:5-8). One author has suggested that Yahweh's decision to allow a world damaged by corruption to continue rather than to destroy it completely (Gen 9:8-17) necessitates his suffering (Fretheim 1984, 112). Opening himself to his creatures in this way, allowing

a creation to continue after it has shown itself rebellious, makes Yahweh vulnerable, exposed to abuse (e.g., Ex 20:7; Deut 5:11) and grief (Gen 6:6; 18:20). Another has poignantly put it that “God is love. That is why he suffers. . . . The tears of God are the meaning of history” (Wolterstorff, 90). This close relationship is portrayed elsewhere through the metaphors of lover (cf. Deut 7:7-9) or parent, including both father (Ex 4:22; Deut 32:6) and mother (implied in Num 11:11-12; cf. Deut 32:18-19, where Yahweh occurs in conjunction with “Rock” and *’ēl*).

Other attributes and aspects of Yahweh can, of course, be derived from other passages. In analogy to a human king, he is said to reign, establishing, protecting and uniting his people (Ex 15:18; Num 23:21; Deut 33:5). Related to this role, he also is portrayed as a divine warrior (Ex 15, especially v. 3; cf. Judg 5:11, 31). Having authority to command without explicit motivation other than his own will (e.g., Gen 2:17), he is also pictured as pondering or deliberating over decisions (e.g., Gen 3:22; 8:21-22; 11:6-7) and at times even discussing these decisions with his creatures (e.g., Gen 18:22-32; Ex 32:7-14; Num 14:11-20; Fretheim 1984, 49-51). Although he, as creator, has power and authority beyond that of any human ruler, he is willing to share elements of that authoritative rule with his human creatures (e.g., Gen 1:28; see also 9:2 with its rewording making more explicit a connotation of military conquest [cf. Deut 11:25] in which placing someone in one’s hand indicates power of life and death [cf. Deut 20:13]), giving them not only authority but also procreative ability along with all living creatures. Rather than destroying those liable to hurt him, Yahweh shows compassion (e.g., Ex 33:18-19; 34:6-7; Deut 13:17 [MT 13:18]; 30:3) and provides the means of redemption (e.g., Ex 6:6; 15:13; Deut 9:26; 15:15) and forgiveness (e.g., Ex 32:32; Lev 4—5; Num 15:25-28; Deut 21:8; 30:2-3).

There is a clear identification of Yahweh with El/Elohim (e.g., Gen 21:33, where Yahweh is identified through apposition with *’ēl ’ōlām*; Ex 3:15-16; later names such as Elijah [“my God is Yahweh”]; Davies [279] lists five nonbiblical inscriptions of “Yahweh your God”). It should therefore not be surprising that there are many characteristics and actions shared by them. Examples are many, but Deuteronomy 32:6-7 provides a number of these when it speaks of Yahweh in terms also used of Elohim as Father

(see 4.1 below), the creator of humanity (*qnh*, Gen 14:19, 22; *’śh*, Gen 1:26) and as ancient/eternal (Gen 21:33). Another element that is characteristic of Yahweh God’s being is *holiness, complete separation from sin and all things unclean (e.g., Lev 19:2; 20:26; 21:8). In light of this evidence, and more besides, it is apparent that for those of the period of the Pentateuch, there was no problem identifying one God using several different terms.

3. The Epithet *’ādōn/’ādōnay*.

The rarest of these three forms in the Pentateuch, the epithet *’ādōn/’ādōnay* (“lord, master”) becomes one of the most commonly used designations for God during the Second Temple period. The term indicates the relationship between a superior and an inferior, often designated *’ebed*, “servant” (Gen 24:9, 65; Ex 21:4-8; Deut 23:15 [MT 23:16]). Developing from this, *’ādōn* became used as an honorific, or polite form of address (e.g., Gen 23:6, 11, 15; 24:18; 31:35), directly equivalent to the English “mister,” derived from “master,” and “sir” from “sire” (cf. Jenni 1997b, 1.26).

For Israel, her God, Yahweh, was “the Lord” (*hā’ādōn*) par excellence (Ex 23:17; 34:23), the “Lord of lords” (*’ādōnē hā’ādōnīm*, Deut 10:17). These regular singular and construct plural forms more rarely refer to Israel’s God than does the variant *’ādōnay*, which usually is interpreted grammatically as a first-person common singular pronominal suffix on a plural noun with an anomalous lengthened vowel in the pronominal suffix, resulting in a translation “my lords.” In the Hebrew Bible, this spelling refers to Israel’s God and is translated in the singular (i.e., “my Lord”). The first times the form is encountered in the Hebrew canon it is in apposition with Yahweh (Gen 15:2, 8; also Deut 3:24; 9:26). Each functions as a vocative, “my Lord, Yahweh” being the addressee of direct speech, of which *’ādōnay* might have become a fixed, fossilized form (e.g., Brettler, 42). A similar function operates in all other uses of the noun referring to God in the Pentateuch, sometimes in association with Yahweh (Gen 18:27, 30, 31, 32; Ex 4:10, 13; 5:22; 15:17; 34:9 [see 34:6]) and once, when found in the mouth of a pagan ruler, standing alone (Gen 20:4). When fear of misusing God’s name, Yahweh (cf. Ex 20:7; Deut 5:11), arose at the end of the pre-Christian era, it was replaced by *’ādōnay*, which became for all

practical purposes a proper noun (cf. Mettinger, 15-19). Some suggest that the actual Masoretic Text (MT) was changed in light of this practice, substituting one for the other (Baudissin, 1.559, 2.81-96; Eichrodt, 1.204), but this does not appear likely, since both *ʾādōnay* and Yahweh remain in the numerous verses mentioned (cf. Jenni 1997b, 1.28). This phenomenon is evident in the MT, however, where the Tetragrammaton, which should not be pronounced lest it be profaned, is revocalized. Sometimes it is to be read as *ʾādōnay*, with this word's vowels appended to the consonants *yhw*h (i.e., *yēh[ō]wāh*, from which we get "Jehovah" through the more archaic English pronunciation of the letters; e.g., Gen 2:4; Yeivin, 58-59). At times it is revocalized as *yēh[ō]wih* with the vowels from *ʾēlōhim* (e.g., Gen 15:2, 8). This practice of substitution carries over into the Septuagint, where *yhw*h is routinely rendered by *kyrios* ("lord"), a practice carried on in the NT (e.g., Mt 4:7, quoting Deut 6:16). This continues in most contemporary English translations (except for the Jerusalem Bible), where *yhw*h is rendered LORD.

4. Other Forms.

4.1. Father (ʾāb). Specific designation of God as Father is unknown in the Pentateuch, possibly in order to avoid any sexualizing of the deity as physical begetter, a feature of the religion of surrounding peoples (Ringgren, *TDOT* 1.2-7; Jenni 1997a, 1.10-11; cf. Abiel ["my Father is God"], 1 Sam 9:1; Abijah ["my Father is Yahweh"], 1 Sam 8:2). God does have a fatherly relationship with his children, Israel, who are called his firstborn (Ex 4:22). He carries them as a father carries a child (Deut 1:31) but also disciplines them as necessary (Deut 8:5). Support and discipline between nation and divine ruler gives the father-child metaphor a covenantal connotation (McCarthy). Some apparently theophoric names with *ʾāb* or *ʾābi* as one element show the same theology (e.g., Abidan ["my Father is judge"], Num 1:11; Abiezer ["my Father is help"], Num 26:30; cf. Josh 17:2; Abiram ["my Father is (the) Exalted (One)"], Num 16:1).

4.2. Mighty One (ʾābir). This term appears to relate etymologically to the bull (cf. Ugaritic *ibr*; Schmid, 1.19; Kapelrud, 1.43). There is no link with the idolatrous calves made for Israel (e.g., Ex 32; 1 Kings 12:28), since a different Hebrew word is used. Its meaning lies within the field of strength. It is used only once in the Pentateuch,

in Joseph's blessing of Jacob, in what could be a divine name, *ʾābir yaʿqōb* ("Mighty one of Jacob," Gen 49:24; cf. Is 49:26; 60:16; Ps 132:2, 5). It has also variously been interpreted as "the bull of Jacob" (Alt, 25-26; Smith, 51) or as referring to the ark rather than to God (Fretheim 1967, 291; Wakely, 1.233), though the latter does not fit well in the context of Joseph's blessing, since a person rather than an object seems to be intended. The power of God evident here is similar to that suggested for *ʾēl* above.

4.3. Fear (pahād). Fear or overwhelming awe is a natural human response to the Wholly Other such as is God (e.g., Ex 15:16), especially as he manifests himself in such overwhelming events as war (e.g., Deut 2:25; 11:25). Twice in Genesis the noun occurs in a construct formation with Isaac, (i.e., "the Fear of [his father] Isaac," Gen 31:42, 53). Both are used in the confrontation between Jacob and his brother-in-law Laban in the context of other divine names (i.e., "the God of my/their father," "the God of Abraham" and "the God of Nahor." It is the name by which an oath was made between the two parties (Gen 31:53). The word is suggested by some to be etymologically related to the word for "thigh" (Job 40:17), which is twice related to an oath (Gen 24:2, 9; 47:29), with an extended meaning of "family, clan," showing a kinship relationship between God and Isaac (Malul). However, the concept of fear, which is also associated with deity in Akkadian literature (cf. *CAD* M/2.9-11; *AHW* 2.878-79) better fits the context (Müller, 525-26; Wenham 1994, 278).

4.4. Rock (šūr). The immovability of a rock makes it a natural metaphor for an unchangeable God, as it is among Israel's neighbors (Albright 1990, 188-89). Its steadfastness makes it attractive as a place of protection (Deut 32:37). In one Hebrew poem, the Song of Moses in Deuteronomy 32, the term is used as a name for Israel's God (Deut 32:4, 15, 18, 30, 31) as well as its use of pagan gods in contrast to Israel's true "Rock" (Deut 32:31, 37). His character as judge comes out in this chapter (Deut 32:4-5 in particular). In Genesis 49:24, another word for rock (*ʾeben*) describes God in his relationship with Israel, also in the context of God as strong.

5. Pentateuchal Source Documents and the Designations of God.

Since the eighteenth century, the two divine names Yahweh and Elohim have been key ele-

ments in the discussion about the composition of the Pentateuch (*see* Source Criticism; Pentateuchal Criticism, History of). It was noted that some passages employ one name (e.g., Yahweh in Gen 2:4b–4:24), while others employ the other (e.g., Elohim in Gen 20:1b-17). This observation led to the suggestion that at least two authors were involved, rather than the traditional view that Moses penned the Pentateuch in its entirety (*see* Authorship of the Pentateuch). In the Documentary Hypothesis of the Wellhausen school of source criticism, the author using “Yahweh” was the tenth- to ninth-century Yahwist (J), while the eighth-century Elohist (E) employed “Elohim,” as did the sixth to fifth-century Priestly writer (P). When the varied nomenclature was coupled with suggested differences in style and theological perspective, the evidence for multiple authorship was considered conclusive and became the standard understanding of OT scholarship, though there have always been dissenting scholarly voices. Scriptural support for the existence of several authors is sought from Genesis 4:26 (J), where Yahweh is called upon prior to the flood, while Exodus 3:13-15 (E) and 6:2-8 (P) indicate that the name Yahweh was unknown prior to the time of Moses. It is argued that a single author would not have included two mutually exclusive statements.

But is this the only possible interpretation of these verses? Even if it were the only explanation, the problem is not resolved, since at some stage an editor/redactor combined both statements into what exists today, obviously feeling that they were not mutually exclusive. Other explanations have been suggested, however. G. J. Wenham and others have suggested that the Exodus passages indicate that a later editor inserted Yahweh into Genesis where originally Elohim was used (Wenham 1983). This was mainly, although not exclusively, in the editorial passages in the book rather than in the direct speeches. There is some evidence of name substitution in two instances where personal names with El (Ishmael and Bethel) are explained using Yahweh (Gen 16:11, 13), apparently indicating at least two stages of textual development. There are numerous other instances, however, where his suggestion does not work (cf. Alexander, 93-96).

One problem with this use of the criteria of divine names to propose at least two sources is that this procedure does not follow accepted sci-

entific or even historical practice. The usual approach in these areas is to observe something that needs an answer, to form a hypothesis to provide an answer, to check the hypothesis against the facts, and then adopt, modify or reject the hypothesis on the basis of the facts. Changing the facts to support the hypothesis is not good form. Genesis 1, which is credited to P, employs only Elohim, but Genesis 2:4b–3:24 has the composite name Yahweh Elohim, not the simple Yahweh demanded by the hypothesis. Other passages combine Yahweh (Gen 21:1a) with Elohim (Gen 21:1b-5 [P] and 6, 8-21 [E], while 21:7, which included no divine name, is J; Campbell and O'Brien), including at least one case where Yahweh occurs right in the middle of an E passage (Gen 22:11). Upon analysis, the division is not as neat as it has been claimed. There are also logical problems with the proposed textual development. If J and E were the earliest documents and were developed independently of each other, exclusive use of one name or another would be understandable. If P closes the compositional process, either as an independent document or as a redaction of all of the documents, it would have known both names. Why does it almost exclusively use Elohim in Genesis (though not in Gen 21:1b), even knowing that Yahweh and Elohim are the same? Also, why are the documents not consistent, allowing the other name to creep in at times? Even more puzzling is why P would deny the early use of Yahweh in Exodus 6:3 if he was aware of its early use in the existing J text of Genesis 4:26.

There is also another problem with the use of *ʾēlōhīm*. According to the evidence of widespread and long-lasting use of *ʾēlōhīm* and related forms throughout the Semitic world, it would have been at least a common noun throughout the period of the Israelites and would have been used to describe their own as well as pagan gods. In other words, those who used Yahweh as a personal name for their God would also have had available *ʾēlōhīm* to use as a descriptor of him (cf. Miller, 42). Following from this, authors of any of the proposed documents, whether J, E or P, would have been able to use *ʾēlōhīm*. It therefore cannot be determinative of authorship, and any exclusive use of one name or another must have been determined on grounds other than authorship. U. Cassuto has suggested that the two names—Yahweh, a personal name; Elohim, a generic

noun—highlight specific features of the character of God: Elohim shows his universality and majesty, Yahweh his covenantal intimacy (Casuto; cf. Garrett, 19). This is observable in some passages, but not in others. M. H. Segal suggests that the alternation is for variety or else because popular usage used them indiscriminately (Segal, 13). This also might help explain some cases, but it does not really explain why there are other large sections of the Pentateuch where only a single name is used. While scholarship is not close to a consensus view, and even less to proof, of the process of composition, the alternation of names is not only explainable by the Documentary Hypothesis.

GOLDEN CALF

The overlaid or molten calf (‘ēgel massēkâ, Ex 32:4, 8; Deut 9:16; Neh 9:18) and the golden calves (‘egēlē zāhāb, 1 Kings 12:28; 2 Chron 13:8; cf. 2 Kings 10:29) were images of a young bull used by Israelites in worship at Mount Sinai (Ex 32; Deut 9:15-21; also referred to in Ps 106:19-20; Acts 7:39-41; 1 Cor 10:7) and in the northern kingdom (1 Kings 12:25-33).

1. The Calf Image in the Ancient Near East
2. The Golden Calf at Sinai
3. The Golden Calf in the Northern Kingdom
4. The Literary Context of Exodus 32 and Its Relationship to 1 Kings 12
5. The Golden Calf in the New Testament

1. The Calf Image in the Ancient Near East.

The male calf or young bull was a popular sym-

bol of both power and fecundity throughout the ancient Near Eastern world. Egypt, the Levant, Anatolia and Mesopotamia all had their cult images of the bull, which usually represented the sky or storm god. Sometimes the bull image served as a pedestal for the sky or storm god in question, which god would be represented as such (e.g., *ANEP*, nos. 500-501; 537, 835). At other times the image represented the god directly and was the object of worship (e.g., *ANEP*, no. 616).

It is likely that Israel, living in the eastern Egyptian Delta, where the land of Goshen was located, would have been more familiar with the bull cult centers that flourished in their immediate area than with the more distant (though not dissimilar) cults of the Apis bull of Memphis or the Mnevis bull of Heliopolis. Considering the close links between Canaan and the eastern Delta, as well as the presence of many Semites in the Delta besides the Israelites, it is possible that Israel was also influenced by Canaanite bull or calf cults (Kitchen, 160).

A basic premise in ancient Near Eastern manufacture and worship of images was that there was no consistent distinction between deity and humankind. The gods were considered part of creation. By the making and vivifying of an image, the god in question would be brought near and worshipers would take care of him or her. In effect, this meant that the god came under human control. Against this background, it is understandable that Yahweh, the sovereign Creator, forbade the making of images of himself (Ex 20:4-6; Van Dam, 119-21; Oswalt; for Egyptian thinking, see Lorton, esp. 179-201) and why Moses and Yahweh reacted with such anger on seeing the golden calf (Ex 32:19-35).

2. The Golden Calf at Sinai.

2.1. The Function of the Golden Calf. When Israel became impatient because of *Moses' long stay on Mount Sinai, they demanded of *Aaron: “make us a god [‘ēlōhim] who shall go before us” (Ex 32:1). Aaron obliged by fashioning a calf of gold, to which the people responded: “This is your god [‘ēlōhēkâ], O Israel, who brought you up from the land of Egypt” (Ex 32:4). The verbs governed by “god” are plural (also in Ex 32:8), a circumstance open to different interpretations but occurring elsewhere in monotheistic contexts as well (e.g., Gen 20:13; 2 Sam 7:23; cf. GKC §145i; Joüon §§148a, 150f). The Septuagint and

Vulgate translate with a plural, but clearly one deity was in view, since this was a feast to Yahweh (Ex 32:5). Also, this event is related in Nehemiah 9:18 using the singular.

How did the golden calf relate to Yahweh? Three possibilities have been suggested. (1) It served as Yahweh's pedestal (cf. section 1 above and Bailey, 97-98). No actual figure would have been standing on the calf in Israel, since the people would have associated it with Yahweh and not with a god of mythology. There is, however, no clear biblical substantiation for this view. (2) The calf served as an emblem of Yahweh. Some evidence exists for the bull serving as emblem of the Ugaritic god El (Toews, 52-53). However, this interpretation is more probable when there is an additional representation of the deity, as in the Ugaritic evidence (Mettinger, 191 n. 75). There is little proof for the older, closely allied idea that the image was a war standard of Yahweh that went ahead of the people (Houtman, 3:607; for the calf as a military emblem symbolizing Yahweh as divine warrior, see Janzen). (3) The most likely possibility is that the golden calf represented and was an image of Yahweh. This would be in accord with calling the image "god," with Aaron's proclaiming a feast for "Yahweh" (Ex 32:4-5; similarly, Neh 9:18) and with it being referred to as a "god of gold" (*ʿēlōhē zāhāb*, Ex 32:31; cf. also Ps 106:19-20). Furthermore, the golden calves at Sinai and later at Dan and Bethel were indeed worshiped (Ex 32:8; 1 Kings 12:28, 32; Ps 106:19; Hos 13:2), just as calf images were worshiped elsewhere (cf. *ANEP*, no. 616).

If the pedestal interpretation is correct, it is clear from the calf worship that the distinctions were too subtle for the people (Cassuto, 407-8; see further, e.g., Curtis, 21-25). Also, if the golden calf indeed represented and was an image of Yahweh as far as Aaron was concerned (Ex 32:5), one needs to consider that the people as a whole may not have perceived the calf according to this official view. In their minds they may have been doing what they had done in Egypt, namely, worshiping other gods (cf. Josh 24:14, 23; Ezek 20:7-8; Acts 7:39-40) and therefore also making another god in disobedience to commands such as those found in Exodus 20:3, 23. In any case, Israel did later in her history identify the golden calf with other gods (see 3 below).

Given the popularity of the male calf image

in religious iconography at the time, the choice of a male calf as an image of Yahweh is as such not surprising. The power and fecundity that the taurine image represented was claimed by Yahweh for himself (cf. Oswalt, 12). Furthermore, the cloud and thunder that accompanied Yahweh's appearance at Mount Sinai (Ex 19:16-19) would have strengthened Yahweh's association with the calf image in the minds of those inclined to it (cf. Mettinger, 192). If, as is not impossible, the calf also had links with the worship of "the host of heaven" (Kitchen, 160), Israel's worship of "the host of heaven" could be understood as starting at Sinai (cf. Acts 7:41-42).

Two other approaches to the function of the calf can be mentioned. The first is to identify it with Moses, since the image would have been a substitution for Moses, who was absent (Ex 32:1, 4). Some have also suggested that Moses himself was connected to the calf when returning from the mountain with a "horned" (*qrn*) face (Ex 34:29, 30; Vulgate; Sasson, 384-87). However, this understanding of *qrn* is unlikely (Houtman, 3:706-8). Another approach has been to identify the calf with the Mesopotamian moon god Sin (Bailey, 103-15). Such an identity is, however, difficult to prove, given the extensive calf worship with which Israel would likely have been familiar from Egypt and Canaan (Toews, 47). Furthermore, both of these approaches fail to account for the worship of Yahweh (Ex 32:5).

2.2. The Making and Destruction of the Golden Calf. After receiving gold from the people, Aaron "fashioned [*šûr*, cf. *HALOT*, 1016] it with a graving tool [*heret*, or stylus, Is 8:1] and made it into a molten calf." This traditional translation (*Tg. Onq.*, LXX) of Exodus 32:4a has been seen as problematic, for a molten image is not made with a graving tool. One solution (*Tg. Neof.*, Peshitta, Vg, NJPS) is to translate the first clause: "cast [*šûr*, cf. 1 Kings 7:15] in a mold [*heret*]," presumably understanding *heret* as a variant for *hârîṭ*, "bag" (cf. *HALOT*, 353). But a bag is not yet a mold. Another old solution (*Tg. Ps.-J.*, which also has the preceding explanation) is to understand *heret* as "cloak" (Gevirtz; cf. *DCH* 3.317) and *šûr* as "wrap up" and thus translate: "wrapped it in a cloak" (i.e., the gold was first collected in a cloak; cf. 2 Kings 5:23).

Three ways have been proposed to retain *heret* as a stylus or graving tool in the description. It was used to draw the blueprint for this

project: "Aaron drew it [the image] with a stylus." Thus, the very beginning and end of the project are mentioned (Jacob, 938-39). A second approach is to accept the traditional translation, realizing that the order may not be chronological (Hahn, 169; KJV, NIV). Third, a graving tool may have been used in the fashioning of the gold plating over the wooden core of the image (Cassuto, 412; see next paragraph). Aaron's speaking of a calf spontaneously coming out of the fire (Ex 32:24) should be understood as a lame excuse.

The term used to describe the image in Exodus 32, *massēkā* ("molten, cast") most likely refers primarily to a wooden or metal statue overlaid with silver or gold (cf. Hab 2:18-19; Schroer, 310-14). Also, the vocabulary typically used of pouring and casting metal (*yšq*) is not found in Exodus 32. If wood formed the core, then the destruction of the golden calf by burning becomes more understandable. There is nothing physically impossible in the description of the destruction. The enforced drinking of the water with the remains of the calf can be understood as a covenant ordeal or simply as a way of bringing dishonor on this image (see Begg, 470-71).

An Ugaritic passage describing Mot's annihilation by Anat (*KTU* 1.6.2.31-36; trans. in *COS* 1.70:270) is often cited as a parallel to Exodus 32:20. However, both the object of destruction and the literary presentations are quite different, making a meaningful parallel dubious (*COS* 1.86:270 n. 257). There are close and distinctive parallels between Exodus 32:20 and Deuteronomy 9:21, which can best be explained in terms of the latter being dependent on the former (Begg, 474-79).

3. The Golden Calf in the Northern Kingdom.

Albeit briefly, mention should be made of Jeroboam's erecting a golden calf at both Dan and Bethel to keep his people from worshipping in Jerusalem and eventually returning to the house of David (1 Kings 12:26-29). There is no evidence that Jeroboam wanted to substitute another god for Yahweh (he used virtually the same formula in introducing the golden calves as had Aaron: Ex 32:4; 1 Kings 12:28). However, the presence of the two golden calves promoted religious syncretism (cf. 1 Kings 14:9; 2 Chron 11:15; Kitchen), and his statement, "this is your god who led you out of Egypt" (with pl. verb, as

in Ex 32:4), was open to being understood as referring not only to Yahweh but also to Canaanite gods (cf. Toews, 41-49). Such an understanding is supported by the strong condemnation of Jeroboam's sin, both in his lifetime (1 Kings 14:9) and after his death (e.g., 1 Kings 15:30, 34; 16:2-3, 7, 19, 26, 31; 2 Kings 17:15-16; Hos 8:5-6), as well as by the fact that such calves were worshiped as a deity (cf. Hos 13:2 and 1 Kings 19:18). Still, the archaeological evidence for calf worship in the northern kingdom is sparse compared to the evidence from earlier (including pre-Israelite) periods (Toews, 49-51; cf. Keel and Uehlinger, 191-95).

4. The Literary Context of Exodus 32 and Its Relationship to 1 Kings 12.

Exodus 32 is part of the unified pericope comprising Exodus 32—34 (e.g., Davis) and is also integrated from a literary point of view into what precedes and follows it. It is strategically placed after the instructions for the building of the *tabernacle (Ex 25—31) and prior to its construction (Ex 35—40). If, as seems most likely, the golden calf was meant to be an image of Yahweh, then the tragic irony of the events taking place at Sinai is poignantly conveyed by the sequence of the material. While the infinitely patient Yahweh in covenant faithfulness wanted to come to his people to make his dwelling in their midst (Ex 25:8; cf. Jn 1:14), impatient and faithless Israel sought to pull God down from Sinai in accordance with the religious thinking of their day, seeking to satisfy their need for security by keeping Yahweh near to them on their terms (Ex 32:1-6). While God was instructing Moses about the building of the tabernacle and the consecration of *priests for the sacrificial service of reconciliation (Ex 29) so that he, the Holy One, could be with his people, Israel, oblivious to their sinfulness and God's holiness, demanded of Aaron a golden calf with which to worship a directly accessible Yahweh (Ex 32:7-10). While God directed Moses to ask Israel for gold for the tabernacle (Ex 25:3), the people offered it for the image at the command of Aaron (Ex 32:2-3). Underlining this tragic irony and contrast are the remarkable parallels between Exodus 24:1-11, where the covenant with God was confirmed, and Exodus 32:1-6 with its covenant-breaking sin. Both passages mention Aaron (Ex 24:1, 9; 32:1-3, 5), the building of an *altar (Ex 24:4; 32:5), offering sacrifices (Ex 24:5;

32:6) and eating in the presence of God (Ex 24:11; 32:6; for connecting elements between Ex 32—34 and earlier pericopes, see Houtman, 3.589-90).

There is no real consensus among critical scholars on the tradition and literary history of Exodus 32, a situation that calls into question the objectivity of the criteria that are applied. A common approach is to see Exodus 32 as a polemic against the calf worship of Jeroboam, who is condemned out of the mouth of Moses. If this position is consistently applied, then Exodus 32 has no historical value; consequently, a mediating position is often taken (see survey in Houtman, 3.599-606; cf. Knoppers). On the other hand, others have presented evidence for the priority of Exodus 32 (Davis; Cassuto, 408-10).

5. The Golden Calf in the New Testament.

The heinous nature of the sin of the golden calf at Sinai is evident from the fact that it is even mentioned in the NT. Stephen referred to it (Acts 7:39-41) when he addressed the Sanhedrin, implying that if Israel at Sinai had been obedient, the present leaders would have recognized the Christ and not resisted the Spirit, as their fathers had done. Paul refers to the golden calf as an example of the sins the church should avoid (1 Cor 10:6-7). In short, self-styled religiosity that ignores God's directives is disobedience.

GRACE

While the doctrine of grace is certainly a central concept in Christian theology, with roots in both the OT and the NT, the doctrine of grace did not emerge as a focused, systematic theological theme until the time of Augustine (A.D. 354-430). Yet for NT writers, as well as patristic theologians, the Pentateuch contains foundational texts for the doctrine of grace. This article surveys the key words and themes in the Pentateuch that communicate God's grace and the use of the Pentateuch in some later developments of the doctrine of grace.

1. Key Words
2. A Narrative Theology of Grace
3. New Testament Developments

1. Key Words.

From the handful of notable Hebrew words used to connote God's grace in the Pentateuch, two are of special importance: *hānan* and *hesed*. A third word, *'emet* ("faithfulness"), is often used in combination with these two words, but our discussion will focus on *hānan* and *hesed*.

Found more than sixty times in the OT, the verb *hānan* denotes kindness or graciousness in action, often expressed as a gift. In the majority of occurrences of *hānan*, God is the subject who offers grace, a gift that presupposes lack or need in the human recipients. In Genesis 33:5, for example, *Jacob praises God's graciousness in having given him the gift of children. Exodus 33:12-23, particularly verse 19, exemplifies the benevolent prerogative of the giver of grace as God speaks to Moses: "I will be gracious to whom I will be gracious, and will show mercy on whom I will show mercy." Again in Exodus 34:6 grace and mercy are paired to describe God's kindness to needy humans (a link that occurs frequently in the Psalms). The related noun *hēn* means "favor." With *hēn* the emphasis shifts to the disposition of the one who shows favor rather than the experience of the recipient of grace (Duffy, 19). This is demonstrated by the phrase "in the eyes of" that usually follows *hēn*, as in Genesis 6:8: "Noah found favor [*hēn*] in the eyes of Yahweh."

Though deriving from a root that is different from *hānan* and having an etymology that remains uncertain, *hesed* is the word that most often serves as a substantive for grace in the OT (Duffy, 20). The meaning of *hesed* is uniquely nuanced and is best understood in the context of familial and community bonds. *Hesed*, found nearly 250 times in the OT, cannot be translated by a single English word. Usually a composite of English words is used: grace, mercy, compassion, steadfast love and so on. *Hesed* is the disposition of one person toward another that surpasses ordinary kindness and friendship; it is the inclination of the heart to express "amazing grace" to the one who is loved. *Covenant is only actualized between God and his people in the Bible where there is *hesed*, for it is a committed, familial love that is deeper than social expectations, duties, shifting emotions or what is deserved or earned by the recipient. More than just an inclination or emotion, *hesed* incarnates itself in action.

The human relational context for the mean-

ing of *hesed* makes this word especially important, then, when the term is used to describe God's heart toward humanity. God expresses a personal, familial love for humans. His commitment to people goes far beyond what is dutiful or expected. God's *hesed* is, in the words of Bernard of Clairvaux, the "love that will not let us go." For example, in Exodus 34:6-7 God describes himself as being rich in *hesed* and faithfulness (*'emet*), extending his *hesed* on to "thousands." (Many English translations add a word, reading it as "thousandth generation," which is not in the Hebrew; the "thousands" are generally understood to mean the faithful ones; see, e.g., Childs, 602; cf. Gowan, 237). The lavish *blessing of the faithful ones is in contrast to punishment of *sin, which only lasts to the fourth generation. These are the first things God says to Moses from within the cloud, as he prepares to give the law to Moses the second time. The very giving of the *law a second time is an act of *hesed* love. As Jacob prepares to meet *Esau after long years of alienation, he prays to God, remembering God's many expressions of *hesed* in the past. Jacob pleads with God to continue the commitment of *hesed* in protecting him from any harm Esau may intend (Gen 32:9-12). Esau's favorable response to Jacob is evidence not only of God's *hesed* toward Jacob but of Esau's mercy and *hesed* toward his brother.

Indeed, the fathomless *hesed* love of God toward his people is meant to elicit worship from them. Deliverance from bondage in *Egypt, the giving of the law and the promise of a new *land are all expressions of *hānan*, *hesed* and *'emet*. These acts of salvation predicate the great commandment (the Shema) of Deuteronomy 6:5: "You shall love the LORD your God with all your heart, and with all your soul, and with all your might." In the NT Jesus quotes this commandment and adds (from Lev 19:18) a "horizontal" *hesed* dimension about loving one's neighbor as oneself. This, he goes on to say, is the path to eternal life (Lk 10:27). Themes of grace are implied even if not explicitly stated in almost every narrative of the Pentateuch. To some of those narratives let us now turn our attention.

2. A Narrative Theology of Grace.

Grace permeates the primordial history of Genesis 1–11. Genesis 1:1–2:3 portrays the great God of *creation who speaks the world into ex-

istence, ordering the chaos into increasingly beautiful and productive life, culminating in the *sabbath. God graciously gifts humanity with his own being so that they are made in his *image, and he gives them authority over the rest of creation. In the creation account of Genesis 2:4-25, *Adam does not know he needs a partner, but God knows and God acts. Adam and *Eve have done nothing to earn God's favor. Life is sheer gift. God's love is sheer gift. This is the beginning of grace, for God initiates loving acts toward Adam and Eve before they know their need.

With Genesis 3:1-24 temptation and sin enter the narrative. Yet "grace is greater" than the sin that mars God's world. Adam and Eve must face the consequences of their actions, but God neither abandons nor totally rejects them. God himself gives animal skins to Adam and Eve for protective clothing before sending them from the garden. Moreover, as God curses the *serpent for deceiving the man and woman, he says "I will put enmity between you and the woman, and between your offspring and hers; he will strike your head, and you will strike his heel" (Gen 3:15). This verse, which speaks of the eventual triumph over the serpent through striking its head, has long been understood by Christians to be the first messianic prophecy of the OT (cf. Paul's allusion in Rom 16:20).

God's grace toward sinners continues in the story of *Cain. First God warns Cain that sin is "lurking at the door" and encourages Cain to master sin before it masters him (Gen 4:6-7). When Cain murders *Abel, God holds Cain accountable for the crime, yet God does not destroy or totally reject Cain. A protective mark is given so that no one will murder Cain. His life is spared, and he goes to live in the land of Nod, where grace is further evinced when his descendants come to include key figures: Jabal, the ancestor of tent-dwellers and herdsmen; Jubal, the ancestor of musicians; and Tubal-cain, the ancestor of bronze and iron-workers (Gen 4:20-22). The father of these three men, Lamech, boasts to his wives of his violence, likening himself to his ancestor Cain (Gen 4:23-24), yet God allows him to be the father of Jabal, Jubal and Tubal-cain.

Though the dominant theme of the story of *Noah is judgment against sin through the destruction of humanity, Noah's story is also a narrative of grace. God does not completely destroy

or reject his creation even though "the LORD saw that the wickedness of humankind was great in the earth, and that every inclination of the thoughts of their hearts was only evil continually" (Gen 6:5). God protects Noah and his family, sparing enough animals and people to repopulate the earth. The *rainbow that follows the cataclysmic judgment is a *covenantal sign God gives, promising never again to destroy the earth with a *flood. Thus the rainbow is ever a reminder that God's mercy and grace are woven into his judgment.

The final narrative of primordial history, the tower of *Babel, is yet another story of grace in the midst of human sin and judgment, even though none of the terms for grace is present in the text itself. Rather than destroying the people for building the tower, God acts to stop "corporate evil" before it gets out of hand. By introducing many languages and scattering the people, God spares people and the rest of creation from the evil consequences that would otherwise result.

The call of Abram begins a new series of the ancestral narratives of grace, as God initiates a plan that eventually will bless every nation of the earth (Gen 12:1-3). *Hānan* is the grace that results in *Abraham and *Sarah becoming parents despite their advanced age. (Note once again the gift-giving nuance to *hānan*.) Through their lineage, in due time, the *Messiah will be born, fulfilling the promise of Genesis 12:3. Again and again in the ancestral narratives of Genesis 12–50 God responds to human error and sin with mercy and grace. God is willing to spare all the evil people of Sodom and Gomorrah if only ten righteous people can be found there (Gen 18:32-33). *Ishmael and *Hagar are delivered from death by an angel and protected by God, even though Ishmael is not the child of promise (Gen 21:8-21). Despite his scheming ways, Jacob is brought to a place of eventual transformation by God, which becomes a source of blessing for generations after him (Gen 32–33). When *Joseph is sold into slavery by his brothers, then undergoes further injustice in *Egypt, God spares his life, raises him to a position of authority and uses Joseph as an instrument of grace to bless and save his sinful brothers. As Joseph explains to them: "Even though you intended to do harm to me, God intended it for good, in order to preserve a numerous people, as he is doing today" (Gen 50:20).

The story of God's grace—*hānan* and *hesed*—continues in the *exodus and the giving of the law. "God heard their groaning, and God remembered his covenant with Abraham, Isaac and Jacob. God looked upon the Israelites, and God took notice of them" (Ex 2:24-25). Passover precedes the Hebrews' flight from Egypt. The sacred rite exemplifies grace, for the people are spared not through virtuous acts of their own but by the presence of the sacrificial blood on the doorposts (Ex 12:1-13). They have nothing to do with their own liberation other than to cooperate with God in leaving Egypt.

Throughout their wandering in the *wilderness God supplies food, water and safety. The pillar of fire and cloud provide direction. When the Israelites repeatedly rebel against Moses and lose faith in God, God disciplines but never totally destroys them. Though the original generation is not permitted to enter the Promised *Land because of their stiff-necked ways, their children do inherit the *promise, for God keeps the covenant he made with Abraham, *Isaac and Jacob. The *tabernacle with its minutely specified details in construction and its explicitly prescribed use for worship, provides for the people a sacred meeting place with God so that they may be reminded continually of the presence of God in their midst. From the vestments of the *Levites to the regulations concerning the incense for the *altar, every detail of tabernacle worship is a sign of God's gracious purpose for his people.

In giving his people the law, along with foundational principles for human society (e.g., the Ten Commandments), God demonstrates more grace, for these provide practical, ethical and spiritual guidance for reclaiming their lives in the Promised Land. The Hebrews had lived with the dehumanizing bondage of slavery for generations. In order to experience the shalom that God intends, the people must learn to see themselves, others and the world from a new, *holy perspective. These are given not for God's benefit, but for the well-being of the Hebrews (Deut 10:12-13).

One final note must be made about the law as an expression of grace. The laws concerning guilt offerings begin with God's words: "When any of you commit a trespass" (Lev 5:14). God does not say "if you commit a trespass." Although the Hebrew text does not clearly make this distinction, the assumption is implicit: God's

people will fail to keep the law. The law is given by God with the full knowledge that God's people will fail to keep it despite the best of intentions. Provision is made within the law for lawbreakers to experience the mercy and forgiveness of God. As Paul explains, the law is neither able to make people righteous nor in opposition to the grace that does. Rather, the law is the disciplinarian or teacher that leads people to justification by grace through faith (Gal 3:19-24). Therefore, the law is part of God's grace.

3. New Testament Developments.

Jesus is the ultimate expression of grace to whom the OT points, NT writers tell us. "Do not think that I have come to abolish the law or the prophets; I have come not to abolish but to fulfill," declares Jesus (Mt 5:17). Unlike other *priests who mediate God's grace to humanity, Jesus is without sin, argues the author of Hebrews; therefore, Jesus is able to mediate God's gracious help to humans who are being tempted. He is able to do this in ways merely human priests never could do (Heb 4:14-16). In the Gospels Jesus is described as the Son of God who mediates unprecedented grace to the world. John writes that Jesus came among us "full of grace and truth" (Jn 1:14) and that he is the one from whom we have received "grace upon grace" (Jn 1:16). Some of Jesus' most notable teachings from the Pentateuch are his grace-filled interpretations of sabbath law (Mk 2:23-28; Lk 13:10-17). Jesus reminds his questioners that sabbath is for the well-being of humanity and that acts of mercy, grace and compassion are always appropriate to the sabbath. He challenges the legalistic, harsh interpretations the Pharisees have given to sabbath law by healing on the sabbath a man with a crippled hand and by healing and delivering from bondage a crippled woman. Jesus brings his critics back to the fundamental grace behind the law as a whole. Jesus' gracious interpretation of sabbath law serves as a synecdoche for his interpretation and fulfillment of the law as a whole. The grace-filled interpretation of the law as a whole is summarized, Jesus says, in loving God with all one's heart, soul, mind and strength *and* loving one's neighbor as oneself.

For Paul, the Pentateuch is the primary scriptural source for theological reflection on grace. His letter to the Galatians, for example, includes

typological expositions on grace and faith versus works and the law, drawing from the story of Abraham, Sarah and Hagar. The author of Hebrews similarly hearkens to the ancestral narratives and the exodus as types of the Christian spiritual journey, with numerous exhortations to receive and live in the grace of Christ.

4. Conclusion.

One feature of postmodern thought is a preference for narrative theology. In the narrative theology of the Pentateuch, the reader encounters grace again and again in the primeval stories of Genesis 1–11, the ancestral narratives of Genesis 12–50, the exodus event and the law of Moses. The grace of God that is revealed in these narratives is seen in conjunction with God's judgment of sin. After all, as D. E. Gowan comments, "There is no such thing as mercy unless right is still right and wrong is still wrong" (Gowan, 237). The tendency for many Christians reading the OT has been to see the judgment while missing the grace. This is why newcomers to the Bible often comment that God seems harsh in the OT but approachable in the NT. With help from pastors and teachers, these readers can approach the text expecting to meet God's grace working in tandem with God's judgment, to bring about God's will in this world.

Both Paul and the writer of Hebrews read the Pentateuch with a midrashic preference for narrative theology, seeing in the story of the Israelites a type of the spiritual journey every believer must make. This level of reading is appropriate today as well, when used along with sound principles of biblical exegesis. As today's church leaders attempt to reach postmoderns with the good news of the grace of Christ, they may find rich resources for teaching and preaching in the narrative theology of grace found in the Pentateuch.

H

HAGAR

Hagar was an *Egyptian woman who belonged to *Abraham's household, serving as handmaiden to his wife *Sarah. She was in turn elevated as mother of Abraham's firstborn (*Ishmael), then dismissed from the family after *Isaac was born.

1. Biblical Evidence
2. Trends in Interpretation
3. Implications

1. Biblical Evidence.

Hagar's name is of uncertain etymology, possibly tracing to Arabian terms meaning alternatively "splendid" or "flight." If Egyptian, the name may convey stamina, deriving from *hgr* "fortress" (on analogy with Egyptian spelling of Hamath using H; cf. Ahituv, 109, 113, 208). The story of Hagar consists principally of two OT accounts: the introduction and flight of Hagar (Gen 16:1-16) and the dismissal of Hagar and Ishmael (Gen 21:8-21). She appears again in the context of Ishmael's family line (Gen 25:12), and finally in the NT as Paul contrasts Sarah with Hagar in an allegorical bid for spiritual freedom over against bondage (Gal 4:24-25).

1.1. Old Testament.

1.1.1. *Introduction and Flight of Hagar (Genesis 16:1-16)*. Hagar served as handmaiden to Sarai, wife of Abram. An Egyptian, Hagar may have joined Abram's household as one of the servants he acquired during his visit to that southern empire (Gen 12:16). Such servants as Hagar, Eliezer of Damascus (Gen 15:2) and the unnamed servant who escorted Rebekah (Gen 24:2-66) give evidence to the extent of Abram's prosperity.

Hagar enters the story as Sarai seeks a solution to her barrenness. The plan is successful—or so it would appear. Hagar does conceive. But

strife ensues as the pregnant Hagar shows disrespect toward her mistress. Sarai reacts harshly, inducing Hagar to flee.

With language similar to the Lord's later inquiry of weary Elijah at Horeb (1 Kings 19:9), a divine messenger gently inquires where she comes from and where she is bound. The messenger (whose voice is equated with Yahweh's voice in Gen 16:13) then directs her to return to her mistress, offering a *prophecy and name for her unborn son. Hagar's discouragement gives way to amazement over this encounter and to obedience in response to God's direction. She gives the site of the encounter a name that implies that she met not merely a divine messenger but God himself (Beer-lahai-roi, "Well of the Living One Who Sees Me").

1.1.2. *Dismissal of Hagar and Ishmael (Genesis 21:8-21)*. The second episode occurs after the birth of Isaac. Sarah instructs Abraham to eject Hagar and Ishmael, determined that Isaac must not divide the inheritance with Ishmael (Gen 21:10). Dismayed, Abraham responds to confirmation from God and sends mother and child away. As the youth is about die, God responds to his cry by yet another supernatural encounter. The angel of God reassures Hagar, showing her a water supply and promising again to make her son into a great nation. In time Hagar obtains a wife for Ishmael, a woman from her own homeland, Egypt.

In a historical-anthropological study, N. Steinberg examines the economic implications of the tension between Sarah and Hagar. The quest for economic security understandably would drive a primary wife (Sarah) to enforce her son's primacy. Mesopotamian customs would award that primacy to Isaac as son of the primary wife, even though not firstborn of his father (Steinberg, 79; for summary of Mesopotamian texts,

see Hamilton, 444). J. Van Seters proposes a closer parallel with customs of Ramesside Egypt (c. 1100 B.C.). The Nebnufer adoption text provides that a slave's child born to a master would be adopted by the barren mistress, thereby guaranteeing the adopted son's right to inheritance (Van Seters, 405-6). Perhaps the tension presented in Genesis 21 arose from a conflict of international inheritance expectations, Mesopotamian (affirming primary wife's son) and Egyptian (favoring firstborn, albeit by slave mother).

With insights keenly attentive to rhetorical implications of the account, P. Tribble seeks to expose the suffering Hagar experienced at the hands of Abraham and Sarah (Tribble 1984). Some may disagree with the extent to which she views Hagar as a "suffering servant," with its allusions to Isaiah 53. J. M. Cohen reviews Hagar's dismissal from Abraham's perspective and suggests that, though pained, Abraham would have recalled God's *promises concerning Ishmael and thus would have been convinced that "his son had a far greater Protector than his mother" (Cohen, 181). Perhaps it was out of a desire to soften Abraham's expulsion, that the *Zohar* of Jewish mysticism offered an additional interpretation, suggesting that his later wife Keturah was in fact Hagar, returning under a different name (Hallevy, 7.1076).

1.2. New Testament. In Galatians 4:21—5:1 Paul draws from the Hagar stories to adduce contrastive evidence for justification by *faith. He allegorically recognizes Isaac as a son borne by a freewoman (Sarah) in a faith response to God's promise, while Hagar's son depicts a child conceived by human ingenuity (*sarx*, "flesh"). For purposes of the Galatians argument, Paul captions Ishmael's birth as an illustration of *law performance. His readers are thus urged to embrace freedom in Christ by tracing spiritual lineage to the freewoman and her son of promise. They must not feel obliged to fulfill the law, as though figuratively descended from the slave woman and her son. Although not commenting on Galatians, I. M. Duguid seems to follow Paul's line of thinking as he explores the notion that the Hagar story comprises one of several instances in the Pentateuch where the people of God experimented with solutions deriving from Egypt, supposed solutions that diverted them from a pathway of faith.

2. Trends in Interpretation.

Similarities between Hagar's two departures

from Abraham's household have led many to infer that these two constituted originally a single event, mediated by differing pentateuchal sources (Yahwistic in Gen 16; Elohist in Gen 21). T. D. Alexander reviews the evidence closely and concludes that a difference in divine names constitutes the sole (and insufficient) evidence supporting the single-event theory. Evidence points instead to two distinct events, further eroding the notion of an Elohist document continuously paralleling the Yahwistic.

S. J. Teubal seeks to envision the Hagar narrative free from an androcentric overlay (Teubal, 193). But this tension plays primarily between Sarai and Abram, not between Hagar and Abram. When considering Hagar's status as slave or concubine, Teubal postulates that neither designation is accurate, suggesting instead that she was a freewoman attached to the priestess Sarai (Teubal, 54). Difficulties with her conclusions have been observed by J. F. Watson and B. F. Batto. (Waters similarly cites evidence that Hagar might not have been in bondage while serving the patriarchal family.)

P. T. Reis questions whether Hagar's relations with Abram were so restricted as Teubal infers and suggests that it was the very extension of the Hagar-Abram liaison beyond barest need for conception that so angered Sarai (Reis, 83-87). Reis relies in part on reading "you" as feminine in "The Lord judge between you [Hagar] and me" (Gen 16:5).

J. C. Exum differs with Reis's reading, instead citing Genesis 16:5 as "an indictment of the patriarchal system, which pits women against women and challenges their intrinsic worth with patriarchal presuppositions about women's role" (Exum, 77). Similarly, D. S. Williams presents a black womanist reading of Hagar: "Hagar, like many black women, goes into the wide world to make a living for herself and her child, with only God by her side" (Williams, 33; for a thoughtful review focusing primarily on feminist and womanist interpretations, see Bellis, 74-79).

Reis argues instead that this is a story of justice and human compassion (or lack thereof), with sufficient parallels to Exodus to suggest that the writer of Genesis viewed Israel's bondage in Egypt as divine retribution for earlier mistreatment of Hagar the Egyptian (Reis, 106-7). This is not a story dealing primarily with issues of male dominance or ethnic purity.

Concerning the Galatians passage, J. L. Mar-

tyn studies Galatians and concludes that Paul did not intend to pit Christianity against Judaism (as Marcion supposed). Rather, he had in mind “the crucial distinction between the two Gentile missions, one observant of the Law and one Law-free. . . . It is a grave mistake to speak here of a polemic against Judaism itself” (Marty, 188-89). E. A. Castelli concentrates on the nature of allegory as used by Paul in Galatians, with conscious sensitivity to “the complex matrix formed by post-modernism, feminism and liberal biblical studies” (Castelli, 228). Worthy of particular note is her extensive bibliography (Castelli, 247-50).

3. Implications.

Two implications stem from the Hagar account. First, Hagar was singled out by God as one who was very special to him. Two supernatural encounters were given to this one who in the biblical culture would have been classed as an unlikely recipient. Ancient readers could have listed three reasons potentially disqualifying Hagar: she was a servant, a woman and not part of Abraham's ethnic group. The divine visitations issue a clear message: God is at odds with the notion that gender, economic status or nationality may dispose him to disregard a person. Quite the opposite. As maker of all, God values all, in particular the downtrodden. Hagar further stands out as the only person in the Bible who deigns to assign a name to the deity (distinct from calling on the name of the deity; Tribble 1985, 229), and the only woman receiving a promise of numerous progeny.

A second implication involves the angel's directive that the fleeing Hagar must return and humble herself under Sarai's authority. The angel uses the same root word employed to describe Sarai's mistreatment of Hagar in the first place (*nh* in the Hithpael stem [“humble oneself”] in Gen 16:9 corresponds to the Piel form [“mistreat”] in Gen 16:6). Does the angel callously consign Hagar to return and endure hardship? Or does God's messenger call on her to exchange earlier disrespect with a humble attitude toward Sarai? The meaning “humble oneself” suggests the latter. The angel's instruction need not equate to sanction of Sarai's rough treatment (contra Tribble 1985, 227). The angel plainly labels her experience as “misery” (*ôm*, still another word related to *nh*, Gen 16:11). By directing Hagar to return, the angel marks out a high road of conduct, calling on her to render

respect due Sarai by virtue of her position as employer (Gen 16:8, cf. 1 Tim 6:1-2; 1 Pet 2:18). By her compliance Hagar earns a position among those Gentiles of the biblical record who by their actions exceed the piety of certain of their Hebrew contemporaries.

HAM. See NATIONS, TABLE OF.

HARAN

Haran is the name of an OT place and an OT person, though the two words are spelled differently in Hebrew, *hārān* (place) and *hārān* (person). Because they are both spelled the same in English and both appear within the space of a few verses in Genesis 11:27-32, they are treated here under one heading.

1. Haran, the Place
2. Haran, the Person

1. Haran, the Place.

Haran (or Harran) has been associated with *Abraham in both the Judeo-Christian and Islamic traditions because it was the place where the patriarch resided after he and his family left *Ur of the Chaldees (Gen 11:31). From Haran, Abraham, Sarah, Lot and their households departed for the land of Canaan (Gen 12:4-6). Later, Abraham sent his servant to Haran for a bride for his son *Isaac (Gen 24:10). *Jacob was sent there by his mother Rebecca to avoid the wrath of *Esau, lived there for twenty years and acquired Rachel and Leah as brides. The city of Haran was also important since it was the center of the worship of Sin, the Mesopotamian moon god.

1.1. Archaeological Evidence. The ruins of Haran are about twenty-five miles southeast of Urfa, a major city in southeastern Turkey. The site is on the Jullab River near the source of the Balikh River, where a number of major trade routes linking Assyria and Babylonia with the Mediterranean converged. The city is also about sixty miles north of the confluence of the Euphrates and the Balikh Rivers. The area was described by the Roman historian Ammanianus Marcellinus as very mild in the winter and very hot in the summer (*Res gest.* 18.7.5).

Although Haran is referred to in a great variety of ancient sources and a number of nineteenth-century scholars visited and even surveyed the area (see Mez), only a small amount of archaeological evidence exists for the city, and

even less for patriarchal times (Lloyd and Brice; Prag; Rice). Surface finds show that Haran was occupied during the Halaf, Ubaid, Uruk and Jemdet Nasr periods (c. 5200-3000 B.C.), although excavators did not reach virgin soil (Prag, 70-71). Private houses with stone foundations (similar to those found at nearby Tell Chuera; Moortgat, fig. 1) and ceramics from the third millennium B.C. Early Dynastic II-III and Akkadian periods have been found. Furthermore, a fragment of a Sumerian seal was also uncovered. There is inscriptional evidence about the Sin temple at Haran as early as the beginning of the second millennium B.C. Material evidence for occupation at Haran in the latter half of the second millennium B.C. is scant indeed; only a single goblet base was found, although the excavators estimate that the city may have housed twenty thousand inhabitants (Lloyd and Brice, 83). In the first millennium B.C. a stela of the moon god was found at Asagi-Yarmica, four miles northeast of Haran (Gadd 1951, 108). In fact, some have theorized that the Sin temple was located at Asagi-Yarmica by the first millennium B.C. and that the city may have relocated there (Prag, 77-78). Moreover, the excavations at nearby Sultantepe show evidence of violent destruction in the late seventh century B.C., presumably the time of the conquest of Haran in 610 B.C. by the Scythians, Medes and Chaldeans.

1.2. Ancient Textual Evidence. Haran was probably founded as a merchant outpost by the Sumerian city of Ur in the late third millennium B.C. The name of the city was referred to with the Sumerogram KASKAL (road) and read by the Akkadians as *harrānu* (Heb *hārān*), a term in Akkadian that means highway, road or caravan (*CAD*, H.106-13). Since the moon god Sin (Sumerian Nanna) was the protective deity of Ur (*ANET*, 523-25), Ur merchants probably introduced Sin worship at Haran. Thus, Sin became one of the primary deities in northwest Mesopotamia and the protector of political order. Old Assyrian business and legal texts from merchants living in Cappadocia mention the city of Haran (c. 1940-1780 B.C.). The Assyrian king Shamshi-Adad I (c. 1814-1781 B.C.) was forced to subdue the area surrounding Haran in order to protect the trade routes (Dossin 1950-1951, 109, text 76.33, 38). Soon thereafter, texts from the Middle Euphrates city of Mari in the early second millennium B.C. (roughly contemporary with the patriarchs) describe the general vicinity around Haran as inhabited by a confederation

of nomadic tribes (including Bene-iamina, or alternatively transliterated, Benjaminites) who were often in an antagonistic relationship with Mari (Dossin 1939, 981-96). The correspondence of Iasmah-Adad of Mari mentions the city of Haran and its king, Asditakum (Dossin 1952, 105, text 75.8'). In the mid-fourteenth century B.C., Suppiluliuma of Hatti and Mattiwaza of Mitanni claimed that Sin and Shamash of Haran witnessed their treaty.

Haran continued as a major trading center in the late second and first millennia B.C. The city appears to have had a unique relationship with the Middle and Late Assyrian kings. The city and temple were apparently destroyed by the Chaldeans and Medes in 610 B.C. (ANET, 305). During the classical period (see Pliny *Nat.* 12.40), Haran (or Charran) became a Seleucid military colony and a transmitter of Hellenistic culture (especially science and philosophy) into the area. It continued as a center of moon worship. In A.D. 639 the city was absorbed into the rising Islamic state.

2. Haran, the Person.

There is very little biblical or extrabiblical information concerning the name of Haran and his various descendants. Haran was the son of *Terah, the brother of *Abraham and *Nahor, as well as the father of *Lot, Milcah and Iscah. He died at *Ur before Abraham and his family migrated to the city of Haran in Syria (Gen 11:26-31). The name *Haran* possibly comes from the Hebrew word *hr* (mountain) with a West Semitic suffix appearing with proper names, *anu/i/a* (Sivan, 97-98). The personal names *ha-ri* and *ha-ru* occur in second millennium B.C. texts at Mari and Alalakh, while *ha-ar-ri* occurs in a gloss in a letter from Amarna, but their meaning is not certain (Sivan, 222; Huffmon, 204). The term is also found as the initial element in a Phoenician personal name, *hr-b'l* and an Israelite personal name from Gibeon (*hryhw*).

Not only is Haran's daughter Iscah not provided a genealogy in Scripture; the etymology of her name is unclear. It has been suggested that it is either related to *nsk* ("to pour," Casuto, 277) or *skh* ("to see"). His other daughter, Milcah (probably a feminine form of *mlk* ["to rule"]); thus her name means "princess", was married to Nahor, Haran's brother. In fact, both Nahor's marriage to Milcah and Abraham's marriage to *Sarah, his half-sister, are

both outlawed by later laws (Lev 18:8, 11; 20:17, 20; they are also similar to Amram marrying his aunt Jochebed in Ex 6:20). It thus appears that marriages such as these were legitimate in the patriarchal period. Milcah's connection to Nahor as both niece and wife has fostered comparisons with the so-called "marriage adoption" contracts from the second millennium B.C. site of Nuzi in northern Iraq. These texts describe the marriage contracts that allow for a woman to take on the status of wife or the adoption of a woman for the purposes of marriage. Thus, she took on the status of daughter, daughter-in-law or sister before her status of wife (Eichler, 45-59; Speiser, 25). The primary purpose was to provide the woman with the support of another family (i.e., godparents; Greengus, 22; Grosz, 140). However, the Nuzi legal practice does not appear to be the background for the biblical narrative concerning the marriage of Milcah to Nahor (Eichler, 48-59).

The personal name Haran is found only two other times in the OT. Haran was a man of Judah, the son of Caleb and his concubine Ephah (1 Chron 2:46), and there was a Levite named Haran, the son of Shimei of Gershon (1 Chron 23:9).

M. W. Chavalas

HARDNESS OF HEART

Hardness of heart denotes stubbornness and rejection of God's will. It most often occurs in the exodus narrative concerning *Pharaoh's refusal to allow the *Israelites to leave *Egypt. Because God is sometimes depicted as hardening Pharaoh's heart, these passages present a challenge for interpreters seeking to understand how the concepts of God's will and human responsibility for personal decisions relate to one another. In *Deuteronomy hardness of heart takes on the additional nuance of lack of compassion for other people.

1. Terms for Hardness of Heart
2. Causes of Hardness of Heart
3. Hardness of Heart and Egyptian Religion
4. Theological Challenges in Understanding God's Hardening of Pharaoh's Heart
5. Hardness of Heart Outside the Pentateuch

1. Terms for Hardness of Heart.

1.1. Hebrew Phrases. Hardness of heart is among a cluster of phrases for spiritual deficiencies described in terms of parts of the human body (stiff-necked, heavy-eared, hard-faced). Four different phrases in Hebrew are synonyms for hardheartedness. All of these phrases are a combination of an adjective and the noun *lēb*, "heart." The phrase *hāzaq lēb* ("to be strong of heart") is most common and occurs twelve times in Exodus and twice outside the Pentateuch in the OT. Second most frequent is the phrase *kābēd lēb* ("to be heavy of heart"), which occurs six times in Exodus and once outside the Pentateuch. A third phrase, *qāsā lēb* ("to be hard of heart"), occurs once in Exodus and three times outside the Pentateuch. These three phrases are interchangeable. All three are used in Exodus 7 (Ex 7:3, 13, 14, 22) without any apparent distinction, and no difference in meaning ought to be assigned to them. However, proponents of the Documentary Hypothesis have assigned passages using *kābēd lēb* to J and those using *hāzaq lēb* and *qāsā lēb* to E and P (Hesse, 308; Stenmans, 21; Fabry, 427). A fourth, equivalent phrase, *ʾamēs lēbāb* ("to be strong of heart"), occurs twice in Deuteronomy and three times elsewhere in the OT, but not in Exodus.

1.2. Meaning.

1.2.1. Negative Meaning. In the Pentateuch hardness of heart always denotes a negative character trait in humans. It refers to stubbornness that refuses to listen to God or to obey him. This hardness causes people to fail to respond in a positive way to evidence of God's will as manifested by the plagues on Egypt or to the word of God spoken by *Moses or *Aaron. In Exodus it is Pharaoh, his servants or the Egyptians as a whole who are characterized as having this attitude. In Deuteronomy hardness of heart also includes a lack of compassion and charity toward other humans. Thus, King Sihon of Heshbon was hard-hearted and would not allow the Israelites to pass through his land (Deut 2:30). Moreover, Moses warns his fellow Israelites not to be hardhearted and thus fail to provide for the needs of the poor among them (Deut 15:7).

1.2.2. Positive Meaning. Phrases for hardness of heart never occur with a positive meaning in the Pentateuch. In fact, the only positive uses in the entire OT are in psalms that use the phrase *ʾamēs lēbāb* to exhort God's people to have hope

and courage as they rely on God (Ps 27:14; 31:24 [MT 31:25]).

2. Causes of Hardness of Heart.

While the phrases for hardness of heart are synonymous, a distinction in the agent that causes the heart to harden can be observed. The Piel of *hāzaq lēb* is never used of humans hardening their own hearts. Rather, God is always the agent who hardens a person's heart when this phrase is used (Ex 4:21; 9:12; 10:20, 27; 11:10; 14:4, 8, 17; all in the Piel stem). Further, the Qal of *hāzaq lēb* is used only to describe the hard state of a person's heart (Ex 7:13, 22; 8:19 [MT 8:15]; 9:35) or the phrase occurs as a statement of fact that someone's heart was hard (Ezek 2:4). On the other hand, the phrases *kābēd lēb*, *qāšā lēb* and *ʾāmēš lēbāb* are rarely used to denote God as the one who hardens human hearts (Ex 7:3; 10:1) but are often used to speak of humans hardening their own hearts (Ex 8:15, 32 [MT 8:11, 28]; 9:34; as well as 1 Sam 6:6; 2 Chron 36:13; Ps 95:8; Prov 28:14). These phrases are used for a statement of fact (Ex 7:14; 9:7; cf. Ezek 3:7, where Israel is described as "hard of heart"). In the Pentateuch the phrase *ʾāmēš lēbāb* is used once of God as the agent of hardening (Deut 2:30) and once of humans hardening their own hearts (Deut 15:7). Outside the Pentateuch, however, it is used once to refer to humans hardening their own hearts (2 Chron 36:13) and twice to exhort humans to hope and courage (Ps 27:14; 31:24 [MT 31:25]).

3. Hardness of Heart and Egyptian Religion.

3.1. Heaviness of Heart. In ancient Egyptian religion the heart was a critical factor for entering into eternal life. The heart was weighed by the god Anubis on a scale. If the heart was heavier than a feather, the deceased could not enter eternal life. It has been suggested that by using the phrase *kābēd lēb* ("heaviness of heart"), Exodus is stating that God made Pharaoh's heart heavy in order to judge him as unworthy of eternal life (Currid). However, since (1) it is only stated once in Exodus that God made Pharaoh's heart heavy (Ex 10:1), (2) this is not the only phrase used in Exodus to describe the hardening of Pharaoh's heart and (3) heaviness of other body parts is also a sign of spiritual deficiencies (e.g., heavy of ears: Is 6:10; 59:1; Zech 7:11), it is not certain that the phrase *kābēd lēb* is a reflection of Egyptian religion.

3.2. Egyptian Expressions for Hardheartedness. W. C. Kaiser (255) notes that ancient Egyptian had several expressions for hardness of heart that parallel the expressions used in Exodus, showing it to have come from an Egyptian provenance and speaking directly of Pharaoh's stubborn attitude. Coupled with the official Egyptian religious view of the Pharaoh as a divine or semidivine figure, God's hardening of Pharaoh's heart was a judgment on Egyptian religion and a demonstration of his divine power over Pharaoh and the gods of Egypt.

4. Theological Challenges in Understanding God's Hardening of Pharaoh's Heart.

4.1. God's Foreknowledge and Human Will. At the burning bush, before Moses confronts Pharaoh, God tells Moses that he will harden Pharaoh's heart so that Pharaoh will refuse to let the Israelites leave Egypt (Ex 4:21). This is repeated immediately before Moses and Aaron confront Pharaoh for the first time. God knows beforehand what Pharaoh will do, and God himself hardens Pharaoh's heart. This has led many to struggle with Exodus's view of God's foreknowledge. It could be argued that God's foreknowledge and will overrule human will; therefore, Pharaoh would appear to be an innocent pawn in God's plan. Pharaoh could hardly be blamed for what happened to him or his people. The plagues, Pharaoh's death and the suffering and death of the Egyptians would appear to be unjust. U. Cassuto attempts to deal with this problem by claiming that such questions about God's foreknowledge and human will stem from Greek philosophical presuppositions and not from the mode of thinking characteristic of the Pentateuch (Cassuto, 55-57). He claims there is no difference between God's hardening Pharaoh's heart and Pharaoh's hardening his own heart. Instead, according to Cassuto, these are both equivalent to stating that Pharaoh became stubborn and do not raise philosophical questions about human will. The hardening of Pharaoh's heart was a means to punishing him for earlier sins (presumably the mistreatment of Israel). Cassuto also claims that Exodus nowhere states that Pharaoh was considered sinful because of his hardheartedness. This, however, is difficult to maintain in light of Exodus 9:34: "When Pharaoh saw that the hail and the thunder ceased, he sinned again. He and his servants hardened their hearts." Since the Penta-

teuch appears to be making a distinction between God hardening Pharaoh's heart and Pharaoh hardening his own heart, Cassuto's solution cannot be accepted.

4.2. Pharaoh's Continual Stubbornness. The hardening of Pharaoh's heart is not solely attributed to God, however (cf. chart in Kaiser, 252-53). In fact, the earliest statements in Exodus that depict Pharaoh's heart growing hard are simple statements of fact (i.e., "Pharaoh's heart was hardened," Ex 7:13, 22; 8:19 [MT 8:15]), as a simple state (i.e., "Pharaoh's heart is/was hard," Ex 7:14; 9:7) or as Pharaoh hardening his own heart (Ex 8:15 [MT 8:11], 32 [MT 8:28]). God is not said to harden Pharaoh's heart until after Pharaoh's heart had been hardened several times (Ex 9:12). Even after this, Pharaoh once again hardened his own heart (Ex 9:34, 35). Only beginning in Exodus 10 does God consistently harden Pharaoh's heart. Thus, it would appear that God's hardening of Pharaoh's heart was a reaction to Pharaoh's continual stubbornness and not God's immutable will for Pharaoh. Though God had foreknowledge of what would happen to Pharaoh and ultimately chose to confirm Pharaoh's hardheartedness by continuing to make Pharaoh stubborn, God did not condemn Pharaoh unjustly. Instead, he continued what Pharaoh already had started. Therefore, although God foreknew what he would do with Pharaoh and it was his ultimate will to harden Pharaoh's heart, God was long-suffering with him until Pharaoh showed himself to be intransigent (Rom 9:14-24). In fact, while others acknowledged God's work in the signs and wonders of the plagues, Pharaoh remained stubborn to the end (Ex 8:19; Kaiser, 255). We should not read the statements in Exodus concerning God's hardening of Pharaoh's heart as implying that God wanted Pharaoh to be destroyed (cf. 2 Pet 3:9; Kaiser, 256). Instead, God never forced Pharaoh to be anything he was not, and the punishment Pharaoh received was justice for his intransigence and his mistreatment of the Israelites.

5. Hardness of Heart Outside the Pentateuch.

5.1. Hardness of Heart in the Old Testament. Hardness of heart is mentioned nine times in the rest of the OT. Only two of these refer to the Pentateuch. Joshua 11:20 states that the Lord hardened the hearts of the kings of Canaan so that Joshua could destroy them as Moses had commanded. Psalm 95:8 reminds the Israelites not to

harden their hearts as they did at Massah (cf. Ex 17:1-7). It is notable that there is no reference to the actual pentateuchal passages where hardheartedness is the subject. Instead, Psalm 95:8 applies the concept to Israelites, though they are never called hardhearted in the Pentateuch.

5.2. Hardness of Heart in the New Testament. The NT refers to hardness of heart several times. Some of these relate to the Pentateuch. Matthew 19:8 and Mark 10:5 refer to Moses allowing divorce because of the hardness of the Israelites' hearts. Hebrews 3:8, 15 and 4:7 refer to the hardheartedness of the Israelites at Massah, quoting Psalm 95:8. The only passage to treat Pharaoh's hard heart is Romans 9:14-24.

HĒREM

The Hebrew term *hērem* has been variously translated as "ban," "dedicated," "proscribed," "devoted" and "devoted to destruction." While its most common use throughout the whole of the OT relates to specific and drastic actions as-

sociated with warfare, within the Pentateuch the term enjoys a broader contextual scope. In every context in which the term is used, it carries a religious connotation. As part of the vocabulary of the sacred, it must be seen as integral to the worldview of ancient Israelite religion.

1. General Considerations
2. *Hërem* in Exodus, Leviticus and Numbers
3. *Hërem* in Deuteronomy
4. Development of Meaning

1. General Considerations.

The verbal form *haram* is found fifty-one times in the OT, forty-eight times in the Hiphil verbal form and three times in the Hophal. Of these, thirteen are in the Pentateuch, eleven times in the Hiphil and twice in the Hophal. The noun form *hërem* is found twenty-nine times in the OT, including eight times in the Pentateuch.

The root *hrm* is found in Northwest Semitic (Ugaritic, Phoenician, Moabite, Aramaic, Hebrew), Central Semitic (Arabic), South Semitic (Ethiopic, Old South Arabic) and East Semitic (Akkadian), generally with the sense of “forbid,” “prohibit” or “separate” (for further discussion of the Semitic root, see *HALOT*; Leslau).

As a whole, the greatest concentration of the terms under consideration is not found in the Pentateuch but in the book of Joshua (verb fourteen times in the Hiphil; noun thirteen times). While the book of Joshua does not fall within the scope of the present work, the student should note that Joshua is closely identified with Deuteronomy, both by those who hold its composition to be closely related in time to the writings of *Moses and by those who believe that both books were composed later, toward the close of the Judahite monarchy.

Philological studies of biblical Hebrew are necessarily concerned with the provenance of the vocabulary studied. One seeks to understand the literary genre; the historical, religious and political *Sitz im Leben*; and the linguistic time frame within which a given word is used. For a document such as the OT, written over the course of a millennium, such matters are of particular concern, for it is commonly accepted by linguists that the usage of a given word is likely to change, often drastically, over such an extended time period. For this reason the reader who wishes to understand the use or uses of a particular word within the Pentateuch must decide whether to understand this great work to be

from the hand of one writer or to be composed of texts from different hands, written at very different times and from differing perspectives. The article on *hrm* by N. Lohfink, for instance, takes the rather common position that Deuteronomy is, or at least was derived from, the text found in the Jerusalem temple in the days of Josiah, while the portions of Leviticus dealing with priestly matters were completed later, possibly from the time of Ezra in the Persian period. On the other hand, one who understands the Pentateuch as from the hand of one author will seek to understand the word in light of its nuances within the span of a generation or two and its later uses in the rest of the OT as springing from the earlier works. Because the terms are used more extensively, though more narrowly, in Deuteronomy than in the first four books of the Pentateuch, Exodus through Numbers will be dealt with separately here.

2. *Hërem* in Exodus, Leviticus and Numbers.

The terms are not found in Genesis. In Exodus—Numbers, the verb is found in just three chapters: once in Exodus 22 (Hophal), twice in Leviticus 27 (Hiphil, Hophal), and twice in Numbers 21 (Hiphil). The noun is found in just two chapters: four times in Leviticus 27 and once in Numbers 18. Exodus 22 deals with the person who sacrifices to other gods. Leviticus 27 considers several vows of separation. Numbers 18 discusses possession of certain property by priests, and in Numbers 21 the issue is warfare against the king of Arad.

Because there is so little agreement among scholars regarding the relative dating of the various textual portions of Genesis to Numbers containing terms related to *hërem*, it lies beyond the scope of this discussion to do more than place the portions within commonly accepted and designated units and in the order provided by the final form of the Pentateuch. Detailed discussions relating to *hërem* in its wider biblical context can be found in N. Lohfink and in P. D. Stern.

2.1. Exodus 22. Exodus 22:20 (MT 22:19) is found within the so-called *book of the covenant and is the first use of the term in the Pentateuch. It is a simple statement that the *hërem* is placed upon anyone sacrificing to any god besides Yahweh. The Hophal emphasizes the person's being acted upon, but there is no agent named. The person's new condition is applied without human action, doubtlessly by the deity.

2.2. *Leviticus 27.* This chapter, which functions as an addendum to the so-called Holiness Code (Lev 17–26), possesses the greatest concentration of the terms associated with *hērem* in the Pentateuch. *Leviticus 27:21–29* uses the verb twice, once in the Hiphil and once in the Hophal, and the noun four times. This portion of *Leviticus 27* discusses the matter of vows dealing with the setting apart of a portion of one's life or of one's property for use by the deity.

Leviticus 27:16–25 considers the implications of a vow setting aside (but not placing under *hērem*) a portion of arable land. *Leviticus 27:20–21* deals with the specific instance of a person who sets aside a piece of property with the understanding that he or she may redeem it, but who then sells that land to another (unsuspecting?) party. It would appear the buyer would have use of the land until the Jubilee, but at that point in time the land would pass entirely into the possession of God in perpetuity.

Leviticus 27:28 considers the implications of a vow placing under *hērem* any property owned by an Israelite. It is immediately obvious that this vow is more serious than that concerning the setting aside of the field discussed immediately above. In this case, being under *hērem* placed the object or person in the category of “most holy,” prohibiting forever the object or person from being redeemed.

Leviticus 27:29 considers the special case of a person who had been placed under *hērem*. This is the only other use, apart from *Exodus 22:19*, of the Hophal form of the verb in the Pentateuch, and it is quite likely that this text alludes to that passage. If so, it is stating that such a person was not placed under *hērem* by a vow but by the activity of the deity. As a result, such a person was not to be considered a possession of the priests, for by his or her actions this person had forfeited his or her life.

2.3. *Numbers.* *Numbers 18:14* simply states that all *hērem* belongs to the agents of Yahweh, his *priests. *Numbers 21:1–3* relates an otherwise unknown battle between Israel and an unnamed Canaanite king of Arad in the Negev. Within the final order of the Pentateuch, this is the first use of the term within the context of warfare. Like Sihon and Og (see below on *Deut 2–3*), this king attempted to prevent the Israelites from taking possession of their land. In the accounts in *Deuteronomy* dealing with Sihon and Og, the instructions for dealing with these two kings came

unrequested from the Israelite God. In this short account in *Numbers 21*, however, the Israelites first approached Yahweh, seeking to place the *hērem* upon this king and his people who stood in their way. This vow was accepted by Yahweh, so the Israelites destroyed the people and the cities. No mention is made with regard to the disposition of their material possessions, whether they were surrendered to the priests as directed in *Numbers 18:14* or taken as booty by the people. The text ends with an etiology of the name for the place *hormâ*, drawn from the same Semitic root as *hērem*, which suggests that even the material remains were destroyed along with the populace and its city.

2.4. *Overview.* Within *Exodus*, *Leviticus* and *Numbers* these terms are usually closely related to the function of the priesthood or to the worship of the deity. Only in *Numbers 21* is the term used in the context of conducting warfare against external enemies. As we shall see below, the texts in *Deuteronomy* deal exclusively with *hērem* as relating to national security threats both from within and from without.

3. *Hērem* in *Deuteronomy*.

Aside from the book of *Joshua*, the terms related to *hērem* are used next most frequently in *Deuteronomy* (verb eight times in the Hiphil; noun three times). Occurrences are isolated to five accounts found within the scope of five chapters (*Deut 2–3*; *7*; *13*; *20*). *Deuteronomy 2:32–3:7* recounts the defeats of Sihon and Og. *Deuteronomy 7:1–5* and *20:16–18* decree the destruction of the nations that inhabit the land that Israel is to possess. *Deuteronomy 7:25–26* demands the destruction of the graven images of other nations, while *Deuteronomy 13:12–18* commands action against covenant breakers within the Israelite community.

Every instance of the use of the term is associated with matters of national security, whether directly in matters of *warfare or indirectly by those who violate the *covenant and thus expose the community to the displeasure of God. The priests are not the recipients of the material remains; rather, the destruction of the enemies' culture is demanded. Only in one instance do the material remains come into someone's possession, and then not of the priests (as in *Num 18:14*) but of the people. They are in all other instances to be utterly destroyed.

3.1. *Deuteronomy 7:1–5 and 20:16–18.* The first

passage lists seven nations that inhabit the land provided by God to Israel, and it decrees that no covenant is to be made with the inhabitants and that the Israelites are not to intermarry with them. The inhabitants' religious *altars, sacred symbols and images are to be torn down, destroyed and burned. This separation from these named peoples, together with the removal of their religious cult, is viewed as fulfilling the terms of the *hērem*. Deuteronomy 20:16-18 comes within the context of general instructions with respect to the conduct of warfare. This portion concerns itself with a similar list of six nations (the Gergashites found in Deut 7:1 are omitted from Deut 20:17), the Israelite treatment of which is to be more radical than that afforded most nations. The reason given for devastating the cities of these nations is like that of Deuteronomy 7:1-5, namely, to prevent the inhabitants from causing Israel to deviate from its covenant with God. While it was expected that the neighboring peoples would maintain the worship of their various deities, the eradication of the worship of other gods within the confines of the borders of Israel was paramount to its long-term security.

3.2. Deuteronomy 2:32—3:7. This section recounts the utter destruction of the human populations of two nations that stood in the way of Israel's possession of its land. Sihon of Heshbon and Og of Bashan on the east side of the Jordan Valley, together with their people, were subjected to the *hērem* and left without survivors. In both instances, their wealth was confiscated and distributed among the Israelites, not among the priests, as directed in Numbers 18:14. It may be that these nations and their material possessions were treated somewhat differently, since they did not constitute the same degree of cultural threat to Israel as might national groups within its future borders.

3.3. Deuteronomy 7:25-26. These verses pick up on the previous demand that the images of other gods within the borders of Israel be destroyed (Deut 7:5). The concern is that an Israelite might breach the covenant by bringing an image or any portion of it into his or her house. Just as the images and those who worshiped them were to be subject to the *hērem*, so any Israelite succumbing to the temptation to embrace their religious symbols or any part of them was to be subjected to the *hērem*.

3.4. Deuteronomy 13:12-18. This passage (MT Deut 13:13-19) expands upon the concerns of

Deuteronomy 7:25-26 for the individual who succumbs to embrace the religious symbols of the nations dispossessed by Israel. It deals with the Israelite population of any city that turns from the covenant with the God of Israel and embraces any other god. After a full investigation, any such traitorous city, together with its inhabitants, was to be treated as the nations dispossessed, that is, subject to the *hērem*. Such a city received the harshest treatment of all. Its inhabitants, its booty and its very site were to be destroyed and left a ruin forever.

3.5. Overview. Within Deuteronomy the use of *hērem* centers upon the nations that stood in the way of Israel's possession of its allotted land. The pleasure of Israel's God required that only he be worshiped within those borders and that any individual or party that deviated from this monolatry to worship other gods would be considered traitors and be subject to the same removal as the nations that once stood in the way of Israel's full possession of its territory. The context of the use of the term is primarily focused on the nation of Israel and dangers to its survival, whether those dangers were posed by outside forces arrayed against it, by the previous inhabitants who would resist the Israelites' taking possession of its land or by those Israelites within its borders who, because of their failure to live by the covenant ordering the worship of Yahweh exclusively, endangered its existence. Generally the inhabitants or individuals placed under *hērem* were destroyed and their cities destroyed or turned to a perpetual ruin. The wealth of the inhabitants, when it is mentioned, becomes the possession of Israel, as in the case of Sihon and Og in Deuteronomy 2—3.

Despite P. D. Stern's arguments to the contrary, within Deuteronomy *hērem* was at the least a form of genocide, though it may have called only for the eradication of the inhabitants of a city and not an entire people. His argument that intermarriage and covenant making were forbidden in the same context as the *hērem* (as in Deut 7:3-4) does not necessarily carry with it the assumption that there would be survivors to marry or covenant with. It is equally possible that these instructions for *hērem* merely countered the less radical solution of absorbing the inhabitants into the Israelite community. Nor is von Rad correct in viewing warfare conducted as *hērem* a strictly defensive action. In every case within Deuteronomy, the *hērem* is intentional in

its purpose to appropriate and maintain the communal property of the Israelites.

4. Development of Meaning.

Within the canonical order of the Pentateuch, the development in the meaning of the terms seems to move from a capital punishment for violating the covenant, as found in Exodus 22:19, to the forfeiture of property for the use of the agents of the deity and then to the forfeiture of life and property on the part of alien nations that stood in the way of the divine purpose for the Israelite nation. In this order, the common thread of meaning for *ḥērem* is one of complete loss, whether loss of life for the Israelite worshipping a god other than Yahweh, the absolute loss of property made “most holy” by a vow or the total loss of lives and habitations of those who resisted the plan of Israel’s God for providing his people their possession. The difficulty with this understanding is the failure of Israel to surrender the material possessions of Sihon and Og to the priests. According to Numbers 18:14, there should be no exceptions to this policy. On the other hand, many argue that the order of the development of the texts of the Pentateuch is not that of its final form. If such were the case, it is still likely that the initial understanding of the *ḥērem* was indeed a capital punishment for violating the covenant, as found in Exodus 22:19. From this forfeiture of one’s life for antagonizing the God of Israel came the understanding of *ḥērem* as including the forfeiture of life and property by alien nations, such as Arad in Numbers 21:1-3, which stood in the way of the divine purpose for the Israelite nation. From this use of *ḥērem* as the utter forfeiture of life and property within warfare, the priesthood then associated persons and things vowed by Israelites as a concession to the deity in perpetuity as also being under *ḥērem*.

HERMENEUTICS

Hermeneutics and exegesis have complementary concerns within the task of interpretation. In *exegesis* we focus on the Pentateuch’s meaning in itself and aim to recover its significance for its authors and their hearers. We thus try to put on one side our own concerns and interests and concentrate on the Pentateuch’s objective meaning, without asking after any relevance for ourselves. Questions about *hermeneutics* begin from the opposite focus. In studying a text we acknowledge that we are not merely interested in its meaning in itself but in its significance for us, and we consciously study it in the light of our interests. These interests, and the commitments and experiences that we bring to the text, affect what we come to see in it. They circumscribe objective understanding, but they also contribute to it. One reason for this is that their concern with the text’s appropriation in our own lives corresponds to the text’s own concern. “The Bible always addresses itself to the time of interpretation; one cannot understand it except by appropriating it anew” (Bruns, 627-28).

This article considers ten common sets of interests, commitments or convictions that both contribute to an understanding of the Pentateuch and circumscribe it in this way.

1. Christological Interpretation
2. Doctrinal Interpretation
3. Devotional Interpretation
4. Ethical Interpretation
5. Feminist Interpretation
6. Imperialist Interpretation
7. Liberation Interpretation
8. Midrashic Interpretation
9. Modern Interpretation
10. Postmodern Interpretation
11. Conclusion

1. Christological Interpretation.

According to Luke 24:27, on the way to Emmaus Jesus interpreted the things about himself in all the Scriptures, beginning with *Moses. We do not know which passages in the Pentateuch he referred to, though elsewhere the NT gives us examples of such interpretation. The Son of Man had to be lifted up as the *serpent was lifted up by Moses in the *wilderness (Jn 3:14; see Num 21:9). The rock from which Israel drank in the wilderness was Christ (1 Cor 10:4; see, e.g., Ex 17:6). Christ is a priest after the order of *Melchizedek, the priest-king of Jerusa-

lem (Heb 7; see Gen 14:18-20).

The chief means of christological interpretation of the Pentateuch is typology. In its full form, typology involves three assumptions. The first is that there is a consistency about God's acts that makes it appropriate to look for regular patterns in them and to picture a coming event in the light of a previous one. The second is that when an event recurs, it takes more splendid form than the first event did. Both these features can be seen within the OT. The Pentateuch itself uses verbs to describe *Abraham's journey to Egypt and back that it will later use to describe Israel's "going down" and "coming up" from Egypt (see Gen 12:10—13:1). It thus hints that Abraham's journey "foreshadows" Israel's. Isaiah 40—55 implies that the deliverance from Babylon will repeat the deliverance from Egypt, only this time people will not need the haste they needed before (see Is 52:12).

When the NT interprets the Pentateuch typologically, it adds a third assumption, that the literal, material reality now becomes a symbol for something in the nonmaterial realm or with a nonliteral sense. Thus the literal rock with its literal water becomes a metaphorical rock, offering metaphorical water. The Pentateuch required the literal sacrifice of a literal animal by a literal priest in a material shrine. Christ is a not a literal sacrifice or lamb or priest in a material shrine, but taking these literal realities as metaphors helps Christians gain an understanding of the significance of Christ's death.

In subsequent centuries, further pentateuchal texts came to be interpreted christologically. For instance, Christ was understood to be the woman's seed of Genesis 3:15 and to be the one to whom the ruler's staff belongs in Genesis 49:10. This further aids a Christian understanding of Jesus. He is the one through whom the snake's work is undone, and he is the descendant of Judah who rules over the people of God as a whole. In addition, a christological interpretation of Genesis 49:10 was simply taking up a Jewish messianic interpretation of the text. In the same way, Balaam's prophecy of a star coming out of Jacob (Num 24:17) was understood in a messianic sense before and after Christ and thus would naturally have been applied to Jesus.

Christological interpretation thus starts from the knowledge that Christ is Son of God and Savior and that his people are God's chosen

people. After NT times, christological interpretation came to be used to attempt to *prove* that Jesus was the Messiah to people who did not believe in him. It is doubtful whether this is an NT practice. The aim of christological interpretation in the NT was to help the community that believed in Jesus to understand more clearly who Jesus was, not to convince the non-Christian community that it should believe in him.

The classic modern exposition of a christological approach to the Pentateuch is the work of W. Vischer. Vischer opens his study with the observation, "the Old Testament tells us *what* the Christ is; the New, *who* he is" (Vischer, 7). He goes on to declare that "all the words of the Old Testament look beyond themselves to the One in the New in whom alone they are true." If this is so, one might infer that christological interpretation will be part of all OT exegesis. But we have noted that the NT utilizes christological interpretation more to throw light on the significance of Christ than to throw light on the Pentateuch. In what sense does it fulfill the latter task?

It does this not by revealing unexpected meanings in the text itself but by setting the text in a broader context. There are few hints in the Pentateuch that an individual ruler (still less an incarnate Son of God who is crucified and rises from the dead) will eventually fulfill a crucial role in achieving God's purpose in the world, but in the event this is what actually happened. It is always the case that earlier episodes in a story need to be read in the light of later episodes and that their broader significance emerges in this context. By seeing the Pentateuch's story as one that comes to its climax with Christ, we gain a wider understanding of the significance of *creation, the *promise to Israel's ancestors, the deliverance from Egypt, the events at Sinai, the journey through the wilderness and the events in the plains of Moab.

We can illustrate the point from either end of this story. First, Genesis 1 tells us of God's plan to rule the world by means of human beings made in the divine *image. This intention was not wholly fulfilled. Describing Christ as bearing the divine image, in a fuller sense than human beings do, helps us see how the complete fulfillment of God's purpose in Genesis 1 is guaranteed. Second, we know that Christ is the "end" of the law (Rom 10:4), though that expression is itself an elusive one. Certainly Christ fulfilled the

expectations of the Pentateuch, brought about the fulfillment of that which the Pentateuch itself served and also brought to an end the time when the Torah was binding on the people of God. This awareness relativizes the significance of the reformulating of the Torah in Deuteronomy.

2. Doctrinal Interpretation.

A major concern of Paul's was to establish the true relationship between divine *grace and human obedience to God. Paul perceived that in Genesis God calls Abraham and gives him promises that have no preconditions—indeed, they have no postconditions (see, e.g., Rom 5). A theological question that arose from Paul's attempt to work out the implications of the gospel thus led to his articulating a significant insight on the text of the Pentateuch itself. At a subsequent stage in the argument of Romans, Paul comes to discuss the further theological question of the place of Israel in God's purpose and what came to be known as the doctrine of *election (see Rom 9). Again, his question leads him to significant articulation of the intrinsic theological implications of Genesis and of the story of *Pharaoh's hardening in Exodus.

Over subsequent centuries, Christians came to interpret the Pentateuch in the light of doctrinal convictions expressed in the Christian tradition as it developed over those centuries. The most subversive instance is the effect of the "rule for the faith," the outline of Christian doctrine that came to be embodied in the Apostles' Creed. This allows no theological significance to the OT beyond the story of creation. It has been devastatingly effective in silencing the OT and marginalizing the place of Israel in the church's thinking.

Under the influence of Greek thought, Christian tradition came to emphasize that God was omniscient (all-knowing), omnipresent (present everywhere) and omnipotent (all-powerful). This leads to a reinterpretation of the Pentateuch. There God asks questions (e.g., Gen 3:9, 11, 13). God discovers things, experiences frustration and has regrets that lead to changes of plan (e.g., Gen 6:6-7). God declares the intention to do something and is then argued out of that intention (Ex 32). In the Pentateuch God does have extraordinary knowledge, the capacity to be in many places and extraordinary power, and has these in a way equaled by no other being.

But the dynamic of the Pentateuch's presentation of God's nature, God's activity and God's relationship with the world came to be obscured when the church gave priority to a stress on God's omniscience, omnipresence and omnipotence. If that stress is accepted, then the aspects of the Pentateuch just noted cannot be allowed to contribute to its presentation of God. God asks questions but really knows the answers. God does not really have a change of mind but only seems to us to do so. Prayer does not make God do anything different from what God already intended.

At a popular level, the God of the Pentateuch is often assumed to be a God of anger rather than of love. This doctrinal assumption stands in tension with the fact that in Genesis God is said to be hurt but is never said to be angry. Similarly, Leviticus with its regulations for sacrifice never suggests that these relate to God's anger. Christian theology emphasizes God's role as judge and accentuates legal categories in working out God's relationship with humanity. Sacrifice then satisfies the need for retribution and satisfies God's anger. Thus when many Christians read the teaching about worship in Leviticus, they give extra stress to its concern with sin and introduce legal categories and a link between sacrifice and anger that does not appear in the text.

Christian doctrine understands sin to have come into the world as a result of the malice of a heavenly being, Satan. Revelation 12:9 identifies Satan with "that ancient serpent," presumably the snake of Genesis 3, and that leads Christians to assume that the snake there is a figure for Satan. This introduces some incoherence into the text, which itself describes the tempter as one of the creatures that Yahweh God had made. Ironically, Genesis does associate supernatural beings with the world's sinfulness, but it is Genesis 6:1-4 that does this, not Genesis 3 (see Sons of God, Daughters of Man). Theologically, it is no doubt appropriate for Christian interpretation to see Satan's activity behind the snake's work. Furthermore, other parts of the OT do describe dynamic powers of disorder as snakelike (e.g., Job 26:13; Is 27:1), and Genesis may indeed see the snake as related to such powers of disorder. But introducing Satan into the text of Genesis 3 obscures not only the exegesis of the text but its significance for Christian readers and for Christian doctrine.

Christian doctrine also emphasizes that God created the world out of nothing. Christian interpretation of Genesis 1 has therefore wanted to establish that Genesis 1:1-2 made this affirmation. Again, this has skewed understanding of the inherent theological significance of Genesis 1. The fact that it is not clear whether God creates “out of nothing” reflects the fact that Genesis’s theological agenda lies elsewhere (*see* Creation).

F. Watson has argued that “an exegesis oriented primarily towards theological issues” should allow the framework of “systematic theology” or “Christian doctrine” to shape theological exegesis (*see*, e.g., Watson, 1). However, this introduces alien priorities and insights into the text. Like any other hermeneutical starting point, the framework of Christian doctrine may be allowed to open up questions, but it must not be allowed to determine answers.

3. Devotional Interpretation.

By devotional interpretation I mean an interest in the Pentateuch that focuses on its significance for people’s personal lives, especially their personal relationship with God. The stories of *Abraham, *Isaac, *Jacob and *Joseph have been the main focus of this interpretation, in partial correspondence to the NT references to these characters. Readers have also found devotional material in Genesis 1–11 and in Exodus, though people who have sought to read through the Pentateuch with this interest in mind have usually flagged by the time they reach the middle of Leviticus. The approach thus shows that the encouragement of individual relationships with God may have been one purpose of the Pentateuch but that it was evidently not the sole purpose. On the other hand, the approach corresponds more closely to the nature of the text than do traditional scholarly interpretations of Genesis 12–50, which have focused predominantly on matters such as the significance of the chapters for questions concerning the history of (pre-)Israelite clans and the development of (pre-)Israelite *religion.

Two classic Christian devotional interpretations are the works of F. B. Meyer and Watchman Nee (Nee To-sheng). Meyer wrote “a devotional commentary” on the whole Pentateuch (1955) and a series of studies of people such as Abraham, Jacob, Joseph and Moses. Nee wrote an influential exposition of the lives of

Abraham, Isaac and Jacob (1967). Nee suggested that the lives of these three men illustrated three ways in which God works in us. More recent Jewish readings of Genesis 12–50 have read these especially for their insight on personal growth in the context of family relationships (e.g., Rosenblatt and Horwitz; Cohen).

The NT suggests two principles of approach for devotional interpretation. In Romans and Galatians, Paul points to a key feature of the life of Israel’s ancestors, specifically of Abraham. The ancestors’ relationship with God was based on God’s grace. For their part, it was based simply on trust in God. In James and in Hebrews 11, the emphasis lies less on the initiative of grace than on the way in which the response of trust expresses itself in acts of commitment to God and to other people. These two emphases complement each other, and both give access to important features of the stories in Genesis.

Christian devotional reading of Genesis has often been formally committed to the conviction that grace is the founding principle of Christian living. Yet paradoxically it has had difficulty recognizing that this makes the Pentateuch as relaxed about the weaknesses of Israel’s ancestors as it is accepting of the absence of any moral basis for God’s choice of Israel (*see* Deut 7). Indeed, the point needs expressing more radically than that. It is not merely that Genesis records the moral failings of people such as Abraham. It is that it is not very interested in moral evaluation of them at all. Thus when Luther and Calvin offer different evaluations of Abraham and *Sarah’s treatment of *Hagar in their commentaries on Genesis, it is difficult to say which of them is right, because Genesis does not focus on this question. The mismatch between some devotional interpretation of Genesis and the text of Genesis itself draws attention to the radical nature of Genesis’s understanding of God’s grace.

Paul also offers what we might call a devotional reading of the stories of Israel’s rebellions against God in Exodus and Numbers (*see* 1 Cor 10:1-11), and this draws our attention to another way in which devotional reading finds itself broadened by the Pentateuch itself. The Pentateuch is the story of *Israel’s* origins. Its focus lies on the community. We have noted that a devotional interpretation could open up the possibility of an appropriately individual reading of Genesis 12–50. But another reason why in

other respects devotional reading finds that the Pentateuch does not conform to its expectations is that the Pentateuch instinctively thinks corporately, as modern readers do not. It thus has the potential to rescue devotional reading from some of its individualism.

4. Ethical Interpretation.

Instruction about behavior has a prominent place in the Pentateuch, and the OT itself suggests at least three possible approaches to such instruction. These are exegetical, logical and prophetic. We may illustrate these from the interpretation of the *sabbath command. The exegetical approach asks about the implications of the actual words in the command. Exactly what counts as "work" on the sabbath? Who are the "you" who are to observe the sabbath? Discovering the answers to such questions puts believers in a position to commit themselves to proper obedience.

The logical approach asks what principles underlie a command. The two versions of the command in Exodus 20:8-11 and Deuteronomy 5:12-15 suggest different principles: the nature of God's creative activity and the nature of God's liberation of Israel. If we understand the principles that a command embodies, we may be better able to understand a command's application in a different setting from the one in which it was uttered.

The prophetic approach is more intuitive in asking what a command means in such a new setting. Within the Pentateuch the idea of a sabbath day stimulates the idea of a sabbath year for the land and for the poor (Lev 25; Deut 15). Isaiah 1:12-20 declares that in some contexts the sabbath may mean nothing because it has ceased to accompany a concern for the needy. In marked contrast, the people's opposition to the sabbath is critiqued in Amos 8:5 because it is a marker of their preoccupation with making money (cf. Neh 13). In Isaiah 56:1-8 observing the sabbath is the very index of commitment to Yahweh (cf. Is 58:13; Jer 17:19-27; Ezek 20). In each case the implication of the sabbath command seems to be perceived by inspiration rather than by the use of logic. Mere reason could not generate the insight expressed here.

All three approaches to the task of perceiving the ethical significance of the Pentateuch are still used. Jewish people still debate the implications of words such as "work" in the sabbath

command; for instance, does switching on an electric light count as kindling a fire (cf. Ex 35:3)? Often the exegetical approach works backwards in the sense that Jewish people or Christians have come to believe that a certain practice is required or forbidden, and exegesis becomes the means of establishing the fact. For Jewish people the question, "How do we know this?" is the question that "is asked on almost every page of the Talmuds" and usually answered through exegesis of texts (Harris, xi-xii).

One example is the conviction that people should not testify for or against their relatives, which came to be inferred (e.g.) from Deuteronomy 24:16, while another example is the variety of bases for reckoning that it is permitted to circumcise on the sabbath (Harris, 8-9, 29-32). For Christians, the question particularly arises in connection with important postbiblical moral questions such as the propriety of homosexual acts or of abortion. Again people seek to justify stances by reference back to biblical texts.

Of course, such interpretation does not always work from the conclusion backward; for instance, Jewish interpreters did not decide a priori to ban cheeseburgers or milk in coffee. It often works from the text forward, in this case the text prohibiting cooking a kid in its mother's milk. The threefold repetition of this text in the Pentateuch suggests that it must be very important and therefore requires considerable reflection.

The logical approach has been the strength of the work of C. J. H. Wright on the interpretation of the Torah (see, e.g., Wright, 114-16). He takes individual biddings in the Torah as "paradigms" of the embodiment of God's will in the world. They give us concrete examples of what this embodiment looks like. He then suggests a series of questions to ask in their interpretation: Does a given bidding form part of criminal, civil, family, cultic or compassionate instruction? How does it function in the society and fit into the social system? What is its objective in that context? And how can this objective be implemented in our own social context? Applied to the sabbath command, the logical approach generates a concern for (e.g.) the providing of rest for members of one's family, employees and animals, and invites us to ask what the providing of this rest looks like in our context.

The prophetic approach, rather, asks what other needs the sabbath command might speak to in our different social context. One need is

the workaholicism of some Western countries. As far as we can tell, this was not a feature of life in Israel, and the sabbath command was not designed to address it, but it has the potential to do so. Another example of this prophetic hermeneutic applied to the Pentateuch was the Christian suggestion that the year 2000 should be treated as a Jubilee year and marked by the remission of debts from third-world countries to Western governments and banks. Neither the marking of a millennial year nor the remitting of national debts is a feature of the Jubilee in the Pentateuch, but the suggestion represents a creative, intuitive perception that a practice commanded by the Pentateuch could thus address needs in a very different social context.

An ethical issue that modern Western Christians often raise in connection with the Pentateuch is the question of war-making. The Pentateuch does raise ethical questions about war-making, but it does not see war-making in itself as an ethical problem in the way that modern Western Christians do, just as traditional Christianity has not seen war-making as a problem in itself (*see* Warfare). Several hermeneutical questions are raised by this fact.

One is that modern Western Christians commonly begin their discussion of war from the “just war” tradition, which has little overlap with the approach of the Pentateuch. The Pentateuch thus has the potential to critique the just-war approach in principle and not simply in detail. A second question is that it is mainly Christians since the advent of modernity who have felt that war is inherently an ethical problem. The Pentateuch thus has the potential to critique modernity and help Christians see where they are shaped by the thinking of their age rather than by Scripture. A third is that it is mainly Christians within the main war-making nations of the modern world who feel that war is inherently a problem. This suggests that the Pentateuch with its very different stance on this question has the potential to help them reflect on factors that have caused them to have this problem. Presumably the problem lies in their own complicity in war. Feeling uneasy about the Pentateuch’s stance on war helps them to feel less guilty about the extent to which their own lives are built on it.

5. Feminist Interpretation.

Feminist interpretation starts from women’s ex-

perience of life, specifically their experience of being held down and held back by men. The starting point for feminist interpretation of the Pentateuch was the accounts of the origins of man and woman in Genesis 1—3. The fact that the woman was formed after the man and for the man had been taken to imply that the woman was intrinsically secondary. The fact that she was the first to succumb to the snake’s temptation had been taken to imply her intrinsic weakness. The declaration that after this the man would rule over the woman had been part of the justification for belief in male “headship.”

Feminist interpretation begins from the conviction that women are as fully human as men and are intellectually, morally and spiritually as strong as men. It then reexamines the biblical text and suggests that the interpretation of Scripture has been affected by patriarchalism. Patriarchalism is the assumption that human life should be lived in the light of a hierarchy of relationships that gives authority to certain groups, such as the educated, the members of certain families or particularly the men. Patriarchal interpretation ignores the implications of the creation story in Genesis 1, which describes men and women together as made in God’s *image. It also reads patriarchal convictions into Genesis 2. For instance, there is no reason to infer that the creation of the woman after the man in Genesis 2 implies her inferiority (*see* Eve). If this were so, we might have to infer that the creation of human beings after the animals in Genesis 1 implies that the human beings are inferior to the animals. Patriarchal interpretation also reads patriarchal convictions into the story of disobedience in Genesis 3, where the headship of men over women is not a divinely intended principle of creation but a regrettable consequence of human disobedience.

Feminism also resists the notion that women should be defined by their capacity to bear children, and it has thus emphasized the relational implications of the understanding of the complementarity of men and women in Genesis. But Genesis 1—3 does emphasize the significance of procreation, and it seems that here the agenda of *Genesis and that of feminism diverge. One issue in the debate over feminist interpretation is thus the question regarding how far the problem lies in patriarchal interpretation of an egalitarian text and how far the text’s own agenda does not correspond to feminism’s.

Feminist interpretation also looks more broadly at the way women feature in the pentateuchal narrative. It considers the way God relates to people such as Sarah and Hagar and observes that women play a key role in the initiation of God's deliverance of Israel from Egypt and in the response to that event (Ex 1—2; 15). Once more, it notes the potential for reclaiming the Pentateuch for women by focusing on the role of women and on the way God relates to them. It also notes the downside to the pentateuchal narrative. This involves recognizing the way women are still marginalized in the story, even if they are less invisible than they have been treated. A symbol of this marginalizing is that the sign of the Abrahamic *covenant is one that only men can receive, *circumcision. At worst, the downside involves recognizing that women are actually oppressed by the hand of heroes such as Abraham and Moses. The story of a woman such as Hagar also raises the question whether they are oppressed by God, though this same story also has God and the narrator giving Hagar a special position and a special covenantal relationship.

Feminist interpretation of the teaching material in the Pentateuch has similarly drawn attention to ways in which the account of the position of women in society accepts or encourages a situation in which women have less freedom and power than men and are subject to constraints. It also notes ways in which texts seek to offer greater scope to women and to limit the constraints that society imposes on them. Deuteronomy, for example, continually emphasizes that the privileges and the responsibilities of the covenant apply to mothers, wives and daughters as well as to fathers, husbands and sons. Feminist interpretation has asked questions about the pollution teaching in the Pentateuch and has perceived male unease about women's *sexuality in the regulations concerning menstruation and childbirth.

Feminist interpretation sometimes offers a new perspective on old problems. Genesis 12—26, for example, includes three stories about an ancestor (conventionally known as a "patriarch"!) who passes off his wife as his sister. The possibility that a similar event simply took place three times does not explain the inclusion of the stories of all three occurrences, when many other stories from the lives of the ancestors could have been included. A feminist interpreta-

tion suggests that the stories represent male attempts to come to terms with their ambiguous feelings about their wives' sexuality (see Exum). This suggestion functions both exegetically to explain the meaning of the text and hermeneutically to point us to the significance of the text for modern readers. Feminist approaches to the stories of *Noah and his sons and *Lot and his daughters offer parallel illumination on these stories from a psychoanalytic viewpoint (see Brenner, 82-128).

6. Imperialist Interpretation.

Protestant Christian thinking in Britain in the sixteenth century saw Britain as inheriting the pentateuchal promises to Israel and the vocation of Israel, and it held on to these convictions in extending British rule in countries such as South Africa. There, native Africans were seen as equivalent to the Canaanites. Their culture was to be destroyed, and if they resisted British rule, British troops could kill them, as Deuteronomy required the killing of Canaanites (see *Herem*). This raises difficult questions for Christians of black African descent today reading a book such as Deuteronomy.

European settlers in America in the sixteenth century adopted from Britain the understanding of themselves as the "new Israel." This likewise gave them a basis for annihilating Native American culture and, if they met resistance, for annihilating Native Americans. American self-understanding also inverted Britain's way of finding itself in the Pentateuch. The American Revolution was, it was thought, the moment when God delivered the colonies from Pharaoh Britain. As in the Pentateuch, exodus and covenant were held closely together in this self-understanding. The Mayflower group committed themselves in covenant, and the American constitutional documents of the 1780s have the same expectation.

Subsequently, "Washington becomes both Moses and Joshua, both the deliverer of the American people out of bondage and the leader of the chosen people into the Promised Land of independence." This illustrates the conviction of the settlers' pastor, John Robinson, in 1620, that "the Lord hath more light yet to break forth out of his Holy Word" (Cherry, 11-12). Thus the light of God's revelation continued to break forth in crucial events of American history. On July 4, 1776, Congress directed Franklin, Jeffer-

son and Adams to design a seal for the United States. Franklin proposed a portrayal of "Moses lifting his hand and the Red Sea dividing, with Pharaoh in his chariot being overwhelmed by the waters." Jefferson suggested "a representation of the children of Israel in the wilderness, led by a cloud by day and a pillar of fire by night" (Cherry, 65). Both proposals illustrate the way in which Americans read the Pentateuch in the light of their own history and their convictions about their relationship with the stories.

The Civil War was thus the nation's first real "time of testing," analogous to the testing that Israel underwent on the way from Egypt. On April 14, 1861, Henry Ward Beecher preached a sermon on Exodus 14:15 ("Tell the Israelites to go forward"). He retells the exodus story, comments that God's people have often been in the position of Israel before the Red Sea and declares: "Now our turn has come. Right before us lies the Red Sea of war. And the Word of God to us today is, 'Speak unto this people that they go forward'" (Cherry, 162-65).

Cherry adds, "the history of the American civil religion is a history of the conviction that the American people are God's New Israel." The trouble is that this belief "has come to support America's arrogant self-righteousness. It has been all too easy for Americans to convince themselves that they have been chosen to be a free and powerful people not because God or the circumstances of history chose in mysterious ways but because they *deserve* election. The blessings of success, wealth, and power are readily taken as signs of their having merited a special place in history" (Cherry, 21, 23-24).

In considering liberation interpretation (see 7 below), we will need to consider the question whether any nation has the right to see itself in the story in the Pentateuch, as if it represents a subsequent embodiment of Israel. Here we need to note especially the risks involved when a powerful nation does that. A weak nation or an oppressed group, such as the American pioneers, might do so in a way that indeed enabled new light to break out from God's Word, but even in the course of finding their freedom they were involved in displacing and killing other people in God's name. After a revolution, yesterday's newly freed people easily becomes today's oppressor. The process whereby British or American appropriation of the Pentateuch became ideological offers some insight on a dy-

namic within the OT itself. The Pentateuch warns Israel of the possibility that it may itself go through a process whereby the entity for whose sake Yahweh destroys a superior people in due course must be destroyed itself.

In turn this may help Israelis face the question equivalent to the one that British and American people must face. The Jewish people today have more obvious right to identify with Israel in the Pentateuch, though the State of Israel is but one embodiment of the Jewish people. Neither the state nor its supporters can afford the risk of simply identifying the State of Israel theologically with the people of Israel in the Pentateuch. In 1947, Jewish refugees from the Holocaust in Europe, for which Britain and America must accept some responsibility, again sought to find their way to the Promised Land. Some did so in a ship called *Exodus*, which Britain stopped from landing in Palestine and sent back to Europe (see, e.g., O'Brien, 276-77). It would be impossible to deny such Jewish people the symbolism of seeing their escape from Europe as an exodus. On the other hand, the State of Israel half a century later must face the question whether (in another symbolism) David has become Goliath. To put it another way, interpretation of the Pentateuch in the light of the conviction that our particular nation is an embodiment of Israel needs to be accompanied with interpretation in the light of the possibility that our nation is an embodiment of Egypt.

7. Liberation Interpretation.

Liberation interpretation is the mirror image of imperialist interpretation. Whereas imperialist interpretation is undertaken by people in power, liberation interpretation is undertaken by people who are not in power. Whereas imperialist interpretation identifies with Israel in its strength, liberation interpretation identifies with Israel in its weakness.

Thus in a volume from a series on American biblical hermeneutics, an African American writer, K. Jordan, observes that in America "rather than finding the freedom and liberty that the Pilgrims and Puritans understood as ordained for them, enslaved Africans and their descendants have experienced varying degrees of 'un-freedom'" (Jordan, 105). Jordan suggests that people in dominant positions in the United States, especially the white men who led the journey to a new world and those who identified

with them, have found that the story of Abraham illumined and validated their lives and experience. In contrast, people who were subject to domination, including African Americans who were enslaved by the people who came to this new land, and particularly African American women, have found that it was the story of Hagar that rather illumined and validated their lives and experience.

But it was in the exodus story that African American slaves especially found hope and inspiration. M. Walzer writes, "Though these were chattel slaves, they were also aware of themselves as a separate people, strangers in a strange land, who shared a common fate. Egyptian bondage is paradigmatic for abolitionist politics, and for radical politics generally, because of its collective character. It invites a collective response—not manumission, the common goal of Greek and Roman slaves, but liberation" (Walzer, 32-33). In his book as a whole, Walzer shows the interaction between the experience of a wide range of radical movements and each element of the pentateuchal story of bondage, exodus, wilderness wanderings, covenant making and arrival at the edge of the Promised Land.

Spirituals such as "Go Down, Moses" illustrate the way in which African American slaves themselves read the exodus story. Contemporary African Americans read behind the story of the exodus to the story of Joseph, asking whether Joseph's achievement in bringing all the peoples in Egypt into the position of being the pharaoh's slaves needs to be read ironically in the light of where this led. To put it another way, if an emergent black middle class forgets its poorer fellow African Americans, it has repeated Joseph's error (cf. Reid, 62). At the moment, the African American community stands between Egypt and the Promised Land, no longer enslaved but not having reached the full enjoyment of God's intent.

The first influential exercise in liberation theology in Latin America, where the phrase *liberation theology* originated, was G. Gutiérrez's *A Theology of Liberation*. It emphasized the significance of the exodus story for people in Latin America who had insufficient food and work and no power to change their destinies. Like African American slaves, they found that the story of Israel's oppression in Egypt resonated with their own experience. There, too, were people

whose lives and work were dominated by the demands of another people. Their taskmasters forced them to undertake work that was oppressive and attempted to control the size of their families. Like the Israelites in Egypt, ordinary Latin American peoples cried out to God. Liberation theologians assured them that God heard their cry, as God had heard the Israelites (see also Croatto).

In seeing God's acts at the exodus as a paradigm for acts that God might be expected to undertake today, liberation theology followed an example set within the OT. As we noted above, Isaiah 40–55 had already taken events in the Pentateuch as a pattern for the deliverance that God was about to bring in restoring the people of Judah from their bondage to the Babylonians. In this sense, Isaiah 40–55 provided a biblical precedent for liberation interpretation. On the other hand, liberation interpretation did need to face a question also implicit in imperialist interpretation. The ordinary people of, for example, Peru are no more God's specially chosen people than is a large, powerful nation such as nineteenth-century Britain or the United States over the subsequent century. Other peoples oppressed by the Egyptians were not delivered as the Israelites were. Can any oppressed people today "claim" the exodus story? A possible response to that question is to note that in general God's work with Israel was designed to be a paradigm of God's ways and purpose in the world. All nations were to pray to be blessed as Abraham's family was blessed (e.g., Gen 12:3). All that Latin America was asking was that God should fulfill this promise for it.

Liberation interpretation of the Pentateuch, like feminist interpretation, provides a textbook illustration of the way in which an interpretive stance or commitment both opens interpreters' eyes to aspects of the text that have been ignored and also risks assimilating the text to the commitment that the interpreters have already made. On the one hand, Christian interpretation of Exodus had long been dominated by typological and pietistic interpretation that made it possible to avoid the main thrust of the actual story. Liberation interpretation dealt with this main thrust quite literally.

On the other hand, in its determination not to subordinate the text to the religious agenda of typological and pietistic interpretation, it is subject to converse temptations. First, it could ig-

nore the actual religious interest of the text. For instance, the story is concerned with Israel's relationship with God, with its leaving the service of Pharaoh for the service of Yahweh. And the story works with the conviction that Yahweh's own direct acts fulfill an important role in this process of leaving, announced but not much helped along by Moses. Liberation interpretation wanted to emphasize human political responsibility and thus sometimes went in for a form of demythologizing in interpreting Exodus's own account of events.

Second, in resisting typology, liberation interpretation also took the exodus story in isolation from the story of the exile, as well as from the story of Jesus. In due course, liberation theology had to begin to come to terms with a theology of exile and thus to affirm that we cannot interpret one act in the OT story in isolation from other acts. Nor can we interpret the OT events as a whole independently of the NT events any more than vice versa (see Goldingay).

8. Midrashic Interpretation.

Jewish midrash begins from gaps sensed in texts and questions that readers feel arise in them, which encourage reflection on issues that concern the readers. For instance, interpreters noted that the account of the creation of the first human couple in Genesis 1 is followed by another account in Genesis 2, specifically by the creation of a woman who is made after Adam and from him rather than along with him. Interpreters inferred that something had happened to Adam's original partner. They filled the gap in Genesis with the help of the enigmatic Lilith, the restless female demon in Isaiah 34:14. Her name was assumed to designate her a figure of the night (*laylâ*), and her activities were known from Babylonian stories about *lilitu*. From these origins there developed the story of Lilith, Adam's first partner who rejected her position as subordinate to Adam. She was cast out for her rebellion and replaced by Eve (see, e.g., Ginzberg, 1.65-66). In the traditional Lilith midrash, male reflection on the tension between the sexes and male suspicion of the opposite sex thus gains a place in the interpretation of the Pentateuch. In J. Plaskow Goldenberg's modern feminist midrash on the Lilith story, the same technique utilizes the text in order to reflect on these issues from a woman's perspective (see Plaskow Goldenberg).

Again, the story of *Abraham's offering of *Isaac has been of great importance for Jewish self-understanding, but readers also felt that it raised a number of questions. For instance, where was *Sarah when the event took place, and what did she make of it? What was Isaac's own attitude to the experience? Was Abraham not tempted to refuse to sacrifice his son, the one through whom the promise was to be fulfilled? And anyway, why did the all-knowing God need to test Abraham to find out how he would react? The raising of that last issue shows how it was not only Christian doctrinal interpretation of the Pentateuch that was affected by the bringing of theological convictions to the text.

Concerned about such questions, readers used material elsewhere in Scripture and material from their own theological traditions to provide clues to the answers to the questions. For instance, they noticed that the story of Sarah's death directly follows the story of Abraham's near-sacrifice of Isaac and inferred that this somehow resulted from her horror when she discovered what was happening to her son. The horror that has often come over readers of the story thus comes to be incorporated into its interpretation. They related how Satan tempted Abraham not to go through with the sacrifice, portraying his activity in the light of the accounts in Zechariah and Job. They inferred that the omniscient God could indeed foreknow the result of the testing but that it was played out so that the world could know that Abraham would indeed pass the test (see Ginzberg, 1.270-90).

Such instances of midrashic interpretation illustrate two key presuppositions. One is that the Scriptures as a whole are the word of God. The other is that there is a oneness between the text of Scripture and the community that develops midrash. These presuppositions mean that other things that God has said in Scripture can be utilized in order to fill the gaps in the text in a way that coheres with the beliefs of the community.

A significant characteristic of midrash is that it can be relaxed about the existence of various answers to questions raised by texts. Admittedly this statement applies to haggadah rather than to halakah. Halakah ("walking") studies the Torah in order to know what is the right thing to do, what is the will of God. We have considered its concern in looking at "ethical interpretation," in particular in noting the "exegetical approach"

to interpreting texts about behavior. When we want to know what to do, there is no space for the equivocal. We need one answer.

In contrast, *haggadah* (“telling” or narrative or the doing of narrative theology) proceeds on an assumption that is implicit within Scripture in books such as Proverbs, Job and Ecclesiastes. This presupposition is that there can be a number of illuminating answers to a question such as “Why did Job suffer?” or “What was going on when God accepted Abel’s sacrifice rather than Cain’s?” or “What do we make of the character of Abraham or Sarah or Hagar or Jacob or Joseph or Moses?” The function of such answers is more to offer resources to readers in thinking about themselves before God than to make objective statements about what went on between God and particular individuals in Genesis. The variety of answers enables readers to think about the question. Midrash thus overlaps with some forms of reader-response interpretation of the text. It does not assume that there is never any such thing as objective interpretation, but it does assume that there are texts or aspects of texts that by their own nature leave space for readers to use their imagination in a way that will further their understanding of themselves and their God in their own context.

E. Frankel’s *The Five Books of Miriam* uses the technique of midrash to expound “what the Torah means to women.” It thus offers a variety of comments on issues that arise in the text, in the form of a conversation between the text and its interpreters. These include traditional rabbinic interpretation and Jewish women’s tradition as it developed over the centuries, the insights of contemporary scholarship and the questions and convictions of contemporary Jewish women, and the imaginary voices of great Jewish women such as *Sarah, Rachel, *Miriam and Huldah. The manner of the presentation parallels that of talmudic discussion in that often the conversation on a passage is not closed. Readers are thus drawn into it and encouraged to come to their own conclusions—or rather to add their contributions.

9. Modern Interpretation.

Midrashic interpretation thus assumes that the Pentateuch is one whole, along with the rest of the Scriptures. Apparent gaps in the text are a stimulus to interpretation, which is undertaken in the light of that conviction that the whole of

Scripture came from one author. Confronted by the gap between Genesis 1 and Genesis 2, modern interpretation instead assumed that the two chapters issued from two authors. The question of the substantial relationship between the two texts then does not arise. The way to handle unevenness in texts is to look behind them. Looking behind a text is also a means to discovering the text’s unequivocal meaning—though actually it is, of course, the unequivocal meaning of a different text. Whereas midrashic interpretation assumes that unclarity is a challenge to build something onto the text, modern interpretation assumes that they are a challenge to take the text apart so as to find the unequivocal meaning that once must have been there.

Like midrashic interpretation, modern interpretation presupposes that interpretation involves treating the Pentateuch in the light of our assumptions. For modern interpretation the key to interpretation is to look at the Pentateuch historically, for this is a basic principle of modern interpretation. It thus seeks to discover the different human authors of the texts and leaves aside the question of divine authorship that was a key presupposition of midrash.

The interpretation of Genesis 1 and 2 provides fine examples of the results of this approach. On the one hand, spectacular illumination emerges from reading Genesis 1 in the context of the stories about creation told by other Middle Eastern peoples and in the light of the experience of Judean people transported to Babylon. Strictly, the results of this historical study constitute exegetical insight rather than insight on the interrelationship between Genesis and our own questions, but the historical study facilitates modern readers’ reflections on that interrelationship. On the other hand, more equivocal results have issued from reading Genesis 2–4 against the background of the early monarchy. One problem here is that the evidence for this dating is even more circumstantial than is the case with the exilic dating of Genesis 1. The other problem may be not unrelated. It is that widely different interpretations of the stories and their significance for us have been offered on the basis of a link with this period.

One key feature of the critical interpretation of Scripture that characterizes modernity is the refusal to be bound by traditions of interpretation. In this sense Reformers such as Luther and

Calvin were among the first modern interpreters of Scripture, for this was their stance. It was taken up by seventeenth-century Enlightenment figures such as Thomas Hobbes and Benedict Spinoza. The rejection of christological interpretation, doctrinal interpretation and midrashic interpretation naturally follows.

H. Frei's book *The Eclipse of Biblical Narrative* explores another key starting point of modern interpretation of the Pentateuch. Before the seventeenth century, readers of the Pentateuch made at least two assumptions about the text and about their relationship with it. First, they assumed that the Pentateuch offered a literal historical account of events from the creation of the world to the end of the life of Moses. Interpreters could thus in principle, for instance, count up the time periods in the Pentateuch and work out that the creation took place around 4004 B.C. (see Chronology). The world of the text and the real world back then were one world. Second, they assumed that this world was also one with their own world. How God related to people in the Pentateuch was also how God related to the readers of the Pentateuch. They could, indeed must, fit their world into the biblical world.

Frei shows how text and history fell apart. The world of scholarship came to recognize that there was a difference between the story the Pentateuch told and the actual history of creation and of the early millennia in the Middle East. It then had to decide which of these two "stories" would henceforth count. It was no contest. The importance of history in modernity meant that henceforth it was the reconstructed prehistory of Israel and the world that became the focus for study of the Pentateuch, rather than the story told in the Pentateuch.

Granted, the Pentateuch is concerned with events that actually happened, and to this extent this decision was one that encouraged a study of the Pentateuch that went with the grain of its own agenda. But inevitably the actual investigation of that history is affected by the cultural context of the investigators. The dominance of a "scientific" worldview affects the study of the Pentateuch both by more conservative and more liberal scholars. One reason why more liberal scholars may dismiss the historicity of the Pentateuch's account of events such as the plagues in Egypt, the Red Sea crossing and the people's provision in the wilderness is that these events

have no analogue in our own experience. Also on the basis of a scientific worldview, more conservative scholars are often attracted to "explanations" of such events that account for them in partly natural terms, but these are inclined to lose the mystery of the events by "explaining them away."

Further, like other biblical narratives the Pentateuch signals that an account of actual events is not all that is required in order to make a story a witness to God's acts. Words are also required, both words that announce ahead of time and words that interpret retrospectively. The Pentateuch embraces all these, but modern study of the Pentateuch focuses resolutely on history.

The attempt to reconstruct what actually happened in Moses' time and before involves first coming to some prior conclusions on the historical background of the material within the Pentateuch. Unfortunately, while from time to time there has been a scholarly consensus on some conclusions about that, the nature of the Pentateuch is such as to give few sure clues as to the date of the material within it. A scholarly consensus on the questions is thus always vulnerable to collapse, and the end of the twentieth century saw such a collapse. It became impossible to make any broadly accepted statements about the origin of the Pentateuch. Some of the world of scholarship then began trying out the idea that the historical background against which to read the Pentateuch is the Persian period. But there is no more concrete reason to think that this is right than was the case with the old consensus that J should be interpreted against the monarchy (see Source Criticism).

The idea that the key to interpreting the Pentateuch is either the quest for concrete historical information within it or the dating of the material within it must be mistaken. Modern interpretation hoped to discover the objective meaning of the Pentateuch, but its method and its results combine subjectivity and objectivity, certainty and uncertainty, and do so as integrally as other approaches to interpretation.

10. Postmodern Interpretation.

Midrashic interpretation sought to see how Genesis 1 and 2 related to each other as part of God's one Word. Modern interpretation sought to unlink them. As humanly devised stories, they are independent of each other. The only link

between them is a historical one. Postmodern interpretation seeks to put the two stories in conversation with each other.

One of the characteristics of the postmodern attitude is to assume that we cannot know the whole truth about anything. Even if total, objective truth exists, the only formulations we have are partial, subjective and provisional. Yet it is characteristic of human formulations to express themselves as if they were final and definitive. At least, they do this on the surface. But usually underneath the surface we can see the concealed other side of the coin. Thus one task of interpretation is to analyze the construction that texts place on things and to look for the other side of the coin that may lie beneath the surface.

In Genesis 1 and 2, postmodern interpretation thus perceives two different understandings of God, the world and humanity. Another then appears in Genesis 4. Postmodern interpretation does not then claim that the truth lies in harmonizing these three or in choosing one over against the other but in letting them dialogue with each other in the conviction that all contain insights.

Whereas modern interpretation abandons the tradition that Moses wrote the Pentateuch and seeks to discover who did so, postmodern interpretation perceives this question as having led to a dead end. Yet it also sees that we cannot simply revert to the premodern tradition that Moses wrote the Pentateuch, because the reasons that led to its abandonment are still compelling. Rather, it starts by acknowledging that we are never going to know who wrote the Pentateuch. The interpretation of the Pentateuch has to be undertaken without knowing who wrote it. Its interpretation involves reading the books, which have covered the tracks of their origins. In focusing on the history that lies behind it, we are working against the grain of its own nature.

Premodern interpretation put power in the hands of the church to decide what Scripture meant. Modern interpretation took that power away from the church but gave it to the university. The authority of scholarship replaced the authority of bishops, and student papers began sentences with "most scholars say" instead of "the church teaches." Postmodern interpretation invites people to read the Bible for themselves. They do so in the company of other people who are not too like themselves, to pro-

tect them from their individualism or the idiosyncrasy of some group.

In postmodern interpretation, relational categories have priority over legal categories, and this affects the way interpreters read the stories of Adam and Eve, Abraham and other ancestors, or the nature of covenants in the Pentateuch. Further, identification replaces distancing, and engagement replaces detachment; the point is to change the world as well as to understand it. In this respect, postmodern interpretation again contrasts with the characteristic stance of modernity.

Believing that we cannot find the key to understanding texts by looking outside them to events of history or to the lives of authors, postmodern interpretation is more inclined to look for clues in the various textual worlds to which texts belong. The study of intertextuality assumes that all texts stand in relationship to other texts. They reflect statements made and questions raised in other texts from their culture. Perhaps implicitly and unconsciously, they stand in dialogue with these other texts, affirming aspects of them but putting them in a new context, denying aspects of them or answering questions they raise. Because this is their origin, they are not directly portraying a world that actually exists but taking part in a corporate creative enterprise of painting a picture of something.

There are thus links between postmodern interpretation and midrashic and other premodern forms of interpretation. Midrashic interpretation subconsciously presupposes that "the Torah, owing to its own intertextuality, is a severely gapped text," filled from within its own world and the related world of the readers (Boyarin, 16). The oddities, unclarities and repetitions are all there by design, not by accident. Harris (215) reports an argument by the nineteenth-century rabbinic writer Jacob Meklenburg, who proposed that God deliberately inspired the Torah in ambiguous form because this makes it necessary for readers to work harder in order to obey it, and it gives them easy opportunity to avoid its demands. "By presenting his norms in such a way, God provides more fully for the development of the strength of character humans need to lead full ethical lives." Thus the ambiguity of the Bible is a product of God's love for humanity (Harris refers to Meklenburg's *הכתב והכבלה* [*Scripture and the Tradition*], vol. 1 [4th ed.; Berlin, 1880], vii-x).

As interpreters we may not wish to believe in the Pentateuch's indeterminacy, but we may yet affirm its polysemy (see Stern, 15-38). It is not the case that there are really no meanings. There *are* meanings because there is someone behind these words. The mystery of truth and the richness of Torah mean that it is not surprising that there are many meanings. Polysemy implies "a claim to textual stability rather than . . . an indeterminate state of endlessly deferred meanings and unresolved conflicts" (Stern, 33).

For example, pentateuchal texts about *circumcision raise historical and exegetical problems that cannot be "solved" by modern approaches to interpretation. We can make it possible for the texts to speak to us by beginning from our own experience in asking what might be the significance of the fact that these texts were incorporated in Scripture, in their enigmatic form. Our own awareness of the need for male sexuality to be disciplined suggests the possibility of taking this as the clue to understanding the reason for preserving these texts about circumcision. It suggests that Israel had the same need for texts that raised issues about the disciplining of male sexuality, a possibility that fits a number of the accounts of male sexual behavior in the Pentateuch and elsewhere. Post-modern interpretation, too, thus contributes to exegesis as well as aiding appropriation.

11. Conclusion.

There is no one hermeneutic of the Pentateuch, nor is there anything Sinaitic about the number *ten*. We may expect coming decades to see the increased flowering of newer approaches to interpretation, such as those concerned with the cosmos and with animal rights, postfeminist ("masculist") hermeneutics and "postcolonial" interpretation. In addition, wholly new approaches will also emerge. (The journal *Biblical Interpretation* is a useful guide to new approaches to interpretation.) These will add to the way in which the approaches to the Pentateuch that we have examined open up aspects of the text's own meaning, though they also have the capacity to obscure the text's own meaning. It is inevitably the case that we come to the text with questions and assumptions—in this sense there is no such thing as objective interpretation. But once we acknowledge this fact, we can profit from it rather than being its victims. Our (subjective) questions and awarenesses can help us see

things that are objectively there in the text. Our experience of finding that the text is not relevant to us can then stimulate us into trying a different set of questions that arise from other people's awarenesses and thus discovering more of what is there. And the latter process may also help us see where our first set of questions and awarenesses has caused us to misread the text.

HISTORICAL CRITICISM

The Pentateuch and historical criticism have long been issues crucial to the interpretation of the OT as a whole. Since the Pentateuch not only comes at the beginning of both the Jewish and Christian canons but also introduces the major themes and topics of the OT, its origin, integrity and context are essential to any reading of the OT. Historical criticism as a method and system of interpretation began challenging traditional biblical interpretation by examining the Pentateuch. In this article a definition and brief history of the major approaches utilized in the historical criticism of the Pentateuch will be undertaken, focusing on its philosophical foundation as well as its varied methodologies. An introduction to the questions of the historicity and historiographical method of the Pentateuch will also be included. A discussion of specific challenges and questions raised by historical criticism follows, including, among others, the correlation of different divine names to differ-

ing textual sources, doublets, historicity and large numbers. The contribution of recent developments in comparative studies; literary analysis focusing on the structure of the Pentateuch as a whole; archaeological data pertaining to the patriarchal period, the exodus and sojourn; and linguistic analysis of the development of Hebrew as a language will also be reviewed. Finally, a concise conclusion will seek to synthesize the results of this article and to attempt a look into the future of this important field of study.

1. Definition and Description of Historical Criticism
2. Philosophical Presuppositions of Historical Criticism
3. Historiography of the Pentateuch
4. Specific Challenges of Historical Criticism to the Unity of the Pentateuch
5. Conclusion

1. Definition and Description of Historical Criticism.

Historical criticism is a generic term describing differing methods of approaching an ancient text, all of which share common philosophical and methodological presuppositions developed during the period of enlightenment in the seventeenth century onward. The word *criticism* is etymologically related to the Greek verb *krinein* ("judge, distinguish, decide") and indicates the basic approach to the biblical text asking critical questions as opposed to the traditional Christian stance of accepting Scripture as divinely inspired and expressed by human agents. The adjective *historical* emphasizes the interest of the modern era to determine the meaning of a given text in its original historical context in order to establish the historical meaning and circumstances of that text. The most important approaches, grouped together under the heading *historical criticism*, include *source criticism, *form criticism and *tradition criticism/history. (For a more detailed discussion of the history of the interpretation of the Pentateuch—including the development of the major methodological concepts; see Cees Houtman 1994.)

1.1. Source Criticism. Source criticism seeks to identify differing written documents (sources) utilized by an ancient author/editor and to assign them relative (or, if possible, absolute) dates. The emphasis in this method is upon the written stage of a document, and scholars utiliz-

ing this method look for textual inconsistencies, repetitions, doublets and stylistic differences (Barton, 162-63; Johnson, 101-4) that might provide a clue to a text's context and development. In European scholarship the term *literary criticism* is often used as an equivalent to source criticism (Steck, 49-63) and has to be differentiated from the more recent methodological approach of *literary analysis*. Traditional source criticism of the Pentateuch (as defined by the classic Graf-Wellhausen hypothesis formulated at the end of the nineteenth century) posits four basic source documents: J (based on the German word for Yahwist), E (Elohist), D (Deuteronomist) and P (Priestly source) (see Pentateuchal Criticism, History of). These four sources were traditionally arranged in sequential chronological order as follows: J in the tenth century B.C.; E in the eighth century B.C.; D in the seventh century B.C. in the time of the Josianic reform (2 Kings 22); and, finally, P in the sixth century B.C. during the exile. According to conventional historical-critical thinking the Yahwist is characterized by its original theological thinking, giving shape to the OT idea of the history of salvation. Furthermore, J utilizes predominantly the tetragrammaton (*yhwh*). The Elohist is held to have originated in the northern kingdom, utilizing the name *ʾēlōhīm* for God and focusing on moral and lifestyle issues in Israelite religion. The Deuteronomist source corresponds essentially to the book of Deuteronomy and does not have a characteristic divine name but utilizes covenant-legal vocabulary. It also emphasizes the uniqueness of Jerusalem (the central focus of adoration) and views Israelite history in terms of obedience/disobedience. The Priestly source is characterized by ritualistic and liturgical texts, genealogies and laws pertaining to the priesthood. According to the standard Graf-Wellhausen hypothesis, these four sources underwent a long process of editing, reaching their present form in the fifth century B.C.

1.2. Form Criticism. Form criticism, based upon the assumption that most of the OT was transmitted orally over a long period of time, seeks to describe the different life contexts that gave rise to different forms of literature. These reconstructed sociocultural contexts are referred to by the German phrase *Sitz im Leben* (lit. "setting/seat in life"). Consequently, when the biblical authors recorded these oral traditions, they were "reshaping the traditions, not creating

new material" (Johnson, 104). Form criticism focuses on the discovery of these ancient traditions and their subsequent developmental stages (Steck, 99-125; Johnson, 104-6) and defines genres as a means of categorizing texts. Historically, form criticism as originally introduced and developed by the German scholar H. Gunkel at the end of the nineteenth century, was a reaction to the orthodoxy and "barrenness of source criticism" (Hasel, 36-37).

1.3. Tradition Criticism or Tradition History. Tradition history/criticism presupposes both source and form criticism but is mainly interested in determining the precompositional stage of texts when stories and sayings were composed, retold, recited and preserved over long periods of time (Knight, 6:634; Hasel, 43; Steck, 127-49). The ultimate interest of tradition historians is to present a relative chronology of the growth of the traditions with its changes, reinterpretations and additions, which ultimately informs the evolution of religious thought and practice (Steck, 141). Important representatives of this method include G. von Rad and M. Noth in the early part of the twentieth century and more recently R. Rendtorff and E. Blum (Seidel, 480-82; Cees Houtman 1994, 236-38, 240-49).

2. Philosophical Presuppositions of Historical Criticism.

Like any other research paradigm, historical criticism in all its incarnations is based upon specific philosophical presuppositions. Some of the most important principles will be presented below and will then be evaluated in light of historical Judeo-Christian interpretation. Historical criticism developed during the age of enlightenment and sought to transcend subjective cultural limitations in order to establish the (more objective) historical meaning of the text once and for all (Harrisville and Sundberg, 262-63). Historical criticism has been compared to the metaphor of psychoanalysis, which seeks to uncover the repressed or forgotten historical, religious and literary realities that informed the biblical traditions (Levenson, 4, 28). The pre-Enlightenment period has often been described as a pre-scientific period, which logically would lead to the assumption that everything following that watershed point in the history of biblical interpretation would be described as scientific method. This scientific method is primarily characterized by skepticism and universal doubt

as its starting points (Maier, 281; Linnemann, 84-92). Practitioners of historical criticism approach the biblical text as a collection of ancient documents that must be studied utilizing the same principles of interpretation as any other ancient documents. According to most practitioners of this method, there is no room for metaphysical realities in modern historical research. One either *believes* the biblical text and by extension is therefore ahistorical, or one opts for the *critical* approach, which has to discard every notion of supernatural intervention. Several important principles of historical criticism as a scientific system have been described and will be synthesized in three main areas. These principles were first formulated by E. Troeltsch at the end of the nineteenth century but continue to inform consciously (or subconsciously) modern historical criticism.

2.1. Principle of Correlation. This principle suggests that every event or historical phenomenon can only be understood in terms of a “closed system,” that is, in terms of its specific historical context. Thus, there is no place for supernatural intervention as an explanation of historical realities. According to this basic principle of historical criticism, God cannot intervene in history, because that would be—historically—not verifiable and thus impossible.

2.2. Principle of Analogy. This principle proposes that all historical events demonstrate a fundamental homogeneity. That means that all events described in the biblical text must be understood in terms of our present experience and conditions. This principle emphasizes a movement from the known to the unknown.

2.3. Principle of Criticism. The third principle postulated by Troeltsch describes the critical attitude as the most basic approach to research. Absolutes do not exist, only probabilities. According to this principle, our judgment about specific aspects of the biblical text or biblical history can only be tentative or probable, never absolute.

2.4. Critique of Underlying Philosophical Principles of Historical Criticism. It is clear that philosophical presuppositions determine the outcome of research inasmuch as prevailing paradigms do not easily allow for deviation (Kuhn). In the case of historical criticism, it seems that the very positivistic approach taken by its early proponents is limited and short-sighted, trying to bring uncontaminated “clean-room” conditions to a discipline dealing with real history,

real people, real languages and real theological perspectives. This positivism is even more surprising since it is not in the least connected to the underlying “scientific” and critical method. As a result historical criticism tends to imprison the biblical text in the past without providing “objective” tools to uncover that past. Therefore, by trying to bring biblical studies into a higher sphere of objectivity, the exact opposite—that of increased subjectivity—is apt to be achieved. Ultimately, the criteria of the scholar are postulated to be the highest measure of authenticity instead of looking to the inherent testimony of the biblical text with its claim of inspiration and authority. This has resulted in some type of anthropocentricity in historical criticism. It is noteworthy to point to the fact that this has led to reactions from both within and without the historical-critical perspective. Archaeological discoveries have resulted in manifold challenges to the standard positions of historical criticism, although they have also raised questions and challenges for traditional Judeo-Christian interpretation. A renewed historiographical interest has helped to open the relationship between literature and history employed in ancient Semitic texts that are so far removed from our reality (Long 1994 and 1997). Ultimately, the question of presuppositions boils down to the issue of authority. If the biblical text is only a collection of diverse ancient texts, it cannot claim an authority in terms of its content. However, if the biblical text began with revelation from a being outside of our own system, then the issue of authority needs to be addressed from a different angle. Keeping this in mind, the following section seeks to describe the latest research concerning historiography, which forms the basis for historical reconstruction by providing the necessary tools to understand the exact historical nature of the biblical text. Nevertheless, it should be noted that while there is a direct link between historicity and authority, which is based upon Scripture’s own inherent claim (2 Tim 3:16) of divine intervention in the process of the writing and transmission of “truth,” historicity is not the trademark and litmus test of every biblical text. A good example can be seen in the OT genre of proverbs, which do not provide a specific historical framework, but do have a truth-claim. In the NT context, Jesus’ parables are not historical accounts but are authoritative. Thus genre and authorial intention need to be taken

into consideration when discussing the historiography of the OT and, more specifically, the Pentateuch.

3. Historiography of the Pentateuch.

A large portion of the Pentateuch can be described as historical writing, that is, texts that describe events in the past in a context involving human beings and their interconnection with other human beings and with Yahweh, the covenant God of the OT account. These histories demonstrate a wide variety of foci, including personal histories (Gen 37, *Joseph is sold by his brothers), national histories (Ex 2, affliction of the Israelites by the Egyptians, which connects for the first time the term *‘am* [“people”] to *benê yiśrā’el* [“sons of Israel”]), social histories (Num 27:1-11, a section dealing with inheritance rights; see Zelophehad, Daughters of) or religious histories (Lev 8, ordination ritual of *Aaron and his sons, indicating the initiation of the formal cult). All of these share common features (such as setting, structure, plot, roles) but at the same time underline the basic “perspectivist nature of historical research” (Deist, 111), that is, the suggestion that history is always shaped by perspective (Long 1994 and 1997). Recent research in ancient historiography has brought to the fore two basic and opposing positions (with varying degrees in between) concerning the historicity of the OT books: those who maintain that the OT is of very limited use when writing a “history of ancient Israel” (Lemche; Thompson; Whitelam) and those who suggest that while the nature of the biblical text does not demonstrate entirely the characteristics of twentieth-century history writing, it does, however, represent a major source of information for the reconstruction of the history of ancient Israel that merits consideration and, together with archaeology, comparative material and social sciences, must form the basis for reconstruction (Long; Provan; Kaiser; Merrill). It is the latter position that is adopted in this essay. Following E. H. Merrill (1997) and V. P. Long (1994; 1997), a “canon” concerning the most important characteristics of the historiography of the Pentateuch will be presented to indicate some of the do’s and don’ts of pentateuchal historiography.

3.1. Increasingly Specific. The Pentateuch shows a sense of increased specifics. The term *specifics* in this context refers to an increase of the amount of information supplied by the au-

thor to the ancient and modern reader of the book(s). Three distinct story lines can be observed that are finely connected by an internal interplay of poetry and prose (Sailhamer, 1987). While Genesis 1—11 focuses upon primordial history and includes the origins of humanity (including *creation, *fall, universal *flood and main people divisions), Genesis 12—50 continues with the patriarchal history and concentrates upon one family and its descendants, at the same time beginning to describe its destiny in relation to other people (as can be seen in the story of Joseph in Egypt). Finally, from Exodus 1 onward to the end of Deuteronomy, the text focuses upon a specific people, the *exodus event, journey, *covenant stipulations and the preparations for the conquest of Canaan. This third section is very specific, including a large number of legal and religious/ritual sections that are always connected to the people of Israel and that often contain an echo of earlier histories of the first two sections (Sailhamer 1992, 32-46). It appears that this increase in specifics is not an indication of three different sources or authors but rather a subtle literary strategy—common also in modern homiletics—in which an author (or preacher) starts from the general and finally ends with the very specific.

3.2. Firmly Grounded. Genesis functions as a prolegomenon of Israel’s history, and with its histories of different origins (of humanity, of *sin, of Israel as a people, etc.) it anchors the subsequent history of Israel. It is clear that this history is theological in nature, since it is mainly interested in describing the relations of Yahweh, the covenant God, with his people.

3.3. Theological. Theological history is not “ahistorical” history. It rather refers to the theocentricity of the text and has been recognized in many ancient texts. The fact that ancient societies and cultures were more holistic and less compartmentalized (as compared to modern Western society) does not automatically indicate a lower level of historicity. If one accepts Long’s (1997) modified definition of the principles of criticism in the context of metaphysical commitments, this rather naive and convenient distinction cannot be maintained any longer. At the same time, however, it should be noted that while the Pentateuch exhibits historiographical traits similar to those found in neighboring cultures (as, for example, in Mesopotamian, Hittite, Egyptian or Greek historiographies), there also

exist striking distinctives (Yamauchi 1994). Some important characteristics of the comparative method, comparing and contrasting different texts, will be explored below.

3.4. Selective. The historiography of the Pentateuch is tendentious and selective inasmuch as it focuses on individuals, groups or a people who represented not necessarily the most important individuals, groups or people of their time. In other words, pentateuchal historiography does not concentrate on the history of the superpowers of its time but rather looks at the more mundane facts of clan (and later state) formation of a small and obscure group to be called the Israelites because, according to its theocentric emphasis, this was important for salvation history. Does this tendentiousness and selectivity make it less historical? For many modern historians, accepting the philosophical presuppositions of historical criticism, the answer would be a resounding yes. However, when understanding the very nature of history writing in terms of the metaphor of artistic reproduction (Long 1994 and 1997), the artistic (or historic) perspective explains the supposed tendencies and selections. As has been shown by Long (1997, 88), “historiography, . . . like portraiture, is driven by an overarching aim to ‘paint a picture’ that truly represents and interprets the significant features of its historical subject.” In the case of the Pentateuch one notes the gap of about 335 years (according to its internal chronology) between the death of *Jacob and *Moses’ birth (Gen 50 and Ex 2), and no specific information can be gleaned indicating important events, dynasties or political, social or religious developments. A similar gap can also be discerned between the story of the tower of *Babel (Gen 11:1-9) and the call of *Abraham (Gen 12:1; actually the story begins in Gen 11:27), although the exact elapsed time cannot be established from the text. The author has connected these gaps by inserting *genealogies (Gen 11:10-32 and Ex 1:1-5), which are most probably abbreviated and incomplete. These gaps can also be related to the previously mentioned characteristic of pentateuchal historiography, that of moving from the less specific (or universal) to the more specific (individual/national). Do these gaps and the definite selectivity of the data make the Pentateuch a worse historical source than any other historical source, ancient or modern? If one would respond in the

affirmative to this question, every kind of history writing would have to be questioned, because each author always applies his or her perspective to the data *as he or she sees it*. However, being aware of these tendencies will help the reader to view the data through the author’s eyes, that is, with the same or a similar perspective.

3.5. Interpretive. Pentateuchal historiography is unabashedly interpretive. Most events are commented on from the perspective of Yahweh. *Noah finds favor in Yahweh’s eyes in a time when the earth is ripe for judgment (Gen 6:8). Yahweh sees from heaven the intention and performance of the tower builders of *Babel and, speaking in the royal plural, introduces the strategy to counter their efforts (Gen 11:7-8). Yahweh evaluates the comportment of the people during the *golden calf episode, and he does so by conversing with Moses (Ex 32:7-14). All these examples help to illustrate the interpretive nature of the pentateuchal text. The reader—ancient and modern—is somewhat drawn into the story and looks at events and the processes leading to these events through the eyes of the author of the text, who describes reality from God’s perspective. This often involves literary artistry. However, it also presupposes a rather distinct worldview that allows for divine interventions and consequently interprets them adequately. As has been suggested above, this literary artistry and competence does not necessarily stand in opposition to reliable historiography but helps the reader to focus on what is important, at least from the ancient author’s viewpoint.

3.6. Biographical. Pentateuchal historiography is profoundly biographical. Specific individuals are the objects of focus (such as *Adam and *Eve, Noah, Abraham, *Isaac, Jacob, *Joseph, *Moses, to mention a few). Traditional historical criticism has often argued that this emphasis on the individual over against a nation or nations is a characteristic of unhistorical writings (see Van Seters [1983]). J. Van Seters bases his work upon the rather restrictive definition of history by the philosopher Huizinga (1936, 9), who suggested that “history is the intellectual form in which a civilization renders account to itself about its past.” Clearly, Van Seters is interested in intentional history writing, and in this regard national history is the preferred vehicle of history writing. In this sense, the distinct biographical focus of pentateuchal historiography is by de-

fault out of line and, as a result, is often evaluated critically. B. Halpern (2001, 107-12) has recently suggested that OT historiography needs to be looked at in the broader context of culture and identity. It is not only descriptive of the recent or remote past (Van Seters, 1995) but also creates community, connecting the individual (e.g., Abraham, Jacob or the later David) to the communal (Israel as a whole). As has been pointed out by many reviewers and commentators, the plea to view biographical historiography as legitimate history writing is a corrective to the fascination of the modern age (roughly beginning with the Enlightenment) with nation structures, a perspective that does not reflect the cultural context of the ancient Near East (Yamauchi, 1994) with its emphasis on community, tribe, clan and family.

3.7. Intentional. Finally, the modern student of the Pentateuch has to focus upon the entire story and intention of the ancient author. Intention is a major factor in understanding ancient ritual texts (G. A. Klingbeil 1998, 43-45) and can also provide a valid research paradigm for historiographical studies. Ultimately, authorial intention focuses on the broader view as opposed to the microlevel research agenda favored by traditional historical criticism.

In order truly to understand the historiographical nature of the Pentateuch, the modern reader needs to be aware of the literary, theological and cultural underpinnings of a text, written several thousands of years before our present time, in a language distinctly different from ours, in an intellectual, religious and cultural climate that is far removed from and strange to our reality. Thus, it requires linguistic, literary, theological, cultural and historical competence in order to fully appreciate and understand this remarkable primary source.

4. Specific Challenges of Historical Criticism to the Unity of the Pentateuch.

During the course of the past 250 years, scholars basing themselves on the philosophical and methodological presuppositions of historical criticism have raised important questions concerning the unity of the Pentateuch in terms of its origin, literary structure and historical reliability. Some of the issues raised by historical criticism have helped to sharpen the understanding of modern readers, making them aware of tensions that exist in the text. Others

have offered a valuable entry point for focusing on underlying realities and worldviews that are very distinct from western twenty-first-century perspectives. The interest in the literary development of the text has also provided new impetus for overarching reconstruction of the history of Israelite *religion. However, most historical-critical studies (in the classical sense of the term), ultimately raised the question of the authority and reliability of the text for the scholarly or non-scholarly reader. Clearly this was often based on a specific (not necessarily the implicit OT) perspective of what history is and what makes a text a document that is historically reliable. Some of the issues concerning the historiographical challenges of the Pentateuch have already been discussed above. In this section some more specific issues will be analyzed. It is clear that not all of these questions can be discussed in the limited context of a dictionary article. However, the main arguments will be scrutinized and commented on in the light of recent findings and research undertaken during the past thirty years.

4.1. Differing Names of God as an Indication of Multiple Sources. The year 1711, with the publication of H. B. Witter's book *Iura Israelitarum*, marked the introduction of the divine-name argument in the discussion of the origin of the Pentateuch. Witter suggested that Genesis 1:1—2:3 represents an old poetic section and should be contrasted with Genesis 2:4 and following, which uses the tetragrammaton *yhwh* instead of the name *'ēlōhim*, thus indicating a different author. Some years later, J. Astruc sought to defend the Mosaic authorship of the Pentateuch by taking up Witter's suggestion of two major sources utilizing the two differing divine names that were used by Moses when he finally edited/wrote the Pentateuch. Later on, he also posited ten more fragmentary sources for Genesis (Cees Houtman 1994, 62-70). Since then, the difference in divine names has formed the basis for the original formulation of source criticism, with a surprising inconsistency between the different practitioners of this method in terms of the indication of the limits of the distinct sources. Behind this lies the more fundamental question of whether divine names (among others) can be used to determine distinct underlying sources of a specific document. Is the consistent use of a specific divine name a credible marker of a specific textual unit? As has been pointed out

(Brichtho 1998, 7), in reality name consistency is not a particular trait of the four major supposed sources. Some occurrences of Yahweh (J) appear in sections generally assigned to the Elohist (E) and have been interpreted by historical-critical scholars as J contaminations or erroneously permitted editorial substitutions. Methodologically, this explanation cannot be satisfactory since it puts into jeopardy the underlying theoretical basis of the hypothesis. This internal inconsistency has been well documented (Segal, 11-14). Additionally, the historical reconstruction of the sequence based upon divine names is founded upon faulty exegesis (see Garrett, 19-20, for some examples).

Several strands of evidence have a bearing on the divine-name usage in the Pentateuch. Recent iconographical studies have demonstrated that deities in the ancient Near East did have a variety of names, the usage of which depended on the region where they were worshiped, but that similar (or even exact) characteristics would indicate the same deity (Keel and Uehlinger, 393-94; M. G. Klingbeil, 182-83). Thus the motif of the smiting god, which has been connected to Resheph or Hadad-Baal in Syria-Palestine, can also be found in Egypt as Baal-Seth. On a bronze figure from Megiddo, dated between 1050 and 1000 B.C., the same smiting deity with the addition of a small shield can be found. Most experts would connect this with the deity Resheph or Baal. Similar iconographical motifs and positions can also be connected with the Egyptian Horus. Several hundred years later the same motif is connected with the non-Semitic deity Hercules (M. G. Klingbeil, 165-72). While it is clear that iconographical data is not directly applicable to a textual or literary problem, it helps to keep in mind the cultural continuum of the ancient Near East, where texts and images were not distinct entities. This principle can be seen in the monumental or private art of all major ancient Near Eastern cultural centers, including Egypt, Mesopotamia and the Levant. A text was naturally illustrated by an image in Egypt and in the stamp seal collections from Palestine (Keel 1995), and thus text and image generally interacted. In this sense, the interchangeability of divine names/attributes seems to challenge the rigid divine name argument in the literary realm. Is it possible that the usage of divine names was rather part and parcel of a literary strategy or a name theology, where each name

represented a specific facet of the deity (see Casuto, 15-41)?

Apart from the pictorial evidence, the use of different divine names in the same ancient Near Eastern text describing the same deity has been well documented (Kitchen 1966, 121-25). Qumran has demonstrated the same phenomenon in biblical texts, as can be seen in 1QIs^a, which changes the divine name in sixteen passages as compared to the MT (Hasel, 15). While this may be due to a different Hebrew *Vorlage* (though unlikely, since 1QIs^a is textually close to MT; Ulrich, 1.385), it at least suggests that the changing of divine names may have happened in the process of transmitting the text and thus cannot be a dependable criterion for establishing distinct sources.

The above evidence does not suggest that that no sources were utilized in the formation of the Pentateuch. The case has been made repeatedly that the so-called toledoth formula found so frequently in Genesis (e.g., Gen 2:4; 5:1; 6:9; 10:1, 32; 11:10 etc.) indicates earlier shorter sections, often connected to genealogies (as has been demonstrated in a review of the evidence and current theories; Garrett, 91-106). Other separate sections may have existed, although the structural unity, the narrative strategy apparent in the text and the noticeable lack of uniformity (Sailhamer 1992, 1-25) would make their existence difficult to determine. However, as has been demonstrated, divine names do not represent the most helpful resource for determining sources. Modern critical scholarship has responded differently to these challenges, sometimes suggesting more sources (with a tendency toward greater fragmentation) and at other times rejecting the methodological basis of source criticism and opting for a more holistic reading of the Pentateuch. Unfortunately, these new proposals do not yet appear in standard introductions to the OT, and thus the illusion of the "assured results" of historical criticism is kept alive.

4.2. Large Numbers as an Indication of the Ahistorical Nature of the Pentateuch. The large numbers found in the Pentateuch have long been described as problematic, and historical criticism in general has rejected them as being "ahistorical" or impossible. These large numbers include the grand total of the Israelites participating in the exodus, which according to Exodus 12:37 included "about 600,000 men on

foot” or, according to the more accurate census in Numbers 1:46, equaled 603,550 men who were able to bear arms. The second census in Numbers 26:51, taken after the sojourn in the desert, gives the figure of 601,730 men over the age of twenty years. It is clear that this large number would signify at least a total of two million men, women and children, which represents a major quantity. Over the past decades, several solutions have been suggested in order to explain the nature of these figures, and a good presentation of these different solutions can be found in T. R. Ashley as well as C. J. Humphreys. In the following, three main proposals will be presented, including their main positions and their contributions and problems for the current discussion.

4.2.1. Literal Interpretation. This is the standard conservative viewpoint, taking the figures at face value and projecting a sum of about two million people (or more; see Allen [681], who rightly suggests that four to five million would be more appropriate a number to support some 600,000 soldiers) for the Israelites during the exodus. This obviously would make the survival of such a group in the desert an extraordinary feat, notwithstanding the miraculous intervention of the Lord. However, it does not seem to be congruent with Deuteronomy 7:7, which suggests that Israel was indeed “the smallest [or fewest] of all the nations.” Exodus 23:30 indicates that taking over the Promised Land would be a gradual process (“little by little”), “until you have increased enough to take possession of the land” (NIV). Additionally, when studying the conquest of Canaan as described in Joshua, the scenario portrayed by the biblical author seems to be one of miraculous delivery and victory by the Israelites, facing a Canaanite population that—as archaeology suggests—was not to be numbered in the millions but rather in the thousands (Merling, 212-20).

4.2.2. Symbolic (or Hyperbolic) Interpretation. This viewpoint has recently been advocated by D. M. Fouts, although it has a long tradition in biblical studies. The hyperbolic interpretation holds that the large numbers should not be interpreted in terms of literal numbers but should rather be understood in terms of figurative language similar to cuneiform annalistic literature. Fouts (387) emphasizes that this use by no means diminishes the historiographical viability of the biblical record. However, on a method-

ological basis, the limits of this interpretation—while being attractive and inviting—are not clearly defined. Which marker in the Hebrew text will indicate that any given number (being large or small) is not meant symbolically but rather literally? As has been indicated above, the fact that pentateuchal (and OT) historiography often employs a theological angle does not diminish its reliability, and a wholesale interpretation of large numbers in this sense does not appear to make sense, both internally and on the comparative level. While there are elements appearing both in OT historiographical literature and in ancient Near Eastern annalistic texts, both textual corpora also show marked differences in terms of audience and focus (McMahon) and involve definite ideological and propaganda features (Liverani). Connecting the symbolic interpretation with the theological nature of pentateuchal historiography, theology might have been the driving force for the numbering scheme utilized in the Pentateuch where rhetorical exaggeration was utilized deliberately and purposefully to “bring glory to God, derision to enemies, and point forward to the fulfillment of God’s promise to the fathers that their descendants will be innumerable” (Allen, 688).

4.2.3. Semantic Interpretation. This perspective was first introduced by F. Petrie in 1906 and later taken up by G. Mendenhall in 1958. J. Wenham also published a variant interpretation based upon Petrie’s proposal. The semantic interpretation takes its point of departure in the Hebrew root *’lp*, which can denote: (1) “a thousand” (Gen 20:16; Num 3:50 and pointed as *’elep*); (2) “leader, chief, captain” (Gen 36:15; Ex 15:15; the term was pointed by the Masoretes as *’allûp*); and (3) “clan, family, group, troop” (Judg 6:15; 1 Sam 10:19; pointed as number 1 above, *’elep*). In this interpretation, in the first census of the Israelites recorded in Numbers 1, the Hebrew of Numbers 1:21—*šissâ wê’arbâ’im ’elep wahămēs mē’ôt* (“six and forty *’elep* and five hundreds”)—is understood as forty-six clans/troops and (comprising) five hundred men. It is possible that the second *waw* introducing the final sum of five hundred could be interpreted as a *waw explicativum* (cf. Baker). C. J. Humphreys’s recent contribution to the question of the large numbers of the Israelite census in the Pentateuch represents a major step forward, since it provides a coherent, mathematically consistent solution to this vexing problem, which surpasses

the more eclectic (albeit similar) solution of Wenham and the limitations of Petrie's interpretation.

However, it should be kept in mind that several unproven presuppositions (such as the average size of families and the distributions of people over and under twenty years of age) are made at the outset of his synthesis. This is not to say that the presuppositions are incorrect or illogical but rather points to the complex nature of the entire issue. Humphreys's point of departure is the statement found in Numbers 3:46, indicating that the number of firstborn that exceeded the number of Levites (who functioned as a symbolic "firstfruit offering to Yahweh" for the entire Israelite congregation, as indicated by Num 3:41) was 273. He also presupposes that in a fast-growing population group, about half the population would be aged under twenty years. As a result of these presuppositions, he concludes that the number of men over twenty and able to bear arms during the exodus was 5,550. Humphreys suggests that as a result of his mathematical analysis there were between eight and nine males in the average Israelite family, which is consistent with the claim in Exodus 1:7 that the Israelites had multiplied vigorously, since the average number of males born to the sons of Jacob entering Egypt was 4.8 (Gen 46:8-25). Figure 1 is a sample table from Humphreys's analysis (Humphrey, 212) of the first census in Numbers 1, translating *'elep* with "troop, military unit," which will serve as a good illustration of some of the results of his study. It should be noted that the average "men per troop" has been rounded to the nearest full number.

Humphreys posits that the final figure of 603,550 in Numbers 1:46 was reached by a later scribe who, conflating the numbers and instead of writing 598 "troops" (= *'elep*) involving 5,550 men, ran together 598 *'elep* and 5 *'elep* (of the 5,550 men) to yield 603 *'elep* (= 603 thousands) and 550 without realizing that *'elep* in this context meant troop rather than "thousand(s)." It should be noted that the average troop size is slightly above nine, which would indicate that more or less two families were combined in one *'elep* ("troop"), emphasizing the social boundaries of this unit. The variation in troop size (for example, Simeon only averages five) could be indicated as variation in family groups. Furthermore, it is interesting to see that the smallest

Tribe	Numbers if <i>'elep</i> = 1000	Numbers if <i>'elep</i> = troop		
		Number of troops	Number of men	Men per troop
Reuben	46,500	46	500	11
Simeon	59,300	59	300	5
Gad	45,650	45	650	14
Judah	74,600	74	600	8
Issachar	54,400	54	400	7
Zebulun	57,400	57	400	7
Ephraim	40,500	40	500	12
Manasseh	32,200	32	200	6
Benjamin	35,400	35	400	11
Dan	62,700	62	700	11
Asher	41,500	41	500	12
Naphtali	53,400	53	400	8
TOTAL	603,550	598	5,550	9.3

Figure 1. Census Figures in Numbers 1: Two Interpretations

fighting units in the Amarna correspondence coming from the fourteenth to thirteenth centuries B.C. also involved ten men (Humphreys, 204). In Mesopotamian texts, the strength of military units is given starting at ten, fifty and one hundred men (Nemet-Nejat, 232). Additionally, it should be noted that the second census in Numbers 26, taken after forty years of desert sojourn, results in 596 troops with 5,730 men and an average size of 9.6 men per troop (Humphreys, 213) when interpreted along similar lines. This is in line with the harsh desert conditions and a virtual lack of population growth. One difficult aspect of this theory, however, is the relationship between the census in Numbers 1 and the encampment numbers in Numbers 2. When applying the semantic principle to the description of the east side of the camp (Num 2:1-9), Judah had 74 troops with 600 men, Issachar accounted for 54 troops with 400 men and Zebulun had 57 troops with 400 men. Mathematically, the total of troops for this section of the camp would result in 185 with 1400 men. Numbers 2:9, however, states the total as 186 thousand (= troops) and four hundred. Humphreys again suggests a possible corruption of the text where

a later scribe did not understand the distinct usage of *'elep* both as “troops” and “thousand,” and thus 185 troops were connected with the final sum of the men (= 1,400). The suggestion of systematic textual corruption in the total numbers debilitates the semantic-interpretation approach, although it still presents a viable possibility.

If the semantic interpretation is to be accepted, one would expect to have a total of 20,000-25,000 for the people of Israel. This is a figure that would be consistent with the issues raised above concerning the size of the population of Canaan during the time period under consideration. At present, Humphreys's reconstruction appears to be the most consistent, although it requires substantial textual conflation of the MT, which was the result of misunderstandings based upon a change in semantics. The other solution to the vexing problem of the large numbers in the exodus as recorded in the Pentateuch would be to reserve judgment or to admit that the ancient conventions for recording numbers are not as transparent to the modern reader as they were to the ancient author and his audience.

4.3. Doublets and Repetition as an Indication of Multiple Documents in the Pentateuch. One of the standard criteria of historical criticism is the presence of supposed doublets occurring in the Pentateuch, which according to a list presented by Friedman includes twenty-seven incidents, beginning with the *creation account(s) in Genesis 1—2 and extending to the list(s) of forbidden animals in Leviticus 11 and Deuteronomy 14. Due to space limitations, this article will focus on the stories involving the wife/sister incidents in Genesis 12, 20 and 26, which have always been presented as one of the prime cases in point. Arguing that they are part of an intentional literary strategy, J. Van Seters (1975) has presented a coherent critical reconstruction of the three incidents, suggesting that Genesis 12 represents the original folk tale, with Genesis 20 and 26 representing later literary variants. As T. D. Alexander (148-49) has rightfully pointed out, the narrative involving Abraham, *Sarah and *Abimelech in Genesis 20:1-18 has important external connections (such as the birth of Isaac in Gen 21:1-7) that explain the specific information contained in the story, including the fact stressed by the author that Sarah did not have intercourse with Abimelech. Thus, against

Van Seters, the supposed doublet is not necessarily an expansion and explanation of some of the open questions of the original folk tale but should rather be understood in its specific narrative context and should be read as an independent event. It is also worth noting that Genesis 20:12 raises an additional legal dilemma that is not even alluded to in Genesis 12, as it suggests that Sarah was also Abraham's sister, a notion completely alien to pentateuchal law (Lev 18:9-11).

Furthermore, it is important to note that repetition and the shaping of similar events along common literary structures is often used to show that God is surely at work (Sailhamer 1992, 143) and has parallels in other ancient Near Eastern literature (Garrett, 22-25). In ritual literature, for example, a distinction should be made between prescriptive and descriptive texts (such as Ex 29 and Lev 8 concerning the ordination of Aaron and his sons) without posing two distinct sources. This distinction is widely accepted and understood by specialists in this area (G. A. Klingbeil 1998, 104-7; also Levine). J. K. Hoffmeier (1992) has suggested a novel interpretation of the wife/sister incidents, connecting them to (failed) attempts by the patriarchs to establish good relations with foreign kings through diplomatic marriages. While this interpretation maintains the narrative integrity of the stories, it does not seem to take into account the personal relational tension involving Abraham and Sarah and later on Isaac and Rebekah respectively. The narrative of Genesis 26, involving Abraham's son Isaac and having a similar sister/wife motif, might also be a conscious effort by the author to emphasize the continuity between both patriarchs, in this case also involving similar negative character traits of a man hiding behind a woman. V. P. Hamilton has pointed to the fact that in Abraham's case the episodes, separated by twenty-five years, might indicate that the precovenant Abraham (as found in Gen 15) is not much different from the postcovenant Abraham. In both scenarios, the historicity of the events involved is not in question.

4.4. Camels in the Patriarchal Narratives as an Indication of the Anachronistic Nature of the Pentateuch. The Hebrew noun *gāmāl* (“camel”) occurs twenty-eight times in the Pentateuch from Genesis 12 onward, mainly in connection with the patriarch Abraham. Critical scholarship ex-

plains these references as a typical anachronism (Lemche), inasmuch as camels were only domesticated in Palestine at the end of the second millennium B.C. and not earlier. Depending on the position taken for the date of the exodus (see Exodus, Date of) and subsequently extrapolating back to the patriarchal period, one would date the call of Abraham either to (1) 2200-2150 B.C. in the early exodus (= fifteenth century B.C.) and long sojourn view; (2) 2000-1950 B.C. in the early exodus but short sojourn view; or (3) 2000-1950 B.C. (the same date as the preceding view) in the late exodus and long sojourn view. A. E. Hill and J. H. Walton (83-85) have provided a very useful introduction to the chronological issues involved in pentateuchal studies, together with a helpful table summarizing the different positions.

The paleozoologic, iconographic and textual evidence concerning the domestication of the camel in the ancient Near East is ambiguous, but it seems clear that the camel (including both the Bactrian two-humped camel [*camelus bactrianus*] and the one-humped dromedary [*camelus dromedarius*]) had been domesticated in lower Mesopotamia and southern Arabia by 2500 B.C. (Hesse, 217; Staubli, 184-85; Borowski, 112-18). R. Younger has recently discussed some petroglyphs depicting camels being led by human figures in the Wadi Nasib, Sinai. These petroglyphs were discovered in close proximity to a Proto-Sinaitic inscription found by Gerster in 1961, which he dates not later than 1500 B.C. Zarins (1925-26) notes that osteological remains from Shahr-I-Sokhta in eastern Iran in a context dated to 2700 B.C. clearly indicate a domesticated camel. In the Arabian Peninsula bones found at Umm-an-Nar and dated to the late third millennium B.C. would also support the view of an early domestication of the camel. Some bone remains have been found at Arad in an Early Bronze context (c. 2900 B.C.; cf. Wapnish), although it is not clear whether they indicate a domesticated animal. Looking from the angle of Jordan, J. Sauer has argued that the camel was definitely domesticated by the third millennium B.C. but that its widespread use only began to emerge during the final moments of the Late Bronze Age. It would thus appear that Abraham's "camel connection" is not a good example for an anachronism but rather can be confidently explained in the context of either the early or late date connected to the patriarchal

period, beginning around the end of the third millennium B.C. O. Borowski (113) has made the interesting observation that camels were instrumental in the establishment of desert nomadism with its change in lifestyle. The Genesis story of Abraham leaving the urban center of Ur and becoming a *gēr* ("stranger, traveler, man without an established residence," Gen 15:13; 23:4) living in a tent does coincide with this function.

4.5. Tents and Patriarchal Nomadism as an Indication of the Anachronistic Nature of the Pentateuch. D. J. Wiseman (1978) has conveniently summarized the evidence for the existence of tents during the patriarchal period. He suggests that the nomadism of the patriarchs is hardly the same as the "enclosed nomadism" as found in the Mari documents of the Middle Bronze Age. Since the references to tents are mostly connected with the act of building an altar and after the initial move from Ur to Haran to Palestine are only mentioned when Abraham was forced to move from the Bethel area, it is possible to argue that they represent seasonal movements of a specific group, something similar to the phenomenon visible in modern-day bedouins living in the twenty-first century. Sufficient extrabiblical evidence from Mesopotamia and Egypt has been marshaled by D. J. Wiseman (197-98) to dismiss this critique raised by traditional historical criticism. The issue of nomadism is also significant regarding the existence of a tent sanctuary and needs to be understood as the matrix for the discussion of the following section.

4.6. Tabernacle, Tents and Religious Terminology as an Indication of the Anachronistic Nature of the Pentateuch. It has been alleged that the tent of meeting or *tabernacle described in Exodus should be understood as a rehashed version of the temple adapted for the prehistorical times by exile-suffering priestly experts (and thus connected to the elusive P source). However, recent studies of the archaeology of temple/tent sanctuaries during the Late Bronze Age have demonstrated the existence of these structures in Egyptian and Northwest Semitic contexts (Kitchen 1993; Fleming 2000). Meanwhile V. A. Hurowitz (110-13) has emphasized the parallel literary structure of the tabernacle building account with Mesopotamian building accounts. Cornelis Houtman (1994) has also indicated the resemblance of the tabernacle with Persian

royal tents, which themselves were not a new architectural development but rather the continuation of a well-established ancient Near Eastern tradition. All this evidence suggests that tent sanctuaries would fit in the Late Bronze Age and, based upon comparative material (including the structure and position of Ramses II's war tent during the battle of Kadesh, which needs to be understood in terms of the Egyptian theology of the divine king [Kitchen 1993, 121*] and B. Rothenberg's discovery of an Egyptian Sinai sanctuary at Timna' from the Late Bronze Age involving a tent structure) would support the notion of the historicity of the tabernacle building account in Exodus during that same period.

The main issue in this question is the true time frame of the texts containing the description of religious space (such as the tabernacle section) or ritual/legal activity connected to the religious events. The majority of these texts have been generally assigned to the P source in traditional historical criticism, with occasional reference to the so-called H substratum, and have been thought to include a substantial part of Exodus plus the major part of Leviticus. One of the arguments regularly brought forward in standard commentaries on Leviticus is the lack of comparative material of religious ritual from the Late Bronze Age that would corroborate the biblical account of these practices and texts. However, recent comparative evidence dating to the second part of the second millennium B.C. challenges this specific line of argumentation and provides palpable evidence of similar religious institutions and practices in a time frame parallel to the indicated historical period of the historical Moses in the second half of the second millennium B.C.

At this point it would be wise to consider the advantages and limits of the comparative method in theological and historical studies. Both *parallelomania* and *parallelophobia* have been widely documented in the history of interpretation of biblical and ancient Near Eastern research (G. A. Klingbeil 1998, 332-35; Malul). When utilizing comparative material, one should first seek to compare comparables and not the proverbial apple with an orange. This requirement involves texts of similar genres and also texts originating in the same historical and geographical sphere. Second, one should work contextually (Hallo), seeking to take into account not just an isolated phenomenon of a

given culture but attempting to understand the entire cultural and religious system behind the phenomenon—including the marked and less obvious differences. Third, the comparative method understood in this manner does not seek to explain origins (which endeavor in itself, because of chronological questions, is often quite challenging) but rather should be used to describe a cultural or religious phenomenon and posit it in a more general historical context.

Examples of recent comparative studies that are helpful in terms of the issue of the origin and development of the Pentateuch involve material from Emar in Syria. Emar (modern Tell Meskene) is situated some 90 km east of modern Aleppo and in six seasons was excavated as part of a salvage operation during the construction of a dam on the Euphrates near Tabqa. The city existed on this particular site for roughly two hundred years, from the fourteenth to the end of the thirteenth centuries B.C., after which it was destroyed (G. A. Klingbeil 1998, 344; Adamthwaite). The important contribution of Emar, however, does not primarily involve its archaeology but rather the immense quantity of cuneiform texts (written mostly in Akkadian, but also including Hittite and Hurrian texts) unearthed in different parts of the city. It is interesting to note that different scholars working independently have arrived at the conclusion that Emar ritual texts shed significant light upon pentateuchal ritual texts and their historical contexts (*Sitze im Leben*). A helpful example can be found in the anointing rites during the ordination ritual of Aaron and his sons (Ex 29 [prescription] and Lev 8 [description]). Until recently, the traditional historical-critical credo (and often espoused in commentaries on Exodus or Leviticus) was that anointing rites of priests could only be attested outside of the OT in the postexilic period. However, the evidence from Emar (369.3-4, 20-21) is unequivocal and involves the high priestess (NIN.DINGIR) of the deity ^dIM (most likely the storm god Baal), who has oil poured on her head twice on two different days during her ordination ritual (G. A. Klingbeil 1996 and 2000; Fleming 1998). Furthermore, it is interesting to note that both anointing rites are not connected with urban centers and well-established temples and palaces but are situated in the context of limited leadership. D. E. Fleming (1992) has discussed this specific Syrian model of societal structure

under the heading of “limited kingship,” emphasizing the distinct difference with urban, king-focused societies of Mesopotamia during the second half of the second millennium B.C. Other comparative evidence pointing to the later part of the second millennium for ritual, legal and religious phenomena attested in the Pentateuch include the order and origins of the Israelite *festival calendar, which should not be understood in terms of postexilic innovations but rather as the reflections of ancient realities from an earlier period (Fleming 1999a and 1999b).

Other relevant material from Syria (Ebla) and Asia Minor (Hittites) have been discussed concerning elimination rituals, such as the well-known scapegoat ritual in Leviticus 16 (Zatelli; Wright). Other relevant comparative material includes the Ugaritic ritual texts concerning sacrificial and divinatory rites (Pardee; summary of Smith, 97-100, 197-200, 220-223), dating to the Late Bronze Age and demonstrating distinctly close parallels, especially concerning the sacrificial system. D. P. Wright (275), for example, finds that while there are definite connections between elimination and purification rites from the OT and the ancient Near East, there are also explicit differences, distinguishing the two different textual corpora with their often conflicting worldviews. This leads to an important aspect of comparative evidence regarding analogy. It can be often observed that similar phenomena have distinct foci in different cultural entities. Thus the simplistic equation of origin or cultural/religious influence that one culture had on another should be discarded in favor of a more complex view in which the modern researcher seeks to understand the underlying intention(s) and worldview of the author of the biblical text. What is clear from the evidence mentioned above, however, is that important ritual elements found in the so-called Priestly source cannot be marked as “late” in the context of the history of Israelite religion.

4.7. The Egyptian Connection in the Pentateuch and Its Repercussions for Historical Criticism. A major part of the storyline of the Pentateuch is connected to Egypt, involving sections of Genesis (Abraham’s visit to Egypt in Gen 12; the story of the servant of Sarah, *Hagar, in Gen 16; and the Joseph cycle in Gen 37–50), and Exodus—Deuteronomy (exodus event and the manifold references to it). Over the past twenty years a re-

newed interest in studying the relationship between Israel/Palestine and Egypt can be seen in research. Some of the important recent works include D. B. Redford, K. A. Kitchen (1994), J. D. Currid (1997) and J. K. Hoffmeier (1997). Currid (23-27) has provided a fascinating discussion as to why the renewed interest for studying the relationship between Egypt and Palestine/Israel has only hit academic circles from 1985 onward. Some of the hesitation of Egyptologists tackling the question of historical connections between Palestine and Egypt can be explained in terms of a negative view concerning the biblical writers’ familiarity with Egyptian cultural, linguistic, religious and perhaps even political realities. Furthermore, some historians refuse to take the possible connection seriously, arguing that the biblical text does not seek to write history, but rather theology, and thus cannot be utilized as a bona fide historical source. As has been shown above, this perspective appears to be rather simplistic in view of the complex issue of historicity and ancient historiography in general. Another factor for the relative lack of qualified studies of the relationship between Israel and Egypt in biblical times can be found in the centrality of Mesopotamian thought over against the Egyptian background that many scholars posit, especially regarding the content of Genesis. Finally, scholars have long argued that the total lack of references to the exodus event in Egyptian sources precludes the historicity of this event. However, this argument from silence needs to be seen in its proper context, as can be seen in other areas of ancient Near Eastern research where long-cherished theories (usually critical toward the biblical record) have seen their systematic erosion or—sometimes—destruction in the light of new and forthcoming evidence. As a good example, Currid mentions N. Glueck’s thesis concerning the archaeology of Transjordan, which suggested that no sedentary evidence from the Late Bronze Age could be found in Transjordan, thus discrediting the biblical record of the conquest. However, this older view of the archaeology of Transjordan had to be totally reformulated in view of current data (cf. La Bianca and Younker). One could include here also the recent discussion concerning the historicity of David and the “monumental” tenth century B.C. in Israel and the influence on this discussion of the Aramaic Tel Dan inscription dated to the ninth century B.C.

Recent research concerning the connection between Israel and Egypt can be divided into three main areas, although systematization is always prone to simplification and runs the risk of leaving out important aspects. First, it focuses upon linguistic connections between Egyptian and Hebrew, involving the text of the MT and Hebrew onomastics. A second major field where Egyptian studies can contribute to our understanding of the meaning and historical *Sitz im Leben* of the biblical text is the religious world referred to both in the biblical text (specifically in Exodus) and in the Egyptian texts. Third, the archaeology of Egypt can contribute to our understanding of the historical and societal conditions of the period described in the Pentateuch. Obviously, the latter contribution is problematic inasmuch as it requires a decision upon the historical context of the exodus event. D. Merling (20-58) provides an in-depth discussion of the distinct models concerning the exodus/conquest events with both their weak and their strong points. It seems that in the age of models and paradigm changes, every new reconstruction of historical events related to the Bible proposes also a new framework of events and causes connected to these events. This clearly points to the difficult nature of the data, but it also can say something about those trying to reconstruct biblical history (or its lack thereof, a position maintained by modern critical scholarship). These differences cannot only be evaluated on the basis of the different data sets but should also take into account the distinct philosophical and theological presuppositions scholars arrive at when studying the text.

Egyptian data can help to provide a matrix against which these paradigms can be evaluated. In the following (sections 4.7.1-3), the three main areas of contact (linguistics, religious thought and archaeology) will be discussed in more detail.

4.7.1. Egypt and the Pentateuch—Linguistics and Onomastics. Relevant data for this section comes from the Joseph cycle (Gen 37–50) and we will focus the discussion on specific names in the narrative. The appropriate historical setting for this story is the Middle Bronze Age, and Egyptian material that broadly could be connected to this period includes the Execration texts and the Story of Sinuhe. Genesis 37:36 describes the first contact that Joseph has with Egyptian society in the form of his new master, a man named

Potiphar, who is portrayed as the *sēris par'ōh* (“one of Pharaoh’s officials,” NRSV), which is followed by *šar haṭṭabbāhim* (“commander of the guard,” NJB). In Egyptian the name *Potiphar* literally means “he whom Re gives” (Currid, 75) or “the gift of [the god] Re” (Kitchen 1994, 85), and it has been suggested that it is an abbreviated form of the name *p₃-di-p₃-r^c*, which is also the name of the future father-in-law of Joseph (Gen 41:45, 50; 46:20) and which might be a conscious literary device expressing irony, especially in view of the events about to take place. Both names are rendered *Petephres* by the LXX. However, this name type does not appear earlier than the Twenty-First Dynasty in Egyptian inscription, which corresponds to the eleventh century B.C. and definitely falls outside the possible time frames for either chronology of the patriarchs. Traditional historical criticism has interpreted this fact as an indication of the late nature of the text, although Kitchen (1994, 85-86) has argued for a conscious modernization of an earlier form *didir^c*, (“the gift of Re”), which utilizes a known pattern *didi-X* (“gift of X [= deity]”). This name pattern is attested for both the Middle Kingdom and the later Hyksos period and thus would fit the biblical chronology. While modernization is not uncommon in biblical literature (cf. the geographical name *Leshem*, which apparently was the earlier Canaanite name of *Dan* [Jos 19:47], but which was not used in earlier texts referring to Dan such as Gen 14:14) and sometimes during the process of transmission scribes “updated” a geographical or administrative term that they did not understand anymore for a newer one, Kitchen’s suggestion of meaningful modernization of an Egyptian name by a Hebrew scribe is doubtful. Perhaps it might be better to argue that the existence of the definite article *p₃* as an onomastic element in Brooklyn Papyrus 35.1446 from the Thirteenth Dynasty could be an indication that the name pattern reflected in the biblical name might even be earlier, although no specific examples have been found (Hoffmeier 1997, 86-87).

Genesis 41:45 describes the elevation of Joseph in the service of Pharaoh, after his convincing explication of the dream of Pharaoh. As part of this change of status (involving visible insignias of power as well [Gen 41:40-43]) the king also gives Joseph the new name Zaphenath-paneah. Y. Muchiki (224-25) provides a good re-

view of the many prevailing interpretations of this name, including Steindorff's generally accepted suggestion to read **dḏp̄ntrwḏ'nh* ("The god said, 'Let him live'"). Kitchen (1994, 82-84) proposed a consonantal metathesis (i.e., a change of position of consonants because of phonological reasons), resulting in a possible *Zathenaph* instead of *Zaphenath*. This would correspond to the Egyptian *ḏd-n.f-ʾlp-ḥnh*, which one could translate "X ("Joseph" in the context of Gen 41:45) is called 'Ip'nhk." This name structure as well as the name itself (Kitchen 1982, 2.1129) can be found in Egyptian texts from the time of the Middle Kingdom onward, and Kitchen has documented his suggestion sufficiently to make it a viable option. However, one should remember that it is based upon a metathesis in Hebrew. Muchiki (224) suggests the reconstruction **ḏf[3-i]nt[r] p[3]-ḥnh* ("my provision is god, the living one") without resorting to a metathesis or any other phonetic "freestyling." Contextually, this etymology would also make sense in the framework of Genesis 41.

Muchiki's work is a gold mine for OT scholars studying Egyptian elements and loanwords in northwest Semitic languages. It is noteworthy that most Hebrew personal names with possible or clear Egyptian linguistic connections appear in the Pentateuch or in genealogies connected to that period. Furthermore, vocalization can be used to determine a possible time frame when the term entered the Hebrew corpus as an Egyptian loanword. The vocalization of the Hebrew term *patrūsim* ("Pathrusim") in the Table of Nations in Genesis 10:14 suggests that the Egyptian word *p3-t3-rs[i]* ("upper Egypt") probably entered Hebrew in the second millennium B.C., since its first-millennium vocalization, based upon its occurrence in a neo-Assyrian text from Esarhaddon, was *pa-tu-ri-si*, which would include the sounds *e/i* instead of the long *u*-sound (Muchiki, 234-35). It has also been shown that most of the Egyptian loanwords (45 percent) in the OT correspond to the semantic domain of natural products (minerals, botanic terminology), and 35 percent can be classified as describing the domestic material culture (Muchiki, 323). This stands in stark contrast to the Akkadian loanwords, which come primarily from the realm of administrative/political terminology. Thus it can be shown that a second-millennium sojourn and exodus from Egypt could be supported in view of the linguistic data. On leaving

Egypt, Israel was not yet mature as a nation—a fact that can be appreciated both in the biblical records in books such as Joshua, Judges and Samuel as well as in the semantic domains of the loanwords brought out of Egypt.

4.7.2. *Egypt and the Pentateuch—Religious Terminology and Concepts.* Currid (83-103) has successfully demonstrated the connection of Egyptian religious thought with the specifics of the plagues as described in Exodus 7–12. Exegetically, it is important to focus more on the polemics of the plagues instead of looking merely on their succession, historicity or sequence. In his discussion of the introductory serpent miracle (Ex 7:8-13), Currid establishes convincingly the religiously polemical nature of the subsequent plague narrative, which must be understood as the cosmic battle between the pharaoh (the human representative of the Egyptian pantheon) and Moses and Aaron (the human representatives of Yahweh). In Egyptian religious thought the snake was both feared and revered. When the Egyptian "wise men" could duplicate the miracle and thus—apparently—nullify the effect of the miraculous introduction of Moses and Aaron, the snake of Moses and Aaron ate the magician's snake, which ironically prefigures the final outcome of the confrontation about to begin (see Currid for numerous textual references from Egyptian sources). Another important contribution of Currid is his discussion of the "hardening of the heart" of Pharaoh and its religious undertones in Egyptian religious thought (see *Hardness of Heart*; Exodus, Book of, §7.3). Hoffmeier (1997, 135-63) provides a convincing discussion of the phrases "strong hand" and "outstretched arm" in the Pentateuch (Ex 3:19; 6:6; 13:3, 14, 16; 15:6, 12, 16; 32:11; Deut 3:24; 6:21; 9:26, 29; 26:8), which he connects with Egyptian *hps* ("strong arm") and *pr-* ("the arm goes forth/is extended"). Both terms are usually related to the Egyptian sovereign and indicate conquest. Evidence of this concept can be found in Egyptian iconography (Hoffmeier 1997, fig. 15) as well as in the Akkadian *zu-ru-uh* in the Amarna letters of the king of Jerusalem (EA 286.12; 287.27; 288.14) sent to the pharaoh in Egypt. S. B. Noegel has provided additional references to Egyptian religious (magic) activity as found in the book of Exodus. The growing corpus of studies researching these aspects points to their relevance for the discussion of the historicity and origin of the Pentateuch.

4.7.3. *Egypt and the Pentateuch—Archaeology and History.* Kitchen (1994 and 1998) and Hoffmeier (1997) usefully review historical and archaeological material pertinent to the question of the origin and development of the Pentateuch. In this short section only the specific areas will be highlighted with further references to the studies indicated above. Both Kitchen and Hoffmeier provide ample textual and iconographical evidence for the presence of Semites in Egypt starting already in the First Intermediate Period and onward. During the Second Intermediate Period the so-called Hyksos controlled most of the Delta and other sections of Egypt. The work of Bietak at Tell el-Dabʿa has demonstrated the reality of this Semitic presence in terms of archaeology as well (Hoffmeier 1997, 63-65, 122-23), although it is not an easy undertaking to correlate ethnicity with specific archaeological data. There are two specific issues where archaeology can provide possible answers: (1) concerning the identity of the store cities mentioned in Exodus 1:11 (Rameses [Heb Raamses] and Pithom) and (2) regarding the possible route of the exodus. Both issues are still under discussion. Rameses is generally identified with Tell el-Dabʿa in the East Delta, while Pithom—whose identification is more complex—has several candidates, including Tell el-Maskhuta and Tell er-Retabe. Concerning the name of Rameses, it has often been argued that the city received its name from either one of the pharaohs of the Nineteenth Dynasty bearing that name. W. C. Kaiser (85-86) has provided some good arguments in favor of an earlier origin of the name and has documented research connecting the Nineteenth Dynasty to earlier Hyksos (or Asian/Semitic) predecessors. This would make the name a less compelling argument in favor of the later date of the exodus, during the thirteenth century B.C., and opens the possibility for an early date.

In terms of literature, Exodus 12:37; 13:17-20; 14:2 and Numbers 33 can be described as itineraries, and they have generally been connected to the P source. However, D. B. Redford's comparison with Egyptian itineraries of Thutmose III has underlined the similarities to this genre, including not only lists of cities but also geographical features (such as mountains, springs, rivers). Thus care should be taken in assigning these sections an unhistorical character on the assumption that they were written during the fifth century B.C. (see Hoffmeier 1997, 177-78).

According to Hoffmeier's reconstruction, the OT portrays the Israelites as leaving from the eastern Delta and moving in a southeastern direction toward the Tjeku region in the eastern end of the Wadi Tumilat. It is clear that temporary desert camps will not leave much to be discovered by even the most dedicated archaeologist. However, future research should focus upon more general topographical features, including the location of the Eastern Frontier Canal, recently discovered by satellite images (Hoffmeier 1997, 164-75; see Exodus Route and Wilderness Itinerary).

4.8. *Literary Studies of the Pentateuch and Their Repercussion for Historical Criticism.* Since the early 1980s a new trend has been observed in studies of the Pentateuch. More and more studies have discarded the limited historical angle (based upon a restrictive understanding of OT historiography) of traditional historical criticism and have read the text in its final/canonical form. Some important works include T. W. Mann's study of the narrative unity of the Pentateuch, J. H. Sailhamer's focus on the Pentateuch as an integrated narrative (1992) and also the efforts of H. C. Brichto and W. Warning, all of whom approach the issue from the background of OT and ancient Near Eastern studies. A parallel phenomenon can be seen in literary critics such as R. Alter and L. Ryken (together with biblical scholar T. Longman) who—reading the text in its final form—have applied standard literary conventions to the text and have arrived at surprising results, such as suspected doublets or proposed distinct sources being interpreted as conscious narrative strategies that help to unify, focus and sharpen the reader's attention. Concerning Leviticus, Warning (180) has suggested that the supposed distinction of layers of P and the relation of the P to the H are "seemingly irrelevant, or even non-existent." Warning found numerous chiasmic structures, structures based on numbers, open-envelope structures and parallel structures based on identical forms and key phrases. Lately the British anthropologist M. Douglas has published a fascinating study of Leviticus from a literary perspective, utilizing anthropological criteria and suggesting that Leviticus should be read as a unit reflecting the tripartite division of Israelite religion (as visible in the tabernacle structure and space, involving the entrance area for everybody; the holy place, where only the special-

ists entered; and finally the holy of holies, where only the high *priest would enter once a year). From this selective review it is clear that structural and literary analysis of the Pentateuch does not appear to support the fragmentary nature of the Pentateuch suggested by practitioners of historical criticism.

4.9. Linguistics of Hebrew and Historical Criticism. One name connected to the recent discussion of linguistic data and its importance for pentateuchal studies is A. Hurvitz of Hebrew University in Jerusalem. His work on the linguistic characteristics of P has revolutionized this aspect of research. Hurvitz has convincingly argued that, based on linguistics and the usage of specific terminology, P cannot be a product of the postexilic period, thus challenging seriously the traditional reconstruction of Israelite religion and literature. Recently, V. Sasson has studied the use and purpose of the *waw consecutive* forms in both old Aramaic and biblical Hebrew. He suggests that these forms can be used for dating texts diachronically, since this stylistic feature was used sparingly in archaic texts. However, it should also be kept in mind that the transmission history of the OT is very complex and not easily reconstructed. This makes an exclusively linguistic emphasis, without external controls and additional disciplines, subjective and limits its value.

5. Conclusion.

Current research on the Pentateuch is changing. More and more specialists are discarding the traditional research paradigm of historical criticism. Historical criticism as a method is in a crisis but continues to thrive as an underlying philosophical position. Unfortunately there is great disparity between the emerging data and the presupposition(s) of the historical-critical method. In this review article an underlying historiography of the Pentateuch was formulated as the basis for a discussion of issues raised by standard historical criticism. While the Pentateuch is not primarily a historical document, it is definitely not unhistorical or even ahistorical. Theology, both in the OT and in the ancient Near East, was always connected with history because these societies shared a holistic concept of life, God and history. Thus, viewed from this perspective, the historicity of the Pentateuch can be postulated without resorting to dogmatism or being labeled "unscientific." In the face of specific challenges

to the unity and historicity of the Pentateuch, we have seen that evidence gathered from such diverse fields as paleozoology, archaeology, ritual studies, Egyptology, comparative studies, linguistics and literary analysis, among others, supports the notion of an emerging nation called Israel, part and parcel of the Late Bronze Age period. The evidence fits better religiously, economically and historically in this period than in other periods connected to the distinct sources. Literary analysis of the canonical text of the Pentateuch contributes significantly to our understanding of the meaning, structure and authorial intention. However, more needs to be done. Future research should seek to formulate an overarching theory of the origin and composition of the Pentateuch, taking into account both the latest research while taking as a point of departure a high view of Scripture. Furthermore, more work needs to be done to understand ritual in the Pentateuch, which represents a significant part of the text but generally receives little attention. It is clear that, in the limited space of a dictionary entry, not every argument and position of historical criticism can be treated in detail and with due consideration—even more so when the topic is so laden and beset with a tremendous history of interpretation.

HOLY AND HOLINESS, CLEAN AND UNCLEAR

Yahweh, Israel's God, is inherently holy, as con-

veyed by the statement that God's name is holy (Lev 20:3; 22:2, 32; lit. "it is the name of my holiness"). Because key names were intricately tied to the bearer's identity in the ancient Semitic world, this means that holiness is the quintessential nature of God. This is confirmed by Yahweh's self-assertion, "I Yahweh, your God, am holy" (Lev 19:2). In Scripture, holiness is exclusive to Yahweh; the holiness of anything else is derived, either from God's presence or from consecration to the sanctuary. Further, because only God is holy, there is nothing either within humans or on earth that is inherently holy, and no Scripture attempts to define "holy." However, two major genres in the Pentateuch allow us to build a concept of holiness, namely, the reports of God's appearing (theophany) and the regulations for worshipping the holy God (cultic prescriptions).

Two ideas commonly associated with holiness need to be qualified at the outset. First, holiness is often defined as separation, because objects and persons consecrated for use at the sanctuary are removed or set apart from ordinary use. However, separation does not get at the essential meaning of holiness—neither in reference to God, the Holy One, nor in reference to the variety of items described as holy—for it fails to provide any content to the concept of being holy. Second, the *ethical and the holy are often so equated that the terms are used synonymously. In biblical faith this is common because Yahweh, the holy God, is righteous. Consequently, *holy* defines the character of biblical ethics. Nevertheless, we need to be aware that holiness encompasses far more than ethical behavior. In fact, in most other religions holiness and the ethical are not connected. In non-biblical contexts, "holy" often refers to a sacred power that inhabits an element of nature, such as a tree or a stream or a specific space such as a burial ground. These sacred objects or places, being closely related to the spirit world, have numinous qualities. In the polytheistic religions of Israel's neighbors, only some of the gods possessed holy power, albeit imperfectly. Holiness as a spiritual force often stood over against the various gods of a pantheon.

As we investigate the idea of holiness in the Pentateuch, we need to be mindful that holiness, being the quintessential character of God, is the center of divine motivation. It affects everything God does. Moreover, the adjectives at-
